In response to concerns about subprime lending, the statement "Interagency Guidance on Subprime Lending," was issued on March 1, 1999.² The statement's objective is to increase awareness among examiners and financial institutions of some of the pitfalls and hazards of this type of lending and to provide general supervisory guidance on the topic. See SR-99-06. The statement is directed to insured depository institutions and their subsidiaries, which includes state member banks. As such, the guidance applies only indirectly to bank holding companies with regard to their supervision of insured depository institutions. Bank holding companies should also consider the statement's guidance as they supervise the lending activities of their nonbanking subsidiaries. Bank holding company examiners should consider this guidance in conjunction with the loan-administration and lending-standards inspection guidance in section 2101.2, and the guidance for asset securitization in section 2190.0. The text of the statement follows. (Section numbers have been added for reference, and some wording has been slightly altered to make the policy appropriate for this manual.)

2190.05.1 INTERAGENCY GUIDANCE ON SUBPRIME LENDING

Insured depository institutions have traditionally avoided lending to customers with poor credit histories because of the higher risk of

default and resulting loan losses. However, in recent years a number of lenders³ have extended their risk-selection standards to attract lower-credit-quality accounts, often referred to as subprime loans. Moreover, recent turmoil in the equity and asset-backed securities market has caused some nonbank subprime specialists to exit the market, thus creating increased opportunities for financial institutions to enter, or expand their participation in, the subprime-lending business.

The term "subprime lending" is defined for this statement as extending credit to borrowers who exhibit characteristics indicating a significantly higher risk of default than traditional bank lending customers.⁴ Risk of default may be measured by traditional credit-risk measures (credit/repayment history, debt-to-income levels, etc.) or by alternative measures such as credit scores. Subprime borrowers represent a broad spectrum of debtors ranging from those who have exhibited repayment problems due to an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. This guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing "paper" from lenders or dealers; and the purchase of loan companies that originate subprime loans.

Due to their higher risk, subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. These loans can be profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. Moreover, the ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights has made subprime lending attractive to a larger number of institutions, further increasing the number of subprime lend-

3. The terms "lenders," "financial institutions," and "institutions," . . . refer to insured depository institutions and their subsidiaries.

4. For purposes of this statement, loans to customers who are not subprime borrowers are referred to as "prime."

1. The term "banking organizations" refers to bank holding companies and their banking and nonbanking subsidiaries.

2. The statement was adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

ers and loans. . . . [A] number of financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. This has brought greater supervisory attention to subprime lending and the ability of insured depository institutions to manage the unique risks associated with this activity.

Institutions should recognize the additional risks inherent in subprime lending and determine if these risks are acceptable and controllable given the institution's staff, financial condition, size, and level of capital support. Institutions that engage in subprime lending in any significant way should have board-approved policies and procedures, as well as internal controls that identify, measure, monitor, and control these additional risks. Institutions that engage in a small volume of subprime lending should have systems in place commensurate with their level of risk. Institutions that began a subprime-lending program prior to the issuance of this guidance should carefully consider whether their program meets the following guidelines and should implement corrective measures for any area that falls short of these minimum standards. If the risks associated with this activity are not properly controlled, the agencies consider subprime lending a high-risk activity that is unsafe and unsound.

2190.05.2 CAPITALIZATION

[S]ubprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. The amount of additional capital necessary will vary according to the volume and type of subprime activities pursued and the adequacy of the institution's risk-management program. Institutions should determine how much additional capital they need to offset the additional risk taken in their subprime-lending activities and document the methodology used to determine this amount. The agencies will evaluate an institution's overall capital adequacy on a case-by-case basis through on-site examinations and off-site monitoring procedures considering, among other factors, the institution's own analysis of the capital needed to support subprime lending. Institutions determined to have insufficient capital must correct

the deficiency within a reasonable timeframe or be subject to supervisory action. In light of the higher risks associated with this type of lending, . . . higher minimum-capital requirements [may be imposed] on institutions engaging in subprime lending.

2190.05.3 RISK MANAGEMENT

The following items are essential components of a well-structured risk-management program for subprime lenders:

1. *Planning and strategy.* Prior to engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution's overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets and/or customers, and performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal control problems and to determine if favorable initial profitability estimates are realistic and sustainable.
2. *Staff expertise.* Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possesses sufficient

expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. Seasoning of staff and loans should be taken into account as performance is assessed over time.

3. *Lending policy.* A subprime-lending policy should be appropriate to the size and complexity of the institution's operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:

- a. types of products offered as well as those that are not authorized
- b. portfolio targets and limits for each credit grade or class
- c. lending and investment authority clearly stated for individual officers, supervisors, and loan committees
- d. a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative/servicing costs, expected charge-offs, and capital
- e. collateral evaluation and appraisal standards
- f. well-defined and specific underwriting parameters (i.e., acceptable loan term, debt-to-income ratios, loan-to-collateral-value ratios for each credit grade, and minimum acceptable credit score) that are consistent with any applicable supervisory guidelines⁵
- g. procedures for separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
- h. credit-file documentation requirements such as applications, offering sheets, loan and collateral documents, financial statements, credit reports, and credit memoranda to support the loan decision
- i. correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution's lending standards

If the institution elects to use credit scoring (including applications scoring) for approv-

als or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.

4. *Purchase evaluation.* Institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and the loan losses that may be experienced as they evaluate expected profits. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution's lending area, are at special risk for fraud or misrepresentation (i.e., the quality of the loan may be less than the loan documents indicate).

Institutions should perform a thorough due-diligence review prior to committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and should regularly review loans offered to ensure that loans purchased continue to meet those criteria. Deterioration in the quality of purchased loans or in the portfolio's actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution's criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or terminate the correspondent relationship or make adjustments to underwriting and dealer/lender selection criteria.

5. *Loan-administration procedures.* After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger

5. Extensions of credit secured by real estate, whether subprime or otherwise, are subject to the Interagency Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution's aggregate investment in loans that exceed the supervisory LTV limits. See 12 C.F.R. 34, subpart D (OCC); 12 C.F.R. 208, appendix C (FRB); 12 C.F.R. 365 (FDIC); and 12 C.F.R. 560.100-101 (OTS) for further information.

collection efforts such as calling delinquent borrowers frequently, investing in technology (e.g., using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program's success. To a large extent, the cost of such efforts can represent a tradeoff relative to future loss expectations when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business.

Subprime loan-administration procedures should be in writing and at a minimum should detail—

- a. billing and statement procedures;
 - b. collection procedures;
 - c. content, format, and frequency of management reports;
 - d. asset-classification criteria;
 - e. methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
 - f. criteria for allowing loan extensions, deferrals, and re-agings;
 - g. foreclosure and repossession policies and procedures; and
 - h. loss-recognition policies and procedures.
6. *Loan review and monitoring.* Once loans are booked, institutions must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Institutions should have information systems in place to segment and stratify their portfolio (e.g., by originator, loan-to-value, debt-to-income ratios, credit scores) and produce reports for management to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and ALLL adequacy models. Models driven by the volume and severity of historical losses experienced during an eco-

nomie expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.

7. *Consumer protection.* Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory “steering” of borrowers to subprime products for reasons other than the borrower's underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 C.F.R. 226.32), Regulation X, and the Real Estate Settlement Procedures Act (RESPA) (12 U.S.C. 2601) and adopt policies and implement practices that ensure compliance.

The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate against an applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited basis characteristic (e.g., race, sex, age, etc.). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

8. *Securitization and sale.* Some subprime lenders have increased their loan-production and -servicing income by securitizing and selling the loans they originate in the asset-backed securities market. Strong demand from

investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risk, that are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution's assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

[T]urmoil in the financial markets [can illustrate] the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans originally intended for sale, these loans may strain an institution's liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses back-up purchasers of the securities or the attendant servicing functions, alternate funding sources, and measures for raising additional capital.

Institutions should refer to Statement of Financial Accounting Standards No. 125 (FAS 125), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," for guidance on accounting for these transactions. If a securitization transaction meets FAS 125 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights/obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular,

management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime lending pools. Institutions should also consult with their auditors as necessary to ensure their accounting for securitizations is accurate.

9. *Reevaluation.* Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause and the program should be modified appropriately. If the program falls far short of the institution's expectations, management should consider terminating it. Questions that management and the board need to ask may include:
 - a. Have cost and profit projections been met?
 - b. Have projected loss estimates been accurate?
 - c. Has the institution been called upon to provide support to enhance the quality and performance of loan pools it has securitized?
 - d. Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?
 - e. Has the program met the credit needs of the community that it was designed to address?

2190.05.4 INSPECTION OBJECTIVES

1. To assess and evaluate the extent of subprime-lending activities and whether management has adequately planned for this activity.
2. To determine whether the BO has the financial capacity, including capital adequacy, to

conduct the high-risk activity of subprime lending.

3. To establish whether management has committed the necessary resources with regard to technology and skilled personnel to manage the subprime-lending program.
4. To ascertain whether management has established adequate subprime-lending standards and is maintaining proper controls over the subprime-lending program.
5. To determine if the BO has contingency plans for subprime lending and if they are adequate for volatile financial markets and during economic downturns.
6. To review and evaluate the performance of the subprime-lending program, including its profitability, delinquency, and loss experience.

2190.05.5 INSPECTION PROCEDURES

1. Determine whether the subprime-lending activities are consistent with the banking organization's overall business strategy and risk tolerances, and that all critical business risks have been identified and considered.
2. Assess whether the BO has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely without any undue concentrations of credit.
3. Ascertain if management has committed the necessary resources in terms of technology and skilled personnel to manage and control the risks associated with the volume and complexity of the subprime-lending program.
4. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the BO's operations and is maintaining proper controls over the program. See subsection 2190.05.3 for the lending standards that should be included in the subprime-loan

program. See also section 2010.2 with regard to loan administration and lending standards.

5. Determine whether the BO's contingency plans are adequate to address the issues of (1) alternative funding sources, (2) back-up purchasers of the securities or the attendant servicing functions, and (3) methods of raising additional capital during an economic downturn or when financial markets become volatile.
6. Review and evaluate loan-administration and loan-monitoring procedures for subprime loans originated or purchased, including—
 - a. collection, repossession, and disclosure procedures;
 - b. management of the level and effective use of skilled staffing and advanced technology;
 - c. the adequacy of the allowance for loan and lease losses; and
 - d. the adequacy and accuracy of models used to estimate credit losses or to set pricing, making certain that the models account for economic cycles and other unexpected events.
7. Review securitization transactions for compliance with FAS 125 and this guidance, including whether the BO has provided any support to maintain the credit quality of loans pools it has securitized.
8. Analyze the performance of the program, including profitability, delinquency, and loss experience.
9. Consider management's response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.
10. Determine if the BO's subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.

2190.1.1 INTRODUCTION TO CREDIT-SUPPORTED AND ASSET-BACKED COMMERCIAL PAPER

The issuance of commercial paper provides an alternative to bank borrowing for large corporations (nonfinancial and financial) and municipalities. Generally, commercial paper issuers are those with high credit ratings. In recent years, however, some corporations with lower credit ratings have been able to issue commercial paper by obtaining credit enhancements (credit support from a firm with a high credit rating¹) or other high-quality asset collateral (asset-backed commercial paper) to allow them to enter the market as issuers. An example of credit-supported commercial paper is one supported by a letter of credit (LOC), the terms of which specify that the bank issuing the LOC guarantees that the bank will pay off the commercial paper if the issuer fails to pay off the commercial paper upon maturity.² A credit enhancement could also consist of a surety bond from an insurance company.

2190.1.2 COMMERCIAL BANK INVOLVEMENT IN CREDIT-ENHANCED AND ASSET-BACKED COMMERCIAL PAPER

A number of commercial banks have become involved in credit-enhanced and asset-backed commercial paper programs. These securitization programs enable banks to help arrange short-term financing support for their customers without having to extend credit directly. This provides borrowers with an alternative source of funding and allows banks to earn fee income for managing the programs. Fees are earned for providing credit and liquidity enhancements to these programs.

It is important to emphasize that involvement in such programs can have potentially significant implications for the organizations' credit and liquidity risk exposure. Therefore, examiners need to be fully informed on the fundamentals of these programs, on the risks associated with these programs, and on the examination and inspection procedures for banking organizations engaged in this activity.

Asset-backed commercial paper programs have been in existence since the early 1980s and have grown substantially over the last few years. These programs use a special-purpose entity (SPE) to acquire receivables generally originated either by corporations or sometimes by the advising bank itself.³ The SPEs, which are owned by third parties,⁴ fund their acquisitions of receivables by issuing commercial paper that is to be repaid from the cash flow of the receivables.

Bank involvement in an asset-backed commercial paper program can range from advising the program to advising and providing all of the required credit and liquidity enhancements in support of the SPE's commercial paper. Typically, the advising bank, or an affiliate, performs a review to determine if the receivables of potential program participants (i.e., corporate sellers) are eligible for purchase by the SPE. The scope of the review is similar to that used in structuring credit card or automobile-loan-backed transactions.

Once the bank (or its affiliate) determines that a receivables portfolio has an acceptable credit-risk profile, it approves the purchase of the portfolio at a discounted price by the SPE. The bank or its affiliate may also act as the operating agent for the SPE. This entails structuring the sale of receivable pools to the SPE and then overseeing the performance of the pools on an ongoing basis.

The SPE pays for the receivables by issuing commercial paper in an amount equal to the discounted price paid for the receivables. The difference between the face value of the receivables and the discounted price paid provides, as discussed below, the first level of credit protection for the commercial paper. The individual companies selling their receivables traditionally act as the servicer for receivables sold to an SPE; that is, they are responsible for collecting principal and interest payments from the obli-

3. To date, the type of receivables that have been included in such programs are trade receivables, installment sales contracts, financing leases, and noncancelable portions of operating leases and credit card receivables.

4. Employees of an investment banking firm or some other third party generally own the equity of the SPE. The advising bank can specifically avoid owning the stock if it does not want to raise the issue of whether it must consolidate the SPE for accounting purposes.

1. Such paper is usually called *credit-supported commercial paper*.

2. Usually referred to as *LOC paper*.

gors and passing these funds on to the SPE on a periodic basis. The SPE then distributes the proceeds to the holders of the commercial paper.

Asset-backed commercial paper programs typically have several levels of credit enhancement cushioning the commercial paper purchaser from potential loss. As noted above, the first level of loss protection is provided by the difference between the face value of the receivables purchased and the discounted price paid for them, known as a “holdback” or “overcollateralization.” In some cases, the terms of the sale also give the SPE recourse back to the seller if there are defaults on the receivables. The amount of overcollateralization and recourse varies from pool to pool and depends, in part, upon the quality of the receivables in the pool and the desired credit rating for the paper to be issued. Usually, the level of credit protection provided by overcollateralization is specified in terms of some multiple of historical loss experience for similar assets.

In addition to overcollateralization and recourse, secondary credit enhancements are also customarily provided. Secondary credit enhancements include letters of credit, surety bonds, or other backup facilities that obligate a third party to purchase pools of receivables from the SPE at a specified price. In addition to credit enhancements, the programs also generally have liquidity enhancements to ensure that the SPE can meet maturing paper obligations.

The rating agencies typically require an SPE’s commercial paper to have secondary enhancements aggregating 100 percent of the amount outstanding in order to receive the highest credit rating. These enhancements are generally structured in one of two ways. In the first, a commercial bank enters into a single agreement under which it is unconditionally obligated to provide funding for all or any portion of maturing commercial paper that an SPE cannot pay from other sources. The obligation to fund may be triggered by credit losses, a liquidity shortfall, or both. In the second, two separate agreements that jointly cover 100 percent of an SPE’s outstanding commercial paper are established.

The first, typically an irrevocable letter of credit, is primarily intended to absorb credit losses that exceed the first tier of credit enhancement for the commercial paper. The second arrangement is a “liquidity” facility that may or may not provide credit support. This second structure will often have a letter of credit equaling 10 to 15 percent of outstandings, with the

liquidity facility covering the remaining 85 to 90 percent.

2190.1.3 RISK-BASED CAPITAL TREATMENT FOR CREDIT-SUPPORTED AND ASSET-BACKED COMMERCIAL PAPER PROGRAMS

Generally, a single funding agreement that has no escape clause, such as a material-adverse-change clause that requires a bank to unconditionally provide funding to repay maturing commercial paper when the need arises because of either credit or liquidity problems should be treated as a direct credit substitute, or guarantee. The risk-based capital guidelines specify that the full amount of such obligations are to be converted to an on-balance-sheet credit-equivalent amount using a 100 percent conversion factor. No part of these arrangements should be considered commitments (either short-term or long-term) for risk-based capital purposes and assigned the conversion factor of a commitment. In the case of enhancements provided by separate facilities, a 100 percent conversion factor should be assigned to a letter of credit or any other form of credit guarantee provided by the bank. The accompanying liquidity facility, on the other hand, should be treated as a commitment and assigned a 50 percent conversion factor if over one year in maturity and a zero percent conversion factor if one year or less in maturity. One of the characteristics of liquidity facilities is that such arrangements generally have some reasonable asset-quality test that must be met before funds are extended to the SPE, to ensure that the bank is not providing credit protection.

2190.1.4 BOARD OF DIRECTORS’ POLICIES PERTAINING TO CREDIT-ENHANCED OR ASSET-BACKED COMMERCIAL PAPER

A banking organization (i.e., a bank or bank holding company) participating in an asset-backed commercial paper program should ensure that such participation is clearly and logically integrated into its overall strategic objectives. Furthermore, the management should ensure that the risks associated with the various roles that the institution may play in such programs are fully understood and that safeguards are in place to manage these risks properly.

Appropriate policies, procedures, and controls should be established by a banking organi-

zation prior to participating in asset-backed commercial paper programs. Significant policies and procedures should be approved and reviewed periodically by the organization's board of directors. These policies and procedures should ensure that the organization follows prudent standards of credit assessment and approval regardless of the role an institution plays in an asset-backed commercial paper program. Such policies and procedures would be applicable to all pools of receivables to be purchased by the SPE as well as the extension of any credit enhancements and liquidity facilities. Procedures should include an initial, thorough credit assessment of each pool for which it had assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. Furthermore, the policies and procedures should outline the credit approval process and establish "in-house" exposure limits, on a consolidated basis, with respect to particular industries or organizations, i.e., companies from which the SPE purchased the receivables as well as the receivable obligors themselves. Controls should include well-developed management information systems and monitoring procedures.

Institutions should analyze the receivables pools underlying the commercial paper as well as the structure of the arrangement.

This analysis should include a review of:

1. The characteristics, credit quality, and expected performance of the underlying receivables;
2. The banking organization's ability to meet its obligations under the securitization arrangement; and
3. The ability of the other participants in the arrangement to meet their obligations.

Banking organizations providing credit enhancements and liquidity facilities should conduct a careful analysis of their funding capabilities to ensure that they will be able to meet their obligations under all foreseeable circumstances. The analysis should include a determination of the impact that fulfillment of these obligations would have on their interest rate risk exposure, asset quality, liquidity position, and capital adequacy.

Examiners should review carefully the asset-backed commercial paper facilities provided by banking organizations to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting asset-backed commercial paper programs. In addition, examiners should determine whether the previously discussed policies are operative and that institutions are adequately

managing their risk exposure. A discussion of the size, effectiveness and risks associated with these programs should be included in the confidential section of the examination/inspection report if not appropriate for the open section. Reference can be made to SR 92-11 as the source for this Manual section.

2190.1.5 INSPECTION OBJECTIVES

1. To determine whether the banking organization (i.e., a bank or bank holding company) participating in an asset-backed commercial paper program has included such participation in its overall strategic objectives.

2. To determine whether management fully understands the risks associated with the involvement in such credit enhancement and asset-backed commercial paper programs and whether appropriate safeguards are in place to properly manage those risks.

3. To ascertain that the appropriate policies, procedures, and controls have been established by the banking organization prior to participating in asset-backed commercial paper programs.

4. To verify whether existing managerial and internal controls include well-developed management information systems and monitoring procedures.

5. To determine whether the banking organization has conducted a careful analysis of its funding capabilities to ensure that they it will be able to meet its obligations under all foreseeable circumstances.

2190.1.6 INSPECTION PROCEDURES

1. Review the Board of Directors or Executive Committee minutes and establish whether the significant policies and procedures for credit enhanced or asset-backed commercial paper have been approved and reviewed periodically by the organization's board of directors.

- a. Determine whether the policies are operative and that institutions are adequately managing their risk exposure.

- b. Determine whether the policies and procedures are applicable to all pools of receivables to be purchased by the special purpose entity (SPE) as well as the extension of any credit enhancements and liquidity facilities.

2. Determine if the organization follows pu-

dent standards of credit assessment and approval.

a. Ascertain whether the procedures include an initial, thorough credit assessment of each pool for which it had assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure.

b. Determine if the policies and procedures outline the credit approval process and establish "in-house" exposure limits, on a consolidated basis, with respect to particular industries or organizations, i.e., companies from which the SPE purchased the receivables as well as the receivable obligors themselves.

c. Determine whether the organization analyzes the receivables pools underlying the commercial paper as well as the structure of the arrangement. Does the analysis include a review of:

(1) The characteristics, credit quality, and expected performance of the underlying receivables;

(2) The ability of the banking organization to meet its obligations under the securitization arrangement; and

(3) The ability of the other participants in the arrangement to meet their obligations?

3. Review the organization's funding obligations and commitments, and determine whether there is sufficient liquidity to satisfy those funding requirements. Include a determination of the impact that fulfillment of these obligations would have on their interest rate risk exposure, asset quality, liquidity position, and capital adequacy.

4. Review carefully the asset-backed commercial paper facilities to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting asset-backed commercial paper programs.

5. Include in the inspection report, a discussion of the size, effectiveness and risks associated with these programs in the confidential section of the inspection report if not appropriate for the open section.

2220.3.1 NOTE ISSUANCE FACILITY (NIF)

One type of off-balance-sheet activity is the note issuance facility (NIF). The first public facility was arranged in 1981. A NIF is a medium-term arrangement under which a borrower can issue short-term paper. The paper is issued on a revolving basis, with maturities ranging from as low as 7 days to up to one year. Underwriters are committed either to purchasing any unsold notes or to providing standby credit. Bank borrowing usually involves commercial paper consisting of short-term certificates of deposit and for nonbank borrowers it would generally be promissory notes (Euro-notes). NIF is the most common term used for this type of arrangement. Other terms include the revolving underwriting facility (RUF), and the standby note issuance facility (SNIF). NIFs, RUFs, and SNIFs are essentially the same credit product. The NIF is usually structured for 5 to 7 years.

Euronotes are denominated in US dollars and are issued with high face values (often \$500,000 or more), being intended for the more sophisticated investor (professional or institutional investors). Holders of the notes show them as an asset on their balance sheets. The underwriting commitment represents an off-balance sheet item. The NIF allows the various functions performed by a single institution in a syndicated credit to be separated and performed by different institutions.

Instead of lending money, as in a syndicated credit, the NIF arranger provides a mechanism for placing notes with other investors when funds are needed. The underwriting commitment transforms the maturity, assuring the borrower access to short-term funds over the medium term, which remains off-balance sheet, unless drawn upon. The underwriters take the short-term credit risk since they face the risk of lending to a borrower that has difficulty in obtaining full confidence from investors.

NIFs can be arranged with an issuer-set margin whereby the issuer determines the margin over LIBOR (the London Interbank Offered Rate), or some other index at which notes will be offered. The issuer thus benefits from any improvement in market conditions. The notes are placed by the placing agent, but senior underwriters have the option of purchasing a

prearranged share of any notes issued. Any notes not taken up at the issuer-set margin are distributed to underwriters at the pre-established maximum (cap) rate.

2220.3.2 REVOLVING UNDERWRITING FACILITY (RUF)

Another type of facility, a revolving underwriting facility (RUF), was introduced in 1982. A revolving underwriting facility is a medium-term revolving commitment to guarantee the overseas sale of short-term negotiable promissory notes (usually a fixed-spread over LIBOR) issued by the borrower at or below a predetermined interest rate. RUFs separate the roles of the medium-term risk-taker and the providers of the funding (the short-term investors). RUFs and NIFs allow access to capital sources at interest rates considerably below conventional financing rates. The savings in interest cost are derived because the borrower obtains the lower interest costs prevailing in the short-term markets, while still retaining the security of longer term financing commitments. The notes issued under RUFs are attractive for institutional investors since they permit greater diversification of risk than the certificates of deposit of only one bank. Underwriters favor them because their commitments do not appear on the statement of financial condition. RUFs are usually structured for periods of four to seven years.

A revolving underwriting facility (RUF) differs from a (NIF) in that it separates the functions of underwriting and distribution. With a RUF, the lead bank (manager or arranger) acts as the only placing agent. The arranger retains total control over the placing of the notes. The lead bank provides assistance to a borrower who forms a lending group of banks. The borrower, assisted by a lead bank (arranger), obtains a medium term revolving commitment that guarantees the sale of short-term negotiable promissory notes at or below a pre-determined interest rate. The participating group of banks arrange the funding, subject to certain lending conditions and rates, for the duration of the facility. In return, the borrower pays a facility fee to the revolving credit banks.

When the borrower desires funds, a placement agent or tender panel¹ places short-term notes with other banks and institutional investors (usually having maturities of 90 days, 180 days or 12 months). The short term notes can be issued to these investors at significantly lower interest rates than would be available from a revolving credit facility that the same banks would have been willing to provide. The note purchasers generally have a rollover option at maturity and new note purchasers are added as needed. The note purchasers bear the risk of loss in the event of default by the borrower. New note purchasers are added as needed. In the event the full line of credit is not placed with the note purchasers on any rollover date, the revolving credit banks must make funding available for the difference at the previously committed revolving credit interest rates, subject to the terms and conditions within the agreement.

With the RUF, and the use of a sole placing agent, the underwriters are not assured of securing any notes that they could place themselves nor can they benefit from any improvement in terms available in the market. The hindrance is removed by the use of NIFs with an issuer-set margin whereby the issuer determines the margin over an index at which notes will be offered.

Another form of a RUF is a transferable revolving underwriting facility (TRUF). With this arrangement the underwriter is able, with the borrower's approval, to transfer all rights and obligations under the underwriting commitment to another institution at any time during the life of the facility.

2220.3.3 RISK

The loan commitments involved in NIF and RUF transactions contain substantially the same terms as other loan commitments extended to similar borrowers. The failure of the borrower to satisfy the revolving standby agreement relieves the banks of any obligation to fund the

transaction. The major source of risk is thus the liquidity risk that is derived from the uncertainty of the timing or amount of required funding. If the underlying notes cannot be marketed at or below the interest rate specified in the agreement, the bank would need to discount the notes to whatever rate would be necessary to make the notes attractive to investors, perhaps taking an up-front loss to avoid funding a low margin loan.

NIFs and RUFs involve less credit risk than extensions of credit because of the additional step that is required before funding takes place, a step that is not present with a revolving credit agreement. In other words, no funding is required until: (1) a decision is made by the borrower to issue notes; and (2) the placing agent becomes unable to place the short-term notes with short-term investors. Further, the risk of loss rests with the note investors. The underwriter's risk of nonpayment is not present until the rollover date. If there has been a significant deterioration in the issuer/borrower's financial condition on that date, the issuer/borrower may be prevented from drawing under the facility. This would be dependent on the funding conditions or the cancellation provisions stipulated in the agreement.

2220.3.4 PRICING AND FEES

The forms of compensation involving a NIF and RUF are: the underwriting and commitment fee; the one-time arrangement fee, and the periodic placement fees. An annual fixed underwriting fee is paid by the borrower on the amount of underlying commitment. This fee must be paid regardless of the frequency of usage of the facility or whether or not the underwriters are required to make any purchases of the short-term paper. This compensation is for the commitment to underwrite the issuance of the notes. The arranger receives a one-time arrangement fee based on a percentage of the amount of the facility. The issuer pays the borrowing costs on the notes issued, usually at a spread above or below an index. A portion of this borrowing fee is retained by the placement agent or the tender panel members as compensation for placing the paper.

Competitive pricing on NIFs and RUFs causes them to be very thinly margined. Commitment fees may be as low as 5 basis points for blue chip customers, while "BBB" credit-rated or equivalent borrowers might be charged as much as 20 basis points. Because of the thin spread some banks may only be serving as an

1. The tender panel was introduced in 1983. It is usually made up of several commercial investment banks and other institutional investors. The panel members bid for any notes issued, up to a predetermined maximum spread. The revolving credit banks can bid as part of the tender panel, but they are not required to do so. Any notes not bid for are purchased by the revolving credit banks or they extend credit of an equal amount. The tender panel may be a continuous tender panel whereby the underwriters are entitled to purchase notes from the lead manager up to their pro rata share at any time during the offer period, if available, at the market price.

arranger, preferring to not participate in the market. Typical fees for this service may consist of: an up-front arrangement fee of 20 basis points on the total principal amount of the facility, and an annual placement fee such as 12.5 basis points on the short-term notes sold. Revolving credit banks usually receive facility fees and annual maintenance fees.

If the underwriters have to purchase the notes, the backup rate of interest may be the index plus 10 to 15 basis points for blue chip companies to plus 37.5 basis points over the index for “BBB” rated borrowers. The interest rates charged (if funded) are usually lower because of market-pricing conventions (lower spreads) and the intense competition within the market.

2220.3.5 STANDBY RUFs

Some RUFs may provide for a utilization fee or may provide for a higher yield on the notes in the event that more than a nominal amount of paper is allocated to the underwriters. Such a provision would more likely be found in a standby facility. Standby facilities are backup commitments under which notes are not expected to be issued. This provision essentially protects the underwriter from having to book loans that are earning an insufficient yield. The structure of the facility generally determines its pricing depending upon the requirements of the issuer/borrower.

Standby RUFs substitute for committed bank lines which may be used, for example, as backup commitments for issuance of U.S. commercial paper. Commitment fees will be low because of the low probability that funds will need to be advanced. A standby facility will make borrowing from the underwriter very expensive in relation to what the issuer might have to pay. Otherwise, the underlying notes are issued on a regular basis, the maximum yield on

the notes is set to approximate the normal market level for the issuer’s short term borrowings. This facility would have a higher underwriting fee than a standby facility, because the regular issuances of notes increase the likelihood that the underwriting bank will have to purchase notes that cannot be placed.

2220.3.6 RUF DOCUMENTS

The *revolving credit agreement* is the primary document in a RUF. It includes the principal agreement of the transaction, executed by the revolving credit banks and the borrower. It contains the terms and conditions under which the borrower can draw on the facility. The document includes the financial covenants and events of default.

An *agency agreement* between the borrower and the placement agent designates the placement agent for the notes and sets forth the conditions of the agent’s obligations for arranging the sale of the notes. Included are representations and warranties of the borrower regarding the authority to enter into the agreement and to issue the notes.

A description of the terms and conditions of the facility is contained within an *information memorandum*. Detail is provided with regard to the use of the proceeds, current and historical financial information, a description of the company, its finances and operations. It is distributed to prospective credit banks and note purchasers.

The *note* is the last document involving a RUF. Usually the notes will be unsecured obligations of the borrower and will include representations and warranties of the company regarding authorization and the absence of material litigation and bankruptcy proceedings. It will also contain a statement that a revolving credit facility is available to the borrower.

The Board has a long-standing policy on real estate appraisals, which emphasizes the importance of sound appraisal policies and procedures in a banking organization's real estate lending activity. In December 1987, the Board and the other bank regulatory agencies jointly adopted guidelines for real estate appraisal policies and review procedures. With the passage of the Federal Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) of 1989, the Board, in August 1990, as well as the other federal financial institutions regulatory agencies, adopted regulations to implement the statute's title XI provisions (12 U.S.C. 3310, 3331-3351, and 1844(b)) relating to the performance and use of appraisals by federally regulated financial institutions. On June 7, 1994, the Board and the federal financial institution regulatory agencies adopted several amendments to their appraisal regulations to clarify the agencies' appraisal requirements.¹ Additionally, the Board revised its guidelines for real estate appraisal and evaluation programs in September 1992 and October 1994. (See SR-94-50, SR-94-55, SR-95-16, SR-95-27, and SR-95-31 (SUP).)

The intent of title XI of FIRREA and subpart G of the Board's Regulation Y (12 CFR 225) is to protect federal financial and public policy interests in real estate-related financial transactions requiring the services of an appraiser. The statute requires that real estate appraisals be prepared in writing, in accordance with uniform standards, and by individuals with demonstrated competency and whose professional conduct is subject to effective supervision.

Title XI permitted each state to establish a program for certifying and licensing real estate appraisers who are qualified to perform appraisals in connection with *federally related transactions*.² Additionally, title XI designated the

Appraisal Foundation, a nonprofit appraisal industry group, as the authority for establishing qualifications criteria for appraiser certification and standards for the performance of an appraisal. The states were authorized by title XI to establish qualification standards for licensing. It established the Appraisal Subcommittee of the Federal Financial Institutions Examination Council to monitor the requirements established to meet the intent of title XI.

The Board's appraisal regulation requires appraisals performed in connection with federally related transactions entered into after August 9, 1990, to comply with the regulation. Real estate-related financial transactions entered into before August 9, 1990, would have had to comply with the Board's supervisory guidelines, issued in 1987, as well as with safe and sound banking practices. Transactions are deemed to have been entered into and a loan is deemed to have been originated if there was a binding commitment to perform before the effective date. The requirement to use a state-certified or -licensed appraiser has a separate effective date, December 31, 1992.³

2231.0.1 APPRAISAL AND EVALUATION POLICY

A banking organization's board of directors is responsible for adopting policies and procedures that establish effective real estate appraisal and evaluation programs. Analyzing real estate collateral at a loan's inception and over its life requires a sufficient understanding of appraisals and evaluations to fully assess credit risk. While the appraisal plays an important role in the loan-approval process, undue reliance should not be placed on the collateral value in lieu of an

1. The appraisal standards for federally related transactions are found in sections 225.61 to 225.67 of subpart G of Regulation Y. Section 225.63 was amended, effective December 28, 1998, to exclude from the Board's appraisal requirements transactions that involve underwriting or dealing in mortgage-backed securities. The amendment permits bank holding company subsidiaries engaged in underwriting and dealing in securities (so-called section 20 subsidiaries) to underwrite and deal in mortgage-backed securities without demonstrating that the loans underlying the securities are supported by appraisals that meet the Board's appraisal requirements. See 1999 FRB 50.

2. *Federally related transaction* refers to any real estate-related financial transaction entered into on or after August 9, 1990, that (1) the Board or any regulated institution engages in or contracts for and (2) requires the services of an appraiser.

A real estate-related financial transaction is any transaction involving (1) the sale, lease, purchase, investment in, or exchange of real property, including interests in property, or the financing thereof; (2) the refinancing of real property or interests in real property; or (3) the use of real property or interests in property as security for a loan or investment, including mortgage-backed securities.

3. States have the flexibility to adopt an earlier implementation date regarding state requirements that an appraiser be certified or licensed to perform an appraisal within his or her state. Financial institutions doing business in a state that has an earlier effective date for mandatory use of a certified or licensed appraiser than the federally mandated effective date will have to abide by any state laws.

adequate assessment of the borrower's repayment ability. However, when a credit becomes troubled, the primary source of repayment often shifts from the borrower's capacity to repay to the value of the collateral. For these reasons, it is important to have sound appraisal policies and procedures.

2231.0.1.1 Appraisal and Evaluation Programs

The appraisal and evaluation programs should be tailored to the lender's size, its location, and the nature of its real estate market and attendant real estate-related activity. These programs should establish prudent standards and procedures which ensure that written appraisals or evaluations are obtained and analyzed for real estate-related financial transactions before a final credit decision is made.

Appraisal and evaluation programs should also establish the manner in which the institution selects, evaluates, and monitors individuals who perform real estate appraisals or evaluations. Key elements of the programs should ensure that individuals are fairly considered for the assignment, possess the requisite expertise to satisfactorily complete the assignment, hold the proper state certification or license if applicable, and are capable of rendering a high-quality, written appraisal or evaluation.

2231.0.1.2 Real Estate Appraisal Compliance Procedures

To ensure compliance with the Board's real estate appraisal regulation and supervisory guidelines, the banking organization should have established regulatory compliance procedures for all appraisals and evaluations. The compliance review may be part of a loan officer's overall credit analysis and may take the form of a narrative or checklist. The individual who prepared the appraisal or evaluation should take corrective action for noted deficiencies. Unreliable appraisals or evaluations should be replaced before the final credit decision. Formal documentation or evidence of the review should be maintained.

Additionally, a banking organization should have comprehensive analytical procedures that focus on certain types of loans, such as large-dollar credits, loans secured by complex or spe-

cialized properties, nonresidential construction loans, or out-of-area real estate loans. The banking organization should establish criteria for identifying which appraisals should be considered for more comprehensive analytical procedures. These comprehensive analytical procedures should be designed to verify the appropriateness of the methods and approaches used in the appraisal and assess the reasonableness of the appraiser's analysis, opinions, and conclusions.

Formal documentation to support the comprehensive analytical procedures should be maintained. An individual performing this analysis, either an employee of the banking organization or an outside consultant, should have real estate-related training or experience and be independent of the transaction. The individual may not change the appraisal's or evaluation's estimate of value as a result of the review—unless that person is appropriately licensed or certified and performs the review according to procedures in the Uniform Standards of Professional Appraisal Practice (USPAP), standard 3.

2231.0.1.3 Reappraisals and Reevaluations

A program should be developed for obtaining reappraisals or reevaluations as part of a program of prudent portfolio review and monitoring techniques—even when additional financing is not being contemplated. Examples include large-credit exposures and out-of-area loans. The decision to reappraise or reevaluate the real estate collateral for a subsequent transaction should be guided by the appraisal exemption for renewals, refinancings, and other subsequent transactions. Loan workouts, debt restructurings, loan assumptions, and similar transactions involving the addition or substitution of borrowers may qualify for the exemption for renewals, refinancings, and other subsequent transactions. Use of this exemption, however, depends upon the condition and quality of the loan, the soundness of the underlying collateral, and the validity of the existing appraisal or evaluation.

A loan may be renewed or refinanced based on a valid appraisal or evaluation if the planned future use of the property is consistent with the use identified in the appraisal or evaluation. However, if the property has reportedly appreciated because of a planned change in use, such as rezoning, an appraisal would be required for a federally related transaction—unless another exemption applied (for example, if the amount financed is below the appraisal threshold).

While the Board's appraisal regulation generally allows appropriate evaluations of real estate collateral in lieu of an appraisal for loan renewals and refinancings, in certain situations an appraisal is required. If new funds in excess of reasonable closing costs are advanced, a new appraisal for the renewal of an existing transaction should be obtained when there is a material change in market conditions that threatens the banking organization's real estate collateral protection.

For loan workouts, a reappraisal or reevaluation may be prudent, even if it is obtained after the modification. If there is an expected delay in obtaining the appraisal or evaluation, the banking organization should first protect its interest to facilitate the orderly collection of the loan or to reduce the risk of loss. In a troubled-loan situation, a reappraisal would not be required when a banking organization advances funds to protect its interest in a property, such as to repair damaged property, because these funds are being used to restore the damaged property to its original condition.

Real estate posted as collateral that has been acquired by a banking organization through foreclosure or deed in lieu of qualifies for the appraisal exemption for subsequent transactions. Therefore, the banking organization is only required to have an evaluation but may first initiate the foreclosure proceedings to protect its collateral interests before obtaining the evaluation. Because the sale or disposal and the financing of the sale of other real estate owned (OREO) do not arise from an existing extension of credit, these OREO transactions do not qualify for the appraisal exemption. Thus, a banking organization is required to have a valid appraisal to support the sale of OREO unless the transaction qualifies for another appraisal exemption. If the banking organization already has a valid appraisal (or an evaluation) of the real estate, it need not obtain a new appraisal.

2231.0.2 TRANSACTIONS NOT REQUIRING THE SERVICES OF A LICENSED OR CERTIFIED APPRAISER

The Board has determined that certain categories of real estate-related financial transactions do not require the services of a certified or licensed appraiser and, as such, are not considered federally related transactions.

Transactions not requiring the services of a certified or licensed appraiser include transactions in which—

1. the transaction value⁴ is \$250,000 or less;
2. a lien on real property has been taken as collateral in an abundance of caution;
3. the transaction is not secured by real estate;
4. a lien on real estate has been taken for purposes other than the real estate's value;
5. the transaction is a business loan that has a transaction value of \$1 million or less and is not dependent on the sale of, or rental income derived from, real estate as the primary source of repayment;
6. a lease of real estate is entered into, unless the lease is the economic equivalent of a purchase or sale of the leased real estate;
7. the transaction involves an existing extension of credit at the lending institution, provided that there has been no obvious and material change in market conditions or physical aspects of the property that threatens the adequacy of the institution's real estate collateral protection after the transaction, even with the advancement of new monies, or there is no advancement of new monies, other than funds necessary to cover reasonable closing costs;
8. the transaction involves the purchase, sale, investment in, exchange of, or extension of credit secured by a loan or interest in a loan, pooled loans, or interests in real property, including mortgage-backed securities, and each loan or interest in a loan, pooled loan, or real property interest met the Board's regulatory requirements for appraisals at the time of origination;
9. the transaction is wholly or partially insured or guaranteed by a U.S. government agency or U.S. government-sponsored agency;
10. the transaction either qualifies for sale to a U.S. government agency or U.S. government-sponsored agency, or involves a residential real estate transaction in which the appraisal conforms to the Federal National Mortgage Association or Federal Home Loan Mortgage Corporation appraisal standards applicable to that category of real estate;

4. *Transaction value* is defined as the amount of the loan or extension of credit under consideration. For a pool of loans or a mortgage-backed security, the transaction value is the amount of each individual loan. In determining transaction value, the senior and junior debt are considered separate transactions under the appraisal rule. However, a series of related transactions will be considered one transaction if it appears that an institution is attempting to avoid the appraisal requirement by structuring the transactions below the appraisal threshold.

11. the regulated institution is acting in a fiduciary capacity and is not required to obtain an appraisal under any other law;
12. the transaction involves underwriting or dealing in mortgage-backed securities;⁵ or
13. the Board determines that the services of an appraiser are not necessary to protect federal financial and public policy interests in real estate-related financial transactions or to protect the safety and soundness of the institution.

For transactions below the appraisal threshold, qualifying for the \$1 million or less business-loan exemption, or qualifying for the existing extension-of-credit exemption, the Board still requires an appropriate evaluation of the real property collateral that is consistent with safe and sound banking practices.

The Board reserves the right to require an appraisal on an exempt transaction whenever it is necessary to address safety-and-soundness concerns. Whether a banking organization will be required to obtain an appraisal for a particular transaction or an entire group of credits will depend on its condition. For example, if a banking organization is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the banking organization to obtain an appraisal for all new transactions below the threshold. However, regardless of a banking organization's condition, an examiner may require an appraisal for a particular real estate-related transaction to address safety-and-soundness concerns.

2231.0.3 OBTAINING AN APPRAISAL

The banking organization or its agent is responsible for engaging the appraiser and must have sufficient time to analyze the appraisal as part of its decision process to enter into the transaction. A banking organization may not accept an appraisal prepared for a potential borrower as the appraisal for a federally related transaction. An appraisal obtained by a financial services institution may be used by a federally regulated institution so long as procedures have been established for reviewing appraisals, the review indicates that the appraisal meets the regulation's requirements, and the review is documented in writing.

5. This Regulation Y exemption from the Board's appraisal standards was effective on December 28, 1998.

For a multiphased development or construction loan, the appraisal of an earlier phase cannot be used for a new phase due to the change in risk. However, if the original appraisal was prepared for all phases of the project, the project appraisal may be used if the appraisal's value for the new phase is still valid at the time additional credit is extended.

2231.0.4 USEFUL LIFE OF AN APPRAISAL

Since a banking organization may wish to use an existing appraisal or evaluation for a subsequent loan or investment, its appraisal and evaluation program should include criteria to determine the validity of an existing appraisal or evaluation. The useful life of an appraisal will vary, depending on the circumstances surrounding the property and the marketplace. When deciding if an appraisal or evaluation may be used for a subsequent transaction, a banking organization should determine if any material changes to the underlying assumptions have occurred that would affect the original estimate of value.

Examples of factors that could cause material changes to reported values include the passage of time; the volatility of the local market; the availability of financing; the inventory of competing properties; new improvements to, or lack of maintenance of, the subject or competing, surrounding properties; a change in zoning; or environmental contamination. The banking organization should document its information sources and analyses used to determine if an existing appraisal or evaluation remains valid. It should also document whether the banking organization will be using that appraisal or evaluation in a subsequent transaction.

2231.0.5 APPRAISAL REQUIREMENTS

The objective of an appraisal is to communicate the appraiser's reasoning and conclusions logically so that the reader is led to the appraiser's estimation of market value. The contents of appraisals should conform to the standards of the Board's appraisal regulation and to those established in USPAP as promulgated by the Appraisal Standards Board of the Appraisal Foundation. The actual form, length, and content of appraisal reports may vary, depending on the type of property being appraised and the nature of the assignment. Standard forms com-

pleted in compliance with the regulation and USPAP are also acceptable.

2231.0.5.1 Appraisal Standards

The minimum standards for appraisals performed in connection with federally related transactions are those set forth in USPAP, as well as any other standards that the Board deems necessary. In summary, an appraisal must—

1. conform to the generally accepted appraisal standards as evidenced by USPAP, unless principles of safe and sound banking require compliance with stricter standards;
2. be written and contain sufficient information and analysis to support the banking organization's decision to engage in the transaction;
3. analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, non-market lease terms, and tract developments with unsold units;
4. be based on the definition of market value as set forth in the regulation; and
5. be performed by state-licensed or -certified appraisers in accordance with the requirements in the regulation.

The Board's appraisal regulation also permits banking organizations to use appraisals prepared according to the USPAP Departure Provision, which permits limited exceptions to "specific guidelines" in USPAP. Appraisers using the Departure Provision still must comply with all "binding requirements" of USPAP and must be sure that the resulting appraisal will not be misleading.

2231.0.5.2 Appraisal Assignment

A banking organization may engage an appraiser to perform an appraisal assignment, either a complete or a limited appraisal. In a complete appraisal assignment, an appraiser must meet all USPAP standards and guidelines in estimating market value. In a limited appraisal assignment, the appraiser elects to depart from certain specific guidelines by invoking the Departure Provision. Before beginning the appraisal, the appraiser must obtain the banking organization's concurrence that the use of the Departure Provision is appropriate for the transaction. The appraiser must ensure that the resulting appraisal report will not mislead the banking organization or other intended users of the appraisal report. The banking organization

should realize that as the degree of departure increases, the extent of reliability of the limited appraisal decreases, resulting in a higher level of risk.

2231.0.5.3 Appraisal Reports

The appraisal report usually includes a disclosure of sales history and an opinion as to the highest value and best use of the property. After preparing a report, appraisers must certify that—

1. statements of fact are true and correct,
2. limiting conditions have been disclosed,
3. they have no interest (present or future) in the transaction or property,
4. compensation is not contingent on rendering a specified value,
5. they have complied with USPAP,
6. an inspection of the property was or was not performed, and
7. assistance was or was not received in the preparation of the appraisal.

Three different report formats can be used for either the complete or the limited appraisal assignment: a self-contained report, a summary report, and a restricted report. Since USPAP requires all appraisal reports to encompass all aspects of the assignment, reports will differ based on the degree of detail presented. The self-contained appraisal report provides the most detail; the summary appraisal report condenses the information; and the restricted appraisal report presents minimal information, with supporting details maintained in the appraiser's work files.

The restricted report is not appropriate for a significant number of federally related transactions because the minimal amount of information limits the usefulness of the document for underwriting, compliance, and other decision-making purposes. However, a restricted report might be used when providing ongoing collateral monitoring of a banking organization's real estate transactions and under other circumstances when a banking organization's program requires an evaluation.

2231.0.5.4 Appraisal Content

The appraisal must reflect a market value of the real estate. The regulation defines market value

as the most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from the seller to the buyer under conditions whereby—

1. the buyer and seller are typically motivated,
2. both parties are well informed or well advised and acting in what they consider their own best interests,
3. a reasonable time is allowed for exposure in the open market,
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto, and
5. the price represents the normal consideration for the property sold, unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

To properly underwrite a construction loan, a banking organization may need to know the prospective value of a property and its market value as of the appraisal date. Prospective value is based on events yet to occur, such as completion of construction or renovation, reaching stabilized occupancy, or some other event yet to be determined. Thus, more than one value may be reported in an appraisal as long as all values are clearly described and reflect the projected dates when future events could occur. Assumptions and projections used to develop prospective value estimates must be fully supported and reasonable in light of current market conditions.

2231.0.6 APPRAISAL VALUATION APPROACHES

The appraiser typically uses three market-value approaches to analyze the value of property:

1. cost approach
2. comparable-sales approach
3. capitalization-of-income approach

All three approaches have particular merits depending on the type of real estate being appraised. For single-family residential property, the cost and comparable-sales approaches are most frequently used since the common use

of the property is the personal residence of the owner. However, if a single-family residential property is intended to be used as a rental property, the appraiser would have to consider the income approach as well as the cost and comparable-sales approaches. For special-use commercial properties, the appraiser may have difficulty obtaining sales data on comparable properties and may have to base the value estimate on the cost and capitalization of income approach. If an approach is not used in the appraisal, the appraiser should disclose the reason the approach was not used and whether this had an impact on the value estimate.

2231.0.6.1 Value Correlation

The three value estimates—cost, market, and income—must be evaluated by the appraiser and correlated into a final value estimate based on the appraiser's judgment. Correlation does not imply averaging the value estimates obtained by using the three different approaches. When these value estimates are relatively close together, correlating them and setting the final market-value estimate presents no special problem. However, if widely divergent values are obtained by using the three appraisal approaches, the appraiser must exercise judgment in analyzing the results and determining the estimate of market value.

2231.0.6.1.1 Cost Approach

In the cost approach to value estimation, the appraiser obtains a preliminary indication of value by adding the estimated depreciated reproduction cost of the improvements to the estimated land value. This approach is based on the assumption that the reproduction cost is the upper limit of value and that a newly constructed building would have functional and mechanical advantages over an existing building. The appraiser would evaluate any depreciation, that is, disadvantages or deficiencies, of the existing building in relation to a new structure.

The cost approach consists of four basic steps: (1) estimate the value of the land as though vacant, (2) estimate the current cost of reproducing the existing improvements, (3) estimate depreciation and deduct from the reproduction-cost estimate, and (4) add the estimate of land value and the depreciated reproduction cost of improvements to determine the value estimate.

2231.0.6.1.2 *Comparable-Sales Approach*

The focus of this approach is to determine the recent sales price of similar properties. Through an appropriate adjustment for differences in the subject property and the selected comparable properties, the appraiser estimates the market value of the subject property based on the sales price of the comparable properties. To determine the extent of comparability of two or more properties, the appraiser must judge their similarity with respect to age, location, condition, construction, layout, and equipment. The sales or list price of those properties that the appraiser determines to be most comparable will tend to set the range for the value of the subject property.

2231.0.6.1.3 *Income Approach*

The income approach estimates the project's expected income over time converted to an estimate of its present value. The income approach typically is used to determine the market value of income-producing properties such as office buildings, apartment complexes, hotels, and shopping centers. In the income approach, the appraiser can use several different capitalization or discounted-cash-flow techniques to arrive at a market value. These techniques include the band-of-investments method, mortgage-equity method, annuity method, and land-residual technique. The use of a particular technique will depend on whether there is project financing, there are long-term leases with fixed-level payments, and the value is being rendered for a component of the project such as land or buildings.

The accuracy of the income approach depends on the appraiser's skill in estimating the anticipated future net income of the property and in selecting the appropriate capitalization rate and method. The following data are assembled and analyzed to determine potential net income and value:

1. Rent schedules and the percentage of occupancy for the subject property and for comparable properties for the current year and several preceding years. This information provides gross rental data and the trend of rentals and occupancy, which are then analyzed by the appraiser to estimate the gross income the property should produce.
2. Expense data such as taxes, insurance, and operating costs being paid from revenues derived from the subject property and com-

parable properties. Historical trends in these expense items are also determined.

3. Timeframe for achieving "stabilized" or normal occupancy and rent levels (also referred to as holding period).
4. An appropriate capitalization rate and valuation technique, selected and applied to net income to establish a value estimate.

Basically, the income approach converts all expected future net operating income into a value estimate. When market conditions are stable and no unusual patterns of future rents and occupancy rates are expected, the direct-capitalization method is used to value income properties. This method calculates the value of a property by dividing an estimate of its stabilized annual income by a factor called a "cap" rate. Stabilized income generally is defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions. The cap rate—usually defined for each property type in a market area—is viewed by some analysts as the required rate of return stated in terms of current income.

The use of this technique assumes that either the stabilized income or the cap rate, used accurately, captures all relevant characteristics of the property relating to its risk and income potential. If the same risk factors, required rate of return, financing arrangements, and income projections are used, explicit discounting and direct capitalization will yield the same results.

For special-use properties, new projects, or troubled properties, the discounted-cash-flow (net present value) method is the more typical approach to analyzing a property's value. In this method, a timeframe for achieving a stabilized or normal occupancy and rent level is projected. Each year's net operating income during that period is discounted to arrive at the present value of expected future cash flows. The property's anticipated sales value at the end of the stabilization period (its terminal or reversion value) is then estimated. The reversion value represents the capitalization of all future income streams of the property after the projected occupancy level is achieved. The terminal or reversion value is then discounted to its present value and added to the discounted income stream to arrive at the total present market value of the property.

Most importantly, the analysis should be

based on the ability of the project to generate income over time based on reasonable and supportable assumptions. Additionally, the discount rate should reflect reasonable expectations about the rate of return that investors require under normal, orderly, and sustainable market conditions.

2231.0.7 OTHER DEFINITIONS OF VALUE

The Board's appraisal regulation requires that the appraisal contain a market value of the real estate collateral. Some other definitions of value that are encountered when appraising and evaluating real estate transactions are described below.

1. *Fair value* is an accounting term that is generally defined as the amount in cash or cash-equivalent value or other consideration that a real estate parcel would yield in a current sale between a willing buyer and a willing seller (selling price), other than a forced or liquidation sale.⁶ According to accounting literature, fair value is generally used in valuing assets in nonmonetary transactions, troubled-debt restructuring, quasi-reorganizations, and business combinations accounted for by the purchase method. An accountant generally defines fair value as market value; however, depending on the circumstances, these values may not be the same for a particular property.
2. *Investment value* is based on the data and assumptions that meet a particular investor's criteria and objectives for a specific property or project. The investor's criteria and objectives are often substantially different than those of participants in a broader market. Thus, investment value can be significantly higher than market value in certain circumstances and should not be used in credit-analysis decisions.
3. *Liquidation value* assumes that there is little or no current demand for the property and that the property needs to be disposed of quickly. In this situation, the owner may have to sacrifice property appreciation for an immediate sale.
4. *Going-concern value* is based on the value of the business entity, rather than the value of the real estate. The valuation is based on the existing operations of a business that has a proven operating record, with the assumption that the business will continue to operate.
5. *Assessed value* represents the value on which a taxing authority bases its assessment. The assessed value and market value may differ considerably due to tax assessment laws, timing of reassessments, and tax exemptions allowed on properties or portions of a property.
6. *Net realizable value (NRV)* is recognized under generally accepted accounting principles⁷ as "the estimated selling price in the ordinary course of business less estimated costs of completion (to the stage of completion assumed in determining the selling price), holding, and disposal." The NRV is generally used to evaluate the carrying amount of assets being held for disposition and properties representing collateral. While the market value or future selling price is generally used as the basis for the NRV calculation, the NRV also reflects the current owner's costs to complete the project and to hold and dispose of the property. For this reason, the NRV will generally be less than the market value.

The appraiser should state the definition of value reported in the appraisal, and, for federally related transactions, the value must meet the definition of market value in the regulation. This is the most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, assuming the buyer and seller are both acting prudently and knowledgeably, and the price is not affected by undue stimulus. Other presentations of value, in addition to market value, are allowed and may be included in the appraisal at the request of the banking organization.

2231.0.8 EVALUATION REQUIREMENTS

The Board's appraisal regulation requires an evaluation for certain real estate-related financial transactions that are exempt from the title XI appraisal requirement. These transactions include—

6. FASB Statement No. 67, "Accounting for Costs and Initial Rental Operations of Real Estate Projects," Appendix A—Glossary.

7. FASB Statement No. 67, "Accounting for Costs and Initial Rental Operations of Real Estate Projects," Appendix A—Glossary.

1. transactions below the \$250,000 threshold;
2. transactions qualifying for the exemption for business loans of \$1 million or less, when rental income or sales proceeds from real estate is not the primary source of repayment; and
3. subsequent transactions resulting from an existing extension of credit (for example, renewals and refinancings).

An evaluation should provide a general estimate of the value of the real estate and need not meet the detailed requirements of a title XI appraisal.⁸ An evaluation must provide appropriate information to enable the banking organization to make a prudent decision regarding the transaction. Moreover, a banking organization is not precluded from obtaining an appraisal that conforms to the regulation for any exempt transaction. At a minimum, an evaluation should—

1. be written;
2. include the preparer's name, address, and signature, and the effective date of the evaluation;
3. describe the real estate collateral, its condition, and its current and projected use;
4. describe the sources of information used in the analysis;
5. describe the analysis and supporting information; and
6. provide an estimate of the real estate's market value, with any limiting conditions.

2231.0.8.1 Form and Content of Evaluations

The documentation for evaluations should fully support the estimate of value and include sufficient information to understand the evaluator's analysis, assumptions, and conclusions. The evaluator is not required to use a particular form or valuation approach, but the analysis should apply to the type of property and fully explain the value rendered.

An individual who conducts an evaluation should have real estate–related training or experience relevant to the type of property. However, the individual does not have to be a state-licensed or -certified appraiser. Prudent practices require that a more detailed evaluation be performed as the banking organization engages

in more complex real estate–related financial transactions or as its overall exposure in a real estate–related financial transaction increases.

An evaluation for a transaction that needs a more detailed analysis should describe the property; give its location; and discuss its use, especially for nonresidential property. An evaluation for a transaction that requires a less detailed analysis may be based on information such as comparable property sales information from sales-data services (for example, the multiple-listing service or current tax-assessed value in appropriate situations).⁹ Further, an evaluation may be based on the banking organization's own real estate loan portfolio experience and on value estimates prepared for recent loans on comparable properties, when appraisals meeting the regulatory requirements were obtained. Regardless of the method, the banking organization must document its analysis and findings in the loan file.

2231.0.9 SELECTION AND QUALIFICATIONS CRITERIA FOR APPRAISERS AND EVALUATORS

The accuracy of an appraisal or evaluation depends on the competence and integrity of the individual performing the appraisal or evaluation, as well as on that person's expertise at developing and interpreting pertinent data for the subject property. Appraisers and evaluators should have adequate training, experience, and knowledge of the local real estate market to make sound judgments concerning the value of a particular property. Their level of training, experience, and knowledge should be commensurate with the type and complexity of the property to be valued. Additionally, appraisers and evaluators should be independent of the credit decision, have no interest in the property being appraised, and have no affiliations or associations with the potential borrower. Absent absolute lines of independence, a banking organization must be able to demonstrate that it has prudent safeguards in place to isolate its collateral-evaluation process from influence or interference from the loan-production process.

9. Assessed values for tax purposes may be a specified fraction of market value, as determined by the tax assessor. Therefore, tax-assessed values should be adjusted to a market-value equivalent. In cases where the assessed value does not have a reliable correlation to current value, the use of assessed value would be inappropriate as the basis for an evaluation.

8. An appraisal means the kind of specialized opinion on the value of real estate that contains certain formal elements recognized by appraisal industry practices and standards.

2231.0.9.1 Appraiser Qualifications

Title XI of FIRREA identified two classifications of appraisers to be used in federally related transactions: state-certified appraisers and state-licensed appraisers. For a state-certified appraiser, title XI anticipated that the states would adopt similar standards for certification based on the qualification criteria of the Appraiser Qualifications Board of the Appraisal Foundation. The Appraisal Foundation standards set forth minimum educational, testing, experience, and continuing-education requirements. For a licensed appraiser, the states have some latitude to establish qualification standards, provided criteria are adequate to protect federal financial and public policy interest.

The Appraisal Subcommittee of the FFIEC is responsible for monitoring state compliance with title XI. The Board also has the authority to impose additional certification and licensing requirements on those adopted by a given state.

2231.0.9.2 Selection of an Appraiser

An independent appraisal is one in which the appraiser is not participating in the administration of the credit or in the approval of the transaction and has no interest, financial or otherwise, in the property. In certain instances involving small banking organizations, officers and directors who perform appraisals must take appropriate steps to ensure that they are independent from the transaction under consideration.

When selecting an appraiser for an appraisal assignment, a banking organization is expected to consider whether the individual holds the proper state certification or license and has the appropriate experience and educational background to complete the assignment. Financial institutions may not exclude a qualified appraiser from consideration for an appraisal assignment solely because the appraiser lacks membership in a particular appraisal organization or does not hold a particular designation from an appraisal association, organization, or society.

In that regard, banking organizations are expected to treat all appraisers fairly and equitably in determining whether to use the services of a particular appraiser. Generally, banking organizations have established procedures for selecting appraisers and maintaining an

approved appraiser list. The practice of pre-approving appraisers for ongoing appraisal work and maintaining an approved appraiser list is acceptable so long as all appraisers are required to follow the same approval process. However, a banking organization that requires appraisers who are not members of a particular appraisal organization to formally apply, pay an application fee, and submit samples of previous appraisal reports for review—but does not have identical requirements for appraisers who are members of other appraisal organizations—would be viewed as having a discriminatory selection process.

2231.0.9.3 Appraisals Performed by Certified or Licensed Appraisers

In summary, a banking organization is required to use a certified appraiser for (1) all federally related transactions over \$1 million, (2) nonresidential federally related transactions of more than \$250,000, and (3) complex residential federally related transactions of more than \$250,000.¹⁰ A banking organization may use either a state-certified or a state-licensed appraiser for noncomplex residential federally related transactions that are under \$1 million.

2231.0.9.4 Other Appraiser Designations

Some states have adopted other appraiser designations that may cause confusion about whether a particular appraiser holds the appropriate designation for a given appraisal assignment. Additionally, some states use designations such as “certified residential” appraiser and “certified general” appraiser, which leads to further confusion. Other states have no specified license designation but have used the term “certified residential” based on the standards for licensing. For this reason, a banking organization needs to understand the qualification criteria set forth by the state appraiser regulatory body and whether these standards are equivalent to the federal designations accepted by the Appraisal Subcommittee.

The Appraisal Subcommittee has recognized two other appraiser designations: certified residential appraiser and transitional licensed appraiser. For the certified residential appraiser, the minimum qualification standards are those

¹⁰ Complex one- to four-family residential property appraisal means one in which the property to be appraised, the form of ownership, or the market conditions are atypical.

established by the Appraiser Qualifications Board for “certified residential real estate appraiser.” Under the Board’s regulation, a certified residential appraiser would be permitted to appraise real estate in connection with a federally related transaction designated for a “certified” appraiser, provided the individual is competent for the particular appraisal assignment.

The Appraisal Subcommittee and the Board are also willing to recognize a transitional license that would allow a state to issue a license to an appraiser, provided the individual has passed an examination and has satisfied either the education or experience requirement. A transitional licensed appraiser is permitted to appraise real estate collateral in connection with a federally related transaction as if licensed. The transitional licensed appraiser is expected to complete the missing requirement within a set timeframe or the license expires. Recognition of a transitional license was believed to be necessary to ease the initial problems and inefficiencies resulting from a new regulatory program. The Appraisal Subcommittee has advised the states that the use of the transitional licenses should be phased out once the appraiser regulatory program is fully established. As a result, the use of a transitional license and the applicable timeframe will vary from state to state.

2231.0.9.5 Qualifications of Individuals Who Can Perform Evaluations

Evaluations can be performed by a competent person who has experience in real estate–related activities, including, but not limited to, appraisals, real estate lending, real estate consulting, and real estate sales. A banking organization may also augment in-house expertise by hiring an outside consultant familiar with a certain market or a particular type of real estate. The evaluation procedures should have established standards for selecting qualified individuals to perform evaluations and for confirming their qualifications and independence to evaluate a particular transaction. An individual performing an evaluation need not be licensed or certified. However, if a banking organization desires, it may use state-licensed or -certified appraisers to prepare evaluations.

2231.0.10 EXAMINER REVIEW OF APPRAISAL AND EVALUATION POLICIES

A banking organization’s appraisal and evaluation policies and procedures will be reviewed

as part of the inspection of the organization’s overall activities. This includes a review of the procedures for selecting an appraiser for a particular appraisal or evaluation assignment and for confirming that the appraiser is qualified, independent, and if applicable, licensed or certified to undertake the assignment. If an institution maintains a listing of qualified real estate appraisers acceptable for the banking organization’s use, the examiner should ascertain whether the board of directors or senior management has reviewed and approved the list.

If a banking organization is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the banking organization to obtain appraisals for all new real estate–related financial transactions below the threshold that are not subject to another exemption. The Reserve Bank will determine if a particular banking organization will have to obtain appraisals below the threshold.

When analyzing individual credits, examiners will analyze appraisals or evaluations to determine that the methods, assumptions, findings, and conclusions are reasonable and comply with the Board’s rule, policies, and supervisory guidelines. Examiners should not challenge the underlying assumptions, including the discount and capitalization rates used in appraisals, that differ only in a limited way from norms that would generally be associated with the property under review. Furthermore, an examiner is not bound to accept the appraisal or evaluation results, regardless of whether a new appraisal or evaluation was requested during the examination. An examiner who concludes that an appraisal or evaluation is deficient for any reason will take that fact into account when judging the quality of the credit.

When the examiner can establish that the underlying facts or assumptions are inappropriate and can support alternative assumptions, he or she may adjust the estimated value of the property for credit-analysis purposes. It is important to emphasize that an examiner’s overall analysis and classification of a credit may be based on other credit or underwriting standards, even if the loan is secured by real property whose value is supported by an appraisal or evaluation.

Significant failures to meet standards and procedures as outlined above will be criticized and corrective action will be required. Furthermore, banking organizations that fail to maintain a

sound appraisal or evaluation program or that fail to comply with the agencies' appraisal regulations and policies, or to the Board's supervisory guidelines, will be cited in inspection reports and may be criticized for unsafe and unsound banking practices. Deficiencies will require corrective action.

The appraisal regulation and guidelines require that banking organizations use the services of qualified, independent, and certified or licensed appraisers to perform appraisals. Furthermore, a banking organization that knowingly uses the services of an individual who is not properly certified or licensed to perform an appraisal in connection with a federally related transaction is violating the Board's Regulation Y. Any action of a state-certified or -licensed appraiser that is contrary to the purpose of title XI should be reported to the Federal Reserve Bank for referral to the appropriate state appraiser regulatory agency for investigation.

2231.0.11 INSPECTION OBJECTIVES

1. To determine whether policies, practices, procedures, and internal controls regarding real estate appraisals and evaluations for real estate-related financial transactions are adequate.
2. To determine whether the banking organization's officers and employees are conforming with the board of directors' appraisal policies.
3. To determine whether appraisals performed in connection with federally related transactions comply with the minimum standards of the Board's appraisal regulation and the Uniform Standards of Professional Appraisal Practice.
4. To determine if appraisers used in connection with federally related transactions are certified or licensed as appropriate.
5. To determine whether appraisers are competent to render appraisals in federally related transactions and whether they are independent of the specific transaction or other lending, investment, or collection functions as appropriate.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations or noncompliance with provisions of supervisory guidelines have been noted.

2231.0.12 INSPECTION PROCEDURES

1. Test real estate-related financial transactions for compliance with approved real estate appraisal policies and established practices, procedures, and internal controls. Also, obtain a listing of any deficiencies noted in the latest review performed by internal and/or external auditors and determine if appropriate corrections have been made. Based on these results, determine the scope of the inspection for appraisals.
 - a. Provide copies of the banking organization's appraisal and evaluation policies and procedures to examiners assigned to functional areas when real estate-related transactions may require the services of an appraiser or evaluator.
 - b. Review appraisals and evaluations of individual real estate-related transactions during the inspection of loans, BHC premises, DPC assets, or OREO transactions. Review the appraisals and evaluations for compliance with the Board's appraisal regulation and appraisal guidelines and with the banking organization's appraisal and evaluation programs.
 - c. When real estate-related transactions are examined on a portfolio basis, review the appraisal and evaluation processes. Determine whether the processes ensure that appraisals and evaluations comply with the Federal Reserve Board's appraisal regulation, the interagency appraisal guidelines, and the banking organization's appraisal and evaluation programs.
2. When performing the above procedures, determine whether—
 - a. the board of directors approves and periodically reviews the appraisal policies and procedures that establish the appraisal and evaluation programs for real estate lending, as required by the Board's real estate lending regulation;
 - b. the appraisal and evaluation programs include comprehensive analytical procedures;
 - c. the banking organization engages competent individuals who are independent of the transaction to perform appraisals and evaluations, and whether the appraisal and evaluation programs establish the manner in which it selects, evaluates, and monitors those individuals;
 - d. the appraisal program ensures that appraisals conform to the Board's appraisal regulation;
 - e. the evaluation program ensures that eval-

- uations conform to the Board's guidance on evaluations (SR-94-55 and SR-94-50);
- f. the appraisal and evaluation programs appropriately reflect the banking organization's size, its location, and the nature and complexity of its real estate-related activities;
 - g. policies and procedures require appraisals and evaluations to be written;
 - h. criteria have been established for determining when to obtain reappraisals or reevaluations as part of a program of prudent portfolio review and monitoring; and
 - i. the banking organization has appropriate procedures to assess the validity of appraisals and evaluations for certain subsequent transactions that are exempt from the Board's appraisal requirements, or whether new appraisals or evaluations were obtained.
3. Review and assess the banking organization's compliance procedures to ensure that the appraisal and evaluation programs are effective and in compliance with regulatory requirements and that they review the appropriateness of appraisals and evaluations before final credit decisions. Determine if—
 - a. The monitoring procedures demonstrate that appraisals and evaluations comply with the Board's appraisal regulation and the Board's appraisal and evaluation guidelines.
 - b. The program provides that appraisals and evaluations are obtained before the final credit or other decision. However, for transactions involving loan workouts or restructurings to facilitate the orderly collection of the credit or to reduce the risk of loss, appraisals or evaluations were obtained in a reasonable time after the transaction occurs.
 - c. The programs have review procedures to verify that the methods, assumptions, and conclusions in the appraisals or evaluations are reasonable and appropriate for the transaction and the property.
 - d. Criteria are established to identify which transactions should have their appraisal or evaluation considered for more comprehensive analytical procedures. For example, certain types of transactions, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential real estate construction loans, or out-of-area real estate, should ensure that the appraisal or evaluation provides adequate support for the particular transaction.
 - e. The banking organization ensures that individuals who perform these reviews have appropriate training and experience and are independent of the transaction.
 - f. There is adequate documentation to demonstrate that the review has occurred. While a checklist may serve this purpose for many of these transactions, a more comprehensive review would require a more detailed written analysis.
 - g. Appropriate procedures exist for any deficiencies noted in the review, thus requiring (1) the individual who prepared the appraisal or evaluation to correct the deficiencies or (2) a new appraisal or evaluation to be obtained before the final credit or other decision.
 - h. The program ensures that changes of an appraisal's estimate of value were made in accordance with standard 3 of the Uniform Standards of Professional Appraisal Practice (USPAP), and whether the changes were made by an appropriately qualified licensed or certified appraiser.
 - i. Appropriate procedures exist for referring potential cases of misconduct by licensed and certified appraisers to the appropriate state appraiser regulatory authority.
4. Assess the procedures for determining whether a real estate-related transaction requires an appraisal or evaluation, or is otherwise exempt from the Board's appraisal regulation.
 - a. For appraisals required under the appraisal program, determine that—
 - the banking organization engaged the appraiser or, if the appraiser was engaged directly by another financial services entity, the banking organization determined that the appraisal complies with its own program and the Board's appraisal regulation. (The banking organization may *not* accept an appraisal prepared for the borrower.);
 - the appraisal was obtained in sufficient time to be analyzed before the final credit or other decision;
 - the appraisal conforms to the generally accepted appraisal standards as evidenced by USPAP, for example—
 - the appraiser uses the three market-value approaches—cost, comparable sales, and income—and corre-

- lates the results into a final value estimate;
- if the above-mentioned approaches were not used, the appraiser discloses the reason and whether this affected the value estimate;
 - the appropriate type of appraisal was obtained (complete or limited), and the appropriate report format (self-contained, summary, or restricted) was used for the particular transaction; and
 - if a limited appraisal was used (that is, the appraiser invoked the Departure Provision), the appraisal fully discloses the limiting conditions;
- the appraisal is written and contains sufficient information and analysis to support the banking organization's decision to enter into the transaction;
 - if the appraisal is for proposed construction or renovation, partially leased buildings, nonmarket lease terms, or tract developments with unsold units, the appraisal includes an appropriate analysis and disclosure of deductions and discounts for holding costs, marketing costs, leasing commissions, rent losses, tenant improvements, and entrepreneurial profits;
 - the appraisal contains an estimate of the current market value of the property in its actual physical condition and current zoning, as defined by the Board's appraisal regulation;
 - the appraisal contains an estimate of the property's prospective market value based on the completion of improvements or stabilized occupancy, if the appraisal is for a property where improvements or renovations are to be made;
 - the appraisal clearly identifies each value estimate and, for the prospective value, gives the projected dates when future events are expected to occur when more than one estimate of value is reported;
 - the individual who performed the appraisal was independent of the transaction and appropriately licensed and certified for the assignment:
 - A certified appraiser must perform the appraisal for a transaction of \$1,000,000 or more, a nonresidential transaction of \$250,000 or more, or a complex residential transaction of \$250,000 or more.
 - A licensed or certified appraiser must perform the appraisal for any other type of federally related transaction.
 - the individual who performed the appraisal had appropriate training and experience demonstrating expertise in appraising similar types of properties and knowledge of the property's market; and
 - incidents of possible appraiser misconduct are documented for possible referral by the Reserve Bank to the state appraiser regulatory agency.
- b. For exempt transactions requiring an evaluation, such as transactions below the \$250,000 threshold, business loans less than \$1 million, and subsequent transactions, including renewals and refinancings, determine that—
- the evaluation at a minimum—
 - is written;
 - includes the preparer's name, address, and signature and the effective date;
 - describes the real estate collateral, its condition, and its current and projected use;
 - describes the source of information used in the analysis;
 - describes the analysis and supporting information; and
 - gives an estimate of the real estate's value with limiting conditions;
 - the evaluation provides sufficient detail to support the estimate of collateral value in more complex real estate-related transactions, or when the overall exposure is high;
 - the individual who performed the evaluation had the appropriate real estate training and sufficient experience and knowledge of the market to prepare the evaluation; and
 - the individual who performed the evaluation, regardless of whether the banking organization's staff performed the evaluation, was independent of the transaction, credit decision, or function.
5. Assess management's compliance with its policies and procedures and with the Board's appraisal regulation and guidance by reviewing appraisals and evaluations.
6. If the review of appraisals or evaluations on one- to four-family residential loans or multi-

- family loans indicates that the appraisals or evaluations do not meet the Board's requirements, or that the loan-to-value ratio at origination was higher than 80 percent for fixed-rate loans or 75 percent for floating-rate loans, then these loans may not be eligible for the 50 percent risk weight permitted under the Board's risk-based capital rule.
7. Evaluate the banking organization with respect to—
 - a. the adequacy of written appraisal and evaluation programs;
 - b. the methods used by the banking organization's officers to conform with established policy;
 - c. internal control deficiencies or exceptions;
 - d. the integrity of the appraisal and evaluation process, including appraisal and evaluation compliance procedures;
 - e. the integrity of individual appraisals and evaluations for their adequacy, their reasonableness, and the appropriateness of the methods, assumptions, and techniques used, and for their compliance with the Board's appraisal regulation and real estate appraisal and evaluation guidelines;
 - f. recommended corrective action when policies, practices, or procedures are deficient;
 - g. the degree of any violations of the Board's appraisal regulation, and the extent of noncompliance with interagency appraisal guidelines, if noted; and
 - h. the existence of other matters of significance, for example—
 - misrepresentation of data such as the omission of information on favorable financing, seller concessions, sales history, feasibility, zoning, easements, or deed restrictions;
 - inadequate techniques of analysis, that is, failure to use the cost, comparable sales, or income approach in the appraisal, when the approach is appropriate for the type of property;
 - use of dissimilar comparables in the comparable-sales approach to valuation (for example, the age, size, quality, or location of the comparable is significantly different from the subject property, making reconciliation of value difficult);
 - underestimating of factors such as construction cost, construction period, lease-up period, and rent concessions;
 - use of best-case assumptions for the income approach to valuation without performing a sensitivity analysis on the factors which would identify the lender's downside risk;
 - overly optimistic assumptions, such as a high absorption rate in an overbuilt market; and
 - demographic factors, such as existing housing inventory, projected completions, and expected market share, that are not reconciled to the value rendered, but are only discussed as background information.
8. Report any instances of questionable conduct by appraisers along with supporting documentation to the Reserve Bank for possible referral to the appropriate state appraisal authorities.
 9. Update workpapers with any information that will facilitate future inspections.

2231.0.13 INTERNAL CONTROL QUESTIONNAIRE

Review the internal controls, policies, practices, and procedures for real estate appraisals and evaluations. The appraisal and evaluation system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. *The items marked with an asterisk (*) require substantiation by observation or testing.*

2231.0.13.1 Appraisal and Evaluation Policies

1. Has the board of directors, consistent with its duties and responsibilities, adopted written appraisal and evaluation policies that define—
 - a. management's responsibility for selecting, evaluating, and monitoring the individual who is performing the appraisal or evaluation?
 - b. the basis for selecting staff appraisers and engaging fee appraisers for a particular appraisal assignment? (This ensures that the individual is independent of the transaction, possesses the requisite expertise, and holds the proper state certification or license, if applicable.)
 - c. the procedures as to when appraisals and evaluations should be obtained?

- d. the procedures for when to obtain a reappraisal or reevaluation, including frequency and scope?
 - e. appraisal and evaluation compliance and review procedures? Will those procedures ascertain that the bank holding company's appraisals and evaluations are consistent with USPAP and the Board's regulations, policies, and guidelines?
2. Does the board of directors periodically review its appraisal, evaluation, and review policies and procedures to ensure that they meet the needs of the bank holding company's real estate lending activity?

2231.0.13.2 Appraisals

- *1. Are appraisals in writing, dated, and signed?
 - *2. Does the appraisal meet the minimum standards of the Board's regulation and USPAP, including—
 - a. purpose;
 - b. market value;
 - c. effective date;
 - d. marketing period;
 - e. sales history of subject property;
 - f. reflection of the valuation using the cost, income, and comparable-sales approaches;
 - g. evaluation and correlation of the three approaches into a final value estimate based on the appraiser's judgment;
 - h. explanation of why an approach is inappropriate if not used in the appraisal; and
 - i. full support for the assumptions and the value rendered through adequate documentation?
 - *3. Are appraisals received before making the final credit or other decision? (For example, is the date of the loan commitment letter later than the date of the appraisal—unless the loan commitment letter is conditioned on receipt of the appraisal?)
 - *4. If the bank holding company is depending on an appraisal obtained for another financial services institution as support for its transaction, does the bank holding company have appraisal review procedures to ensure that the appraisal meets the standards of the appraisal regulation? These types of transactions would include loan participations and mortgage-backed securities.
 - *5. If an appraisal for one transaction is used for a subsequent transaction, are the determinations that the appraisals are still valid sufficiently documented?
- ### 2231.0.13.3 Appraisers
- 1. Are appraisers fairly considered for assignments regardless of their membership or lack of membership in a particular appraisal organization?
 - 2. Do appraisers have requisite knowledge and experience to complete the appraisal before taking the assignment?
 - 3. Do appraisers who discover deficiencies in their expertise before taking the assignment or while performing the appraisal—
 - a. disclose their lack of knowledge and/or experience to the client before accepting the assignment or when the deficiencies become readily apparent?
 - b. describe in the appraisal their lack of knowledge and/or experience and the steps taken to competently complete the assignment?
 - 4. Are appraisers independent of the transaction?
 - a. Are staff appraisers independent of the lending, investment, and collection functions, and are they uninformed, except as an appraiser, in the federally related transaction, with no direct or indirect interest, financial or otherwise, in the property?
 - b. Are fee appraisers engaged directly by the banking organization or its agents, and are written assurances obtained that those appraisers have no direct or indirect interest, financial or otherwise, in the property or transaction?
 - 5. If staff appraisers are used, does the bank holding company periodically have test appraisals performed by independent appraisers to check the organization's knowledge of trends, values, and markets?
 - 6. If fee appraisers are used, are investigations performed to determine their qualifications and reputation?
 - 7. Is the status of an appraiser's state certification or license verified with the state appraiser regulatory authority to ensure that the appraiser is in good standing?
 - 8. Are fee appraisers paid the same fee whether or not the loan is granted?
 - 9. If the transaction is outside the local geographic market, does the bank holding company engage appraisers or consultants with knowledge of the market where the real estate collateral is located?

2231.0.13.4 Evaluations

- 1. Are individuals performing evaluations independent of the transaction?
- *2. Are evaluations required to be in writing, dated, and signed?
- *3. Does the bank holding company require sufficient information and documentation to support the estimate of value and the evaluator's analysis?
- *4. If an evaluation obtained for one transaction is used for a subsequent transaction, is the determination that the evaluation is still valid sufficiently documented?
- *5. Are evaluations received before making the final credit decision?
- *6. If the bank holding company is depending on an evaluation obtained for another financial services institution as support for its transaction, does the holding company have evaluation review procedures to ensure that

the evaluation meets the Board's regulation and guidance?

2231.0.13.5 Evaluators

- 1. Are individuals who perform evaluations competent to complete the assignment?
- 2. Are evaluations prepared by individuals who are independent of the transaction?

2231.0.13.6 Reappraisals and Reevaluations

- 1. Is a formal reappraisal and reevaluation program followed?
- 2. Does the bank holding company sufficiently document and follow its criteria for obtaining reappraisals or reevaluations?

2231.0.15 APPENDIX A—GUIDELINES FOR REAL ESTATE APPRAISAL AND EVALUATION PROGRAMS

INTERAGENCY APPRAISAL AND EVALUATION GUIDELINES

October 27, 1994

Purpose

The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS) (the agencies) are jointly issuing these guidelines, which supersede each of the agencies' appraisal and evaluation guidelines issued in 1992.^a These guidelines address supervisory matters relating to real estate appraisals and evaluations used to support real estate-related financial transactions and provide guidance to examining personnel and federally regulated institutions about prudent appraisal and evaluation policies, procedures, practices, and standards.

Background

Title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) requires the agencies to adopt regulations on the preparation and use of appraisals by federally regulated financial institutions.^b Such real estate appraisals are to be in writing and performed in accordance with uniform standards by an individual whose competency has been demonstrated and whose professional conduct is subject to effective state supervision.

Common agency regulations^c issued pursuant to section 304 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) also require each regulated institution to adopt and maintain written real estate lending policies that are consistent with safe and sound banking practices and that reflect consideration

of the real estate lending guidelines attached to the regulation. The real estate lending guidelines state that a real estate lending program should include an appropriate real estate appraisal and evaluation program.

Supervisory Policy

An institution's real estate appraisal and evaluation policies and procedures will be reviewed as part of the examination of the institution's overall real estate-related activities. An institution's policies and procedures should be incorporated into an effective appraisal and evaluation program. Examiners will consider the institution's size and the nature of its real estate-related activities when assessing the appropriateness of its program.

When analyzing individual transactions, examiners will review an appraisal or evaluation to determine whether the methods, assumptions, and findings are reasonable and in compliance with the agencies' appraisal regulations, policies,^d supervisory guidelines, and the institution's policies. Examiners also will review the steps taken by an institution to ensure that the individuals who perform its appraisals and evaluations are qualified and are not subject to conflicts of interest. Institutions that fail to maintain a sound appraisal or evaluation program or to comply with the agencies' appraisal regulations, policies, or these supervisory guidelines will be cited in examination reports and may be criticized for unsafe and unsound banking practices. Deficiencies will require corrective action.

Appraisal and Evaluation Program

An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish an effective real estate appraisal and evaluation program. The program should—

FRB: "Guidelines for Real Estate Appraisal and Evaluation Programs," September 28, 1992; OCC: BC-225, "Real Estate Appraisal and Evaluation Guidelines," September 28, 1992; FDIC: FIL-69-92, "Guidelines for Real Estate Appraisal and Evaluation Programs," September 30, 1992; OTS: Thrift Bulletin 55, "Real Estate Appraisal and Evaluation Guidelines," October 13, 1992.

b. OCC: 12 CFR 34, subpart C; FRB: 12 CFR 208.18 and 12 CFR 225, subpart G; FDIC: 12 CFR 323; and OTS: 12 CFR 564.

c. OCC: 12 CFR 34, subpart D; FRB: 12 CFR 208, subpart C; FDIC: 12 CFR 365; and OTS: 12 CFR 545 and 563.

d. The appraisal guidance contained in the "Interagency Policy Statement on the Review and Classification of Commercial Real Estate Loans," November 7, 1991, generally applies to all transactions.

- establish selection criteria and procedures to evaluate and monitor the ongoing performance of individuals who perform appraisals or evaluations,
- provide for the independence of the person performing appraisals or evaluations,
- identify the appropriate appraisal for various lending transactions,
- establish criteria for contents of an evaluation,
- provide for the receipt of the appraisal or evaluation report in a timely manner to facilitate the underwriting decision,
- assess the validity of existing appraisals or evaluations to support subsequent transactions,
- establish criteria for obtaining appraisals or evaluations for transactions that are otherwise exempt from the agencies' appraisal regulations, and
- establish internal controls that promote compliance with these program standards.

Selection of Individuals Who May Perform Appraisals and Evaluations

An institution's program should establish criteria to select, evaluate, and monitor the performance of the individuals who perform a real estate appraisal or evaluation. The criteria should ensure that—

- the institution's selection process is nonpreferential and unbiased;
- the individual selected possesses the requisite education, expertise, and competence to complete the assignment;
- the individual selected is capable of rendering an unbiased opinion; and
- the individual selected is independent and has no direct or indirect interest, financial or otherwise, in the property or the transaction.

Under the agencies' appraisal regulations, the appraiser must be selected and engaged directly by the institution or its agent. The appraiser's client is the institution, not the borrower. An institution may use an appraisal that was prepared by an appraiser engaged directly by another financial services institution, as long as the institution determines that the appraisal conforms to the agencies' appraisal regulations and is otherwise acceptable.

Independence of the Appraisal and Evaluation Function

Because the appraisal and evaluation process is

an integral component of the credit underwriting process, it should be isolated from influence by the institution's loan production process. An appraiser and an individual providing evaluation services should be independent of the loan and collection functions of the institution and have no interest, financial or otherwise, in the property or the transaction. If absolute lines of independence cannot be achieved, an institution must be able to clearly demonstrate that it has prudent safeguards to isolate its collateral evaluation process from influence or interference from the loan production process.

The agencies recognize, however, that it is not always possible or practical to separate the loan and collection functions from the appraisal or evaluation process. In some cases, such as in a small or rural institution or branch, the only individual qualified to analyze the real estate collateral may also be a loan officer, other officer, or director of the institution. To ensure their independence, such lending officials, officers, or directors should abstain from any vote or approval involving loans on which they performed an appraisal or evaluation.

Transactions That Require Appraisals

Although the agencies' appraisal regulations exempt certain categories of real estate-related financial transactions from the appraisal requirements, most real estate transactions over \$250,000 are considered federally related transactions and thus require appraisals.^e A "federally related transaction" means any real estate-related financial transaction in which the agencies engage, contract for, or regulate, and that requires the services of an appraiser. An agency also may impose more stringent appraisal requirements than the appraisal regulations require, such as when an institution's troubled condition is attributable to real estate loan underwriting problems.^f

e. To facilitate recovery in designated major disaster areas, subject to safety-and-soundness considerations, section 2 of the Depository Institutions Disaster Relief Act of 1992 authorized the agencies to waive certain appraisal requirements for up to three years after a presidential declaration of a natural disaster.

f. As a matter of policy, OTS requires problem associations and associations in troubled condition to obtain appraisals for all real estate-related transactions over \$100,000 (unless the transaction is otherwise exempt).

Minimum Appraisal Standards

The agencies' appraisal regulations include five minimum standards for the preparation of an appraisal. The appraisal must—

- conform to generally accepted appraisal standards as evidenced by the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation unless principles of safe and sound banking require compliance with stricter standards;

Although allowed by USPAP, the agencies' appraisal regulations do not permit an appraiser to appraise any property in which the appraiser has an interest, direct or indirect, financial or otherwise.

- be written and contain sufficient information and analysis to support the institution's decision to engage in the transaction;

As discussed below, appraisers have available various appraisal development and report options; however, not all options may be appropriate for all transactions. A report option is acceptable under the agencies' appraisal regulations only if the appraisal report contains sufficient information and analysis to support an institution's decision to engage in the transaction.

- analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units;

This standard is designed to avoid having appraisals prepared using unrealistic assumptions and inappropriate methods. For federally related transactions, an appraisal is to include the current market value of the property in its actual physical condition and subject to the zoning in effect as of the date of the appraisal. For properties where improvements are to be constructed or rehabilitated, the regulated institution may also request a prospective market value based on stabilized occupancy or a value based on the sum of retail sales. However, the sum of retail sales for a proposed development is not the market value of the development for the purpose of the agencies' appraisal regu-

lations. For proposed developments that involve the sale of individual houses, units, or lots, the appraiser must analyze and report appropriate deductions and discounts for holding costs, marketing costs, and entrepreneurial profit. For proposed and rehabilitated rental developments, the appraiser must make appropriate deductions and discounts for items such as leasing commission, rent losses, and tenant improvements from an estimate based on stabilized occupancy.

- be based upon the definition of market value set forth in the regulation; and

Each appraisal must contain an estimate of market value, as defined by the agencies' appraisal regulations.

- be performed by state-licensed or -certified appraisers in accordance with requirements set forth in the regulation.

Appraisal Options

An appraiser typically uses three market value approaches to analyze the value of a property—cost, income, and comparable sales—and reconciles the results of each to estimate market value. An appraisal will discuss the property's recent sales history and contain an opinion as to the highest and best use of the property. An appraiser must certify that he or she has complied with USPAP and is independent. Also, the appraiser must disclose whether the subject property was inspected and whether anyone provided significant assistance to the person signing the appraisal report.

An institution may engage an appraiser to perform either a Complete or Limited Appraisal.^g When performing a Complete Appraisal assignment, an appraiser must comply with all USPAP standards without departing from any binding requirements and specific guidelines when estimating market value. When performing a Limited Appraisal, the appraiser elects to invoke the Departure Provision, which allows the appraiser to depart, under limited conditions, from standards identified as specific guidelines. For example, in a Limited Appraisal, the appraiser might not utilize all three approaches

^g USPAP Statement on Appraisal Standards No. 7 (SMT-7)—Permitted Departure from Specific Guidelines for Real Property Appraisal, issued March 30, 1994, effective July 1, 1994.

to value. Departure from standards designated as binding requirements is not permitted. An institution and appraiser must concur that use of the Departure Provision is appropriate for the transaction before the appraiser commences the appraisal assignment. The appraiser must ensure that the resulting appraisal report will not mislead the institution or other intended users of the appraisal report. The agencies do not prohibit the use of a Limited Appraisal for a federally related transaction, but the agencies believe that institutions should be cautious in their use of a Limited Appraisal because it will be less thorough than a Complete Appraisal.

Complete and Limited Appraisal assignments may be reported in three different report formats: a Self-Contained Report, a Summary Report, or a Restricted Report. The major difference among these three reports relates to the degree of detail presented in the report by the appraiser. The Self-Contained Appraisal Report provides the most detail, while the Summary Appraisal Report presents the information in a condensed manner. The Restricted Report provides a capsulized report with the supporting details maintained in the appraiser's files.

The agencies believe that the Restricted Report format will not be appropriate to underwrite a significant number of federally related transactions due to the lack of sufficient supporting information and analysis in the appraisal report. However, it might be appropriate to use this type of appraisal report for ongoing collateral monitoring of an institution's real estate transactions and under other circumstances when an institution's program requires an evaluation.

Moreover, since the institution is responsible for selecting the appropriate appraisal report to support its underwriting decisions, its program should identify the type of appraisal report that will be appropriate for various lending transactions. The institution's program should consider the risk, size, and complexity of the individual loan and the supporting collateral when determining the level of appraisal development and the type of report format that will be ordered. When ordering an appraisal report, institutions may want to consider the benefits of a written engagement letter that outlines the institution's expectations and delineates each party's responsibilities, especially for large, complex, or out-of-area properties.

Transactions That Require Evaluations

A formal opinion of market value prepared by

a state-licensed or -certified appraiser is not always necessary. Instead, less formal evaluations of the real estate may suffice for transactions that are exempt from the agencies' appraisal requirements. The agencies' appraisal regulations allow an institution to use an appropriate evaluation of the real estate rather than an appraisal when the transaction—

- has a value of \$250,000 or less;
- is a business loan of \$1,000,000 or less, and the transaction is not dependent on the sale of, or rental income derived from, real estate as the primary source of repayment; or
- involves an existing extension of credit at the lending institution, provided that (i) there has been no obvious and material change in the market conditions or physical aspects of the property that threaten the adequacy of the institution's real estate collateral protection after the transaction, even with the advancement of new monies, or (ii) there is no advancement of new monies other than funds necessary to cover reasonable closing costs.

Institutions should also establish criteria for obtaining appraisals or evaluations for safety-and-soundness reasons for transactions that are otherwise exempt from the agencies' appraisal regulations.

Evaluation Content

An institution should establish prudent standards for the preparation of evaluations. At a minimum, an evaluation should—

- be written;
- include the preparer's name, address, and signature, and the effective date of the evaluation;
- describe the real estate collateral, its condition, its current and projected use;
- describe the source(s) of information used in the analysis;
- describe the analysis and supporting information; and
- provide an estimate of the real estate's market value, with any limiting conditions.

An evaluation report should include calculations, supporting assumptions, and, if utilized, a discussion of comparable sales. Documentation should be sufficient to allow an institution to

understand the analysis, assumptions, and conclusions. An institution's own real estate loan portfolio experience and value estimates prepared for recent loans on comparable properties might provide a basis for evaluations.

An evaluation should provide an estimate of value to assist the institution in assessing the soundness of the transaction. Prudent practices also require that as an institution engages in more complex real estate-related financial transactions, or as its overall exposure increases, a more detailed evaluation should be performed. For example, an evaluation for a home equity loan might be based primarily on information derived from a sales data services organization or current tax assessment information, while an evaluation for an income-producing real estate property should fully describe the current and expected use of the property and include an analysis of the property's rental income and expenses.

Qualifications of Individuals Who Perform Evaluations

Individuals who prepare evaluations should have real estate-related training or experience and knowledge of the market relevant to the subject property. Based upon their experience and training, professionals from several fields may be qualified to prepare evaluations of certain types of real estate collateral. Examples include individuals with appraisal experience, real estate lenders, consultants or salespersons, agricultural extension agents, or foresters. Institutions should document the qualifications and experience level of individuals whom the institution deems acceptable to perform evaluations. An institution might also augment its in-house expertise and hire an outside party familiar with a certain market or a particular type of property. Although not required, an institution may use state-licensed or -certified appraisers to prepare evaluations. As such, Limited Appraisals reported in a Summary or Restricted format may be appropriate for evaluations of real estate-related financial transactions exempt from the agencies' appraisal requirements.

Valid Appraisals and Evaluations

The agencies allow an institution to use an existing appraisal or evaluation to support a

subsequent transaction, if the institution documents that the existing estimate of value remains valid. Therefore, a prudent appraisal and evaluation program should include criteria to determine whether an existing appraisal or evaluation remains valid to support a subsequent transaction. Criteria for determining whether an existing appraisal or evaluation remains valid will vary depending upon the condition of the property and the marketplace, and the nature of any subsequent transaction. Factors that could cause changes to originally reported values include the passage of time; the volatility of the local market; the availability of financing; the inventory of competing properties; improvements to, or lack of maintenance of, the subject property or competing surrounding properties; changes in zoning; or environmental contamination. The institution must document the information sources and analyses used to conclude that an existing appraisal or evaluation remains valid for subsequent transactions.

Renewals, Refinancings, and Other Subsequent Transactions

While the agencies' appraisal regulations generally allow appropriate evaluations of real estate collateral in lieu of an appraisal for loan renewals and refinancings, in certain situations an appraisal is required. If new funds are advanced over reasonable closing costs, an institution would be expected to obtain a new appraisal for the renewal of an existing transaction when there is a material change in market conditions or the physical aspects of the property that threatens the institution's real estate collateral protection.

The decision to reappraise or reevaluate the real estate collateral should be guided by the exemption for renewals, refinancings, and other subsequent transactions. Loan workouts, debt restructurings, loan assumptions, and similar transactions involving the addition or substitution of borrowers may qualify for the exemption for renewals, refinancings, and other subsequent transactions. Use of this exemption depends on the condition and quality of the loan, the soundness of the underlying collateral, and the validity of the existing appraisal or evaluation.

A reappraisal would not be required when an institution advances funds to protect its interest in a property, such as to repair damaged property, because these funds should be used to restore the damaged property to its original condition. If a loan workout involves modification of the terms and conditions of an existing credit,

including acceptance of new or additional real estate collateral, which facilitates the orderly collection of the credit or reduces the institution's risk of loss, a reappraisal or reevaluation may be prudent, even if it is obtained after the modification occurs.

An institution may engage in a subsequent transaction based on documented equity from a valid appraisal or evaluation, if the planned future use of the property is consistent with the use identified in the appraisal or evaluation. If a property, however, has reportedly appreciated because of a planned change in use of the property, such as rezoning, an appraisal would be required for a federally related transaction, unless another exemption applied.

Program Compliance

An institution's appraisal and evaluation program should establish effective internal controls that promote compliance with the program's standards. An individual familiar with the appropriate agency's appraisal regulation should ensure that the institution's appraisals and evaluations comply with the agencies' appraisal regulations, these guidelines, and the institution's program. Loan administration files should document this compliance review, although a detailed analysis or comprehensive analytical procedures are not required for every appraisal or evaluation. For some loans, the compliance review may be part of the loan officer's overall credit analysis and may take the form of either a narrative or a checklist. Corrective action should be undertaken for noted deficiencies by the individual who prepared the appraisal or evaluation.

An institution's appraisal and evaluation program should also have comprehensive analytical procedures that focus on certain types of loans, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential real estate construction loans, or out-of-area real estate. These comprehensive analytical pro-

cedures should be designed to verify that the methods, assumptions, and conclusions are reasonable and appropriate for the transaction and the property. These procedures should provide for a more detailed review of selected appraisals and evaluations prior to the final credit decision. The individual(s) performing these reviews should have the appropriate training or experience, and be independent of the transaction.

Appraisers and persons performing evaluations should be responsible for any deficiencies in their reports. Deficient reports should be returned to them for correction. Unreliable appraisals or evaluations should be replaced prior to the final credit decision. Changes to an appraisal's estimate of value are permitted only as a result of a review conducted by an appropriately qualified state-licensed or -certified appraiser in accordance with Standard III of USPAP.

Portfolio Monitoring

The institution should also develop criteria for obtaining reappraisals or reevaluations as part of a program of prudent portfolio review and monitoring techniques—even when additional financing is not being contemplated. Examples of such types of situations include large credit exposures and out-of-area loans.

Referrals

Financial institutions are encouraged to make referrals directly to state appraiser regulatory authorities when a state-licensed or -certified appraiser violates USPAP or applicable state law, or engages in other unethical or unprofessional conduct. Examiners finding evidence of unethical or unprofessional conduct by appraisers will forward their findings and recommendations to their supervisory office for appropriate disposition and referral to the state, as necessary.

These guidelines are designed to ensure that troubled real estate loans receive consistent treatment nationwide. The guidelines are not intended to be a substitute for the examiner's judgment or for careful analysis of applicable credit and collateral factors. Use of the word "institution" in these guidelines refers to any lending source within the bank holding company organization, whether the lender is the parent company, a bank, thrift, or nonbanking subsidiary.

2240.0.1 EXAMINER REVIEW OF COMMERCIAL REAL ESTATE LOANS

2240.0.1.1 Loan Policy and Administration Review

As part of the analysis of an institution's commercial real estate loan portfolio, examiners review lending policies, loan administration procedures, and credit risk control procedures. The maintenance of prudent written lending policies, effective internal systems and controls, and thorough loan documentation are essential to the institution's management of the lending function.

The policies governing an institution's real estate lending activities must include prudent underwriting standards that are periodically reviewed by the board of directors and clearly communicated to the institution's management and lending staff. The institution must also have credit risk control procedures that include, for example, prudent internal limits on exposure, an effective credit review and classification process, and a methodology for ensuring that the allowance for loan and lease losses is maintained at an adequate level. The complexity and scope of these policies and procedures should be appropriate to the size of the institution and the nature of the institution's activities, and should be consistent with prudent banking practices and relevant regulatory requirements.

2240.0.1.2 Indicators of Troubled Real Estate Markets and Projects, and Related Indebtedness

In order to evaluate the collectibility of an institution's commercial real estate portfolio, examiners should be alert for indicators of weakness in the real estate markets served by the institution. They should also be alert for indicators of

actual or potential problems in the individual commercial real estate projects or transactions financed by the institution.

There are several warning signs that real estate markets or projects are experiencing problems that may result in real estate values decreasing from original appraisals or projections. Adverse economic developments and/or an overbuilt market can affect a project's economic feasibility and may cause a real estate project and the loan to become troubled. Available indicators, such as permits for—and the value of—new construction, absorption rates, employment trends, and vacancy rates, are useful in evaluating the condition of commercial real estate markets. Weaknesses disclosed by these types of statistics may indicate that a real estate market is experiencing difficulties that may result in cash flow problems for individual real estate projects, declining real estate values, and ultimately, in troubled commercial real estate loans.

Indicators of potential or actual difficulties in commercial real estate projects may include:

- An excess of similar projects under construction.
- Construction delays or other unplanned adverse events resulting in cost overruns that may require renegotiation of loan terms.
- Lack of a sound feasibility study or analysis that reflects current and reasonably anticipated market conditions.
- Changes in concept or plan (for example, a condominium project converted to an apartment project because of unfavorable market conditions).
- Rent concessions or sales discounts resulting in cash flow below the level projected in the original feasibility study or appraisal.
- Concessions on finishing tenant space, moving expenses, and lease buyouts.
- Slow leasing or lack of sustained sales activity and increasing sales cancellations that may reduce the project's income potential, resulting in protracted repayment or default on the loan.
- Delinquent lease payments from major tenants.
- Land values that assume future rezoning.
- Tax arrearages.

As the problems associated with a commer-

cial real estate project become more pronounced, problems with the related indebtedness may also arise. Such problems include diminished cash flow to service the debt and delinquent interest and principal payments.

While some commercial real estate loans become troubled because of a general downturn in the market, others become troubled because they were originated on an unsound or a liberal basis. Common examples of these types of problems include:

- Loans with no or minimal borrower equity.
- Loans on speculative undeveloped property where the borrowers' only source of repayment is the sale of the property.
- Loans based on land values that have been driven up by rapid turnover of ownership, but without any corresponding improvements to the property or supportable income projections to justify an increase in value.
- Additional advances to service an existing loan that lacks credible support for full repayment from reliable sources.
- Loans to borrowers with no development plans or noncurrent development plans.
- Renewals, extensions and refinancings that lack credible support for full repayment from reliable sources and that do not have a reasonable repayment schedule.¹

2240.0.1.3 Examiner Review of Individual Loans, Including the Analysis of Collateral Value

The focus of an examiner's review of a commercial real estate loan, including binding commitments, is the ability of the loan to be repaid. The principal factors that bear on this analysis are the income-producing potential of the underlying collateral and the borrower's willingness and capacity to repay under the existing loan terms from the borrower's other resources if necessary. In evaluating the overall risk associated with a commercial real estate loan, examiners consider a number of factors, including the character, overall financial condition and

1. As discussed more fully in Manual section 2240.0.2, the refinancing or renewing of loans to sound borrowers would not result in a supervisory classification or criticism unless well-defined weaknesses exist that jeopardize repayment of the loans. Consistent with sound banking practices, institutions should work in an appropriate and constructive manner with borrowers who may be experiencing temporary difficulties.

resources, and payment record of the borrower; the prospects for support from any financially responsible guarantors; and the nature and degree of protection provided by the cash flow and value of the underlying collateral.² However, as other sources of repayment for a troubled commercial real estate loan become inadequate over time, the importance of the collateral's value in the analysis of the loan necessarily increases.

The appraisal regulations of the federal bank and thrift regulatory agencies require institutions to obtain appraisals when certain criteria are met.³ Management is responsible for reviewing each appraisal's assumptions and conclusions for reasonableness. Appraisal assumptions should not be based solely on current conditions that ignore the stabilized income-producing capacity of the property.⁴ Management should adjust any assumptions used by an appraiser in determining value that are overly optimistic or pessimistic.

An examiner analyzes the collateral's value as determined by the institution's most recent appraisal (or internal evaluation, as applicable). An examiner reviews the major facts, assumptions, and approaches used by the appraiser (including any comments made by management on the value rendered by the appraiser). Under the circumstances described below, the examiner may make adjustments to this assessment of value. This review and any resulting adjustments to value are solely for purposes of an examiner's analysis and classification of a credit and do not involve actual adjustments to an appraisal.

A discounted cash flow analysis is an appropriate method for estimating the value of income-producing real estate collateral.⁵ This analysis should not be based solely on the current performance of the collateral or similar

2. The treatment of guarantees in the classification process is discussed in subsection 2240.0.3.

3. Department of the Treasury, Office of the Comptroller of the Currency, 12 CFR Part 34 (Docket No. 90-16); Board of Governors of the Federal Reserve System, 12 CFR Parts 208 and 225 (Regulation H and Y; Docket No. R-0685); Federal Deposit Insurance Corporation, 12 CFR 323 (RIN 3064-AB05); Department of the Treasury; Office of Thrift Supervision, 12 CFR Part 564 (Docket No. 90-1495).

4. Stabilized income generally is defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions.

5. The real estate appraisal regulations of the federal bank and thrift regulatory agencies include a requirement that an appraisal (a) follow a reasonable valuation method that addresses the direct sales comparison, income, and cost approaches to market value; (b) reconcile these approaches; and (c) explain the elimination of each approach not used. A discounted cash flow analysis is recognized as a valuation method for the income approach.

properties; rather, it should take into account, on a discounted basis, the ability of the real estate to generate income over time based upon reasonable and supportable assumptions.

When reviewing the reasonableness of the facts and assumptions associated with the value of the collateral, examiners may evaluate:

- Current and projected vacancy and absorption rates;
- Lease renewal trends and anticipated rents;
- Volume and trends in past due leases;
- Effective rental rates or sale prices (taking into account all concessions);
- Net operating income of the property as compared with budget projections; and
- Discount rates and direct capitalization (“cap”) rates.

The capacity of a property to generate cash flow to service a loan is evaluated based upon rents (or sales), expenses, and rates of occupancy that are reasonably estimated to be achieved over time. The determination of the level of stabilized occupancy and rental rates should be based upon an analysis of current and reasonably expected market conditions, taking into consideration historical levels when appropriate. The analysis of collateral values should not be based upon a simple projection of current levels of net operating income if markets are depressed or reflect speculative pressures but can be expected over a reasonable period of time to return to normal (stabilized) conditions. Judgment is involved in determining the time that it will take for a property to achieve stabilized occupancy and rental rates.

Examiners do not make adjustments to appraisal assumptions for credit analysis purposes based on worst case scenarios that are unlikely to occur. For example, an examiner would not necessarily assume that a building will become vacant just because an existing tenant who is renting at a rate above today’s market rate may vacate the property when the current lease expires. On the other hand, an adjustment to value may be appropriate for credit analysis purposes when the valuation assumes renewal at the above-market rate, unless that rate is a reasonable estimate of the expected market rate at the time of renewal.

When estimating the value of income-producing real estate, discount rates and “cap” rates should reflect reasonable expectations about the rate of return that investors require under normal, orderly and sustainable market conditions. Exaggerated, imprudent, or unsustainably high or low discount rates, “cap” rates,

and income projections should not be used. Direct capitalization of nonstabilized income flows should also not be used.

Assumptions, when recently made by qualified appraisers (and, as appropriate, by institution management) and when consistent with the discussion above, should be given a reasonable amount of deference. Examiners should not challenge the underlying assumptions, including discount rates and “cap” rates used in appraisals, that differ only in a limited way from norms that would generally be associated with the property under review. The estimated value of the underlying collateral may be adjusted for credit analysis purposes when the examiner can establish that any underlying facts or assumptions are inappropriate and can support alternative assumptions.

2240.0.2 CLASSIFICATION GUIDELINES

As with other types of loans, commercial real estate loans that are adequately protected by the current sound worth and debt service capacity of the borrower, guarantor, or the underlying collateral generally are not classified. Similarly, loans to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards, including loans to creditworthy commercial or residential real estate developers, should not be classified or criticized unless well-defined weaknesses exist that jeopardize repayment. An institution will not be criticized for continuing to carry loans having weaknesses that result in classification or criticism as long as the institution has a well-conceived and effective workout plan for such borrowers, and effective internal controls to manage the level of these loans.

In evaluating commercial real estate credits for possible classification, examiners apply standard classification definitions. In determining the appropriate classification, consideration should be given to all important information on repayment prospects, including information on the borrower’s creditworthiness, the value of, and cash flow provided by, all collateral supporting the loan, and any support provided by financially responsible guarantors.

The loan’s record of performance to date is important and must be taken into consideration. As a general principle, a performing commercial real estate loan should not automatically be

classified or charged-off solely because the value of the underlying collateral has declined to an amount that is less than the loan balance. However, it would be appropriate to classify a performing loan when well-defined weaknesses exist that jeopardize repayment, such as the lack of credible support for full repayment from reliable sources.

These principles hold for individual credits, even if portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each credit should be based upon the fundamental characteristics affecting the collectibility of the particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits that are not affected by the problems of the troubled sectors.

2240.0.2.1 Classification of Troubled Project-Dependent Commercial Real Estate Loans⁶

The following guidelines for classifying a troubled commercial real estate loan apply when the repayment of the debt will be provided solely by the underlying real estate collateral, and there are no other available and reliable sources of repayment. The guidelines are not intended to address loans that must be treated as “Other Real Estate Owned” for bank and BHC reporting purposes.

As a general principle, for a troubled project-dependent commercial real estate loan, any portion of the loan balance that exceeds the amount that is adequately secured by the value of the collateral, and that can clearly be identified as uncollectible, should be classified “loss.”⁷ The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than “substandard.” The amount of the loan balance in excess of the value of the collateral, or portions thereof,

should be classified “doubtful” when the potential for full loss may be mitigated by the outcomes of certain pending events, or when loss is expected but the amount of the loss cannot be reasonably determined.

If warranted by the underlying circumstances, an examiner may use a “doubtful” classification on the entire loan balance. However, this would occur infrequently.

2240.0.2.2 Guidelines for Classifying Partially Charged-off Loans

Based upon consideration of all relevant factors, an evaluation may indicate that a credit has well-defined weaknesses that jeopardize collection in full, but that a portion of the loan may be reasonably assured of collection. When an institution has taken a charge-off in an amount sufficient that the remaining recorded balance of the loan (a) is being serviced (based upon reliable sources) and (b) is reasonably assured of collection, classification of the remaining recorded balance may not be appropriate. Classification would be appropriate when well-defined weaknesses continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally be classified no more severely than “substandard.”

A more severe classification than “substandard” for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, e.g., where significant risk exposures are perceived, such as might be the case for bankruptcy situations or for loans collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

2240.0.2.3 Guidelines for Classifying Formally Restructured Loans

The classification treatment previously discussed for a partially charged off loan would also generally be appropriate for a formally restructured loan when partial charge-offs have been taken. For a formally restructured loan, the focus of the examiner’s analysis is on the ability of the borrower to repay the loan in accordance with its modified terms. Classification of a formally restructured loan would be appropriate, if, after the restructuring, well-defined weaknesses exist that jeopardize the orderly repayment of the loan in accordance with reasonable modified

6. The discussion in this section is not intended to address loans that must be treated as “other real estate owned” for bank regulatory reporting purposes or “real estate owned” for thrift regulatory reporting purposes. Guidance on these assets is presented in supervisory and reporting guidance of the agencies.

7. For purposes of this discussion, the “value of the collateral” is the value used by the examiner for credit analysis purposes, as discussed in a previous section of this policy statement.

terms.⁸ Troubled commercial real estate loans whose terms have been restructured should be identified in the institution's internal credit review system, and closely monitored by management.

2240.0.3 TREATMENT OF GUARANTEES IN THE CLASSIFICATION PROCESS

Initially, the original source of repayment and the borrower's intent and ability to fulfill the obligation without reliance on third party guarantors will be the primary basis for the review and classification of assets.⁹ The federal bank and thrift regulatory agencies will, however, consider the support provided by guarantees in the determination of the appropriate classification treatment for troubled loans. The presence of a guarantee from a "financially responsible guarantor," as described below, may be sufficient to preclude classification or reduce the severity of classification.

For purposes of this discussion, a guarantee from a "financially responsible guarantor" has the following attributes:

- The guarantor must have both the financial capacity and willingness to provide support for the credit;
- The nature of the guarantee is such that it can provide support for repayment of the indebtedness, in whole or in part, during the remaining loan term; and¹⁰
- The guarantee should be legally enforceable.

The above characteristics generally indicate that a guarantee may improve the prospects for repayment of the debt obligation.

2240.0.3.1 Considerations Relating to a Guarantor's Financial Capacity

The lending institution must have sufficient

8. An example of a restructured commercial real estate loan that does *not* have reasonable modified terms would be a "cash flow" mortgage which requires interest payments *only* when the underlying collateral generates cash flow but provides no substantive benefits to the lending institution.

9. Some loans are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the loan based upon the guarantor's ability to repay the loan.

10. Some guarantees may only provide for support for certain phases of a real estate project. It would not be appropriate to rely upon these guarantees to support a troubled loan after the completion of these phases.

information on the guarantor's financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor's financial capacity to fulfill the obligation. Also, it is important to consider the number and amount of guarantees currently extended by a guarantor, in order to determine that the guarantor has the financial capacity to fulfill the contingent claims that exist.

2240.0.3.2 Considerations Relating to a Guarantor's Willingness to Repay

Examiners normally rely on their analysis of the guarantor's financial strength and assume a willingness to perform unless there is evidence to the contrary. This assumption may be modified based on the "track record" of the guarantor, including payments made to date on the asset under review or other obligations.

Examiners give due consideration to those guarantors that have demonstrated their ability and willingness to fulfill previous obligations in their evaluation of current guarantees on similar assets. An important consideration will be whether previously required performance under guarantees was voluntary or the result of legal or other actions by the lender to enforce the guarantee. However, examiners give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee obligation under review.

Examiners also consider the economic incentives for performance from guarantors:

- Who have already partially performed under the guarantee or who have other significant investments in the project;
- Whose other sound projects are cross-collateralized or otherwise intertwined with the credit; or
- Where the guarantees are collateralized by readily marketable assets that are under the control of a third party.

2240.0.3.3 Other Considerations as to the Treatment of Guarantees in the Classification Process

In general, only guarantees that are legally

enforceable will be relied upon. However, all legally enforceable guarantees may not be acceptable. In addition to the guarantor's financial capacity and willingness to perform, it is expected that the guarantee will not be subject to significant delays in collection, or undue complexities or uncertainties about the guarantee.

The nature of the guarantee is also considered by examiners. For example, some guarantees for real estate projects only pertain to the development and construction phases of the project. As

such, these limited guarantees would not be relied upon to support a troubled loan after the completion of those phases.

Examiners also consider the institution's intent to enforce the guarantee and whether there are valid reasons to preclude an institution from pursuing the guarantee. A history of timely enforcement and successful collection of the full amount of guarantees will be a positive consideration in the classification process.

During the early 1980s, open-end credit primarily consisted of credit card accounts with small lines of credit to the most creditworthy borrowers. Currently, open-end credit consists of much larger lines of credit that have been extended to diverse borrowers with a variety of risk profiles. In 1980, the Federal Financial Institutions Examination Council (FFIEC) (the FRB, FDIC, and OCC, and, in 1987, the FHLBB (now, the OTS)) adopted the uniform policy for the classification of installment credit based on delinquency status. The 1980 policy also provided for different charge-off timeframes for open-end and closed-end credit.

Because open-ended borrowing practices had changed and there were inconsistencies with respect to institutional practices for charging off open-end accounts based on their past-due status, the agencies (the FRB, FDIC, OTS, and OCC) recently undertook a review of the 1980 FFIEC classification policy in concert with a review of all written policies mandated by section 303(a) of the Riegle Community Development and Regulatory Improvement Act of 1994 (RCRDIA). This manual section sets forth the February 10, 1999, expanded FFIEC supervisory guidance that the agencies are to use when applying a uniform classification of retail credit loans that have been extended by depository institutions (see SR-99-5). The current policy provides supervisory guidance for residential and home equity loans; fraudulent accounts; accounts of deceased persons; accounts of borrowers in bankruptcy; re-aging of open-end credit; or extensions, deferrals, renewals, or rewrites of closed-end credit. The policy is provided only for the bank holding company examiner's reference as he or she summarizes the classifications of credits extended by the holding company's depository institutions (for example, banks and savings associations) within the inspection report. Bank holding company examiners and other readers should be mindful that the policy is written as guidance to depository institution management and institution examiners, and it is not written in a supervisory context that is directed to a bank holding company's management or its examiners. The FFIEC policy statement follows.

2241.0.1 UNIFORM RETAIL-CREDIT CLASSIFICATION AND ACCOUNT-MANAGEMENT POLICY¹

Evidence of the quality of consumer credit

soundness is indicated best by the repayment performance demonstrated by the borrower. Because retail credit generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail credit portfolio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and examiners. Therefore, in general, retail credit should be classified based on the following criteria:

- Open-end and closed-end retail loans past due 90 cumulative days from the contractual due date should be classified substandard.
- Closed-end retail loans that become past due 120 cumulative days and open-end retail loans that become past due 180 cumulative days from the contractual due date should be charged off. The charge-off should be taken by the end of the month in which the 120- or 180-day time period elapses.²

extended to individuals for household, family, and other personal expenditures. It includes consumer loans and credit cards. For the purpose of this policy, retail credit also includes loans to individuals secured by their personal residence, including home equity and home-improvement loans.

The regulatory classifications used for retail credit are substandard, doubtful, and loss. These are defined as follows. *Substandard*: An asset classified substandard is protected inadequately by the current net worth and paying capacity of the obligor, or by the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected. *Doubtful*: An asset classified doubtful has all the weaknesses inherent in one classified substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. *Loss*: An asset, or portion thereof, classified loss is considered uncollectible, and of such little value that its continuance on the books is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value; rather, it is not practical or desirable to defer writing off an essentially worthless asset (or portion thereof), even though partial recovery may occur in the future.

Although the Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, Office of the Comptroller of the Currency, and Office of Thrift Supervision do not require institutions to adopt identical classification definitions, institutions should classify their assets using a system that can be easily reconciled with the regulatory classification system.

2. Fixed-payment open-end retail accounts that are placed on a closed-end repayment schedule should follow the closed-end charge-off timeframes.

1. Retail credit includes open-end and closed-end credit

- Unless the institution can clearly demonstrate and document that repayment on accounts in bankruptcy is likely to occur, accounts in bankruptcy should be charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the timeframes specified in this classification policy, whichever is shorter. The charge-off should be taken by the end of the month in which the applicable time period elapses. Any loan balance not charged off should be classified substandard until the borrower reestablishes the ability and willingness to repay (with demonstrated payment performance for six months at a minimum) or there is a receipt of proceeds from liquidation of collateral.
- Fraudulent loans should be charged off within 90 days of discovery or within the timeframes specified in this classification policy, whichever is shorter. The charge-off should be taken by the end of the month in which the applicable time period elapses.
- Loans of deceased persons should be charged off when the loss is determined or within the timeframes adopted in this classification policy, whichever is shorter. The charge-off should be taken by the end of the month in which the applicable time period elapses.
- One- to four-family residential real estate loans and home equity loans that are delinquent 90 days or more with loan-to-value ratios greater than 60 percent should be classified substandard.
- When a residential or home equity loan is 120 days past due for closed-end credit and 180 days past due for open-end credit, a current assessment of value³ should be made and any outstanding loan balance in excess of the fair value of the property, less cost to sell, should be classified loss.

Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent

3. Additional information about content requirements of evaluations can be found in the "Interagency Appraisal and Evaluation Guidelines," October 27, 1994. For example, under certain circumstances, evaluations could be derived from an automated collateral evaluation model or from sales of real estate in the market that are comparable to the institution's collateral.

should not be classified. However, home equity loans where the institution does not hold the senior mortgage and that are delinquent 90 days or more should be classified substandard, even if the loan-to-value ratio is equal to or less than 60 percent.

2241.0.1.1 Other Considerations for Classification

If an institution can clearly document that the delinquent loan is well secured and in the process of collection, such that collection will occur regardless of delinquency status, then the loan need not be classified. A *well-secured loan* is collateralized by a perfected security interest in, or pledges of, real or personal property, including securities, with an estimated fair value, less cost to sell, sufficient to recover the recorded investment in the loan, as well as a reasonable return on that amount. *In the process of collection* means that either a collection effort or legal action is proceeding and is reasonably expected to result in recovery of the loan balance or its restoration to a current status, generally within the next 90 days.

This policy does not preclude an institution from adopting an internal classification policy more conservative than the one detailed above. It also does not preclude a regulatory agency from using the doubtful or loss classification in certain situations if a rating more severe than substandard is justified. Loss in retail credit should be recognized when the institution becomes aware of the loss, but in no case should the charge-off exceed the timeframes stated in this policy.

2241.0.1.2 Partial Payments on Open-End and Closed-End Credit

Institutions should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing delinquency. Alternatively, the institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is \$300 and the borrower makes payments of only \$150 per month for a six-month period, the loan would be \$900 (\$150 shortage times six payments), or three full months delinquent. An institution may not use both methods simultaneously with the same loan.

2241.0.1.3 Re-aging, Extensions, Deferrals, Renewals, or Rewrites⁴

Re-aging is the practice of bringing a delinquent account current after the borrower has demonstrated a renewed willingness and ability to repay the loan by making some, but not all, past-due payments. Re-aging of open-end accounts, or extensions, deferrals, renewals, or rewrites of closed-end accounts, should only be used to help borrowers overcome temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member. A permissive policy on re-aging, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use of a policy is acceptable when it is based on recent, satisfactory performance and the true improvement in a borrower's other credit factors, and when it is structured in accordance with the institution's internal policies.

The decision to re-age a loan, like any other modification of contractual terms, should be supported in the institution's management information systems. Adequate management information systems usually identify and document any loan that is extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that institution personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower shows the ability to repay the loan.

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. An account eligible for re-aging, extension, deferral, renewal, or rewrite should exhibit the following:

- The borrower should show a renewed willingness and ability to repay the loan.
- The account should exist for at least nine months before allowing a re-aging, extension, renewal, referral, or rewrite.
- The borrower should make at least three minimum consecutive monthly payments or the equivalent lump-sum payment before an

account is re-aged. Funds may not be advanced by the institution for this purpose.

- No loan should be re-aged, extended, deferred, renewed, or rewritten more than once within any 12-month period—that is, at least 12 months must have elapsed since a prior re-aging. In addition, no loan should be re-aged, extended, deferred, renewed, or rewritten more than two times within any five-year period.
- For open-end credit, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees). No new credit may be extended to the borrower until the balance falls below the designated predelinquency credit limit.

2241.0.1.4 Depository Institution Examination Considerations

Examiners should ensure that institutions adhere to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The uniform classification and account-management policy does not preclude examiners from reviewing and classifying individual large-dollar retail credit loans that exhibit signs of credit weakness regardless of delinquency status.

In addition to reviewing loan classifications, the examiner should ensure that the institution's allowance for loan and lease losses provides adequate coverage for inherent losses. Sound risk- and account-management systems, including a prudent retail credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. Internal controls should be in place to ensure that the policy is followed. Institutions lacking sound policies or failing to implement or effectively follow established policies will be subject to criticism.

4. Certain advertising and marketing programs like "skip-a-payment" and holiday payment-deferral programs are not subject to this portion of the policy.

In carrying out its regulatory and supervisory responsibilities, the Board requires the submission of various reports from bank holding companies. These reports are an integral part of the Board's supervision, monitoring, and surveillance functions. Information from these reports is used to evaluate the performance of bank holding companies, appraise their financial condition, and determine their compliance with applicable laws and regulations. The examiner must review the reports (submitted to the Federal Reserve System) for accuracy and timeliness and insist on their being amended if material errors are found. If inaccurate data are submitted, the resulting ratios could conceal deteriorating trends in the company's financial condition and performance. Bank holding companies should maintain sufficient internal systems and procedures to ensure that reporting is accomplished according to appropriate regulatory requirements. Clear, concise, and orderly workpapers should support the data presented and provide a logical tie between report data and the financial records. For detailed current information on who must submit reports and what the reporting requirements are, see the Board's public site on the Internet at the following address: www.federalreserve.gov/boarddocs/reportforms.

2250.0.1 PENALTIES FOR ERRORS IN REPORTS

Section 8 of the Bank Holding Company Act (the act) was amended to provide for the assessment of civil money penalties for the submission of late, false, or misleading reports filed by bank holding companies that are required by the act and Regulation Y and for the failure to file the required regulatory reports. Financial institutions that have adequate procedures to avoid any inadvertent errors but that unintentionally submit incorrect information or are minimally late in publishing or transmitting the reports can be fined up to \$2,000 per day. The financial institution has the burden of proving that the error was inadvertent. If the error was not inadvertent, a penalty of up to \$20,000 per day can be assessed. If the submission was done in a knowing manner or with reckless disregard for the law, a fine of up to \$1 million or 1 percent of the institution's assets can be assessed for each day of the violation. Institution-affiliated parties who participate in any manner in the filing of an institution's false or misleading required regula-

tory report, or who cause the failure to file or a late filing of a required regulatory report, may be assessed a civil money penalty of up to \$25,000 per day.

2250.0.2 APPROVAL OF DIRECTORS AND SENIOR OFFICERS OF DEPOSITORY INSTITUTIONS

The Federal Deposit Insurance Act (12 U.S.C. 1811) was amended to require each insured depository institution and depository institution holding company to give 30 days' prior notification to the federal banking authority of (1) the proposed addition of any individual to its board of directors or (2) the employment of any individual as a senior executive officer. This requirement applies to the following institutions:

1. institutions that have been chartered less than two years
2. institutions that have undergone a change in control within the preceding two years
3. institutions that are in a troubled condition or whose capital is below minimum standards

The agencies have the authority to issue a notice of disapproval to stop the appointment or employment of an individual if they feel that appointing or employing the person would not be in the interests of the public, taking into account that individual's competence, experience, character, and integrity.

2250.0.3 INSPECTION OBJECTIVES

1. To determine that required reports are being filed on time.
2. To determine that the contents of reports are accurate and complete.
3. To recommend corrective and, if needed, formal enforcement action when official reporting practices, policies, or procedures are deficient.

2250.0.4 INSPECTION PROCEDURES

1. A bank holding company's historical record concerning the timely submission of reports should be ascertained by reviewing relevant

- Reserve Bank files. The examiner should determine, from documentation in the files, which reports should have been filed because of the passage of time or the occurrence of an event. If a report is delinquent, the bank holding company should be instructed to prepare and submit the report expeditiously.
2. Copies of regulatory reports filed since the prior inspection should be reviewed and compared with company records on a random, line-by-line basis, using a significance test. In some cases, the review will necessarily extend to supporting schedules and workpapers that substantiate the data reflected in the reports. If the initial reports reviewed are found to be substantially correct, then the scope of subsequent reviews may be curtailed. If the reports are found to be incorrect, the overall review procedures should be intensified. When an error or misstatement is considered significant, the matter should be brought to management's attention and the bank holding company should be required to submit adjusted data. Improper methods used in preparing reports should be called to management's attention. The examiner should explain all changes carefully and assist bank holding company personnel in whatever way possible to ensure proper reporting in future reports.
 3. At the conclusion of the review process, the examiner should discuss the following with management, when applicable:
 - a. inaccuracies found in reports and the need for submission of amended pages or reports
 - b. violations of law, rulings, or regulations
 - c. recommended corrective action when policies or procedures have contributed to deficiencies noted in the reports or the untimely submission of report(s)
 4. Details concerning the late or inaccurate preparation of reports should be listed in the inspection report on the Other Supervisory Issues report page. If the matter is considered significant, it should be noted on the Examiner's Comments and Matters Requiring Special Board Attention report page, as well. When the exceptions are considered minor and have been discussed with management and corrected, it will suffice to state this on the Other Supervisory Issues workpaper supporting page.
 5. When it is determined that false, misleading, or inaccurate information is contained in financial statements or reports, consider whether formal enforcement action is needed to ensure that the offending bank holding company, financial institution, or other entity under the holding company structure will correct the statements and reports.

2250.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Submission of reports concerning compliance with the act, or regulations or orders under it	1844(c)			
Annual reports	1844(c)	225.5(b)		
Report on intercompany transactions	1844(c)	225.5(b)		
Reports emanating from inspection report recommendations	1844(c)	225.5(b)		
Reports emanating from cease-and-desist orders	1818(b), (c)

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

2260.0.1 INTRODUCTION

Venture capital activities are usually conducted through one or more of the following types of entities: Small Business Investment Companies (SBIC); Minority Enterprise Small Business Investment Companies (MESBIC); Non-licensed Venture Capital Companies; and Partnerships or Venture Capital Funds. SBIC's and MESBIC's are licensed and regulated by the Small Business Administration (SBA); the other types are not. Both SBIC's and MESBIC's are limited by regulation to investing in and lending to small businesses; whereas, non-licensed venture capital companies and partnerships have greater latitude. The activities of MESBIC's (section 103d companies) are specifically limited to small firms owned by socially or economically disadvantaged persons. Most banks and bank holding companies engage in venture capital activities through an SBIC because of its broad ability to take equity positions in other companies. SBIC's are permitted to own up to 49.9 percent of the voting shares of a company. By contrast, a non-licensed venture capital company that is a subsidiary of a bank holding company may not own more than 4.9 percent of the voting shares of a business. To escape from this limitation some bank holding companies have formed partnerships or venture capital funds. However, a bank holding company can only participate as a limited partner with an ownership interest not to exceed 24.9 percent. Limited partnerships are preferred by those bank holding companies who do not possess the expertise for this type of activity but seek the potential opportunity for high returns.

Through the use of private capital and, in some cases, borrowed money, venture capital companies invest in and lend to new and growing business enterprises. They prefer to invest in and lend to companies that exhibit strong management talent and clearly defined strategies. Many of the companies are yet unknown to the public. Their products either have been introduced to the market or are due to arrive in the next few years. Venture capital companies do not favor pioneering research. Instead, they are interested in financing innovative products, i.e.,

those next in generation to existing ones, that have a wide market appeal and the potential for strong growth. Such products are preferred because of their shorter development time and possible faster realization of profits. One of the ways a venture capital company makes money is by purchasing the common stock of an emerging company and selling it when the company has grown and the stock has appreciated in value. It also generates earnings by making convertible preferred stock investments and by lending money in the form of subordinated debentures and term loans. Usually lending agreements contain provisions which enable a venture capital company to acquire shares or increase existing holdings through the exercise of warrants or stock options at a later date. Although in most cases some equity interest is taken, venture capital companies, generally, do not acquire a controlling interest in a business they finance.

Once financing commences, venture capital companies typically take an active role in the management of the companies. They usually receive representation on the company's board of directors, which enables them to review budgets and assist in structuring the company's long-range strategic plan. Guiding a company through its developing stages is considered essential for the achievement of equity appreciation and realization of the high returns sought by venture capital companies.

2260.0.2 LOANS AND INVESTMENTS

Investments and lending philosophy may differ among venture capital companies. Some choose to be equity-oriented; that is, they look for higher returns on investments through capital appreciation, while others favor lending in the form of loans or convertible debt securities which provide cash flow to fund operations and service debt. However, most companies will strive for a diversified portfolio in terms of the type of investment and industry mix. The range of financing possibilities associated with lending and/or investing is as follows:

First Step Financing	Funds needed for seed capital to help develop an idea.
Start-up Financing	Funds needed to cover the cost of preparing a business plan, conducting market studies and opening a business.
First Stage Financing	Funds needed to start manufacturing and selling the product(s).
Second Stage Financing	Funds needed for working capital to expand production and build inventories. Company is operating but not yet profitable.
Third Stage Financing	Funds needed to improve the product, build working capital and expand marketing and production facilities. At this point, the company should be generating a profit.
Fourth Stage Financing	Additional working capital funds needed prior to initial public offering which may be as much as a year later.

In addition to the above, venture capital companies will consider financing leveraged buy-outs and turnaround situations.

The degree of risk assumed varies according to the stage of financing, i.e., lower stages contain greater risk because of the requirement for longer-term investment discipline than higher stages. Investments in start-up companies typically take five to seven years or more to mature. Because of the high risk involved, most bank-affiliated venture capital companies will avoid the earlier or lower stages of financing. Newly established venture capital companies and especially those that use leverage tend to focus on the intermediate and latter stages of financing. These stages are represented primarily by debenture financing, preferred stock investments, and straight term loans. In structuring a portfolio, a venture capitalist should consider both liquidity and capital protection. The ideal financing mix might entail a limited amount of money invested in common stock with the remainder distributed between debentures, loans, and preferred stock. These instruments will provide income to cover operating expenses and service debt as well as give some protection should the business start to decline. Limited holdings of common stock give the company the opportunity to enhance earnings through capital gains without adversely affecting cash flow. Regardless of the type of financing offered, the ability to exist from an investment or loan through either the issuance of public stock or a cash buyout by a larger company is the goal of a venture capital company.

2260.0.3 FUNDING

A venture capital company may use private capital, leverage, or a combination of both to fund its portfolio of loans and investments. Venture capital companies obtain private capital from their parent organization, either banks or bank holding companies. Generally, private capital is used to fund high-risk, lower-stage investments, although some companies may diversify their portfolio and deploy a portion of capital in loans, debentures and preferred stock. Leverage may be derived from internal and external borrowings. SBIC's that are banking subsidiaries may receive funding in the form of loans from their parent bank. For those companies that are a subsidiary of a bank holding company, internal funding may be provided by the bank holding company from internal cash flow or its external borrowing sources. A bank holding company might borrow from its available bank lines or other borrowing sources to fund venture capital operations. There is, however, one exception; that is, the use of commercial paper proceeds to fund venture capital investments and loans does not appear to qualify under the exemptive provisions of section 3(a)(3) of the Securities Act of 1933. SBIC's and MESBIC's can obtain external financing from the U.S. government and the private sector, while, non-licensed venture capital companies are limited to only private sources for their external financing. Under current SBA regulations, an SBIC can borrow up to \$35 million from the federal financing bank with no limit as to the aggregate amount of private debt. Because of the investment restrictions on MESBIC's, the SBA allows them to incur higher leverage. MESBIC's are permitted to

borrow up to four times their capital base and issue preferred stock to the SBA up to two times their capital base. MESBIC's also have no limit on the aggregate amount of private debt. All government borrowings are through the federal financing bank and carry the guarantee of the SBA. Such borrowings are classified as senior debt.

2260.0.4 PROFITABILITY

Earnings of venture capital companies can fluctuate widely depending on the nature of their activities. Those companies that blend their portfolios with loans, debentures and preferred stock investments tend to be more predictable and less erratic in earnings performance than companies that are strictly equity-oriented. The difference being that loans, debentures and preferred stock provide income to cover operating expenses and debt service requirements, while common stock investments may not yield positive returns for several years. Portfolio diversification tends to smooth out earnings, although the potential for major fluctuations in earnings exists in the future should capital gains be realized on equity investments. In measuring earnings performance, one should consider the combination of net realized earnings (net investment income plus net realized gains (losses) on sale of investments) and net unrealized appreciation or depreciation on investment holdings found in the capital structure of the balance sheet. It is not uncommon to see aggregate returns on capital reach 50

or more. Typically, returns of this magnitude are influenced by either large gains realized on the sale of investments or a substantial amount of unrealized appreciation on investments held or a combination of both. Appreciation or depreciation in portfolio investments represents potential realized gains or losses and, therefore, should be considered in evaluating the company's earnings performance. Specifically, the change in year-to-year net unrealized appreciation or depreciation is a factor that should be considered in analyzing results. When measuring the company's contribution to consolidated earnings, net unrealized appreciation or depreciation should be ignored.

2260.0.5 CAPITALIZATION

In addition to the usual equity components of capital stock, surplus and retained earnings, the capital structure of a venture capital company

includes a separate category for net unrealized appreciation (depreciation) on equity interests. Net unrealized appreciation (depreciation) on equity interests represents the gross amount reported under loans and investments less an appropriate provision for taxes. Since unrealized appreciation (depreciation) on equity interests represents future profits (losses) they are measured separately in the equity account rather than in earnings.

There are no industry norms with which to measure capital adequacy. What is known, however, is that the SBA requires a minimum capital investment of \$1,000,000 to establish an SBIC. Moreover, regulations governing SBIC's limit the dollar amount of investments and/or loans to a single customer to 20 percent of an SBIC's capital base. Although banks are limited by statute to a maximum capital investment in an SBIC of 4.9 percent of their primary capital, statistics show that SBIC's have substantially less than this limit. By contrast, there are no restrictions as to the amount of capital that a bank holding company may invest in a nonbank affiliated venture capital company. Dependence on capital to fund portfolio loans and investments seems to be preferred as the cost of leverage, at present, cannot provide meaningful spreads. It can be assumed that the larger the capital position the higher the dollar amount available for investing and/or lending to a single customer.

Sustained profitability and satisfactory asset quality are required to maintain financial soundness and capital adequacy. The SBA will consider an SBIC's capital as impaired if net unrealized depreciation and/or operating losses equal 50 percent or more of its capital base. It would seem appropriate to use this guideline for measuring the adequacy of capital of non-licensed venture capital companies that are affiliated with a bank holding company.

2260.0.6 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.

2. To determine whether transactions with affiliates, especially banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios and whether the allowance for losses is

adequate in relation to portfolio risk and whether the nonaccrual policy is appropriate.

4. To determine the viability of the company as a going concern, and whether its affiliate status represents a potential or actual adverse influence upon the parent holding company and its affiliated bank and nonbank subsidiaries and the condition of the consolidated corporation.

5. To determine whether the company has formal written policies and procedures relating to lending and investing.

6. To determine if such policies and procedures are adequate and that management is operating in conformance with the established policies.

7. To assess management's ability to operate the company in a safe and sound manner.

8. To suggest corrective action when policies, practices or procedures are deficient, or when asset quality is weak, or when violations of laws or regulations have been noted.

2260.0.7 INSPECTION PROCEDURES

2260.0.7.1 Pre-Inspection

All SBIC's and MESBIC's are subject to comprehensive regulations and annual examinations administered by the SBA. Therefore, it is not necessary to conduct a full scope inspection of these subsidiaries. The bank holding company inspection should focus on the quality of assets, as disclosed in the annual director's valuation and financial statements submitted to the SBA on an annual basis, transactions with affiliates and an overall financial evaluation.

The decision whether the operations of a non-licensed venture capital company will be inspected "on-site" is based on the availability and adequacy of data from either the parent holding company or that which is obtained upon request from the subsidiary. The following information should be obtained and thoroughly reviewed prior to making a decision to go "on-site":

1. Minutes of the board and executive committee meetings since inception of company or the date of the previous inspection;

2. Comparative interim and fiscal financial statements containing value accounting adjustments, including the year-end filing with the SBA;

3. Listing of contingent liabilities, including any pending material litigation;

4. Latest director's valuation of loans and investments and results of latest internal loan or credit review;

5. Copies of the most recent internal and external audit reports;

6. Trial balance of all loans and investments, indicating the percent ownership of a company involving an equity interest;

7. Listing of loans, debentures and preferred stock on which scheduled payments are in arrears 30 days or more or on which payments are otherwise not being made according to original terms;

8. Details of internal and external borrowing arrangements; and

9. Any agreements, guarantees or pledges between the subsidiary and its parent holding company or affiliates.

After reviewing the above information, a decision whether or not to conduct an on-site inspection must be made. Some of the determinants of this decision would include: relative size; current level and trend of earnings; asset quality as indicated in the director's valuation of loans and investments; and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would warrant a visit even though a satisfactory condition had been determined during the previous inspection. All non-licensed venture capital companies should be inspected on-site at least once every three years.

2260.0.7.2 On-Site Inspection

If the decision was made to conduct an "on-site" inspection of the subsidiary, the examiner should expand the scope of the review to include these additional procedures:

1. Hold a brief meeting with the chief executive officer of the company to establish contact and present a brief indication of the scope of the inspection;

2. Review the company's policy statements for loans, investments, nonaccruals, and charge-offs;

3. Review the latest internal review by the company's directors or the loan review department of the bank affiliate or bank holding company;

4. Conduct an independent review of the portfolio;

a. Establish the minimum dollar of loans

and investments to be reviewed to achieve at least 70 percent coverage of the portfolio;

b. Review loans and investments in sample, giving consideration to the following:

- Latest balance sheet and income data;
- Profitability projections;
- Product(s) being produced by customer and their market acceptance;
- Business plan;
- Extent of relationship with customer;
- Funding sources; and
- Ultimate source of repayment.

c. Discuss the more serious problem loans and investments with management;

d. Classify, if necessary, those loans and investments that exhibit serious weaknesses where collectibility is problematical or worse. Lower classification criteria must accompany these assets, which possess a higher degree of credit risk than found in other types of nonbank lending;

e. Determine the diversification of risk within the portfolio, i.e., the mix of loans and investments and the type of industries financed;

f. Review the adequacy of the allowance for loan losses and determine the reasonableness of the amount of unrealized appreciation or depreciation reported on the balance sheet in conjunction with the asset evaluation; and

g. Determine whether the board of directors or parent holding company has established credit limits for the maximum amount of loans and investments to be extended to a single customer. Verify adherence to the limits.

5. Review equity investments for compliance with the 4.9 percent maximum limitation to any one customer;

6. Verify office locations and activities with system approvals;

7. Compare company's general ledger with statements prepared for the latest FR Y-6;

8. Review the quality and liquidity of other investment holdings;

9. Review and classify, if necessary, assets acquired in liquidation of a customer's business due to default. Determine compliance of divestiture period with section 4(c)(2) of The Bank Holding Company Act;

10. Review the manner and frequency in which subsidiary management reports to the parent holding company;

11. Follow-up on matters criticized in the most recent audit reports and the previous inspection report on the subsidiary; and

12. Assess the expertise of subsidiary management and awareness of subsidiary directors.

2260.0.7.3 Matters Warranting Recommendation in Inspection Report

Deficiencies or concerns that warrant citation in the inspection report for the attention of management are:

1. Lack of policies and/or controls in the lending and investing functions;

2. Improper diversification of risk in the loan and investment portfolio;

3. Adverse tie-in arrangements with the affiliate bank(s);

4. Lack of management expertise;

5. Impairment of capital as a result of operating losses or high unrealized depreciation on equity interests or a combination of both; and

6. Lack of adequate reporting procedures to parent holding company management.

2260.0.8 LAWS, REGULATIONS, INTERPRETATIONS AND ORDERS

The Bank Holding Company Act of 1956 was enacted to limit the expansion of banking institutions into nonbanking activities. A bank holding company was defined in the 1956 act as an entity that owned or controlled 25 percent or more of the voting shares of two or more banks; companies owning only one bank were exempted from regulation under the act.

During the 1960s there was a dramatic growth in the number of commercial enterprises that purchased one bank, engaged in nonbanking activities, and remained exempt from regulation. As a result of this change in the structure of bank ownership, Congress enacted the Bank Holding Company Act Amendments of 1970. Of these amendments, the most significant is the extension of the act to cover one-bank holding companies. The Federal Reserve Board was granted the authority to regulate the expansion of one-bank holding companies.

In 1978, Congress passed the International Banking Act. Section 8 of this act expanded the nonbanking prohibitions of the Bank Holding Company Act to foreign banks that engage in the business of banking in the United States directly through a branch or agency or indirectly through a subsidiary commercial lending company. This expanded the nonbanking restrictions beyond simply covering foreign banks that own or control U.S. banks or bank holding companies. However, section 2(h) of the BHC Act provides foreign organizations that are principally engaged in the business of banking outside the United States with exemptions from the nonbanking prohibitions of the BHC Act. Further exemptions have been granted by the Board's discretionary authority under section 4(c)(9) when such exemptions were in the public interest and were consistent with the purposes of the BHC Act.

Under section 4(c) of the BHC Act, Congress exempted a limited number of investments from the general prohibition against owning or controlling shares of nonbank concerns. Section 4(c)(8) permits investment in "shares of any company the activities of which the Board after due notice and opportunity for hearing has determined by regulation to be so closely related to banking or managing or controlling banks as to be a proper incident thereto." The act also provides that any bank holding company may apply to the Board for permission to engage in an activity that has not yet been determined to be permissible if the applicant is of the opinion that the activity in its particular circumstances is closely related to bank-

ing or managing or controlling banks. Section 225.25(b) of the Board's Regulation Y lists permissible nonbanking activities that the Board has deemed to meet these criteria (see appendix 1 of this section). The list of permissible nonbanking activities has been expanded at various times.

The Board has also permitted by order, on an individual basis, certain activities that it considers to be closely related to banking under section 4(c)(8) of the act, but in doing so the Board did not expand the list of permissible activities under section 225.25(b) of Regulation Y. For a list of such activities, see appendix 2 of this section.

In determining whether the performance of a nonbank activity by a bank holding company or the acquisition of a nonbank firm by a bank holding company is a proper incident to banking, the Board applies a "public interest test." The Board determines whether the proposed new activity or proposed acquisition "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices."

An interpretation of Regulation Y (12 C.F.R. 225.126) dated April 28, 1972, and amended September 20, 1972, listed activities that the Board determined do not satisfy the "so closely related" test under section 4(c)(8). The Board subsequently determined that a number of other activities do not satisfy the closely related test. For a complete list of these impermissible activities, see appendix 3 of this section, and for a brief description of a selected number of the activities denied by the Board, see section 3700.0 et seq.

As the primary regulator for bank holding companies and their directly held nonbank subsidiaries, the Federal Reserve System conducts inspections of their operations, financial condition, and compliance with appropriate banking and other related statutes and regulations. Inspection personnel are called upon to evaluate the current condition of the organization as well as its future prospects.

On August 10, 1987, the Competitive Equality Banking Act of 1987 was signed into law. The act redefined the definition of "bank" in

section 2 of the BHC Act so that an FDIC-insured institution is deemed a bank.

State-authorized activities of savings banks. A special rule was established for qualified savings banks (state-chartered, FDIC-insured institutions organized before March 5, 1987) that are subject to the BHC Act (see section 2090.7). In accordance with section 3 of the BHC Act, a qualified savings bank may engage in any nonbanking activity, except insurance activities, either directly or through a subsidiary, that it is permitted to conduct directly as a state-chartered savings bank, even if those activities are not otherwise permissible for bank holding companies. In order to engage in those activities, however, a qualified savings bank must remain a savings bank, and a subsidiary of a savings bank holding company (a company that controls one or more qualified savings banks whose total aggregate assets, upon formation and at all times thereafter, constitute at least 70 percent of the assets of the holding company).

With respect to insurance activities, qualified savings banks may engage in underwriting and selling savings bank life insurance if the savings bank is located in Connecticut, Massachusetts, or New York and if certain other conditions are met.

BHCs engaging in nonbanking activities in foreign countries. A bank holding company has greater leeway to perform nonbanking activities abroad than in the United States in that it may engage in nonbanking activities abroad that would not be permissible in the United States. However, activities abroad are subject to limitations. Section 211.5 of Regulation K requires a bank holding company to limit its direct and indirect activities abroad to those usual in connection with banking and financial activities and to necessary related activities. Section 211.5 also lists particular activities that are permissible abroad and provides rules regarding when a bank holding company must submit an application to engage in such activities directly or through investments.

Edge Act or agreement corporations. A bank holding company may own an Edge or agreement corporation. The Federal Reserve Act and Regulation K govern the permissible activities of Edge or agreement corporations. An Edge or agreement corporation is an international banking vehicle that may only engage in listed or approved activities that are incidental to international or foreign business. The restriction gener-

ally permits an Edge or agreement corporation to only engage in international banking or financial activities (see 12 C.F.R. 211.4(e)). A separate manual, *Guidelines and Instructions for Examination of Edge Corporations*, sets forth the rules and procedures for examining Edge or agreement corporations and for determining whether their activities are permissible.

Companies that only own an Edge Act or agreement corporation. Any company, other than a bank, that acquired an Edge Act or agreement corporation after March 5, 1987, must conform its activities to section 4 of the BHC Act.

Underwriting and dealing in debt and equity securities. Beginning in January 1989, certain section 20 nonbanking subsidiaries of bank holding companies were approved to underwrite and deal in debt or equity securities (excluding open-end investment companies) (see 1989 FRB 192). The Board required, and delayed commencement of the activity, until it was determined by the Board that each applicant had established the necessary managerial and operational infrastructure to commence the expanded underwriting and dealing activity and to comply with their Board order. The applicant's capital plan had to be determined to be adequate along with the necessary policies and procedures needed to comply with the Board's order. The Board's order requires that loans to, and capital investments in, the underwriting subsidiary be deducted from the bank holding company's capital, as provided for in the Board's capital adequacy guidelines. The Board further confirmed that the activities could not be conducted in any other subsidiary other than the Board-approved section 20 subsidiary. (See section 3600.21.4.)

As for underwriting and dealing in equity securities, the Board stated in the order that it would review within a year whether the applicants could commence the activity. The first Board authorization to commence underwriting and dealing in equity securities was given on September 20, 1990, subject to the bank holding company's commitments within its respective Board order, including its commitment to maintain the capital of its section 20 subsidiary at levels necessary to support its activities and commensurate with industry standards, and that it will accordingly increase the capital of the section 20 subsidiary as it grows.

Modifications to the Board's orders authorizing BHC subsidiaries to underwrite and deal in bank-ineligible securities consistent with section 20 of the Glass-Steagall Act. The Board announced its approval of modifications to its previous section 20 authorizations by order, on

September 21, 1989 (1989 FRB 751). The modifications (1) raised from 5 percent to 10 percent (currently 25 percent) the revenue limit on the amount of total revenues a section 20 subsidiary may derive from bank-ineligible securities underwriting and dealing activities, and (2) permit the underwriting and dealing in securities of affiliates, consistent with section 20 of the Glass-Steagall Act, if the securities are rated by an unaffiliated, nationally recognized statistical rating organization, or are issued or guaranteed by the Federal National Mortgage Association (FannieMae), the Federal Home Loan Mortgage Corporation (FHLMC), or the Government National Mortgage Association (GNMA), or represent interests in such obligations.

Acting as agent in the private placement of all types of securities and acting as riskless principal in buying and selling securities. In another Board order, the Board authorized a bank holding company to transfer its private-placement activities from its commercial bank subsidiary to its section 20 subsidiary. The section 20 subsidiary would act as agent in the private placement of all types of securities, including the provision of related advisory services, and to buy all types of securities on the order of investors as a “riskless principal.” The Board concluded that the section 20 subsidiary’s private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities for the purposes of section 20 of the Glass-Steagall Act, and that the revenues derived therefrom should not be subject to the 25 percent revenue limitation placed on bank-ineligible securities activities. (See section 3230.4.)

Foreign banks authorized to operate section 20 subsidiaries to underwrite and deal in corporate debt, commercial paper, and other securities. In a Board order (1990 FRB 158), the Board authorized a foreign bank to operate a section 20 subsidiary under the bank to underwrite and deal in these securities (securities issued by open-end investment companies are not included). The foreign bank operated outside the United States but owned a subsidiary bank in the United States. To achieve equality between the domestic and foreign banking operations in the United States and in an effort to negate any advantages that a foreign bank might have over a domestic bank, the Board considered the foreign bank as a bank holding company even though the bank is not a subsidiary under a bank holding company structure. In so doing, the Board imposed restrictions on the section 20 subsidiary. The foreign bank may fund the section 20 subsidiary, but that action requires prior Board approval.

In addition, the section 20 subsidiary may not borrow from its parent bank. Any loans to, transfers of assets to, or investments in the section 20 subsidiary must also have Board approval. See 1990 FRB 158, 455, 554, 568, 573, 652, and 683.

Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA). This act became law on August 9, 1989. The law revised section 4(c)(8) of the BHC Act and authorized the Board to approve applications from bank holding companies for the acquisitions of savings associations. The Board thus revised section 225.25(b)(9) of Regulation Y to include as a permissible nonbanking activity the owning, controlling, or operating of a savings association, if the savings association engages only in deposit taking, lending, and other activities permissible for bank holding companies. The legislation required the Board to remove tandem restrictions of previous Board orders that are not prohibited by FIRREA and to confine, in approving applications, limitations on transactions between the savings association and its bank holding company affiliates to those required by sections 23A and 23B of the Federal Reserve Act. FIRREA made sections 23A and 23B applicable to savings associations as though they were member banks. Two exceptions apply: (1) no extensions of credit may be granted by a savings association to an affiliate unless it is engaged only in activities permissible for bank holding companies in the BHC Act, and (2) savings associations may not purchase or invest in securities of an affiliate other than shares of a subsidiary. The legislation also provided for a “sister bank” exemption from the provisions of sections 23A and 23B of the Federal Reserve Act. (See sections 2020.8 and 2090.8.1.)

1992 revisions to the Regulation Y (section 225.25(b)) list of nonbanking activities—the “laundry list.” During 1992, the Board initiated several actions that affected certain nonbanking activities. The first action, effective May 18, 1992, amended section 225.25(b)(5) of Regulation Y with regard to tangible personal property leases. Subject to the stated limitations, a bank holding company can rely on estimated residual values of up to 100 percent of the acquisition costs of the leased property in order to recover the bank holding company’s leasing costs. Previously, the nonbanking activity had only been approved by Board order (see the initial Board order at 1990 FRB 462 and the subsequent

Board orders at 1990 FRB 960 and 1991 FRB 187 and 490).

The Board issued, effective August 10, 1992, a revised interpretive rule regarding investment advisory activities of bank holding companies to expressly provide that a bank holding company or its nonbank subsidiary may act as agent for customers in the brokerage of shares of an investment company advised by the holding company or any of its subsidiaries. In addition, the revision provides that a bank holding company or its nonbank subsidiary may provide investment advice to customers regarding the purchase or sale of shares of an investment company advised by an affiliate. In both instances the Board requires certain disclosures to be made to address potential conflicts of interest or adverse effects. See 12 C.F.R. 225.125(h), Regulation Y.

Two other subsequent Board actions further consolidated additional nonbanking activities into Regulation Y (sections 225.25(b)(4) and (b)(15)) that were previously approved by Board order, as they related to providing full brokerage services, and separately, financial advisory services. The Board approved both changes, subject to the limitations stated therein, effective September 10, 1992.

3000.0.1 CATEGORIES OF NONBANKING ACTIVITIES

Section 4(c)(8) of the BHC Act authorizes bank holding companies to engage directly or through a subsidiary in activities that the Board determines are closely related to banking or managing or controlling banks. The Board and the courts have established the following guidelines for determining whether a nonbanking activity is closely related to banking:¹

1. whether banks have generally provided the service;

2. whether banks generally provide services that are operationally or functionally so similar to the proposed service as to equip them particularly well to provide the proposed service; or

3. whether banks generally provide services that are so integrally related to the proposed service as to require their provision in specialized form.

In addition, the Board may consider other factors in deciding what activities are closely related to banking.² Upon a positive determination that a proposed activity is “closely related to banking or managing or controlling banks,” the Board must also find that a proposed activity is a “proper incident” to banking and that performance of an activity by a bank holding company can reasonably be expected to produce benefits to the public (such as greater convenience, increased competition, or gains in efficiency) that outweigh possible adverse effects (such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices).

The following describes three categories of bank holding company nonbanking activities:

1. those that have been found to be permissible and are listed in Regulation Y, the so-called laundry list activities (see appendix 1);

2. those that are permissible by Board order only (see appendix 2); and

3. those that have been denied by the Board (see appendix 3).

1. *National Courier Association v. Board of Governors*, 516 F.2d 1229 (D.C. Cir. 1975).

2. *Alabama Association of Insurance Agents v. Board of Governors*, 533 F.2d 224 (5th Cir. 1976), cert. denied, 435 U.S. 904 (1978).

3000.0.2 APPENDIX 1—ACTIVITIES APPROVED BY THE BOARD AS BEING CONSIDERED “CLOSELY RELATED TO BANKING” UNDER SECTION 4(c)(8) OF THE BANK HOLDING COMPANY ACT (SECTION 225.28(b) OF REGULATION Y)

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
<i>Note: The bulleted items in this appendix are provided for historical reference only. The narrative before the bulleted items reflects the current Regulation Y authorization.</i>	
1. Extending credit and servicing loans	1971
Making, acquiring, brokering, or servicing loans or other extensions of credit (including factoring, issuing letters of credit, and accepting drafts) for the company’s account or the account of others.	
2. Activities related to extending credit	
a. Appraising	
(1) Real estate appraising	1980
(2) Personal property appraising	1986
b. Arranging commercial real estate equity financing	1983
c. Check-guaranty services	1986
d. Collection agency services	1986
e. Credit bureau services	1986
f. Asset management, servicing, and collection activities	1997
g. Acquiring debt in default	1995
h. Real estate settlement servicing	1997
3. Leasing personal or real property or acting as agent, broker, or adviser in leasing such property	
• Personal property leasing ²	1971
• Real property leasing	1974
4. Operating nonbank depository institutions	
a. Owning, controlling, or operating an industrial bank, Morris Plan bank, or industrial loan company so long as the institution is not a bank	1971
b. Owning, controlling, or operating a savings association, if the savings association engages in deposit-taking activities, lending, and other activities that are permissible for bank holding companies	1989

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
5. Trust company functions or activities	1971
6. Financial and investment advisory activities: acting as an investment adviser or financial adviser to any person, including (without limiting these activities in any way) —	1971
a. Serving as an investment adviser to an investment company registered under the Investment Company Act of 1940, including sponsoring, organizing, and managing a closed-end investment company	1972
• Investment or financial advising	1971
• Advisory services to open-end (mutual fund) investment companies	1972
b. Furnishing general economic information and advice, general economic statistical forecasting services, and industry studies	1984
c. Providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, reorganizations, recapitalizations, capital structurings, financing transactions, and similar transactions, ³ and conducting financial feasibility studies ⁴	1992
• Financial futures and options on futures	1986
d. Providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments	1992
• Financial futures and options on futures	1986
• Providing financial advice to—	
— state and local governments and	1973
— foreign governments, including foreign municipalities and agencies of foreign governments, such as with respect to the issuance of their securities	1992
• Inclusion of any investment or financial advisory activity without restriction	1997
• Discretionary investment advice to be provided to any person (includes investment advice regarding derivative transactions to institutional or retail customers as an investment, commodity trading, or other adviser) regarding contracts related to financial or nonfinancial assets (such advice is no longer restricted to institutional customers)	1997
• Financial and investment advice (or any permissible nonbanking activity) can be provided in any combination of permissible nonbanking activities listed in Regulation Y	1997
e. Providing educational courses and instructional materials to consumers on individual financial management matters	1986

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
f. Providing tax-planning and tax-preparation services	1986
7. Agency transactional services for customer investments (principal positions)	
a. Securities brokerage services (including securities clearing and/or securities execution services on an exchange) for the account of customers and does not include securities underwriting or dealing	
(1) Securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or	1982
(2) In combination with advisory services and incidental activities (including related securities credit activities and custodial services)	1992
b. Riskless-principal transactions	1997
c. Private-placement services	1997
d. Futures commission merchant activities	1984
• A nonbanking subsidiary may act as an FCM with respect to any exchange-traded futures contract and options on a futures contract based on a financial or nonfinancial commodity	1997
e. Other transactional services such as providing to customers as agent transactional services with respect to the following:	1997
(1) Swaps and similar transactions	
(2) Investment transactions as principal ⁵	
(3) Transactions permissible for a state member bank	
(4) Any other transaction involving a forward contract, an option, futures, an option on a futures or similar contract (whether traded on an exchange or not) relating to a commodity that is traded on an exchange	
8. Investment transactions as principal	
a. Underwriting and dealing in government obligations and money market instruments	1984
b. Investing and trading activities. Engaging as principal in the following:	
(1) Foreign exchange	1984
(2) Forward contracts, options, futures, options on futures, swaps, and similar contracts, based on any rate, price, financial asset (such as gold, silver, platinum, palladium, copper, or any other metal approved by the Board) or any other nonfinancial asset or group of assets, other than a bank-ineligible security	1997

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
(3) Forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on an index of a rate or price, or the value of any financial asset, nonfinancial asset, or group of assets, other than a bank-ineligible security, if the contract requires cash settlement	1997
9. Management consulting and counseling activities	
a. Providing management consulting advice on any matter (financial, economic, accounting, or audit) to any other company ⁶	
• Unaffiliated banks (depository institutions)	1974
• Nonbank depository institutions	1982
• Other unaffiliated depository institutions	1997
• Any financial, economic, account, or audit matter to any other company	1997
b. Employee benefits consulting services	1997
c. Career counseling services	1997
10. Support services	
a. Courier services	1973
b. Printing and selling MICR-encoded checks and related documents	1997
11. Insurance agency and underwriting	
a. Credit insurance: acting as principal, agent, or broker for insurance (including home mortgage redemption insurance)	
• Acting as insurance agent or broker primarily in connection with credit extensions ⁷	1971
• Underwriting credit life and credit accident and health insurance related to an extension of credit	1972
b. Finance company subsidiary: insurance agent or broker for extension of credit by finance company subsidiary	1982
c. Insurance agency activities in small towns	1984
d. Insurance agency activities conducted on May 1, 1982	1984
e. Supervision of retail insurance agents	1984
f. Insurance agency activities by small bank holding companies	1984
g. Insurance agency activities conducted before 1971	1984

3000.0.3 Appendix 2—Activities Considered “Closely Related to Banking” under Section 4(c)(8) of the Bank Holding Company Act

<i>Permitted by Order on an Individual Basis</i>	<i>Year Approved</i>	<i>Manual Section 3600.</i>
1. Operating a “pool-reserve plan” for the pooling of loss reserves of banks with respect to loans to small businesses	1971	1
2. Operating an article XII New York investment company	1977	5.1
3. Underwriting and dealing in commercial paper to a limited extent	1987	21.1
4. Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, and commercial paper	1987	21.2
5. Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, consumer receivable-related securities, and commercial paper	1987	21.3
6. Issuing and selling mortgage-related securities backed by the guarantees of the Government National Mortgage Association	1988	23
7. Engaging in title insurance agency activities (approved under exemption G of the Garn–St Germain Depository Institutions Act of 1982)	1988	17.1
8. Underwriting and dealing in, to a limited extent, corporate debt and equity securities	1989	21.4
9. Acting as a sales-tax refund agent	1990	24.1
10. Providing real estate settlement activities through a permissible title insurance agency (exemption G companies only)	1990	26
11. Providing administrative and certain other services to mutual funds	1993	27
12. Acting as a dealer-manager in connection with cash-tender and exchange-offer transactions	1993	21.5
13. Privately placing limited partnership interests	1994	8
14. Engaging in real estate title abstracting	1995	30
15. Providing employment histories to third parties	1995	29
16. Underwriting “private ownership” industrial development bonds by a section 20 company	1995	21.6
17. Serving as a commodity pool operator of investment funds engaged in purchasing and selling futures and options on futures on certain financial and nonfinancial commodities	1996	13.1

3000.0.4 Appendix 3—Activities Considered Not to Be “Closely Related to Banking” under Section 4(c)(8) of the Bank Holding Company Act

<i>Activities Denied by the Board</i>	<i>Year Denied</i>
1. Insurance premium funding (“equity funding”) (combined sales of mutual funds and insurance)	1971
2. Underwriting general life insurance not related to credit extension	1971
3. Real estate brokerage	1972
4. Land investment and development	1972
5. Real estate syndication	1972
6. General management consulting	1972
7. Property management	1972
8. Trading in platinum and palladium coin and bullion ³	1973
9. Armored car service ¹	1973
10. Sale of level term credit life insurance	1974
11. Underwriting mortgage guarantee insurance	1974
12. Computer output microfilm services ²	1975
13. Operating a travel agency	1976
14. Underwriting property and casualty insurance	1978
15. Real estate advisory activities	1980
16. Certain contract key entry services	1980
17. Offering investment notes with transactional features	1982
18. Engaging in “pit arbitrage” spread transactions on commodities exchanges to generate trading profits	1982
19. Engaging in the publication and sale of personnel tests and related materials	1984
20. Providing credit ratings on bonds, preferred stock, and commercial paper	1984
21. Providing independent expert actuarial opinions of a general nature for purposes such as divorce action and personal injury litigation	1984
22. Acting as a specialist in foreign-currency options on a securities exchange	1985

*Activities Denied by the Board**Year Denied*

- | | |
|---|--------|
| 23. Title insurance activities (See the Board letter dated March 17, 1986, re: Independence Bancorp, Inc. and the Board order at 1989 FRB 31) | 3000.0 |
| 24. Acting as a broker for customers in the purchase and sale of forward contracts based on certain financial and nonfinancial commodities, and acting as the primary clearing firm for professional floor traders ⁴ | 1991 |

1. On June 18, 1990, the Board determined that the activity of providing armored car services to the general public is closely related to banking (see 1990 FRB 676). In order for the Board to approve a nonbank activity for a bank holding company, the Board must also find that the activity is a "proper incident thereto." On February 10, 1993, the Board denied the application (1993 FRB 352), finding that the proposed transactions posed potential violations of section 23B of the Federal Reserve Act and that the applicant had failed to

prove that the activity is a proper incident to banking.

2. The Board's interpretation of Regulation Y at 12 C.F.R. 225.123 was amended on November 25, 1987, by deleting item (e)(4) relating to the impermissibility of the activity (see 52 *Federal Register* 45160-45161 and 1987 FRB 933).

3. Authorized by the Board in 1995 FRB 190 (platinum) and 1996 FRB 571 (palladium).

4. The Board subsequently approved this activity by Board order. (See 1997 FRB 138.)

Section 2(c) of the BHC Act (Savings Bank Subsidiaries of BHCs Engaging in Nonbanking Activities) Section 3001.0

As an FDIC insured institution, a savings bank qualifies as a “bank” under section 2(c) of the BHC Act, as amended by section 101(a) of the Competitive Equality Banking Act of 1987 (“CEBA”). CEBA amended the BHC Act, in section 3(f), stating that any qualified savings bank, which is a subsidiary of a bank holding company, could engage directly, or through a subsidiary, in any nonbanking activity, except for certain insurance activities, that it is permitted to engage in by State law—including activities which are not otherwise permitted for bank holding companies under section 4(c)(8) of the BHC Act. In order for a qualified savings bank, that is a subsidiary of a bank holding company, to engage in such activities, however, the bank holding company must be a savings bank holding company as defined in section 2(1) of the BHC Act, in other words, 70 percent of the assets of the bank holding company must consist of one or more savings banks at the time of formation.

Insurance activities of any qualified savings bank which is a subsidiary of a bank holding company are limited to the insurance activities allowed under section 4(c)(8) of the BHC Act. A qualified savings bank that was authorized to engage in the sale or underwriting of savings bank life insurance, as of March 5, 1987, can sell or underwrite such insurance directly, provided that it is permitted to underwrite and engage in the sale of savings bank life insurance as that activity is authorized for savings banks by state law, and is located in Massachusetts, Connecticut, or New York. Should the bank

holding company parent of the qualified savings bank cease to be a savings bank holding company, the savings bank must cease engaging in these activities within two years.

In a separate application a nonoperating company, which was formed for the purpose of acquiring a savings bank, insured by the Federal Deposit Insurance Corporation, applied for the Board’s approval to become a bank holding company pursuant to section 3(a)(1) of the Bank Holding Company Act, acquiring all of the voting shares of the savings bank. The savings bank engages through subsidiaries in real estate investment and development activities authorized pursuant to State law.

As part of the Board’s analysis in this case, including its evaluation of the capital and financial resources of the bank holding company and the bank involved, the Board considered the risk to the Applicant and to the savings bank of the real estate development activities to be conducted by the savings bank through its nonbank subsidiaries. The Board expressed serious reservations with regard to this application and similar applications by bank holding companies to acquire savings banks engaged directly or through subsidiaries in real estate development activities. In the Board’s view the conduct of real estate development activities through a holding company subsidiary rather than a bank subsidiary would provide more effective corporate separateness.

The Board approved the application by Order on October 30, 1987 (1987 FRB 925), relying on the Applicant’s commitments.

Section 4(c)(i) and (ii) of the BHC Act (Exemptions From Prohibitions on Acquiring Nonbank Interests) Section 3010.0

3010.0.1 INTRODUCTION

The prohibitions against a bank holding company having or acquiring nonbank interests do not apply to bank holding companies meeting the requirements of section 4(c)(i) and (ii) of the Act.

3010.0.2 LABOR, AGRICULTURAL OR HORTICULTURAL ORGANIZATIONS

Section 4(c)(i)—“Any company that was on January 4, 1977, both a bank holding company and a labor, agricultural or horticultural organization exempt from taxation under section 501 of the Internal Revenue Code of 1954, or . . . any labor, agricultural or horticultural organization to which all or substantially all of the assets of such company are hereafter transferred.”

Exemption under this section was amended when the Financial Institutions Regulatory and Interest Rate Control Act of 1978 became effective early in 1979. The effect of the amendment was to repeal exemption under this section for labor, agricultural or horticultural organizations becoming BHCs after *January 4, 1977*, except for those organizations becoming BHCs by means of acquiring all or substantially all of the assets of a company that was both a BHC and a labor, agricultural or horticultural organization exempt from taxation on January 4, 1977. In order for a holding company to be entitled to this exemption, net income derived from the organization cannot inure to the benefit of any individual. Organizations must be formed primarily for the betterment of the working conditions of the labor organization’s members, or improvement in the grade of agricultural or horticultural products for an agricultural or horticultural organization. The growing of products for profit by agricultural or horticultural organizations would disqualify them for exemption. Thus the phrase “any labor, agricultural or horticultural organization” is intended to include only such organizations that are also exempt from taxation under section 501 of the Internal Revenue Code of 1954.

In order for a labor, agricultural or horticultural organization to receive exemption from taxation under section 501(c)(5) of the Internal Revenue Code of 1954, it must file an application (form 1024) with the IRS. In response to the application, the organization receives a determination letter which should be reviewed

to assure that exemption was allowed and to verify the date the company became exempt under section 501. The date of exemption is determined as follows. A company which files for exemption within 18 months after its organization is considered exempt as of the date of its organization. The date of IRS approval is the date of exemption if application for exemption is filed more than 18 months after organization. The date of exemption must be no later than January 4, 1977, for the company to be entitled to exemption from section 4 of the Act. The fact that an organization pays income taxes annually does not disallow its exemption under section 501 of the tax code. Despite its tax exemption, an organization is subject to tax on its unrelated business income.

3010.0.3 FAMILY-OWNED COMPANIES

Section 4(c)(ii)—“A company covered in 1970 more than 85 percentum of the voting stock of which was collectively owned on June 30, 1968, and continuously thereafter, directly or indirectly, by or for members of the same family, or their spouses, who are lineal descendants of common ancestors.”

The phrase “voting stock” does not limit the form of an organization to an incorporated entity. Exemption under this section extends to other forms of business associations which meet the definition of a company. For example, for a partnership, the 85 percent rule applies to “general partnership interest” and for a trust which meets the definition of a company, the 85 percent rule applies to “beneficial ownership.” A company must continue to control the same subsidiary bank that it controlled on June 30, 1968, to retain its exemption under this section. Lineal descendants of common ancestors include descendants by half as well as full blood and legally adopted children.

In January 1980, the Board approved an application of a one-bank holding company covered by the exemption in 4(c)(ii) to acquire an additional bank, but stated that the holding company could no longer rely on that section for conducting its nonbanking activities. Based upon its review of the legislative intent of Congress in providing this exemption, it was the Board’s judgment that the exceptionally broad exemp-

tion afforded by section 4(c)(ii) must be limited to family-owned one-bank holding companies that are not engaged in the management of banks. Moreover, in the Board's view, upon the acquisition of an additional bank, a one-bank holding company that is exempt under section 4(c)(ii) of the Act, would become engaged in the management of banks, and would thereby terminate its eligibility for the exemption. In addition, the Board believed that to permit unsupervised nonbank expansion by a multibank holding company would constitute an evasion of the Act, which the Board is authorized to prevent pursuant to section 5(b) of the Act.

3010.0.4 INSPECTION OBJECTIVES

1. To verify that a holding company qualifies for exemption from the prohibitions of section 4 by virtue of either section 4(c)(i) or 4(c)(ii).

2. Review the activities conducted by a company qualifying for an exemption under section 4(c)(ii) of the BHC Act, which may be faced with revocation of the exemption, and determine if there may be eligibility for permanent grandfathering under section 4(a)(2) of the BHC Act.

3010.0.5 INSPECTION PROCEDURES

1. Although bank holding companies qualify-

ing for a section 4(c)(i) or 4(c)(ii) exemption are not routinely inspected on a periodic basis, when inspected their exempt status should be verified. All nonbank activities of exempt organizations should be examined in the inspection. The nature of all such activities and the dates they were commenced should be documented in the work papers to establish their current permissibility in the event the organization should lose its exemption from section 4.

2. For BHCs exempt under section 4(c)(i), the examiner should ascertain the date the company became exempt under section 501 of the tax code. Also, the stock books of the subsidiary bank or other pertinent documents should be reviewed to assure that the company was a BHC on January 4, 1977.

3. When verifying a company's exemption under section 4(c)(ii), the stock records of the subsidiary bank and the stock records, partnership agreements, trust agreements and other records of the bank holding company should be reviewed to assure that the following conditions have been satisfied:

a. 25 percent or more of the voting stock of the subsidiary bank has been continuously owned by the BHC since June 30, 1968;

b. Members of the same family have continuously held an 85 percent or more interest in the holding company since June 30, 1968.

Section 4(c)(1) of the BHC Act (Investment in Companies Whose Activities are Incidental to Banking) Section 3020.0

3020.0.1 INTRODUCTION

By virtue of section 4(c)(1) of the Act, a bank holding company may invest, without supervisory approval, in the shares of companies engaged in activities that Congress felt were incidental to the business of banking. The following activities are permissible investments for bank holding companies under this section.

3020.0.2 PROVIDING BANKING QUARTERS

Section 4(c)(1)(A) provides that a BHC may invest in a company engaged in holding or operating properties used wholly or substantially by any banking subsidiary of such bank holding company in the operations of such banking subsidiary or acquired for such future use.

Normally, bank utilization of 50 percent or more of the property would meet the requirements of this section. Investments in property where usage of such property by subsidiary banks is less than 50 percent will be reviewed on an *ad hoc* basis to determine its permissibility under this section. Future needs of the bank holding company and its bank subsidiaries will be considered when reviewing these cases.

In acquiring property, a bank holding company must have definite plans for use of the property as a subsidiary bank's premises within a reasonable period of time. Property may not be acquired and indefinitely warehoused until a need develops for the property.

This section of the BHC Act does not provide the authority for a BHC to invest in the shares of a company engaged in holding or operating properties used by nonbank subsidiaries. Directly holding or operating properties used by a nonbank subsidiary is considered an incidental activity necessary to carry on the main business activity of the subsidiary and thus is exempt under section 4(a)(2)(A) of the Act and section 225.22(a)(2)(vi) of Regulation Y.

3020.0.3 SAFE DEPOSIT BUSINESS

Section 4(c)(1)(B) of the Act provides that a holding company may invest in the shares of a company whose activities are limited to conducting a safe deposit business. Refer to Section 225.22(b) of Regulation Y.

3020.0.4 FURNISHING SERVICES TO BANKING SUBSIDIARIES

Section 4(c)(1)(C) of the BHC Act provides that a BHC may invest in a company which furnishes services to or performs services for the bank holding company or its banking subsidiaries. Section 225.22(a) of Regulation Y provides that a bank holding company may, without the Board's prior approval, furnish services to or perform services for its banking and non-banking subsidiaries either directly or indirectly through a subsidiary. Generally, a BHC may only provide services related to the internal operations of the BHC or its subsidiaries. A bank holding company or its subsidiaries may not rely on the servicing exemption to deal with the public as principal, but may deal with outside parties provided they are acting only as agent for the holding company or its subsidiaries.

The term "services" implies servicing operations a bank may carry on itself, but which the BHC chooses to have done through a nonbank subsidiary. Section 225.22(a)(2) states that services for the internal operations of the bank holding company or its subsidiaries include: accounting, auditing, appraising, advertising, public relations, data processing, data transmission services, data bases or facilities, personnel services, courier services, holding or operating property used wholly or substantially by a subsidiary in its operations or for its future use, and selling, purchasing or underwriting insurance such as blanket bond insurance, group insurance for employees, and property and casualty insurance. For the later insurance activities, bank holding companies are permitted under the servicing exemption to act as agent or to underwrite insurance on their own risks (e.g. blanket bond insurance or employee group insurance plans). Refer to section 225.22(a)(2) of Regulation Y for other services permissible for the internal operations of the BHC or its subsidiaries.

The servicing exemption extends to services that are normally performed by a bank for its customers or correspondent banks. These activities generally include computerized billing, payroll, accounting, financial records maintenance and other similar data processing services as long as the subsidiary bank is permitted under applicable State or federal law to provide the service. These services may be provided only

upon request by the customers to the subsidiary bank. Furthermore, the contractual arrangements must be made between the customer and the bank. The company can service existing service contracts the bank has originated but is prohibited from purchasing the contracts or entering into contracts to provide services directly to the public.

The purchasing of participations by the parent in loans from subsidiary banks generally is not considered an exempt activity under the authority of sections 4(a)(2) or 4(c)(1). Holding companies that engage in the purchase of participations from their subsidiary banks should file an application pursuant to Section 4(c)(8) of the BHC Act. Purchasing participations in loans for the purpose of providing liquidity or acquiring a portion of a line of credit to facilitate the needs of the bank's customers (overlines) provides a service or benefit to the bank and is considered an acceptable purchase under the services exemption. In all cases where a participation in a loan is purchased, the loan must be made in the name of the bank and serviced by the respective bank. The purchasing of a loan for reasons other than those set forth above may be viewed as a direct lending activity.

3020.0.5 FURNISHING SERVICES TO NONBANK SUBSIDIARIES

The Bank Holding Company Act of 1956 prohibited a BHC itself from engaging in any business except (1) banking, (2) managing or controlling banks, and (3) furnishing services to its bank subsidiaries. In 1970, Congress amended section 4 of the BHC Act to expressly authorize a BHC to furnish services to or perform services for its nonbank subsidiaries as well as its bank subsidiaries under exemption A of section 4(a)(2). While section 4(c)(1) authorizes a BHC to invest in shares of a company engaged in certain activities, exemption A provides the authority for a BHC to engage in those activities directly.

The Board issued an interpretation (12 C.F.R. 225.141), effective August 1980, which stated that it will permit, without any regulatory approval, a bank holding company to form a wholly-owned subsidiary to perform servicing activities for both banking and nonbanking subsidiaries that the holding company itself could perform directly or through a department or a division under section 4(a)(2)(A) of the BHC Act. In addition, an approved section 4(c)(8)

company may form a wholly-owned subsidiary to engage in activities that such company could itself engage in.

3020.0.6 LIQUIDATING ASSETS

Section 4(c)(1)(D) provides that a BHC may own shares of a company which engages in liquidating assets acquired from such BHC (not including its nonbank subsidiaries) or its banking subsidiaries or which were acquired from any other source prior to May 9, 1956, or the date on which such company became a BHC, whichever is later.

Assets acquired for liquidation by a section 4(c)(1)(D) subsidiary are subject to the same time limitations as shares acquired D.P.C. pursuant to section 4(c)(2) of the Act.

BHCs seeking to hold the shares of a liquidating or nominee subsidiary organized to dispose of assets acquired D.P.C. by a BHC nonbank subsidiary, can rely on the Board's August 1980 interpretation permitting, without prior regulatory approval, a BHC to form a subsidiary to perform activities which itself could perform under exemption A of section 4(a)(2).

3020.0.7 INSPECTION OBJECTIVES

1. To determine whether the activities conducted by companies in which the BHC has a greater than 5 percent investment in the company and for which the BHC claims exemption under section 4(c)(1) of the BHC Act, are the types of permissible activities contemplated by that section—activities claimed under the premises exemption under 4(c)(1)(A), the safe deposit business exemption under 4(c)(1)(B), the services exemption under (4)(c)(1)(C), or the liquidating subsidiary exemption (4)(c)(1)(D).

3020.0.8 INSPECTION PROCEDURES

The inspection of a nonbank subsidiary exempt under section 4(c)(1) of the Act should center on a review of the activities to assure that those activities are the types permissible under section 4(c)(1) subsections A, B, C and D.

3020.0.8.1 Section 4(c)(1)(A)—Bank Premises

The following procedural steps should be performed in connection with an inspection of a bank premises company.

1. Obtain a list of all real estate held by the company including the following information:

- a. Property description and location;
- b. Date acquired;
- c. Current utilization;
- d. Extent of utilization by banking subsidiaries and others indicating percentage of square feet leased to subsidiaries.

2. When use of the property by a subsidiary bank(s) is less than 50 percent, discuss future plans for the use of the property with management. Note any related discussion contained in the minutes of directors' and committee meetings, and action taken to date to implement these plans. Lease agreements with other tenants should be reviewed to determine the term of a lease including options to renew.

3. Evaluate the permissibility of holding each property under the premises exemption.

4. Review and evaluate other activities engaged in and assets held by the company to establish their permissibility under the premises exemption. Such activities could include leasing property and providing a general maintenance service to other tenants.

3020.0.8.2 Section 4(c)(1)(B)—Safe Deposit Business

Activities exempt under this section are restricted to conducting a safe deposit business. All activities engaged in and assets held by companies for which the BHC is claiming exemption under this section should be reviewed and evaluated to determine their permissibility under this exception.

3020.0.8.3 Section 4(c)(1)(C)—Services

The following procedural steps should be performed when inspecting service companies.

1. List and describe all services provided to subsidiaries in the inspection report.

2. Review and evaluate the types of services provided to the banking and nonbanking subsidiaries to determine their permissibility.

3. Obtain from management any written bank holding company policies concerning the provision of services and the assessment of fees or discuss with management the basis on which service fees are established.

4. Comment on the reasonableness of fees relative to the fair market value, cost, volume, or quality of such services rendered.

5. Indicate if all service contracts have been approved by each subsidiary's board of directors.

6. When reviewing services provided to banking subsidiaries for their customers:

- a. List and describe all services provided;
- b. Determine that the company is operating as an adjunct to its affiliated banks for the purpose of facilitating the bank's operations, and not as a separate, self-contained organization;
- c. Review contractual arrangements to assure that the company has not purchased any service contracts from a subsidiary bank and has not entered directly into agreements to provide services to any party other than the bank;

d. Review and evaluate all services to determine whether they are services that the subsidiary bank is permitted to provide under applicable State or federal law.

3020.0.8.4 Section 4(c)(1)(D)—Liquidating Subsidiary

The following procedural steps should be followed in connection with an inspection of a liquidation company in which the BHC holds an investment.

1. Obtain a list of all assets acquired by the company for the purpose of liquidation including the following information:

- a. Asset description and location;
- b. Date acquired;
- c. Source of acquisition;
- d. Liquidation plans, including timetable and selling price;
- e. Cost of assets and book value, including detail on any improvements.

2. Verify that assets acquired from sources other than the parent or its subsidiary banks were acquired prior to May 9, 1956, or the date on which the holding company became a BHC, whichever is later.

3. Verify that assets acquired for liquidation did not originate in a nonbank subsidiary. If a section 4(c)(1)(D) liquidating subsidiary is holding a material amount of assets acquired from a nonbank subsidiary, discuss the propriety of these holdings with the Reserve Bank office staff and, if necessary, Board staff in the Division of Banking Supervision and Regulation or the Legal Division.

4. Review the bank holding company's policies, practices and procedures concerning the liquidation of assets and determine if the subsidiary is in compliance with the time limits indicated above.

5. Discuss with management and note the

liquidation plans and progress to date in liquidating assets that have been held in excess of 12 months. Note any related discussion found in the minutes of directors' and committee meetings.

6. Comment on whether management is making a *bona fide* effort to dispose of all assets for fair value.

7. Check improvements made to property by the company to assure that the nature and use of the asset has not substantially changed. The investment of funds to change substantially the nature of the asset (such as undeveloped real estate) to increase its value would generally be viewed as engaging in real estate development, an activity which is not permissible.

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Section 4(c)(2) of the Bank Holding Company Act permits a bank holding company or any of its subsidiaries to acquire shares in satisfaction of debts previously contracted (DPC) in good faith. The shares must be disposed of within two years from the date they were acquired, except that the Board is authorized upon application of a company to grant additional exemptions if, in its judgment, the extension would not be detrimental to the public interest and either the bank holding company has made a good faith attempt to dispose of those shares during the five-year period, or the disposal of the shares would have been detrimental to the company. The aggregate duration of the extensions cannot extend beyond 10 years.

Even though the statute refers specifically to shares, the Board has taken the position, in section 225.22(d) of its Regulation Y and in an interpretation (12 C.F.R. 225.140), that the congressional policy evidenced by section 4(c)(2) should apply to DPC acquisitions of other assets, other than shares (assets), and real estate by bank holding companies and their nonbanking subsidiaries. Section 225.22(d)(1) provides the same holding periods (including provision for extensions) for other DPC assets or real estate as are provided by statute for DPC shares.

Regulation Y, section 225.22(d), addresses nonbanking acquisitions that do not require prior Board approval. With respect to DPC acquisitions, voting securities, or other assets or real estate acquired by foreclosure or otherwise, in the ordinary course of collection of a debt previously contracted (DPC property) in good faith, Regulation Y does not require the Board's prior approval if the DPC property is divested within two years of acquisition. Regulation Y further states that the Board may, upon request, extend the two-year period for up to three additional years. Further, the Board may permit additional extensions for up to five years (for a total of 10 years). This provision applies to shares, real estate, or other assets in which the holding company demonstrates that each extension would not be detrimental to the public interest and either the bank holding company has made good faith attempts to dispose of such shares, real estate, or other assets, or the disposal of the shares, real estate, or other assets during the initial period would have been detrimental to the company. Transfers within the bank holding company system do not extend any period for divestiture of the property.

Under the Board's delegated authority, the Reserve Banks may approve a BHC's requests

for extensions beyond the two-year divestiture period.¹ In accordance with a Board interpretation (12 C.F.R. 225.138), extensions should not be granted except under compelling circumstances, and periodic progress reports on divestiture plans are generally required. When these permissible extension periods expire, the Board no longer has discretion to grant further extensions. A BHC would be in violation of the act if shares, other assets, or real estate acquired DPC is not disposed of within the prescribed time frame.

In July 1980, the Board issued an interpretation of Regulation Y (12 C.F.R. 225.140) that provided for a possible approval for an additional five-year period for the divestiture of real estate acquired DPC. With respect to DPC real estate, this interpretation requires that (1) the value of the real estate on the books of the company be written down to fair market value, (2) the carrying costs cannot be significant in relation to the overall financial position of the company, and (3) the company must make good faith efforts to effect divestiture. Fair market value should be derived from appraisals, comparable sales, or some other reasonable method. Companies holding real estate for this extended period are expected to make active efforts to dispose of it, and they should advise the Reserve Bank regularly concerning their ongoing efforts.

In accordance with the Board's interpretation (12 C.F.R. 225.140), after two years from the date of acquisition of DPC assets, the holding company is to report annually to the Federal Reserve on its efforts to accomplish divestiture of the assets. The Reserve Bank will monitor the efforts of the company to effect an orderly divestiture. Divestiture may be ordered before the end of the authorized holding period (beyond the initial two-year period that requires no Board authorization) if supervisory concerns warrant such action.

Section 4(c)(1)(D) allows a bank holding company to establish a subsidiary to hold real estate acquired by itself or by any of its banking subsidiaries for debts previously contracted, for the purpose of disposing of the real estate in an orderly manner. Permissible activities of this

1. Each Federal Reserve Bank has been delegated the authority (12 C.F.R. 265.2(f)(12)) to extend the time within which a bank holding company or any of its subsidiaries must divest itself of interests acquired in satisfaction of a debt previously contracted.

liquidating subsidiary include completion of a real estate development project and other activities necessary to make the real estate saleable. The "date of acquisition" is the date the bank holding company (or subsidiary of the bank holding company) acquired the DPC asset. Section 4(c)(1)(D) may not be used to extend the time under which a bank holding company may indirectly hold DPC property under section 4(c)(2). In most cases where a subsidiary bank has held property for the statutory holding period, a BHC may not shift the property to another subsidiary or to the parent to avoid disposing of the property. However, due to the complexity and potential impact on the organization of a forced divestment at the end of the holding period, inspection personnel and Reserve Bank staff are encouraged to discuss the situation with Board staff to tailor the supervisory response to the particular situation.

With respect to the transfer by a subsidiary of other DPC shares, other assets, or real estate to another company in the holding company system, including a section 4(c)(1)(D) liquidating subsidiary, or to the holding company itself, such transfers would not alter the original divestiture period applicable to such shares or assets at the time of their acquisition. Moreover, to ensure that assets are not carried at inflated values for extended periods of time, the Board expects, in the case of all such intercompany transfers, that the shares or assets will be transferred at a value no greater than the fair market value at the time of transfer and that the transfer will be made in a normal arm's-length transaction. With regard to DPC assets (except for DPC shares as described above) acquired by a banking subsidiary of a holding company, as long as the assets continue to be held by the bank itself, the Board will regard them as being solely within the authority of the primary supervisor of the bank.

Section 4(c)(3) of the Bank Holding Company Act permits a bank holding company to acquire shares or real estate from any of its subsidiaries if a subsidiary had been requested to dispose of the shares by any federal or state authority having power to examine the respective subsidiary. The Board does not have authority to extend the two-year disposition period under section 4(c)(3) of the act. Section 4(c)(3) may not be used to extend the statutory period in which a bank must dispose of DPC assets (10 years in the case of DPC real estate assets, five years for all other).

3030.0.1 EXEMPTION TO SECTION 4(c)(2) DISPOSITION REQUIREMENTS OF DPC SHARES

Section 4(c)(5) of the Bank Holding Company Act allows a bank to own shares in certain nonbanking companies, specifically, the kinds and amounts eligible for investment by national banking associations under the provisions of section 5136 of the Revised Statutes (see section 3050.0 for a detailed explanation of section 4(c)(5)). The exemption provided by section 4(c)(5) covers any shares, including shares acquired DPC, that meet the conditions set forth in that exemption. Therefore, DPC shares held by a banking subsidiary of a bank holding company which meet section 4(c)(5) conditions are not subject to the disposition requirement prescribed in section 4(c)(2); however, such shares would continue to be subject to requirements for disposition as may be prescribed by provisions of any other applicable banking laws or by the appropriate bank supervisory authorities.

Section 4(c)(6) of the act allows a bank holding company to own shares, including those acquired DPC, of any nonbank company that does not exceed 5 percent of the outstanding voting shares of such company. The Board has expressed an opinion (12 C.F.R. 225.101(f)) that any shares acquired DPC under this section, whether by a holding company or a bank subsidiary, are not subject to the disposition requirements of section 4(c)(2) of the act.

Real property is often shown on an entity's books as other real estate (ORE). Possession of ORE usually results from a distressed loan collateralized by a lien on real estate. In addition, in attempting to salvage other types of credit, an entity may have obtained title to real property through process of law or by voluntary deed. Acquisition costs for other real estate acquired for debts previously contracted usually consist of the principal amount that was due on the defaulted loan at the time the entity took possession, unpaid interest, legal fees and other foreclosure costs, accrued and unpaid taxes, and mechanic's liens. Property acquired DPC may be recorded on the company's books by capitalizing the loan amount and acquisition costs. Advances to complete the project can be included in the capitalized investment if the ORE is an unfinished project. The fact that the additional investment is being used to improve the property and make the property more saleable should be evident.

A company owning a DPC asset should maintain records documenting its efforts to dispose

of the asset. Because an ORE asset is normally a nonliquid, nonproductive asset of uncertain value, a company should attempt to dispose of the asset at the earliest date possible. Unless special circumstances are present, a company should sell the ORE asset when a price offer sufficient to cover the acquisition, investment, and carrying costs is obtained.

3030.0.2 INSPECTION OBJECTIVES

1. To determine compliance with applicable laws, rulings, and regulations, and to initiate corrective action when violations appear in these areas.

2. To determine whether policies, practices, and internal controls regarding DPC shares, other assets, or real estate are adequate and to recommend correction when deficiencies are noted.

3. To evaluate the quality of DPC shares, other assets, or real estate and the progress toward their disposition.

4. To determine whether the DPC shares, other assets, or real estate acquired are recorded at fair market value.

3030.0.3 INSPECTION PROCEDURES

1. During the preinspection review, compile a list of shares, other assets, and real estate known to have been acquired DPC by the bank holding company and its nonbank subsidiaries, as well as a list of shares known to have been acquired DPC by the BHC's bank subsidiaries. Information on this list should include—

- a. a description of the shares or asset(s);
- b. the fair market value of the shares and asset(s), and the method of valuation, if available;
- c. the name of the company owning the shares and asset(s); and
- d. the date the shares and asset(s) were acquired.

2. If the shares or asset has been held longer than the initial holding period, determine whether the BHC has requested an extension of time.

3. In the Officer's Questionnaire, request a list of DPC shares, other assets, or real estate owned by the holding company and its nonbanking subsidiaries, and a list of DPC shares owned by the holding company's bank subsidiaries, including a detailed description of the shares or asset, the value of the shares or asset on the entity's books, the date the shares or asset was

acquired, and plans for disposal of the shares or asset. In addition, a list of DPC shares, other assets, or real estate which has been disposed of since the previous inspection or within the past year should be obtained. Compare these lists with the list compiled during the preinspection review.

4. Review other real estate owned accounts to evaluate—

a. the fair market value of the property (A qualified appraiser should appraise the property at the time of acquisition, and subsequent timely appraisals should be conducted to determine the current fair market value of the property.);

b. the carrying costs of the property; and

c. the company's efforts to dispose of the property (Information on file should include documentation showing a record of offers made by potential buyers and other information reflecting efforts to sell the property (i.e., advertisement brochures)).

5. Determine whether additional advances have been made on an unfinished project and whether evidence supports that the advances are making the property more saleable.

6. Determine whether a first-lien status exists and whether there are any tax liens or other encumbrances against the property.

7. Discuss DPC shares, other assets, or real estate and their values with management who is familiar with the history and current status of the shares or asset and assign classification, if warranted. A substandard classification may be applied when a company is sustaining losses in maintaining the property, and prospects for sale are not evident or encouraging. A company's acquisition of property through foreclosure often indicates a lack of demand and, as time elapses, the value of the real estate may become more questionable if the lack of demand persists. If the carrying amount of the investment exceeds the estimated value of the property, an adequate allowance reserve for any difference should be established and maintained. Property that is in the process of being sold for an amount in excess of the carrying value should not be classified if it appears that ultimate payment will be forthcoming.

8. List shares, other assets, and real estate acquired DPC under "other assets" in the inspection report. For significant shares and assets, the examiner may choose to present in the inspection report or in the workpapers, whichever is deemed appropriate, the following information:

- a. a brief description sufficient to identify the property, the manner in which the property was acquired, and the reasons for its acquisition
- b. the value of the shares or assets on the books of the company, the method used to determine the booked value, and whether it is the fair market value
- c. a brief statement as to management’s efforts to sell the property, its opinion of the likelihood of sale, and the anticipated sales price
- d. a summary of the carrying costs subsequent to assumption and income generated from the property
- e. the date when the holding company or its subsidiary must dispose of the property or request an extension to continue to hold the DPC shares or asset
- f. the amount classified, if appropriate
- g. any apparent discrepancies with rules or regulations

 3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(4) of the Bank Holding Company Act provides that nonbank shares held or acquired by a bank in good faith in a fiduciary capacity are exempt from the general prohibitions of section 4 of the Act. This exemption is provided to allow banks to carry on their normal fiduciary operations without significant interference and without being subject to the limitations of the Bank Holding Company Act. Without this exemption, a subsidiary bank could act as trustee for up to only 5 percent of a nonbank company's shares as provided by section 4(c)(6) of the Act.

There are certain exceptions which were included within the body of the section 4(c)(4) exemption to prevent utilization of the trust vehicle to circumvent the intent of the Act. The section 4(c)(4) exemption is not applicable when shares acquired are held by a trust which is considered a "company" under section 2(b) of the Act. Under section 2(b), a trust is defined as a company if it does not terminate within 25 years, or within 21 years and 10 months after the death of individuals living on the effective date of the trust. Such trusts are generally referred to as perpetual trusts and include employee benefits and charitable trusts which can operate in perpetuity.

Another exception to the exemption implies that no more than 5 percent of the shares of a nonbank company may be held by a subsidiary bank as trustee under a trust established for the benefit of the bank itself, the bank's parent company or any of its subsidiaries, or the shareholders or employees of the bank, the parent company or its subsidiaries as indicated in section 2(g)(2) of the Act. Employee benefit trusts have become a principal source of banks' trust assets. As strictly applied, section 4(c)(4) would limit acquisition of stock of a nonbank company to 5 percent of its shares for employee trust accounts of banks which are subsidiaries of bank holding companies.

3040.0.1 TRANSFER OF SHARES TO A TRUSTEE

Section 2(g)(3) of the Act is tied to section 4(c)(4) by specific reference as an exception to the fiduciary exemption. Section 2(g)(3) provides that shares transferred by a bank holding company to a transferee are deemed to continue to be controlled by the bank holding company if the transferee is indebted to the bank holding company or has one or more officers, directors,

trustees or beneficiaries in common with or subject to control by the holding company. However, the Board may determine after opportunity for hearing in such cases that control does not exist.

Relating this to section 4(c)(4), if a bank holding company transfers nonbank shares to a trustee where the trustee has one or more directors in common with the bank holding company, the nonbank shares are deemed to be controlled by the bank holding company until the Board determines otherwise.

3040.0.2 TRUST COMPANY SUBSIDIARIES

Even though section 4(c)(4) refers by its language to shares held or acquired by a *bank* in good faith in a fiduciary capacity, the exemption also applies to shares held or acquired in a fiduciary capacity by a trust company subsidiary of a bank holding company.

3040.0.3 OTHER REPORTING REQUIREMENTS

Holdings in fiduciary capacities of nonbank stock over 5 percent in certain circumstances, may also trigger reporting requirements under the federal securities laws.

3040.0.4 INSPECTION OBJECTIVES

To determine that nonbank shares held by a bank in a fiduciary capacity are in compliance with section 4(c)(4).

3040.0.5 INSPECTION PROCEDURES

Review the holding company's internal reporting procedures to establish that bank trust departments report 5 percent holdings in nonbank companies. In multibank companies, determine that controls are in place to aggregate nonbank shares held by each bank so that if an aggregate of 5 percent is held, it is reported in the Y-6.

3040.0.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Interests In Nonbanking Organizations		225.12(a) 225.22(c)(3)		

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Section 4(c)(5) of the BHC Act (Investments Under Section 5136 of the Revised Statutes)

Section 3050.0

Section 4(c)(5) of the Bank Holding Company Act permits (without prior approval) investments by a bank holding company in shares of the kinds and amounts eligible for investment by national banks under the provisions of section 5136 of the Revised Statutes (12 U.S.C. 24(7)).

National banks are prohibited by section 5136 of the Revised Statutes from purchasing and holding shares of any corporation except those corporations whose shares are specifically made eligible by federal statute. This prohibition is made applicable to State member banks by section 9, paragraph 20 of the Federal Reserve Act (12 U.S.C. 335).

In 1968, the Board interpreted section 5136 as permitting a member bank to purchase shares of a corporation engaging in business (at locations the bank is authorized to engage in business) and carrying out functions the bank is empowered to perform directly. Section 5136 is a broad statute with types of permissible activities both explicitly defined and implied indirectly without express definition. Therefore, to limit the need for constant Board interpretation regarding the implied areas of section 5136, the Board curtailed the authority of a bank holding company to acquire shares on the basis of section 4(c)(5) through section 225.22(d) of Regulation Y. As a result, effective June 30, 1971, permissible shares for bank holding company acquisition under section 4(c)(5) are limited to those *explicitly* authorized by any federal statute. Additional reasons for limiting the scope of activities to those explicitly defined by statute, are that section 4(c)(5) acquisitions require neither prior Board approval, nor the opportunity for interested parties to express their views, nor any prior regulatory consideration of anti-trust and related matters.

3050.0.1 COMPANIES IN WHICH BHC'S MAY INVEST

The following is a list of permissible companies expressly authorized by federal statute. The list includes the companies most frequently encountered.

1. Small business investment companies ("SBICs").
2. Agriculture credit companies.
3. Edge and agreement corporations.
4. Bank premises companies (usually exempt under section 4(c)(1)(A)).
5. Bank service corporations (usually exempt under section 4(c)(1)(C)).
6. Safe deposit companies.
7. Obligations of student loan marketing associations.
8. State housing corporations.

3050.0.2 LIMITATIONS

On most 5136 authorizations, share investments are limited in some form, usually based on a percentage of the bank's capital and surplus. Under section 4(c)(5), a holding company's investment in such shares is also limited by amount and type to those permitted for a national bank to prevent avoidance of these limitations by a bank holding company.

3050.0.3 INSPECTION OBJECTIVES

1. To determine the permissibility of each activity encountered during the inspection which claims a section 4(c)(5) exemption.
2. To determine if the operations and financing of the section 4(c)(5) activity is not to the detriment of the bank(s).

3050.0.4 INSPECTION PROCEDURES

1. Review compliance with section 5136 of the Revised Statutes to determine if the activity is expressly permitted by any federal statute.
2. Determine the financial condition of the activity and its impact on the bank affiliate.

3050.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Section 4(c)(6) and (7) of the BHC Act (Ownership of Shares in Any Nonbank Company of 5 Percent or Less) Section 3060.0

3060.0.1 SECTION 4(c)(6)

This section provides an exemption for ownership of shares of any nonbank company that do not exceed 5 percent of the outstanding voting shares of such company. The exemption is designed to permit diversification of investments by a bank holding company and its subsidiaries which do not result in control of a nonbanking organization. The Board has indicated through an interpretation of 12 U.S.C. 225.101, that in its opinion, the 5 percent limitation applies to the aggregate amount of voting stock in a particular nonbank company held by the entire bank holding company organization including the parent company and all of its direct and indirect bank and nonbank subsidiaries. This is to prevent a holding company from acquiring a controlling interest in a nonbank company through ownership of small blocks of stock by numerous subsidiaries in circumvention of the provisions of section 4 of the BHC Act.

3060.0.1.1 D.P.C. Shares

The same interpretation (12 C.F.R. 225.101) also addresses the question of the applicability of section 4(c)(6) to nonbank shares acquired in satisfaction of debts previously contracted (D.P.C.) by a subsidiary bank, any nonbank subsidiaries, or the parent company. In this instance, the Board expressed the opinion that the 5 percent exemption provided by section 4(c)(6) covers any nonbank shares, including those acquired D.P.C. Consequently, shares which meet such conditions are not subject to the disposition requirements of section 4(c)(2) of the Act. It is important to remember that the exemption provided by section 4(c)(6) applies only to shares of any nonbank company. Acquisitions of any bank shares are subject to the provisions contained in section 3(a) of the Act.

Although the 5 percent limitation of this section applies, by its language, to “voting shares” rather than “any class of voting shares” as used elsewhere in the Act, the Board has indicated in 12 C.F.R. 225.137 that it applies to “any class of voting shares” rather than to the aggregate of all classes of voting shares held. Thus section 4(c)(6) is not available to a group of BHCs each owning a “class of voting securities” even if each BHC owns less than 5 percent of all shares outstanding. Further, section 4(c)(6) must be viewed as permitting ownership of 5 percent of a company’s voting stock only when that owner-

ship does not constitute “control” as otherwise defined in section 2 of the Act.

Note that section 4 prohibits engaging in nonbank activities other than those permitted by section 4(c)(8). Thus, if a BHC may be deemed to be “engaging in an activity” through the medium of a company in which it owns less than 5 percent of the voting stock it may nevertheless require Board approval, despite the section 4(c)(6) exemption.

3060.0.1.2 Acquisition of Nonbank Interests—Royalties as Compensation

A bank holding company requested an opinion on the permissibility of its subsidiary’s receiving limited overriding royalty interests in oil, gas, and other hydrocarbon leasehold interests as partial compensation for investment advisory services in connection with those properties. The bank holding company was not acquiring more than 5 percent interest in any project. The subsidiary was to place the assigned royalties in a compensation plan for assignment to certain professional employees. Neither the subsidiary nor any affiliate were to acquire, hold, locate, sponsor, develop, organize, or manage any other energy property investment or in any other manner control the investment. The subsidiary was to hold interest in energy properties only if the interest had not yet been reassigned to an employee, or if an employee terminates service with the subsidiary and is required to reassign his or her energy properties to the subsidiary. The bank holding company’s proposal was consistent with section 4(c)(6) of the Bank Holding Company Act, which exempts passive investments of 5 percent or less from the prohibitions of section 4 of the Bank Holding Company Act.

3060.0.2 SECTION 4(c)(7)

This section provides bank holding companies the opportunity to own, directly or indirectly, shares of an investment company (any amount up to 100 percent of outstanding shares) provided that each of the following conditions is met:

1. The investment company is not itself a bank holding company;
2. The investment company is not engaged in

any business other than investing in securities; and

3. Securities in which the investment company invests do not include more than 5 percent of the outstanding voting securities of any company.

4. As in section 4(c)(6), the 5 percent limitation applies, by its language, to “voting shares” rather than “any class of voting shares,” as used elsewhere in the Act. However, the criterion applies to “any class of voting shares” for purposes of this section.

The 5 percent restriction does not prevent an investment company from having direct or indirect subsidiaries of its own, provided that ownership of such subsidiaries is permitted under another provision of the Act. Rather, the limitation is intended to apply only to securities purchased in the ordinary course of investing by the investment company.

The legislative history of this provision of the Act does not provide a clear indication as to the type of institutions encompassed under the term “investment company” as used in this section. It appears, however, that any company primarily engaged in the purchasing and ownership of securities may be regarded as an investment company for purposes of this section. Section 4(c)(7) can be viewed, more or less, as an extension of section 4(c)(6) which permits a bank holding company to directly or indirectly through subsidiaries own up to 5 percent of the voting stock of any nonbank company. In fact, until the Amendments of 1966, the Bank Holding Company Act incorporated both section 4(c)(6) and section 4(c)(7) under one section. From a practical standpoint, the parent company is allowed, under section 4(c)(6), to directly engage in the same activities as an investment company. Accordingly, most holding companies conduct these activities through the parent company, rather than through an investment company subsidiary. Such an arrangement prevents duplicate payment of certain taxes and provides more flexibility for utilizing funds in other areas of the organization.

3060.0.3 INSPECTION OBJECTIVES

3060.0.3.1 Section 4(c)(6)

1. To determine that the investments held pursuant to section 4(c)(6) comply with the Act and 12 C.F.R. 225.101 and 225.137.

2. To determine that no more than 5 percent

of the voting shares of any nonbank company (other than those owned pursuant to other provisions of the Act) is held by the bank holding company and its subsidiaries.

3060.0.3.2 Section 4(c)(7)

1. To determine the overall quality of the investments held.

2. To determine the financial impact of the ownership of such shares upon the bank holding company and its subsidiaries.

3. To determine if policies, practices and procedures regarding investments are adequate.

4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.

3060.0.4 INSPECTION PROCEDURES

3060.0.4.1 Section 4(c)(6)

1. Review investments held to determine that the BHC has a total interest of no more than 5 percent.

2. Determine that 5 percent does not constitute control.

3. Determine that the BHC is not “engaged” in any nonbank activity through its 5 percent ownership.

3060.0.4.2 Section 4(c)(7)

1. Where section 4(c)(7) applies, compare the investment company’s general ledgers with statements prepared for the latest FR Y–6.

2. Obtain schedules of investments in voting shares of any companies. Review quality of such shares (utilizing rating service publications, etc.) and check for ownership interests exceeding 5 percent.

3. Review policies (written or oral) regarding purchase and sale of stocks.

4. Obtain and evaluate documentation relating to credit review for securities held. Determine adequacy of procedures to maintain credit updates.

5. Compare carrying value of stocks to current market value to determine market depreciation, if any and determine adequacy of any established reserves.

6. Perform verification procedures, including physical review of stock held in safekeeping, where practical.

7. Determine that purchases and sales of stocks are appropriately approved by directors or designated officers.

8. Review minutes of the board of directors meetings (where an investment company subsidiary is involved).

3060.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
4(c)(6) Applicability to shares acquired D.P.C.		225.101	4-187

3. Federal Reserve Regulatory Service reference.

A mortgage banker specializes in the origination, acquisition, and sale of residential real estate loans to permanent investors (the secondary mortgage market). Most mortgage banking firms that are affiliated with banks and bank holding companies primarily originate residential real estate loans, although some firms may engage in interim and other lending secured by real estate. Unlike their nonbank competitors, the vast majority of the loans mortgage banks originate are sold to permanent investors in the secondary mortgage market.

Mortgage banks can retain or sell their loans and sell or retain the servicing of their mortgages. The mortgage banking industry currently offers a wide variety of products, market mechanisms, financing vehicles, and financial strategies due to competitive pressures within the mortgage banking industry and rapid growth in the demand for loans and related securities within the secondary mortgage market. Mortgage bankers use these marketing and financing strategies to differentiate themselves from the competition in terms of interest rates, maturities, down-payment requirements, and product offerings.

The earnings stream, cash flow, and capital needs of a mortgage banking company are all highly influenced by management's decision whether to retain or sell the mortgage loans as well as the related mortgage-servicing rights. The majority of loans that are sold in the secondary market are originated under government-sponsored programs. Such loans are either sold directly or are converted into securities that are collateralized by the underlying mortgages (mortgage-backed securities). The pools of collateralized mortgage loans backing mortgage-backed securities provide a form of risk diversification for the investor.

Originations, secondary market sales, and servicing constitute the primary functional business lines within a typical mortgage company. As an originator of mortgages, the company is responsible for the initial phase of the mortgage, from original contacts with the borrowers to the closing of the loans. At closing, the company disburses its funds and becomes the lender of record. Mortgage loans can also be acquired through a network of correspondent companies. Most mortgage banking companies use a combination of origination and acquisition strategies. The decision about whether to originate or purchase loans also varies over time due to fluctuations in demand and pricing discrepancies.

The secondary marketing department is responsible for selling loans in the secondary market and managing the interest-rate risk associated with loans during the interim period. In most cases, the mortgage company retains the loans until it can find a permanent investor to purchase the loans. The mortgage banker obtains purchase commitments from permanent investors and submits completed loan documentation packages to the investors for their approvals in satisfaction of the commitments.

As part of the overall process, the mortgage banker maintains a relationship with a variety of other permanent investors to whom the originated mortgages are sold. These investors are generally institutional investors such as securities dealers, commercial banks, life insurance companies, pension funds, and other financial and nonfinancial institutions. Some of these investors are restricted by state law, charter, or bylaws as to the type of mortgages and the locations of the property in which they can invest. Accordingly, their purchase commitments should incorporate these limits as well as the price and/or required yield of the mortgage loans or mortgage-backed securities. When these commitments are filled and the mortgages sold to the investors, the mortgage banker may retain the servicing rights to the mortgages it sells to permanent investors or sell the servicing rights in the secondary market.

The servicing department manages the loans that were retained in permanent loan portfolio or those that were sold to another permanent investor. Fees paid for services rendered in administering the mortgage portfolios of investors are a principal source of revenue for most mortgage bankers. In general, the company receives a fee that is usually based on a percent of the unpaid balance of the administered mortgages. In return for the fee, the servicer is responsible for collecting and remitting payments, managing the tax and insurance escrow accounts, inspecting the properties when required, pursuing delinquent borrowers, foreclosing on the mortgages when necessary, and providing accounting support. Considering the services rendered and the generally low fees involved, the servicing portfolio must be sizable for the company to be profitable. The servicing portfolio may represent very little credit risk to the servicer and can be a valuable source of residual income to the company.

The mortgage banking industry is experiencing significant consolidation. To be competitive, participants must maximize economies of scale and efficiencies. Emphasis has been placed on using more efficient systems and technologies that enhance loan processing, underwriting, servicing, and the management of pipeline risk (the interest-rate risk associated with the holding period for the mortgages). Existing mortgage banking firms are larger and operate more efficiently (faster, cheaper, and with higher quality) than they did in the past. Operating efficiencies are achieved through the use of sophisticated information systems, such as electronic data interchange, imaging, optical character recognition, expert systems, and other forms of artificial intelligence.

Within a bank holding company, mortgage banking subsidiaries generally focus on residential mortgage lending. As discussed initially, these mortgage bankers may also engage in other forms of lending. On an industry basis, they extend loans to real estate brokers who buy properties for resale, engage in second mortgage and home improvement lending (usually through dealer agreements), and extend interim loans. Interim loans represent a means of funding a project through one or more phases, with the property and improvements as collateral for the loan. The size of interim loans may range from a single residence under construction to large industrial, commercial, or residential projects. Construction lending and other forms of lending may be provided by other such real estate lending subsidiaries located elsewhere within the bank holding company's organizational structure.

The mortgage banker, as a lender, has the flexibility to fund any and all phases of a project including land acquisition, development, and construction. Land acquisition credit may be extended for the acquisition of more than one parcel of land, which may not necessarily be identified with a specific project. More frequently, acquisition credit is tied into a specific project for which the lender expects to fund more than one phase. In development-phase lending, funds are advanced to "improve" the property, bring utilities on-site, cut roadways, and prepare the site for its intended use. Many residential and industrial park projects are funded through this phase, with the sale of individual parcels providing the repayment of the loan. Construction lending funds the project from the foundation to completion. For those loans that fund two or more phases, there may

be no clear distinction between the phases as certain elements of each may be underway concurrently.

On large projects funded through completion, such as apartment and office buildings where the construction is to be repaid from a permanent mortgage, the lender will usually require the borrower to obtain a permanent mortgage commitment from a third party. While this "take-out" commitment may or may not be arranged through the lender's network of investors, this commitment provides the lender with some assurance of repayment. In some cases, particularly in unsettled market environments, these takeouts are not available, and the lender may issue a "standby" commitment. On occasion, no permanent financing will be available upon completion and the lender will extend a "bridge" loan for the interim period between project completion and the placement of a permanent mortgage. Making construction loans without takeout commitments from responsible term lenders could expose the construction lender to adverse interest-rate movements as well as the market acceptability of the project. The absence of a takeout can represent a weakness in a loan. The general lack of takeouts in a portfolio should be a criticizable management practice (unless mitigating circumstances prevail) and should be discussed with management.

This section provides inspection guidance and procedures for mortgage banking nonbank subsidiaries of bank holding companies. Except for the limited guidance that pertains only to bank holding companies, they may also serve as examination guidance and procedures for mortgage banking subsidiaries of state member banks. The way in which these procedures are used should be determined on a case-by-case basis depending on the size of a particular company and its business activities. The information in "Board Oversight and Management," "Financial Analysis," and "Intercompany Transactions" presented in this section is applicable to all mortgage banking reviews. The subsection "Mortgage-Servicing Rights" is recommended for use in companies that have significant risk exposure. The examiner should also target functional areas such as production, marketing, and servicing/loan administration.

3070.0.1 BOARD OVERSIGHT AND MANAGEMENT

The examiner should assess the quality and effectiveness of a mortgage banking company's board of directors (board) and executive man-

agement team, the appropriateness of its organizational structure, the nature of its internal control environment, and the effectiveness of internal control programs.¹ Such internal control programs may include internal and external audits, loan review, quality control over mortgage loans originated and/or serviced for investors, compliance, fraud detection, and related employee training programs.

The board and executive management team must be evaluated within the context of the particular circumstances surrounding each mortgage banking company. Since business complexities and operating problems vary according to the institution's size, organizational structure, and business orientation, directors and managers who are competent to effectively discharge their responsibilities under one set of conditions may be less competent as these conditions change.

Board oversight and management should be rated satisfactory, fair, or unsatisfactory based on both objective operating results and more subjective criteria. Performance must be evaluated against virtually all the factors necessary to operate the mortgage banking company's activities in a safe, sound, and prudent manner, including the ability to anticipate and plan for future events that may have a material impact on the company's financial condition. Such a rating should also be considered when assigning a consolidated rating of risk management (see section 4070.1 and SR-95-51).

3070.0.1.1 Board Oversight

The mortgage banking company's board provides oversight, governance, and guidance to the executive management team. The board may include executives of the mortgage banking company, executives of the bank holding company and other affiliated companies, and outside directors.

The examiner should determine whether a separate board exists, as well as the identity and qualifications of the members. Minutes of board meetings should be reviewed to determine

whether directors are fulfilling their fiduciary responsibilities. At a minimum, directors should—

- select and retain a competent executive management team;
- establish, with management, the company's short- and long-term business objectives and adopt operating policies to achieve those objectives in a safe and sound manner;
- monitor operations to ensure they are controlled adequately and are in compliance with laws and policies;
- oversee the mortgage banking company's business performance; and
- ensure that the mortgage banking company meets the community's residential mortgage credit needs.

The examiner should assess whether directors exercise independent judgment in evaluating management's actions and competence, attend board and committee meetings regularly, remain well informed regarding the company's activities and the mortgage banking industry overall, and are knowledgeable regarding all applicable state and federal laws and regulations. The examiner should also review the quality of board reporting. Board reports must provide accurate and timely information to directors with respect to operating results, asset-quality trends, liquidity and capital needs, and relevant industry and peer-group performance statistics for each operational area. Directors should also receive information regarding exceptions to established policies and operating procedures, volume-related processing backlogs, and the effectiveness of the internal control programs. Information on hedging products and strategies should be routinely provided to the board and to holding company management. In connection with this portion of the review, examiners should also request and review information regarding all loans to insiders and their related interests to ensure that no preferential transactions have been extended to these parties.

3070.0.1.2 Management

The executive management team generally consists of a president and chief executive officer (CEO), chief operating officer (COO), chief financial officer (CFO), and senior executives in charge of production, marketing, and servicing/

1. See section 1010.1 of the *Commercial Bank Examination Manual* and a report, "Internal Control—Integrated Framework," which was issued in September 1992 by the Committee of Sponsoring Organizations of the Treadway Commission, for a more detailed discussion of internal controls. The Treadway Commission report broadly defines internal control as a process, effected by an entity's board of directors, management, and other personnel, designed to provide reasonable assurance regarding the effectiveness and efficiency of operations, reliability of financial reporting, and compliance with applicable laws and regulations.

loan administration. Management formulates operating policies and procedures and oversees the day-to-day administration of mortgage banking activities. Management should be evaluated in terms of its technical competence, leadership skills, administrative capabilities, and knowledge of relevant state and federal laws and regulations. The management assessment should evaluate management's attitude toward risk, as evidenced by the type of products that are offered; the existence of effective hedging programs; and/or the degree of reliance that is placed on the resources of affiliate banks, non-banks, and other entities to support mortgage banking company activities.

Prudent operating policies and procedures that are consistent with the business needs and risk-management practices of the parent bank holding company should be in place for each functional area. An effective risk-management program should also be in place. Without adequate management oversight, excessive errors can occur, fraud or other violations of law may go undetected, and financial information may be reported incorrectly. Any of these events can damage the company's image, impair its access to external funding sources, and jeopardize its ability to originate and sell mortgage loans in the secondary market.

It is management's responsibility to develop and maintain management information systems (MIS), which should be dedicated to obtaining, formatting, manipulating, and presenting data to managers when needed. Such systems should generate accurate financial statements; identify the need for financial, human, technological, and physical resources; and produce timely and useful management exception reports.

Management should also be evaluated on its ability to plan effectively. Effective planning entails the annual approval of an operating budget and the development of a long-term strategic plan that helps management anticipate changes in the internal and external environment and respond to changing circumstances. Because losses on the origination of mortgage loans are common in the mortgage banking industry, management should assess the servicing time necessary to recapture costs and achieve required returns. This information is critical to decisions to purchase mortgage-servicing assets, and it should be incorporated into hedging strategies.

The strategic plan should identify the company's strengths and weaknesses, growth targets, and other strategic initiatives (including

management's philosophy toward the business, the extent of financial risk-taking, commitments to maintaining procedures and controls in managing the business, and management's commitment to staff development) over a one- to three-year time horizon. Planning efforts should also address system deficiencies and technological advancements within the industry. Without appropriate planning, the company can only react to external events and market forces.

Management should be results-oriented, but not at the expense of sound risk-management practices. Goals and objectives should be specific and measurable. Management should develop a performance measurement system that tracks progress toward achieving both financial and nonfinancial goals.

3070.0.1.3 Organizational Structure

The organizational structure should be reviewed to determine, on a legal-entity basis, the relationship between the mortgage banking company, the bank holding company, and any other bank or nonbank subsidiaries. The structure should also be reviewed to determine whether the lines of authority are clearly defined, the responsibilities are allocated logically, and management depth is sufficient within each division, department, or functional area.

The president and CEO usually reports directly to the mortgage banking company's board of directors, as well as to an executive management committee at the affiliate bank or the bank holding company level. Other reporting lines may exist between functional area executives and their counterparts at either a bank affiliate or the holding company level.

3070.0.1.4 Control Environment

Management's attitude toward risk is communicated to employees through the company's corporate culture. In general, the CEO should establish and communicate a corporate culture that promotes safe, sound, and prudent business practices. The corporate culture should provide a positive control environment, set high standards, and reward ethical, desirable behavior.

Management's failure to communicate acceptable standards of behavior may encourage impermissible or high-risk business practices. For instance, compensation programs that are incentive-based may generate poor-quality loans. Below-market pricing strategies or overly aggressive growth targets may further exacer-

bate asset-quality problems or generate loans in excess of processing and servicing capabilities.

3070.0.1.5 Control Programs

Management controls in a mortgage banking company consist of an internal audit, an external audit, loan review, compliance, quality control over loans originated and/or serviced for investors, fraud detection procedures and related employee training programs, insurance coverage, and legal review. The examiner should review recent reports conducted by internal loan review, state and federal agencies, and private investors to determine the scope of the review, the nature of any problems noted, and the adequacy of management's response.

3070.0.1.5.1 Internal Audit

The internal audit function in a mortgage banking company is responsible for detecting irregularities; determining compliance with applicable laws and regulations; and appraising the soundness and adequacy of accounting, operating, and administrative control systems. Accounting, operating, and administrative control systems are designed to ensure the prompt and accurate recording of transactions and a proper safeguarding of assets.

Internal audit activities may be conducted through a separate department located on-site or through the internal audit department of the bank holding company. Very small financial institutions that do not maintain a separate audit function may rely solely on their external auditor to perform these functions.

Regardless of the organizational structure, internal auditors must be independent of the line areas being reviewed, have access to all company records, and maintain sufficient status and authority within the company. The internal auditors' findings should be reported directly to the board or a designated committee thereof.

The scope, frequency, and coverage provided through the internal audit program should reflect the size and complexity of the institution. The audit schedule should cover underwriting practices and other high-risk areas of mortgage banking, including the most significant balance-sheet accounts, income statement accounts, and internal control systems.

To yield meaningful results, the department must be adequately staffed with individuals who are experienced and knowledgeable about mortgage banking. Audit staff should receive ongoing

training and be encouraged to hold professional industry certifications. Internal audit reports should be issued and responded to by line management in a timely fashion. Follow-up procedures should be in place to ensure that corrective measures are taken.

3070.0.1.5.2 External Audit

External auditors generally review and assess the mortgage company's financial condition and the adequacy of internal controls. The engagement letter sets forth the external auditor's responsibilities, scope, and extent of reliance that is placed on the internal audit department with respect to the type of engagement. When an external audit is to be performed, the audit is an examination that is conducted to determine that the present financial condition of the company and the results of operations are fairly stated and are in conformity with generally accepted accounting principles.

Examiners should review the most recent external audit report to determine whether the opinion regarding the company's financial statements and their disclosures was qualified in any manner. If applicable, examiners should note any significant concerns or weaknesses in the company's internal control structure. Examiners should also review management's written response to the audit to determine whether corrective measures were appropriate, complete, and timely and whether the response reveals any internal control weaknesses.

The reason behind any changes in external audit firms used should be investigated. Unusual items and areas of potential concern should be discussed with management and/or the external auditor. If questions arise during the safety-and-soundness review, the examiner should determine whether the area of concern was considered to be a material item by external auditors, the nature of audit work performed, and the outcome of that review. If questions persist, the examiner may want to request access to specific external audit workpapers.

3070.0.1.5.3 Loan Review

Loan review activities may be conducted at the mortgage banking company or in conjunction with the loan review activities of either an affiliate or the parent bank holding company. In any

event, loan review should determine whether mortgage loans that are originated and/or purchased meet underwriting standards as defined in the internal loan policy. Loan review may also sample loans to determine whether they meet underwriting criteria established by investors. The scope of the loan review program should be evaluated. The examiner should also review a copy of the most recent loan review to determine whether problems are identified and addressed in a timely manner.

3070.0.1.5.4 Quality Control

Mortgage banking companies that service loans for investors must also maintain a separate quality control department to test the quality of loans produced and serviced for investors. Investors such as the Government National Mortgage Association (GNMA or Ginnie Mae), Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac), and FannieMae issue very specific guidelines that must be met with respect to the scope and frequency of such reviews.

At a minimum, these investors require that the mortgage banking company sample at least 10 percent of all closed loans each month and conduct a quality control review to determine the extent of accuracy, completeness, and adherence to agency underwriting standards. Random samples should include loans originated through the company's own production network, purchased loans, loans for which work was performed by a third party (outsourced), and loans with various product characteristics, such as a high loan-to-value or a convertible feature.

Quality control personnel verify loan documentation, including the appraisal, down payment, employment, and income information. After each review, the department should issue a comprehensive report detailing specific quality control findings and recommendations. Quality control reviews must be completed within 90 days of closing. Exceptions to company policy or investor underwriting standards should be documented and communicated to executive management. Corrective measures should be initiated promptly.

The quality control function should serve as an early warning system that alerts management to situations that may jeopardize the financial strength, image, or origination and sale capacity of the company. To function as an effective management control, the quality control depart-

ment should operate independently from the production and servicing/loan administration departments. Quality control should complement, not substitute, work performed by the internal audit and loan review functions.

3070.0.1.5.5 Insurance Program

The insurance program should be reviewed to determine whether coverage adequately protects the mortgage banking company and its affiliates against exposure to undue financial risk. Insurance policies should be reviewed and approved by the board at least annually.

3070.0.1.5.6 Litigation

The legal department should be contacted to determine whether existing or pending litigation exposes the mortgage banking company or its affiliates to undue financial risk. Particular attention should be paid to the status of any actual or pending class action lawsuits of a material nature.

Examiners should also determine whether procedures exist to detect and investigate suspected fraud, either internal or external. In many instances, the legal department coordinates fraud training and investigations, as well as the submission of criminal referral or suspicious activities reports and the initiation of legal action. If a separate fraud division or unit does not exist, examiners should determine whether procedures governing the detection, investigation, and referral of potentially fraudulent situations exist and function effectively. Examiners should also determine whether management reports adequately detail and track potential exposure.

3070.0.1.6 Inspection Objectives—Board Management and Oversight

1. To assess the composition, qualifications, and degree of oversight provided by the mortgage company's board and executive management team.

2. To determine whether the organizational structure is appropriate given the nature and scope of the mortgage banking company's operations.

3. To evaluate the reasonableness of the operating budget, long-term business planning, performance measurement systems, and MIS and related management and board reports.

4. To determine the nature of the company's internal control environment and the effectiveness of its system of internal controls, including internal and external audits, loan review, quality control, suspicious activities and fraud detection (including criminal referral and suspicious activities reporting) and related employee training programs, insurance coverage, and pending litigation.

3070.0.1.7 Inspection Procedures—Board Management and Oversight

Board Oversight

1. Review biographies of the board of directors and minutes from board and committee meetings to determine whether directors are qualified and fulfilling their fiduciary responsibilities.
2. Review the most recent package of information that was provided to directors. Do they receive sufficient detail regarding the financial condition, internal controls, and risk-management techniques employed within the company?

Management

1. Review biographies of members of the executive management team to determine their level of experience, technical knowledge, leadership skills, and administrative capabilities. Discuss whether salaries are commensurate with management's experience level and expertise.
2. Evaluate the quality of operating policies and procedures within each division or functional area and the extent to which compliance with such policies and procedures is monitored and reported.
3. Evaluate the output from the planning process, including the most recent operating budget, business plan, and related performance measurement system reports. Determine whether objectives, goals, and growth targets are reasonable.

Organizational Structure

1. Review the organization chart to determine whether the organizational structure is appropriate, as well as the appropriateness of the division of functional responsibilities and the degree of management depth within each division or functional area.

Internal Control Environment

1. Evaluate the nature of the internal control environment and how risk parameters are communicated to employees.

Internal Control Programs

1. Assess the effectiveness of internal controls in identifying and controlling risks. Internal controls include internal and external audits, quality control for mortgage loans, insurance coverage, and fraud detection procedures and related employee training programs.

Internal Audit

1. Determine whether a separate internal audit function exists and, if so, its degree of independence.
2. Review the qualifications of the internal audit manager and his or her staff for mortgage banking and accounting and auditing expertise. Consider the size of the department and its ongoing training programs, as well as the experience levels, educational backgrounds, and professional certifications of the department's staff.
3. Determine the scope and frequency of the internal audit program to ensure that all high-risk areas are reviewed regularly.
4. Review all internal audit reports, management responses to them, and follow-up audit reports for work conducted since the previous inspection.
5. Select a significant sample of internal audit reports and respective workpapers and conduct an intensive review of the internal audit program. Determine that all issues and exceptions were brought forward to the final audit report, the report was presented to the board or a committee thereof, and that any detected and disclosed problems or control weaknesses received appropriate management attention.
6. Evaluate the internal audit department's system for following up on issues and exceptions. Determine whether prompt, satisfactory resolution of issues was effected.

External Audit

1. Review the engagement letter for the most recent external audit to determine the external

auditor's scope, responsibilities, and extent of reliance on the internal audit department.

2. Review the most recent external audit report to determine whether the opinion regarding the company's financial condition was qualified in any way and whether any internal control weaknesses were noted. Review the notes to the financial statements for appropriate disclosures.

3. Discuss any unusual items and areas of potential concern with management and/or the external auditor. Determine whether any areas of concern were considered to be material items by the external auditors, based on the nature of audit work performed, management's representations in the management letter, and the outcome of that review. If questions persist, consider the need to request and review specific external audit workpapers.

4. Discuss the reasons for any recent changes in external auditors with management.

Compliance and Disaster Recovery

1. Review the methods used to ensure compliance with state and federal laws and regulations by—

a. interviewing the person who is responsible for compliance to determine the nature of outstanding problems and the adequacy of corrective measures that have been taken, and

b. reviewing the system for logging, tracking, and responding to customer complaints.

2. Determine whether the disaster recovery plan is adequate.

Quality Control

1. Review the quality control department's policies and procedures to determine whether the quality control program meets minimum investor requirements.

2. Review a sample of reports issued by the quality control unit to determine whether they were issued in a timely manner and conclusions were adequately documented.

3. Determine whether quality control results are relayed to executive management and whether follow-up procedures are adequate.

4. Determine whether the quality control unit is sufficiently staffed and independent.

5. Determine whether quality control out-sources work to outside parties. If so, are adequate controls in place to ensure that such out-

sourcing meets the company's own quality standards?

Insurance

1. Review insurance policies maintained for the mortgage banking company to determine whether coverage is adequate and whether the majority of insurable risks is included, giving consideration to a cost versus benefits analysis.

2. Review board minutes to ascertain the date the board last reviewed and approved the insurance program.

Litigation

1. Review all current and pending litigation of a material nature and determine whether adequate reserves are maintained to cover anticipated financial exposure.

Fraud Detection and Training

1. Determine whether a separate fraud unit exists and whether procedures are in place regarding the detection and investigation of suspected fraudulent activity and the issuance of related management reports.

2. Evaluate the company's early warning system for detecting potential fraud. Is the level of training adequate?

3. Review any criminal referral or suspicious activities forms filed since the prior inspection and discuss their status with management.

3070.0.2 PRODUCTION ACTIVITIES

Loan production covers the process of originating or acquiring loans. Production begins with the initial loan application and ends when a loan has been underwritten and processed, closed, and reviewed by post-closing.

3070.0.2.1 Types of Loans

Loans are categorized as either government or conventional loans. *Government loans* generally carry a below-market interest rate and are either insured by the Federal Housing Administration (FHA) or guaranteed by the Veterans Administration (VA). Both agencies protect investors holding such securities against losses in the event of a borrower default, thereby slightly

reducing investors' required yields. To be insured or guaranteed, a loan must meet agency standards regarding the size, interest rate, and terms. The lender can obtain a certificate of insurance or guaranty to give support to a loan for securitization. A certificate of insurance or guaranty may not be needed for a loan to be securitized.²

Loans that are not FHA-insured or VA-guaranteed are referred to as *conventional loans*. Conventional loans are generally originated for larger loan amounts and made to stronger borrowers. Conventional loans typically require higher down payments and bear market interest rates. Most lenders that offer programs with smaller down-payment terms require that the borrower purchase private mortgage insurance for the top 5 to 20 percent of the loan principal balance so that a proportionate share of the credit risk is borne by a private mortgage insurance (PMI) company.

The extent of credit risk associated with a loan often depends on the marketing program under which the loan is originated. Marketing programs and participants are described briefly here; for a more detailed description, see "Marketing Activities" later in this section.

The market for residential real estate loans is dominated by three government-sponsored entities: the Government National Mortgage Association (GNMA), the Federal Home Loan Mortgage Corporation (FHLMC), and the Federal National Mortgage Association (FannieMae). GNMA is a government agency that guarantees the timely payment of principal and interest on pass-through securities that are backed by pools of FHA-insured or VA-guaranteed mortgages. These guaranties are backed by the full faith and credit of the U.S. government. Although investors will get paid in full, servicers may retain some risk of loss, particularly with respect to VA loans (see subsection 3070.0.4.5 for additional information on "VA no-bids").

Pass-through securities provide for monthly installments of interest at the stated certificate rate plus scheduled principal amortization on specific dates, despite the delinquency status of the underlying loans, as well as any prepayments and additional principal reduction. The issuer collects the mortgage payments and, after retaining servicing and any other specified fees, remits monthly payments to the certificate holders.

Although FHLMC and FannieMae are not extensions of the U.S. government, the market believes that there is an implicit guaranty that

their securities will be repaid. FHLMC and FannieMae securitization involves the purchase of conventional loans from lenders and the selling of mortgage-participation certificates, which are similar to GNMA pass-through securities. Participation certificates represent an ownership interest in pools of conventional loans. FHLMC and FannieMae guarantee the monthly pass-through of interest, the scheduled amortization of principal, and the ultimate repayment of principal. Unlike GNMA pass-throughs, however, participation certificates are not backed by the full faith and credit of the U.S. government.

Conventional loans are classified as either conforming or nonconforming. *Conforming* loans must comply with FannieMae's and/or FHLMC's underwriting and documentation guidelines in order to be sold in the secondary market. Conforming mortgages may be sold to FannieMae or FHLMC on either a recourse or nonrecourse basis.

Private pools of *nonconforming* loans that do not meet FannieMae or FHLMC guidelines may be sold in the secondary market under a private label structure. Nonconforming loans are often "nontraditional" products such as loans with teaser rates, limited documentation, and graduated payment schedules, as well as "jumbo" loans that exceed maximum agency size requirements. To improve salability, pools of nonconforming loans may be insured through third-party credit enhancements (for example, letters of credit) or various senior/subordinate structures. Since the underlying mortgages generally already carry private mortgage insurance, such pools are, in effect, doubly insured.

3070.0.2.2 Production Channels

Mortgage loan applications are generated through either *retail* (internal) or *wholesale* (external) production channels. Retail loans are originated through the company's own branch network. A branch network is relatively costly, since origination costs often exceed the origination fees received from the borrowers.

Wholesale production channels (where contact with the borrower is made by another party) take several forms. Whole loans can be purchased either individually or by using bulk commitments. Bulk commitments either require the correspondent to deliver a set amount of loans (mandatory) or deliver all registered loans that close (best effort or optional).

2. See the appropriate agency seller/servicer guide for standards and requirements regarding certificates of insurance or guaranty.

Loans may be closed in the buyer's own name using its own funds, closed in the seller's name using the buyer's own funds, or closed and funded by the seller with delivery to the buyer within a certain number of days. If the seller closes in its own name, the mortgage and note are generally assigned to the buyer simultaneously upon closing.

Three hybrid production channels are worth mentioning here. Examiners should note that terminology within the industry varies greatly. Under the first method, *table funding*, a mortgage banking company funds loans at closing that have been originated by a correspondent or broker according to the company's own specifications. Historically, the company's ability to record mortgage-servicing rights depended on the degree of independence that was maintained and the extent of risk borne by the originator. See subsection 3070.0.6, on "Mortgage-Servicing Assets and Liabilities."

The second hybrid method, *assignment of trade*, involves the bulk purchase of loans and investor commitments to sell the loans in the secondary market. The purchaser bears virtually no market risk under this production method. The third hybrid method, *co-issue*, entails the acquisition of servicing rights only, at the time a security is issued.

Most mortgage originators operate on a non-recourse basis. For purchasers of correspondent production, credit risk increases to the extent that the lender relies on other parties to correctly process and underwrite the loan. Contracts with correspondents should include representations and warranties from the correspondent that loans delivered meet the underwriting requirements of the agency or investor program for which the loan was originated. Approved correspondent lenders should be continually monitored for the quality of the product delivered and the financial ability to repurchase mortgages that do not meet the standard representations and warranties under which the mortgages are sold.

3070.0.2.3 Production Strategies

A successful production strategy combines high credit-quality standards with cost containment and effective marketing. In contrast, an overly aggressive or inappropriate strategy leads to heightened production risk. High-risk production strategies can be evidenced by relaxed credit standards, low documentation require-

ments, an executive officer's compensation based on volume, an emphasis on high-risk product types or geographic areas, and/or dependence on a limited number of production channels. Examiners are responsible for recognizing and reaching agreement with management to better control such high-risk production strategies where appropriate.

3070.0.2.4 Production Process

There are five principal steps in the retail production process: (1) pipeline entry, (2) processing, (3) underwriting, (4) closing and funding, and (5) post-closing. Each of these functions should be independent from one another and separately supervised to ensure the quality of the loans produced. Each step is briefly discussed below.

1. *Pipeline entry.* A loan has entered the pipeline when a prospective borrower completes a loan application. The applicant authorizes the lender to verify his or her employment, credit history, bank deposits, and other information that evidences repayment capacity.

2. *Processing.* The application is then processed to qualify the applicant and the property for the loan. Processing personnel verify the applicant's employment history and credit information and order an appraisal on the property. Processing activities should be controlled through standardized procedures, checklists, and systems.

3. *Underwriting.* The underwriting unit approves or disapproves applications based on underwriting criteria that are established by the FHA, VA, FannieMae, and FHLMC and by private mortgage insurers and institutional investors. To ensure objectivity, the underwriting unit should not report to management of the production function.

4. *Closing and funding.* After an application has been approved, the lender generally issues a commitment letter to the borrower, which states the interest rate and terms of the loan. At closing, the lender or its agent obtains all the legal and related documents executed by the parties to the sale, disburses the proceeds of the loan, and collects certain funds from the borrower.

5. *Post-closing.* After closing, a post-closing review is performed to ensure that documents were properly executed and underwriting instructions were followed. The post-closing review also identifies any trailing or missing documents that must be tracked and obtained to meet investors' pool certification requirements. Specific

agency requirements are detailed in the agency seller/servicer guides. Before the loan is transferred to the delivery or shipping department, processing begins for the final mortgage insurance (from the private mortgage insurer or from the FHA/VA guaranty certificate). Receipt of the actual certificate may take 45 to 60 days or longer. Pool custodians and investors will allow the lender to complete the sale if final documentation, including the insurance certificate, is expected to be received within a reasonable timeframe.

3070.0.2.5 Production Risks

The production process can present risks of both a short- and potentially long-term impact. Operational inefficiencies can result in high management and staff turnover, an inability to meet investor documentation requirements, an increasing number of pools that have not received final certification, or an unusually high production cost structure. Operations risk often increases during peak volume periods. If additional resources (which can include independent service providers) are not allocated to the processing, underwriting, closing, and post-closing areas, delinquency levels may increase and workloads may exceed existing capacity.

Management should be prepared to quickly respond to interest-rate cycles and related volume increases or declines, since failure to act promptly can affect earnings and capital. During the pooling and securitization process, for example, if the number of pools that lack final certification exceed a certain limit, the company may be required to seek financial support in the form of a letter of credit from an affiliate bank or bank holding company to ensure that all required loan documentation is secured in a timely manner. Credit risk and operational inefficiencies may also create liquidity problems and additional interest-rate risk if the company is unable to sell its loans in the secondary market.

To the extent a company retains servicing on either its retail or correspondent production, long-term credit risk issues may develop. These include exposure to the pools being serviced through recourse arrangements, potential non-reimbursable foreclosure costs, or costs associated with VA “no-bid” options.

3070.0.2.6 Overages

In certain instances, originators and loan brokers may have the ability to deviate from mort-

gage loan prices that are established by the marketing department. An overage exists when a lender permits an originator or broker to impose a higher number of points (or a higher interest rate) on a loan to certain borrowers than is imposed for the same product offered to other borrowers at a given point in time. (See CA-94-6.)

Overages are often used as an incentive to compensate originators or brokers. The amount that is received over the expected price is often shared by the mortgage banking company and the originator or broker. The practice of permitting overages may contribute to or result in lending discrimination under the Equal Credit Opportunity Act (ECOA) and the Fair Housing Act (FHAAct).

Examiners should review the mortgage banking company’s lending policy and determine whether overages are permitted and whether the practice has resulted in lending discrimination. If a more detailed review of overages is deemed necessary, such review should be performed in conjunction with the appropriate Federal Reserve System’s legal and consumer compliance staff.

3070.0.2.7 Inspection Objectives— Production Activities

1. To determine the types of loans offered to borrowers and any significant changes in product mix.
2. To determine whether mortgage loans are securitized; if so, to determine whether mortgage-backed securities are insured or otherwise guaranteed by government-sponsored agencies or private entities.
3. To determine what channels are used to originate loans.
4. To determine if production processes are consistent with operational risk controls and efforts to minimize risk.
5. To determine whether production processes can handle cyclical changes in volume.
6. To determine whether overages are permitted and to assess whether the practice has resulted in lending discrimination.

3070.0.2.8 Inspection Procedures— Production Activities

General

1. Review organization charts to determine

the structure of the production function and its status within the company. Verify that functional units such as underwriting and quality control are independently managed.

2. Determine the types of mortgage products offered and the company's target markets. Evaluate portfolio trends for overreliance on one product type and undue concentrations in one geographic area.

3. Discuss the company's credit culture, compensation methods, and growth targets to determine whether income and loan volume are emphasized over credit quality.

4. Determine whether the level of nonconforming or unsalable loans being originated present undue risk and whether the quality and delinquency trends for such loans are adequately monitored.

Originations

1. Review policies and procedures for retail branch originations. How are originators compensated? Determine whether originators have the authority to alter loan pricing parameters set by the marketing unit.

2. Determine the size of the branch network and its cost structure. Is the network growing or shrinking? How does management plan for anticipated changes in loan volume?

3. Determine if the mortgage banking company is involved in overage activities. If so—

a. determine whether management has developed comprehensive policies and procedures, detailed documentation and tracking reports, accurate financial reporting systems and controls, and comprehensive customer complaint tracking systems to adequately monitor and supervise overage activities;

b. review whether overages are an essential component of the mortgage banking company's earnings and origination activities, and review the percentage of mortgages originated since the previous inspection that resulted in overages and the average overage per loan;

c. determine if management reviews overage activity for disparate treatment and disparate impact; and

d. determine if overages are a major component of loan officer and/or broker compensation.

4. Review policies and procedures for wholesale purchases. Which production channels are used and how do they work? Channels may include whole loan purchases (production flow),

table funding, assignment of trade, or co-issuances (bulk purchases of servicing rights only). For each production channel, review how brokers and correspondents are compensated.

5. Review the method for reviewing and approving brokers and correspondents and specific programs under which wholesale loans are purchased. Is there an approved list of correspondents? How is it updated and how frequently? Determine whether exceptions to this list are made and by whom, and whether controls are in place to prevent unauthorized purchases.

6. Evaluate the process for conducting financial reviews on correspondents. How often are financial statements obtained, and who analyzes them?

7. Determine whether adequate controls are in place to detect changes in the financial condition of a correspondent, test and monitor the quality of loans purchased, and evaluate the correspondent's financial capacity to perform under contractual repurchase obligations.

8. Select a sample of contracts for the largest correspondents for additional review. Do contracts clearly state pricing structures, maximum dollar volumes, recourse arrangements, and whether loans are purchased on a mandatory delivery or a standby basis? Have any legal issues arisen as a result of the contract language? How frequently does management put back loans to its largest correspondents?

9. Determine whether management information systems adequately track approvals and denials by loan type and production channel. Are exceptions to policy adequately tracked and monitored?

Processing

1. Determine whether processing is performed in-house or by another party (a third-party contractor or the originator). Review checklists and procedures for the processing unit and determine whether loan tracking systems are adequate.

2. Review steps that have been taken to address any audit or quality control findings. Determine whether additional corrective actions are necessary.

Underwriting

1. Determine whether underwriting is performed in-house, by third-party underwriters, or by the originator. Is management planning for

peak volume periods and are controls over the underwriting process adequate?

2. Review policies and procedures to gain a reasonable assurance that underwriting standards are prudent and comply with investor guidelines. If individual underwriters perform this function, determine whether management has established approval limits, developed exception procedures for loans that are rejected or suspended, and receives reports that track loan quality for each underwriter. If a committee performs the underwriting function, review its charter, composition, and minutes. If a scoring system is used, review credit scoring methodology. Can the system be overridden? If so, by whom?

3. Review a representative sample (preferably a statistical sample) of current loans to test the underwriting policies and procedures and also determine the validity and adequacy of documentation supporting loans held for sale or investment.

4. If an unusual increase in unmarketable loan inventory has been noted, select a small sample of loans in current production for additional review. Does underwriting comply with established guidelines? If a credit scoring system is used, focus on loans that are of the lowest acceptable grade. If deficiencies are noted, consider expanding the review sample.

5. Review loans that were rejected and then approved. Did the proper authority approve such loans, and was management's rationale adequately documented?

Closing/Post-Closing

1. Evaluate procedures, checklists, and systems for closing loans. Are all required documents obtained from the borrower before funds are disbursed? If not, evaluate the appropriateness of suspense items.

2. Determine if a post-closing documentation review process exists to differentiate, track, and obtain both trailing and missing documents. Assess its effectiveness.

3. Determine if wholesale loans are re-underwritten at delivery. If not, how does management ensure that loans are re-underwritten in accordance with secondary marketing program requirements?

4. Determine the number of pools that lack final pool certification. Has this number exceeded the maximum allowable limit since the previous review? Why has this problem occurred, and what steps are being taken to secure the necessary documentation? Has a letter of credit been

posted? Does the situation pose undue financial risk for the company or any of its affiliates?

3070.0.3 MARKETING ACTIVITIES

The marketing department is typically responsible for the development of mortgage products, determination of products to be offered, and the establishment of daily mortgage prices. The marketing department, which is also referred to as secondary marketing, is also responsible for the sale of mortgage loans to investors. Given these roles, the marketing department acts as an intermediary between the borrower and the investor. All of these activities require close coordination to be effective and are appropriately placed within one department.

3070.0.3.1 Oversight

Marketing activities are generally supervised by a marketing committee, which may consist of the chief executive officer, chief operating officer, chief financial officer, and the executive officers responsible for marketing, production, and servicing/loan administration. The marketing committee is responsible for the formulation of marketing policies, departmental operating procedures, pricing strategies, and parameters governing the use of various mortgage-related products and strategies used to hedge the interest-rate risk associated with certain mortgage loans.

3070.0.3.2 Securitization

The marketing department's primary tool in performing its activities involves securitization outlets. Securitization activities are discussed in SR-90-16, which transmitted the following documents: (1) the Examination Guidelines, (2) An Introduction to Asset Securitization, and (3) Accounting Issues Relating to Asset Securitization. There is also a discussion of these activities in the *Commercial Bank Examination Manual*, section 4030.1. A review of the securitization process can provide a clearer understanding as to the value the marketplace assigns to a mortgage banker's production. Mortgage securities, however, are usually issued by an entity other than the mortgage banking company under inspection (such as government-

sponsored agencies, securities affiliates, or brokerage firms).

Many approaches are used for securitization, but the great majority of activity occurs with conduits such as GNMA, FHLMC, and FannieMae. Conduits provide many programs that a mortgage originator can use to deliver a mortgage or pools of mortgages in return for cash or securities. To investigate current program requirements and available options, the examiner should consult the seller guidelines issued by the agencies.

The securitization process presents the marketing department with a complex set of options to consider when deciding how to sell the company's loan production for maximum profit. If the company's own servicing valuation differs from pricing offered by the agencies, for instance, the marketing department can use some flexibility in pool formation guidelines to retain or divest servicing cash flows. Recourse to the originator or servicer can be negotiated to reduce agency guaranty fees. Agencies also alter guaranty fees based on different methods of remitting principal and interest payments. Sales to the agencies can be on a best-efforts or mandatory basis. A best-efforts basis is when loan delivery is not required if the loan does not close. Better prices are received for the lender's acceptance of the more rigid performance requirements of mandatory commitments. Master commitment contracts can be reviewed by the examiner to determine negotiated terms.

Although most securitization activity occurs within the programs already mentioned, private security issues are also used. The private issues are used primarily for loans that do not meet the underwriting criteria of the agencies, commonly due to larger than accepted loan amounts (jumbo loans). Nonconforming loan production is usually sold to brokers or security affiliates who have marketed the product to investors, sometimes using complex real estate mortgage investment conduits (REMICs).

3070.0.3.3 Pooling Practices

As an intermediary between the borrower and the investor, marketing personnel coordinate the flow of loan documents from the shipping department to the pool custodian and the ultimate holder. If servicing is retained, the loan will be input into the company's servicing system soon after closing. Staffing levels should be

adequate to ensure that processing backlogs are managed and workloads remain reasonable. Temporary help and/or outsourcing may be used during peak volume periods.

Operating procedures governing the selection of mortgage loans for pooling, packaging, and sale should be evaluated to ensure that the shipping and pooling processes are efficient and that loan files ultimately contain complete documentation. Management reports should identify and track the number of pools that lack final agency certification and the status of missing (unavailable) and trailing (delayed) documentation.

If third-party guaranties are used during the securitization process, procedures should also establish methods for evaluating and monitoring the financial condition of all third-party entities that provide credit enhancement. If loans or securities are sold with recourse, management reports should identify and track potential recourse obligations. Management should also analyze historical recourse losses by investor and product type and determine the appropriate level of reserves to cover estimated recourse exposure.

3070.0.3.4 Marketing Risks and Risk Management

3070.0.3.4.1 Techniques

The marketing department manages several risks, which can be categorized as follows:

- unsalability
- pricing
- fallout
- counterparty performance

3070.0.3.4.2 Unsalability

Under most circumstances, a mortgage banking company will originate mortgage products that are acceptable to GNMA, FannieMae, FHLMC, or other major investors. This minimizes the risk that mortgage products originated will not be marketable to investors and have to be retained as a portfolio investment. However, the marketing department may also initiate certain products that are intended for the loan portfolio of the mortgage company or portfolios of bank or nonbank affiliates. In the case of production for bank affiliates, underwriting and pricing arrangements must be structured to ensure compliance with the restrictions imposed by sections 23A and 23B of the Federal Reserve Act. See the subsections on production activities (3070.0.2) and intercompany transactions (3070.0.7).

3070.0.3.4.3 Pricing Risk

The mortgage banking business is volume driven. Because profit margins are thin and fixed costs associated with loan production can be large (especially in the case of a retail origination network), it takes a significant volume of mortgages to generate profits. Mortgage pricing decisions are critical because the price is a major determinant in the volume of mortgages originated.

Pricing strategies can be affected by divisional profit and loss allocations or external industry practices. A neutral price structure sets mortgage prices that are equivalent to the expected price for which the mortgages will be sold to investors, plus a normal servicing spread of 25 to 50 basis points depending on the type of loan. Daily adjustments are usually made to prices to reflect market changes for future settlement of mortgage-backed securities (MBS).

Due to regional or local competition, mortgage banking companies often find it necessary to deviate from a purely neutral pricing strategy to maintain volume in certain markets. However, large deviations from market price in either a lower or even upward direction can have adverse consequences. In addition to causing marketing losses, price cutting could place operational strains on the production and servicing areas. Premium pricing can position the company as a lender of last resort with adverse credit quality implications.

The marketing department attempts to minimize price risk by matching origination pricing with the price it expects to receive from investors. However, estimating the price at which the mortgages can be sold can be difficult because it is determined in large part by external factors such as interest rates. The longer the elapsed time between when the mortgage applicant decides to lock in a loan rate and the time the loan closes, the greater the risk that the prices for which the mortgages can be sold will change. Some companies encourage customers to “float” their interest rate until closing approaches to reduce the volume and costs of hedging.

3070.0.3.4.4 Fallout

A third type of risk that the marketing department manages relates to pipeline “fallout.” This is the risk that the proportion of loans in the rate-committed pipeline that are expected to close will change with a given change in interest rates. As market interest rates decline, fewer mortgages in the pipeline will close because

applicants will opt to make new applications at the lower rates. As interest rates rise, the proportion of pipeline loans that will close increases as more applicants choose to lock in rates. Mismatches that occur in the long and short positions can result in financial losses when the institution needs to settle its trades.

3070.0.3.4.5 Hedging Strategies

The most common hedging strategy used to protect the inventory of closed loans and the rate-committed pipeline against adverse interest-rate movements involves the use of mandatory and optional forward sales of MBS. Under this hedging strategy, the inventory and rate-committed pipeline (the long position) are generally covered through short sales (mandatory delivery contracts with settlements corresponding to expected delivery volumes). Put and call options on MBS are sometimes purchased to manage heightened fallout risks during periods of volatile interest-rate fluctuations.

The typical practice is to hedge 100 percent of the closed loan inventory that is marketable. In addition, pipeline loans very near to closing are generally also hedged at or close to 100 percent. However, a significant degree of uncertainty exists as to the amount and timing of 30- and 60-day rate-committed pipeline closings due to interest-rate fluctuations, underwriting delays, and cancellations. To control exposure to rate movements, management must estimate the percentage of the rate-committed pipeline that is expected to close in the current economic environment.

Although estimation techniques vary, data are generally collected on a number of pipeline characteristics such as product type, whether the loan is a purchase or refinance, and whether it is retail- or wholesale-originated. Fallout behavior can vary depending on these and other factors. Based on this information, management then derives an estimated closing percentage that becomes management’s operating target for coverage of the rate-protected pipeline.

Marketing personnel often use simulation modeling to assess fallout percentages, assist in balance-sheet valuations, and develop appropriate hedging strategies. Such models may be either purchased from outside vendors or developed in-house, and they vary greatly in their degree of sophistication. In any event, the primary assumptions and inputs to the model should

be reasonable, well documented, and reviewed periodically by both the marketing committee and by an independent source such as an internal or external audit. Results from the marketing simulation model should be provided to management through summary reports. Information may also be provided to bank holding company personnel for asset/liability management purposes.

Other products may also be used to hedge inventory loans and the rate-committed pipeline, particularly loans with an adjustable rate feature or other specialized characteristics. The marketing committee should review and approve all specialized hedge products used, the degree of correlation between the hedge product and the underlying position being hedged, and the degree of risk that each strategy or position entails. The accounting department should also determine whether such products qualify for hedge accounting treatment, establish appropriate management reports, and establish accounting policies. See subsection 3070.0.6, "Mortgage-Servicing Rights."

3070.0.3.4.6 Position Reports

To limit risk, the marketing committee should place prudent limits on the amount of exposure that can be incurred through hedging operations. Limits, which may be contained in the marketing policy, might establish a constraint on the size of uncovered long positions, require that coverage be maintained at the marketing committee's current closure estimates, or establish a constraint based on an earnings-at-risk measurement.

Compliance with limits should be monitored through regular position reports, which should be provided to senior management (the marketing committee and perhaps the treasury function of the parent company, if they participate in decisions or policy enforcement) at least weekly. Position reports should detail the company's long and short positions in relation to limits, as well as unrealized and realized gains and losses on loans and securities. Department managers generally require daily position reports in order to effectively monitor the position. Marketing position reports may not reconcile directly with reports prepared by the accounting department for financial reporting purposes. Significant differences should be investigated.

3070.0.3.4.7 Counterparty Performance

The marketing committee is also generally responsible for managing investor/counterparty performance risk. The marketing committee (or the treasury department of the parent bank holding company) should approve all brokers and dealers to which securities are sold before trading commences. Dealer limits should be established to limit the maximum amount of trades outstanding with each firm. Frequent position reports should be prepared to monitor compliance with established limits. The accounting department may be responsible for the ongoing monitoring of the financial capacity of the brokers and dealers.

3070.0.3.5 Inspection Objectives— Marketing Activities

- To review the types of products developed.
- To determine the pricing strategies offered to borrowers and investors.
- To review pipeline fallout estimation techniques.
- To review hedging methods as they relate to loan production.
- To determine whether information systems are adequate for senior management to monitor fallout behavior and hedge performance.

3070.0.3.6 Inspection Procedures— Marketing Activities

Management Oversight

1. Review the composition of the marketing committee and minutes from recent committee meetings to determine the nature and scope of its responsibilities, the frequency of meetings, and the degree to which oversight over marketing activities is provided.

2. Review the marketing policy as it relates to product offerings, pricing strategies, loan sales, and hedging operations. Are all relevant marketing risks identified? Note the date the marketing policy was last reviewed and approved by the board of directors.

3. Determine how management measures and controls interest-rate risk associated with closed loans in inventory and rate-locked loan applications in the pipeline. How are limits established and quantified (i.e., earnings at risk, economic value of equity at risk, percentage of capital, etc.)? Are such limits reasonable? Evaluate management's oversight of asset securitization

activities in accordance with SR-90-16, as applicable.

4. Assess the adequacy of management information systems and related management reports that are designed to track compliance with established policy. Determine the extent to which operational practices adhere to policy. How are exceptions handled?

Securitization and Pooling Practices

1. Determine the secondary marketing programs used to sell mortgages to investors and the volume of sales under each program.

2. Discuss the strategies and procedures used for the selection of mortgage loans for pooling, packaging, and sale. Are there quality control procedures in place to ensure that the files of pooled loans contain complete documentation? What impact does strategy have on departmental profitability?

3. Evaluate the company's securitization practices:

- Determine how much risk the company retains and in what form.
- Determine the source, conditions, and costs of third-party guaranties. Verify that the financial condition of all third-party credit enhancers is substantiated.
- Determine the procedures used to obtain final pool certifications from investors (coordinate with the examiner(s) assigned to the production function). Determine the number and volume of securities that lack final certification. Is management doing everything possible to obtain missing documents? Are problems volume-driven or due to a lack of internal controls?

4. Determine whether loans or securities are sold with recourse. If so, are management information systems in place to track recourse obligations? Are analyses of recourse losses conducted by investor and product type? Are reserves held for recourse loans? What is the methodology for determining the adequacy of reserves? Review actual and potential losses. Are reserve levels adequate to cover identified exposure? Is compensation tied to trading profit?

Unsalability

1. Review the marketing policy to determine

whether all mortgage products originated by the mortgage company are intended to be salable in the secondary market (for example, do they conform to guidelines issued by GNMA, Fannie-Mae, FHLMC, or other major investors?). How is actual salability monitored?

2. Determine if mortgage loans that are not salable are generated specifically for the permanent investment portfolio of either the mortgage banking company or its bank or nonbank affiliates.

3. Determine who is responsible for the review of temporarily unsalable loans, the frequency of such reviews, the actions taken to correct documentation and/or credit deficiencies, and if internal controls are adequate. This information is needed to ensure that hedge volumes are accurate.

Pricing Strategies

1. Review the current list of mortgage product offerings and the daily price sheet. Are prices determined centrally and are they uniform? Discuss pricing strategies with management to determine whether the company uses a neutral, above-market, or below-market pricing strategy.

2. Ascertain what procedures are in place to ensure that deviations from the approved pricing policies receive the proper degree of scrutiny and approval by senior management. If such discrepancies are common, why is this occurring (competition, compensation schemes, or departmental profitability considerations)? What impact have such deviations had on production volumes and the company's overall profitability?

3. Determine what policies are in effect regarding customer rate-locks. If a rate-lock expires, is it automatically renewed or is it renegotiated at current interest rates? Are the number and dollar volume of loans with expired rate-locks adequately monitored and tracked?

Fallout

1. Discuss the methodology used to predict the volume of applications that are expected to "fall out" of the mortgage pipeline. Is fallout methodology well documented?

ALCO/Simulation Modeling

1. Determine whether the expected fallout ratio is based on intuition, historical data, or an empirical model. Are assumptions reasonable? Are volatility assumptions based on historical performance or on implied volatility levels in the market? Who is responsible for reviewing model assumptions, and are these individuals sufficiently independent from the process itself? Does management also engage in sensitivity analyses to determine the impact interest-rate fluctuations will have on expected fallout levels?

2. Determine to what extent management uses output from these models in business planning, financial management, and budgeting.

3. Assess the degree to which mortgage banking activities are incorporated into the parent company's asset/liability management reports and program.

Hedging Practices

1. Discuss management's philosophy and strategy to determine the amount of interest-rate risk they are willing to accept. How successful has the company's marketing strategy been over the past few years and how is it changing? What are management's primary sources of market information? Are sources sophisticated enough given the size of the company and the scope of its activities?

2. Review the marketing policy to determine products and strategies used to hedge the interest-rate risk associated with inventory loans and rate-locked loan applications in the pipeline. Review actual hedging practices to determine whether they conform with established policy limitations and guidelines. What percentage of closed loans held in inventory and loan applications in the pipeline are matched against specific investor commitments? How are coverage levels determined and how have they changed over time? Is the basis for this coverage ratio adequately documented? Determine whether the current coverage ratio exposes the company to undue risk associated with potential marketing losses.

3. Determine the adequacy of management's strategies for hedging loans that have special risks (ARMs with interest-rate caps and floors).

4. Ascertain if basis risk exists for any hedg-

ing products, whether such risks are significant, and the impact on correlation. How is basis risk identified, monitored, and controlled?

5. Determine whether call options are written to enhance inventory yields. If so, verify that they are written against covered positions. Determine whether management is speculating in any way and whether this activity subjects the company to undue risk.

6. Obtain profit/loss reports on hedging activities. How frequently are they prepared, how are they used, and to whom are they distributed? Evaluate the financial results of the hedging program over the past three years. Is management taking on excessive risk to record profits in this area?

7. Review management reports relating to pipeline and closed-loan hedging operations. Determine whether such reports are complete, accurate, and timely. Do such reports adequately limit excesses, record exception approvals, and detail risk exposures?

8. Review information provided to executive management and the board to determine whether hedging practices are adequately supervised.

Counterparty Risk

1. Review the marketing committee's list of approved brokers and dealers. Have appropriate dealer limits been established and are such limits adhered to? How are exceptions monitored, reported, and controlled?

3070.0.4 SERVICING/LOAN ADMINISTRATION

Mortgage banking companies that originate and sell residential real estate loans in the secondary market often retain the right to service those loans for the investor for a fee. In return, the servicer collects monthly payments from mortgagors, collects and maintains escrow accounts, pays the mortgagors' real estate taxes and insurance premiums, and remits principal and interest payments to the ultimate investors. The servicer also maintains records for the mortgagor, collects late payments on delinquent accounts, inspects property, initiates and conducts foreclosures, and submits regular reports to investors. Such functions and responsibilities should be documented within a formal written servicing agreement.

3070.0.4.1 Revenue Generation

The right to service mortgage loans provides a stable source of earnings and the potential for one-time gains. For this reason, servicing portfolio growth has become a primary objective for many mortgage banking companies.

Mortgage-servicing revenues are derived from six sources. The primary source is the contractual servicing fee. Because this fee is usually expressed as a fixed percentage of each outstanding mortgage loan's principal balance, servicing-fee revenues decline over time as the loan balance declines.

The second source of servicing income arises from the interest that can be earned by the servicer from the escrow balance that the borrower often maintains with the servicer for the payment of taxes and insurance on the underlying property. This income may vary, however, as some states require that interest payments on escrow balances be paid to the borrower.

The third source of revenue is the float earned on the monthly loan payment. This opportunity for float arises because of the delay permitted between the time the servicer receives the payment and the time that the payment must be remitted to the investor.

The fourth source of revenue consists of income late fees charged to the borrower if the monthly payment is not made on time. A fifth source is income in the form of commissions that many servicers receive from cross-selling credit life and other insurance products to the borrowers. The sixth and last source is when the servicer might generate fee income by selling mailing lists to third parties.

3070.0.4.2 Cost Containment

Long-term profitability is achieved through cost containment, technological improvements, and economies of scale, which reduce the per-unit cost of servicing. Servicing costs vary widely across institutions depending on portfolio characteristics such as product type, loan size and age, delinquency status, and foreclosure statistics. Nevertheless, two efficiency measures frequently used within the industry to measure cost containment are unit-servicing costs and the number of loans serviced per employee. The minimum size of a loan-servicing portfolio needed to achieve economies of scale varies across institutions and depends on portfolio characteristics and the servicer's expertise and technological capabilities.

Servicing data are available through the Mortgage Bankers Association's publication, "Mortgage Banking Performance Report." Based on detailed financial-statement information from a sample of companies, the report presents a compilation of performance data on all aspects of the mortgage banking industry.

3070.0.4.3 Growth Strategies

Many companies have established aggressive growth targets for their servicing portfolios. The size of the portfolio may be increased through originations, purchases of loans (individual or bulk), or purchased servicing rights. Portfolio size is reduced through normal runoff, prepayments, and sales of either loans or servicing rights only. Management's growth strategy should be examined in light of its expertise and systems capabilities.

3070.0.4.4 Servicing Agreements

The servicer generally operates under a written contract with each investor. This contract, also known as a servicing agreement, establishes minimum conditions for the servicer such as its fiduciary responsibilities, audit requirements, and fees. Contracts may be standardized or tailored to the individual investor.

Under most servicing agreements, the servicer warrants that full principal has been advanced, the mortgage is in fact a first mortgage on the property, and that the first mortgage position will be maintained by the servicer. Additional warranties that are either unwritten or implied may create significant exposure for the servicer.

A servicer may also enter into an agreement with another company to subservice certain loans or portfolios of loans. The company's method of evaluating and monitoring the financial condition of its subservicers should also be reviewed. Servicing and subservicing agreements should be evaluated in terms of the subservicer's responsibilities, reporting requirements, performance, and fees. They should also be reviewed to determine that no additional liabilities, real or contingent, are imposed upon the company beyond its responsibilities as a servicing agent.

3070.0.4.5 Recourse Obligations

A servicing agreement may contain specific recourse obligations that go beyond the servicer's customary fiduciary obligations. A mortgage banking company can choose to service loans for investors either with or without recourse back to the mortgage banking company. Servicing agreements should be reviewed to determine the extent of any recourse obligations. The risk of recourse should also be discussed with management to assess whether the risk is being identified and effectively managed.

The degree of recourse varies by investor. FannieMae offers either "regular" or "special" servicing options. With FannieMae's regular option, the servicer retains all risk of loss from mortgage default. With FannieMae's special servicing option, the mortgage banking company only retains exposure for normal representations and warranties. FHLMC offers similar servicing options. FannieMae and FHLMC generally limit eligibility for the regular servicing option to participants with the knowledge and financial wherewithal to make good on their recourse obligations.

GNMA servicing carries no contractual recourse. However, in the event of mortgage default, the servicer may have exposure to principal loss and other nonreimbursable expenses, particularly with respect to VA-guaranteed loans. If a borrower defaults on a VA-guaranteed loan, the VA can exercise a "no-bid" put option, which allows the VA to pay out its guaranty and leave the property with the servicer for disposition.

When a borrower defaults on a VA-guaranteed loan, the VA makes a calculation that will guide its decision to accept or reject conveyance of the property. The VA's decision to exercise its no-bid option is based on the net value of loan collateral and the VA's guaranteed percentage of the indebtedness. The mortgage servicer, at its option, could pay down the outstanding principal balance on the loan to a point where the VA would not be expected to exercise its no-bid option. Such "buydowns" result in additional foreclosure losses for the servicer.

The risk-based capital guidelines require a charge to capital when any risk of loss is retained on such recourse obligations. The charge would be at the bank holding company, the bank, or both,³ depending on ownership of the risk. For

this reason, the accuracy of reported recourse obligations should be verified.

3070.0.4.6 Guaranty Fees

The amount of guaranty fee the mortgage banking company pays the government-sponsored agencies (or private issuer) is negotiated. Guaranty fees vary based on the amount of recourse assumed by the mortgage banking company (the servicer) and the timing of the cash flows. A smaller guaranty fee is negotiated when the guarantor assumes less risk or receives payments sooner in the remittance cycle. Remittance cycles vary by investor.

The examiner should discuss with servicing personnel the amount of risk that has been taken on by the marketing department in exchange for reduced guaranty fees. Excessive risk accepted by the mortgage banking company should be incorporated into the assessment of management.

3070.0.4.7 Internal Controls

The servicing process begins after the post-closing review has been completed and the loan has been set up on the mortgage banking company's servicing computer system. Servicers are responsible for adequately safekeeping loan documents. Documents must be stored in a secured and protected area such as a fireproof vault. Servicers must also maintain a tracking system for following up on missing documents.

The control environment that sets the tone of a servicing department's operation should be assessed. A servicing department's management faces a variety of risks that it should identify and control. In addition to identifying and controlling risks, management also needs to institute adequate and effective internal controls to match a servicing portfolio's growth and the department's technological changes. When assessing the control environment, the examiner needs to consider the extent to which management uses internal and external audits, quality control reports, and investor audits to ensure that its policies and procedures are followed.

The servicer's performance should be evaluated, with any loss of servicing due to operating inefficiencies or excessive risk-taking discussed and noted. A discussion of the risks within each operational area, as well as the management reports and internal controls, follows.

- *Loan accounting.* Incoming payments may be processed in-house, through a lockbox, or

3. If at the bank, then it is also consolidated at the bank holding company level.

through some combination of both. Payments are deposited into a clearing account and then transferred to the respective investor custodial bank accounts the next day. Investor remittances may be required daily, weekly, monthly, or as funds are received. In certain cases, servicing agreements may specify that payments be sent directly to security holders. Numerous accounts through which incoming and outgoing payments pass should be reconciled daily to avoid costly processing errors. The reconciliation process should be reviewed with management to ensure that reconciliations are performed on a timely basis and without chronic discrepancies.

- *Escrow administration.* In addition to receiving and remitting payments, servicers are also responsible for paying taxes and insurance on the underlying property. Accurate information must be maintained for each loan regarding a legal description of the property; the appropriate taxing authority, due dates, and amounts for taxes owed; and the insurance provider and due dates and amounts for insurance owed. Failure to maintain such information may result in missed tax and insurance payments on the property, which may lead to penalties and/or lapsed insurance coverage. The servicer's record of tax penalties paid over the past several years should be reviewed to determine whether a problem exists in this area.

Escrow account balances should be adequate to meet expected tax and insurance obligations. If the servicer advances its own funds to cover an escrow overdraft, such payments may be capitalized and recorded as a receivable only if the servicer is to be reimbursed by either the mortgagor or the investor. Escrow receivables should be aged, with stale or otherwise uncollectible receivables charged off.

Escrow accounts should be analyzed at least annually, with a copy of the analysis sent to the mortgagor. Shortages (overdrafts) may be billed or spread out over 12 months. Overages should be returned to the borrower or handled in a manner consistent with federal and state laws and regulations. For loans that were set up without an escrow account, the examiner should verify that adequate information has been obtained from the mortgagor to ensure that taxes and insurance are current.

- *Investor reporting.* Investor remittance and reporting requirements vary greatly. Remittances are contractually arranged. In some instances, the servicer may be required to

advance to investors funds that have not yet been received from the mortgagor (for example, cash advances to ensure timely payment of principal and interest). In such cases, a receivable is created on the balance sheet. Receivables relating to investor remittances should be aged in the same manner as escrow receivables and periodically reviewed by a supervisor. Stale or otherwise deemed uncollectible receivables should be periodically charged off in a timely manner.

Investor reports should include detailed account reconciliations and information on the mortgagor's name, principal balance outstanding, escrow balance, delinquency status of the account, and any foreclosure activity or transfer to the servicer's other real estate owned account. The quality and accuracy of investor reporting should be periodically reviewed by internal or external auditors.

- *Collections, foreclosures, and other real estate (ORE).* Investor requirements also vary concerning contact with delinquent borrowers, forbearance policies, and reimbursement for foreclosure expenses, ORE write-downs, and related losses. Detailed policies concerning collection efforts and foreclosures should be in place and followed. The property should be inspected regularly to ensure that its condition is adequately monitored. Delinquency and foreclosure statistics should be tracked by product type and originator.

Foreclosures are generally initiated after three full installments are due and unpaid. The servicer notifies the mortgagor of its intent in writing and refers the case to an attorney. Detailed records should be maintained for all expenses that are incurred. If the loan is insured, claims may ultimately be filed against the FHA, VA, or private mortgage insurance (PMI) company. However, it should be noted that certain interest expenses and collection or foreclosure costs are not reimbursable.⁴ These expenses are a cost of doing business that must be factored into the servicing fee charged for providing these services.

The timeframe for taking title on foreclosed property varies widely and is determined by state law. *Once title is taken, the property should be classified as ORE.* Although

4. For a detailed list of both reimbursable and nonreimbursable expenses, see the agency seller/servicer guides.

all ORE is generally managed through a centralized unit, for accounting purposes, ORE may fall into one of two distinct categories: ORE that is owned by the mortgage banking company, and ORE that is serviced on behalf of the investor. ORE that is owned should reconcile to the balance sheet, whereas ORE that is serviced for others is an off-balance-sheet item. ORE appraisal, valuation, and financing policies should be consistent with regulatory policy. In-substance foreclosures and any troubled debt restructurings should be properly identified and accounted for.

- *Payoffs.* Loans are considered “paid off” when the loan matures, the loan is refinanced, or the property is sold. Prior to payoff, the servicer is responsible for sending payoff instructions to the mortgagor. After a loan has been paid off, the servicer makes a satisfaction remittance to the investor or the pool; obtains documentation; cancels the note; and forwards the satisfied mortgage documentation plus an escrow refund check, if applicable, to the mortgagor. A high level of refinance activity may strain payoff personnel’s ability to perform this obligation accurately and promptly. Management reports should monitor the level of payoff activity and alert supervisors to operational backlogs, the need to hire temporary personnel, or the need to outsource work to third parties.
- *Customer service.* Poor service may damage the mortgage banking company’s business reputation (reputation risk) and ability to originate, sell, and service loans within the community. Because of name recognition, problems in this area may also adversely affect affiliate banks or the bank holding company and its nonbank companies.

For this reason, servicers should maintain an adequate system for logging, tracking, and responding to customer inquiries and complaints. Management reports should track the volume and disposition of such inquiries and complaints. Inordinate volumes of complaints may be an indication of operational backlogs, inefficiencies, or mishandling of accounts. If this occurs, corrective measures should be initiated immediately.

3070.0.4.8 Data Security/Contingency Planning

The servicing system should be of a complexity

and size necessary to accommodate both the current and the projected volume of transactions. Examiners should obtain information on the servicing system in use and any limitations it might pose in terms of future growth plans.

Procedures for maintaining physical security in the workplace, data security, and file backup also should be discussed with management. A contingency plan should describe the use of alternative backup sites, as well as procedures that would be followed to reconstruct altered or destroyed files. Contingency plans should be reviewed and approved at least annually and tested regularly.

3070.0.4.9 Inspection Objectives— Servicing/Loan Administration

1. To assess the adequacy of management oversight of risk through policies and procedures, management information systems and reports, and other internal and external audits, with respect to the following:

- collecting monthly payments from mortgagors
- reporting loan activity and remitting funds to investors
- monitoring escrow account balances
- disbursing property insurance and real estate tax payments
- monitoring delinquencies, initiating collection activities, and initiating foreclosure proceedings in a timely manner

2. To evaluate the level of risk assumed by the mortgage banking company through servicing recourse arrangements.

3070.0.4.10 Inspection Procedures— Servicing/Loan Administration

Management Assessment

1. Obtain an organization chart for the servicing department and resumes for senior management and key staff members. Evaluate management’s qualifications and expertise.

2. Review servicing policies and procedures manuals to determine whether reasonable operating standards have been established for each functional area. Also assess whether management reports adequately monitor compliance with established policies and procedures. Determine how exceptions are identified and addressed.

3. Review internal and external audits, quality control reports, and investor audits to determine whether internal controls are functioning effectively.

4. Evaluate safeguards in place for loan documents and determine if an adequate document tracking system exists.

5. Verify that a disaster recovery plan is in place that covers all in-house servicing functions. Verify that backup systems exist should primary systems fail. Determine if backup systems would provide information to substantiate servicing portfolio asset values.

6. Obtain a list of subservicers and vendors, if any, employed to perform servicing functions.

- Determine if a periodic review of services provided by each subservicer is conducted. In addition, the financial condition of each subservicer should be evaluated at least annually.
- Determine whether a contingent operating plan has been established should subservicers and vendors be unable to perform their contractual obligations.

Profitability Analysis

1. Review business line profitability for the servicing department to identify significant trends and/or areas of potential weakness. Discuss and review key efficiency measures such as unit cost and cost per employee.

2. Analyze servicing income and expenses to determine whether operations are profitable and economies of scale are being achieved in line with industry norms:

- Determine whether all direct and indirect costs are included.
- Compare servicing revenues with costs.
- Assess the impact of any bulk servicing purchases or sales on departmental profitability.
- Analyze efficiency in light of management's growth projections.

3. Review servicing portfolio trends and characteristics, including the following:

- investors (GNMA, FannieMae, FHLMC, private)
- recourse provisions
- loan types (30-year fixed, 15-year fixed, ARM, balloon)
- average loan size

- interest rates (particularly those above market)
- remaining contractual life
- projected life
- geographic distribution of mortgagors
- delinquency statistics
- foreclosure statistics
- number of subserviced loans and servicers

Loan Accounting

1. Review with management the procedures for receiving payments from mortgagors and depositing funds into segregated accounts. Determine that the segregation of duties and other controls over custodian accounts are adequate.

2. Review any outstanding advances to investors. Evaluate the collectibility of advances, the timeliness of charge-offs, and the adequacy of reserves.

3. Determine whether outstanding items related to investor account reconciliations are being resolved in a timely manner. Are reconciliations routinely reviewed and approved by a supervisor?

Escrow Administration

1. Review with management the system in place for ensuring the timely payment of taxes, insurance, and other obligations.

2. Review the servicer's method for analyzing the amount and adequacy of escrow account balances, and evaluate its effectiveness. Assess procedures relating to shortages and overages in escrow accounts:

- Determine whether procedures comply with 12 U.S.C. 2609 (RESPA) and to the extent possible with state laws.
- Determine whether the borrower is sent an analysis statement showing the amount of discrepancy, how it occurred, and an explanation of how it is to be corrected.

3. Determine the volume of loans with no escrow requirement and procedures for ensuring that insurance payments and taxes are current.

4. Determine how escrow funds are invested, assess the appropriateness of the investment vehicles, and review management's analysis of yield on escrow funds.

5. Evaluate whether controls are in place to prevent the use of escrow custodial accounts to meet other obligations.

6. Review outstanding escrow advances, and determine if claims for reimbursement are processed in a timely manner. Evaluate the collectibility of outstanding advances and verify that uncollectible advances are charged off in a timely manner.

Investor Reporting

1. Review the list of investors for which servicing is performed.

2. Review servicing contracts to verify that signed, current contracts exist. Discuss with management the nature of any recourse provisions, forbearance requirements, and nonreimbursable collection and/or foreclosure expenses.

3. Review the most recent investor audit reports on the servicing function. Discuss findings with management and evaluate the adequacy of any actions taken to correct deficiencies.

4. Determine whether any servicing contracts have been terminated for cause or are likely to be lost in the near future. Determine the reason for any termination and the extent of any corrective actions taken.

Collections and Foreclosures

1. Review and assess, on a statistical-sample basis, the accuracy and adequacy of loan delinquency reports by product type and originator. Ascertain the reasons for poor or declining asset quality within the servicing portfolio.

2. Review policies and procedures for collecting late payments.

- Determine when collection efforts start once an account becomes delinquent.
- Verify that all attempts at collecting past-due payments are documented, including each date of communication with borrowers, the nature of the communications, and the customers' replies.

3. Select a sample of files for borrowers who are 120 days or more delinquent and determine whether foreclosure proceedings are instituted in a timely manner.

- Determine if borrowers and investors are appropriately notified of the initiation of foreclosure action.

- Verify that contacts with borrowers are documented.
- Determine whether property inspections are conducted in accordance with policy.
- Verify that foreclosure practices comply with FHA/VA/PMI requirements and guidelines.

4. Determine the average foreclosure costs for each product type. Foreclosure costs include inspections, legal and administrative costs in excess of those defined as normal and customary, VA no-bid, and VA write-downs.

5. Obtain a list of loans in foreclosure in which action has been delayed, and determine if the justifications for delay are reasonable.

6. Determine the number and dollar volume of delinquent loans that were purchased from the servicing portfolio (buyouts or buybacks).

- Assess the impact of repurchases on profitability, the appropriateness of this practice, and the accounting procedures for these loans.

7. Discuss with management the effect that negotiated guaranty fees may have on the level of losses associated with foreclosures.

Payoffs

1. Review procedures for payoffs to determine whether—

- payoff instructions are sent to the mortgagor before payoff;
- satisfaction remittances are made to the investor or to the pool, necessary documentation is obtained, notes are canceled properly, and documentation plus any escrow refund checks are sent to the mortgagor in a timely manner; and
- internal controls are in place to ensure that funds are not misappropriated and employee fraud is detected and reported according to policy.

Other Real Estate

1. Determine the number and dollar volume of ORE by geographic location.

- Compare the volume of ORE with historical levels and the industry average for similar-sized servicers.

- Evaluate the impact of ORE on profitability.
- Review the policies and practices for ORE accounting, property supervision, and marketing. Verify that policies are consistent with investor guidelines and regulatory policies.

2. Determine whether ORE parcels are purchased from the servicing unit by the bank holding company or its affiliates.

- Evaluate the controls in place to limit or prevent this practice and the accounting treatment for such loans.
- Verify that information regarding ORE is properly reported to the parent bank or holding company for consolidation into regulatory reports.

Customer Service

1. Review the system for logging, tracking, and responding to customer complaints. Has the volume of complaints grown? Are complaints addressed promptly with any problems resolved in a timely manner?

2. Review the servicer's customer-complaint file to gain more insight into the nature of the complaints. Do complaints suggest that internal policies and procedures are not being followed or that staffing levels are inadequate?

cial risk. The examiner should also investigate any trends that appear inconsistent with the mortgage banking company's industry peer group, business orientation (such as wholesale versus retail, originations versus servicing, etc.), and future growth plans or with the current economic and interest-rate environment.

Financial-statement presentation may vary across mortgage banking companies. If questions arise, financial-statement presentation and accounting should be reviewed with the company's internal and/or external accountants for propriety. During the review of the financial statements, the examiner should establish whether regulatory reports are prepared accurately. Banks must conform to the reporting requirements of the Commercial Bank Reports of Condition and Income (call report). Bank holding companies and their direct subsidiaries must conform to generally accepted accounting principles (GAAP). Relevant GAAP statements of the Financial Accounting Standards Board include SFAS No. 65, "Accounting for Certain Mortgage Banking Activities," as amended; SFAS No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases"; SFAS No. 115, "Accounting for Certain Investments in Debt and Equity Securities"; SFAS No. 125, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities;" and SFAS No. 80, "Accounting for Futures Contracts." Other relevant accounting pronouncements are identified in appendix B, Accounting Literature.

The financial analysis should also include an assessment of asset quality, earnings, liquidity and funding, and capital. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or the parent bank holding company to undue financial risk should be brought to management's attention and discussed in the Examiner's Comments and Matters Requiring Special Board Attention.

3070.0.5 FINANCIAL ANALYSIS

This section provides the examiner a framework with which to analyze the financial condition of a mortgage banking company. The analysis begins with a review of the mortgage company's balance sheet and income statement. The financial analysis should incorporate a review of primary balance-sheet and income-statement levels and trends, off-balance-sheet assets and liabilities, asset quality, market share and earnings performance, funding sources, liquidity needs, and capital adequacy. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or its parent bank holding company to undue financial risk should be brought to management's attention and documented in page one, Examiner's Comments and Matters Requiring Special Board Attention. The examiner should focus on items that are either large relative to the company's operations or that may pose undue finan-

3070.0.5.1 Balance Sheet

3070.0.5.1.1 Assets

The asset side of the balance sheet may consist of cash, reverse repurchase agreements, marketable securities, receivables and advances, mortgage loans held for sale, mortgage loans held for

investment, mortgage-servicing assets (MSAs) (including mortgage-servicing rights), reserves for loan and other credit-related losses (contra accounts), other real estate owned (OREO), and other assets.

banking company must demonstrate the positive intent and ability to hold it until maturity.

3070.0.5.1.1.1 Mortgage-Related Securities

The examiner should determine whether the accounting treatment for mortgage-related securities reported on the balance sheet is consistent with SFAS 115. SFAS 115 applies to equity securities having readily determinable fair values and to all debt securities. It does not apply to loans purchased.

Under SFAS 115, at acquisition and at each subsequent reporting date, all debt and equity securities that fall under the scope of the statement should be classified into one of the following categories:

- trading securities
- available-for-sale securities
- held-to-maturity securities

Both debt and equity securities can be assigned to the above first two categories. The third classification can only consist of debt securities.

Trading. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities should be classified as trading securities and reported at fair value. Debt securities not held to maturity and equity securities that have readily determinable fair values should be classified as trading securities when (1) they are held for short periods of time and (2) they have been acquired with the expectation of a profit from short-term price differences. Securities that are actively traded should be carried at fair value on the balance sheet, with net unrealized gains or losses included in income.

Available-for-sale. Debt and equity securities having readily determinable fair values that are not otherwise classified, as above, should be categorized as available-for-sale and carried at fair value on the balance sheet. Unrealized holding gains and losses should be reported in a separate component of shareholders' equity and should not be included in income.

Held-to-maturity. For a security to qualify as held-to-maturity under SFAS 115, the mortgage

3070.0.5.1.1.2 High-Risk Securities

The examiner should also review any high-risk mortgage securities that are on the balance sheet, such as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), CMO and REMIC residuals, and stripped mortgage-backed securities (stripped MBSS). See sections 2126.1 and 2190.0.5.

3070.0.5.1.1.3 Mortgage Loans Held for Sale

The examiner should determine whether the accounting treatment for mortgage loans held for sale is consistent with SFAS 65, as amended. Mortgage loans held for sale shall be reported at the lower of cost or market value, determined as of the balance-sheet date.⁵ The amount by which the cost exceeds market value shall be accounted for as a valuation allowance. Changes in the valuation allowance shall be included in net income of the period in which the change occurs.

3070.0.5.1.1.4 Mortgage Loans Held for Investment

Mortgage loans held for investment may include loans that (1) do not meet secondary-market guidelines and are therefore unsalable, (2) loans that were repurchased from an investor due to poor documentation and/or improper servicing, (3) loans put back to the mortgage banking company under recourse agreements, and (4) loans intentionally originated for portfolio.

SFAS 65 states that a mortgage loan transferred to a long-term investment classification shall be transferred at the lower of cost or market value as of the transfer date. The securitization of a mortgage loan held for sale shall be accounted for as the sale of the mortgage loan

⁵ According to SFAS 65, as amended, the capitalized costs of acquiring rights to service mortgage loans, associated with the purchase or origination of mortgage loans, shall be excluded from the cost of mortgage loans for the purpose of determining the lower of cost or market value.

and the purchase of an MBS classified as a trading security at fair value. Any difference between the carrying amount of the loan and its principal balance shall be recognized as an adjustment to yield by the interest method.

A mortgage loan shall not be classified as a long-term investment unless the mortgage banking company has both the intent and the ability to hold the loan for the foreseeable future or until maturity. If the ultimate recovery of the carrying amount of the loan is doubtful and the impairment is considered to be other than temporary, the carrying amount of the loan shall be reduced to its expected collectible amount, which becomes the new cost basis. The difference is recognized as a loss. A recovery of the new cost basis shall only be reported as a gain upon sale, maturity, or disposition of the loan.

3070.0.5.1.2 Liabilities

The liability side of the balance sheet may include repurchase agreements, commercial paper, revolving warehouse lines of credit, long-term debt instruments, intercompany payables, and equity capital.

3070.0.5.1.2.1 Repurchase Agreements

A mortgage banking company may finance its mortgage loans or MBSs held for sale by transferring mortgage loans or MBSs temporarily to banks, nonbanks, or other financial institutions under formal repurchase agreements that indicate that control over the future economic benefits relating to those assets and the risk of market loss are retained by the mortgage banking company.

Repurchase agreements can provide a cost-effective method of holding mortgage-backed securities before their sale to investors. Securities dealers repo the securities for a period of 30 to 180 days at a substantial cost advantage to warehouse facilities. Repurchase agreements involve delivery of the security to the dealer with an agreement to repurchase it on a specified date. Upon receipt, the dealer wires the haircut proceeds to the mortgage company. The mortgage company then reduces the amount of its outstanding warehoused loans. If the repo is being handled by the dealer that is arranging the ultimate sale of the security, the amount of that discount should approximate the discount on the sale. If another dealer is involved in the ultimate sale, the haircut may be greater because the security must be repurchased and redelivered to

the second dealer. This may also require a rehousing to provide funds to honor the repurchase commitment. Most warehouse lenders allow traditional warehouse lines to be collateralized by individual mortgages and mortgage-backed securities.

A mortgage banking company may use repurchase agreements in conjunction with sales of loan pools. The company may use repurchase agreements to pledge mortgage loans and/or MBSs as collateral for borrowings. In return, it receives advanced funds against future deliveries. The lenders are repaid through the sales of MBSs. The amount outstandings bear interest for the number of days the funds are outstanding.

Under repurchase agreements, the same loans or MBSs are generally reacquired when they are sold to permanent investors. Mortgages or MBSs may also be transferred temporarily without a repurchase agreement. However, some type of informal agreement generally exists. Mortgage loans and MBSs held for sale that are transferred under either formal or informal repurchase agreements shall be accounted for as collateralized financing arrangements and reported as either mortgage loans held for sale or MBSs classified as trading securities on the mortgage banking company's balance sheet.

3070.0.5.1.2.2 Commercial Paper

Another source of short-term funding is the issuance of commercial paper. In general, commercial paper represents unsecured notes with maturities up to 270 days from the date of sale. Because of its short maturity, proceeds should be limited to current transactions with short-term maturities. Commercial paper proceeds should not be used to fund loans held for sale for a period greater than one year.

Commercial paper can be less reliable than warehouse lines of credit. If commercial paper funding is used, examiners should review related commercial paper backup lines of credit and ratings issued by credit rating agencies. The reason for any rating changes during the prior year should be investigated. Additional guidance on this topic is set forth in sections 2080.05, 2080.1, and 5010.23.

3070.0.5.1.2.3 Revolving Warehouse Lines of Credit

Short-term revolving warehouse credit lines are

often used to fund loans held for sale, which is generally the largest asset on the company's balance sheet. Revolving credit lines may be obtained from an affiliate bank, the parent bank holding company, or an unrelated third party.

The extension of credit for a particular loan is paid off when the mortgage lender sells the mortgage loan to a government-sponsored agency such as GNMA, FannieMae, or FHLMC or to a private investor. Lenders who provide warehouse lines of credit typically enter into a warehouse credit agreement with the borrower. Under the agreement, the warehouse lender agrees to extend credit to the mortgage banking company for the purpose of originating loans. The mortgage banking company agrees to repay each extension of credit within the terms of the agreement. Each extension of credit is secured by placing a lien on the originated mortgage loan. The warehouse lender perfects its security interest by taking possession of the original promissory note executed by the borrower, endorsed "in blank," together with an assignment of the mortgage securing the loan. To further protect its security interest, the warehouse lender usually takes the responsibility of delivering the loan package to the secondary market investor for purchase. The investor, in turn, delivers the purchase price of the mortgage directly to the warehouse borrower (mortgage banking company). Each portion of the warehouse line may be priced separately to reflect various levels of risk and the documentation requirements of each.

The details of all credit lines should be specified in formal, written credit agreements. Revolving credit lines may be either unsecured or secured by a lien on the underlying mortgages. Under most secured lines, a formula is used to calculate the borrowing base, which generally consists of cash, cash equivalents, loans held for sale, securities, and a percentage of the mortgage-servicing portfolio less certain short-term indebtedness. Some credit lines require the maintenance of compensating balances.

Internal credit arrangements (conducted either by a mortgage banking subsidiary of a bank or bank holding company) must comply with sections 23A and 23B of the Federal Reserve Act. See sections 2020.1 and 3070.0.7 of this manual.

Examiners should evaluate the adequacy and efficiency of warehouse funding operations. The examiner should determine whether the warehouse lender is of a sufficient size and whether it is well positioned financially to provide

adequate lines of credit, as needed. Examiners should ascertain whether funding must be regularly derived from more than one warehouse lender (including whether the warehouse line has to be participated out to other lenders) and whether the lender has proper internal controls to safeguard collateral documents for pool certification. The examiner should also determine what management's contingency plans are for the use of alternative financing sources beyond standard warehouse lines of credit for backup financing and lower-cost efficiency purposes. Has management (1) explored variations in existing lines of credit to reduce overall borrowing costs and (2) determined what competitor lenders are paying for similar financing facilities?

Procedures should be in place to monitor compliance with all short-term debt covenants. Covenants may limit servicing of loans with recourse, limit total debt to specified levels, and/or require minimum tangible net worth, leverage, and current ratios. Most credit agreements also limit the borrower's financial flexibility if the company's long-term debt ratings decline or the company becomes unrated or if certain events occur related to securities.

3070.0.5.1.2.4 Long-Term Debt

Longer-term assets are more appropriately funded through the issuance of longer-term liabilities or capital. Toward this end, mortgage banking companies may issue medium- or long-term public debt securities (including warrants to purchase debt securities). Debt may be issued in the form of fixed-rate or floating-rate notes with various repayment or redemption terms. Loan agreements should specify all relevant terms and conditions and may contain debt covenants similar to those found in the warehouse funding arrangements.

Long-term debt may incorporate restrictive covenants which limit the company's activities in certain respects. These covenants may set limits on the amount of senior debt outstanding and the minimum amount of liquid net worth (as defined by the documents), and may limit the proportions of specific categories of assets. Such covenants should be reviewed to make certain that they are not too restrictive and that they permit financial flexibility.

3070.0.5.1.3 Equity Capital

Funding is also provided through equity capital,

which may be supplemented by capital contributions from the parent company or the direct issuance of equity securities.

3070.0.5.2 Income Statement

Mortgage banking revenues generally consist of the following: loan servicing/administration revenue; loan-origination-fee revenue; interest income; gains (losses) on the sale of mortgage loans, mortgage securities, or mortgage-servicing rights; and management and other fee income. The examiner may find that gross gain (loss) on the sale of mortgage loans or securities is reported on the income statement net of loan-origination fees and direct loan-origination costs such as personnel and office expenses.

Expenses may include interest expense; salaries, commissions, and other personnel costs; interest losses on MBS pools; amortization of mortgage-servicing assets and any other purchased intangible assets; electronic data processing and other selling, general, and administrative costs; occupancy and equipment; depreciation; provision for foreclosure and other loan losses; and a provision for income taxes. Some companies net amortization of MSAs directly against loan-servicing revenues.

3070.0.5.3 Unique Characteristics

The financial analysis should reflect certain operational characteristics that are unique to the mortgage banking industry. Many of these characteristics are cyclical based on interest rates and economic conditions.

For example, the cost of funding loans in the warehouse is relatively inexpensive during periods of low interest rates, but may increase significantly as interest rates rise. Marketing operations are also highly dependent on the interest-rate cycle. During periods of falling interest rates, the company may experience substantial gains on the sale of mortgage loans and securities to permanent investors. Alternatively, during periods of rising interest rates, the company will usually experience losses on the sale of mortgages and securities. Interest-rate volatility can cause large fluctuations in warehouse funding costs and marketing gains and losses.

The examiner should also consider the impact of current economic conditions on the size and composition of the mortgage banking company's balance sheet. When the economy expands, loan volume increases and the overall size of the balance sheet tends to grow. During recessions,

the balance sheet should contract, reflecting the lower demand for new loans. Management's planning efforts should incorporate this type of economic trend analysis in their growth targets. Steady annual growth may or may not be anticipated.

Efficiency measures, such as activity ratios (inventory turnover and efficiency ratios), should be used to determine management's ability to originate and sell loans efficiently. The inventory of loans held for sale is transitory, lasting between 45 to 60 days. A buildup of loans on the balance sheet may indicate processing delays and/or asset-quality problems that may prevent their ultimate sale to permanent investors. Because of the transitory nature of the balance sheet, traditional leverage ratios (asset-to-equity capital) may not be meaningful and should be used sparingly.

Another unique characteristic of a mortgage banking company is the economic value of its mortgage-servicing operations, which constitutes an off-balance-sheet item. Failure to incorporate this economic value into the financial analysis may overstate the degree of financial leverage that is employed within the company.

3070.0.5.4 Asset Quality

The quality of assets that are on the balance sheet is evidenced by the following: compliance with original underwriting standards; the existence of effective loan review and quality control programs; borrower payment and agreement performance; the fair value of MBSs held for sale or investment; the collectibility, independent valuation, nature, volume, and existence of recorded assets; the application of GAAP in accounting for the assets; and the degree of protection afforded by real estate mortgage collateral, including any private mortgage insurance. The value afforded by real estate mortgage collateral includes the extent of compliance with the Federal Reserve Board's real estate appraisal regulations and guidelines. (See section 2231.0.) Asset quality should be analyzed in terms of regional and national economic factors as well as portfolio and managerial factors.

For any review of any loan portfolio, a sampling of real estate appraisals should be included to determine whether the appraisal results reasonably support the amount loaned. If the property appears to be overappraised or if there is a

problem with the appraisal (for example, the appraisal is obsolete or the validity of the appraisal is in question), the examiner should consider recommending that a new appraisal be performed.⁶ It may be necessary for the examiner to classify the loan (i.e., as a loss) and for the parent holding company to increase its allowance for loan and lease losses.

Bank holding companies and/or their non-bank subsidiaries should be criticized if initial appraised values appear to be inadequate and/or not properly supported by proper documentation. If corrective action is not taken by management, formal enforcement action should be considered. Such actions may require the bank holding company to revamp its appraisal activities and/or collection procedures and, if warranted, to retain the services of an independent appraiser to conduct an evaluation of loan collateral.

With respect to MBSs, the quality characteristics of the underlying mortgage collateral should be considered. If the securities are backed by GNMA, FannieMae, or FHLMC, the rating agencies consider such securities to be the highest quality asset because of their linkage to the federal government. If the collateral consists of unsecuritized mortgages, the examiner should consider the geographic dispersion, type of mortgage and property, underwriting standards, and term to maturity of the underlying pool of mortgage loans. External factors can affect the value of mortgage securities directly, such as the default or downgrading (by a credit rating agency) of a private mortgage insurer.

To a large extent, insurance and guaranties provided by government-sponsored agencies and other third parties (for example, private mortgage, bankruptcy protection, fraud, and mortgage pool insurers, as well as performance bond insurers and other guarantors) mitigate credit risk for an originator; however, the originator still remains responsible for the quality of loans sold to investors for at least the first 90 days, as well as for any loans sold under recourse arrangements. As a servicer, the company also can be held liable if it does not initiate collection and foreclosure actions in strict accordance with investor-servicing agreements. In addition, certain interest losses and expenses relating to

collections, foreclosure, and ORE are not fully reimbursable and should be anticipated.

The mortgage banking company must maintain adequate management reports to measure and track the quality of originated, purchased, and serviced assets. Proper administration over loans and other assets held for sale or investment requires the use of aging and other tracking reports. For assets held for sale, the reports should identify loans and other marketable assets, other than marketable securities,⁷ that have been in this category longer than 60 days. In such instances, a determination should be made as to whether credit quality problems and/or documentation deficiencies exist that will prevent the timely sale of the loan in the secondary market. If problems are not correctable within a reasonable timeframe, the loans and other related assets should be revalued and transferred to the held-for-investment category. Procedures governing the valuation and transfer of poor-quality assets should be in writing and should be followed.

The MIS should also generate for management's review reports on the delinquency status of loans held for investment and loans serviced for investors. Such reports provide an early warning system and an analysis tool to evaluate internal collection activities. If a loan becomes delinquent (30 days or two payments past due), the borrower should be contacted. Collection efforts should be strengthened if the delinquency continues. If the loan becomes severely delinquent, foreclosure proceedings should be initiated consistent with the investor-servicing agreement, and the value of the collateral supporting the loans should be assessed. Anticipated shortfalls should be recognized as losses in a timely manner.

MIS should also include an internal loan-grading system, which tracks the borrower's ability to meet its monthly payment obligations. Although MIS should be tailored to meet management's needs, information should be consistent with loan-grading systems that are used by the controlling bank holding company and federal bank regulatory agencies. Reports should also track collection and foreclosure actions initiated by the servicer and repurchase requests initiated by a permanent investor or other third party.

Examiners should also verify that appraisal practices are consistent with the Board's

6. For certain credits, the bank holding company should develop criteria for obtaining reappraisals or revaluations as part of a prudent portfolio review and monitoring program.

7. For mortgage-backed securities available-for-sale, similar account classification procedures apply, but those are accounted for in accordance with SFAS 115.

appraisal regulations,⁸ the interagency appraisal and evaluation guidelines (see SR-94-50, SR-94-55, SR-95-16, SR-95-27, and SR-95-31), and any other state and federal laws and regulations. Mortgage banking companies that are subsidiaries of either state member banks or bank holding companies are subject to the same appraisal standards and requirements as their parent companies.

3070.0.5.4.1 Classification Procedures

The classification process begins with an analysis of delinquent loans. The examiner should begin by obtaining an aged listing of all delinquent loans in the held-for-sale and the held-to-maturity portfolios. Clear-cut shortfalls in property values compared with loan or investment values should usually be classified unless there are mitigating circumstances. Usually loans or investments with doubtful or loss elements have other significant weaknesses that will ordinarily justify a classification of substandard for the remaining balance. Loans secured by collateral such as real estate should be classified in accordance with these guidelines and the applicable classification guidance found in sections 2060.1 and 2090.1 of the *Commercial Bank Examination Manual* and sections 2010.2, 2065.1, 2240.0, and 5010.10 of this manual.

Portions of these loans may warrant a more severe classification if the value of the underlying collateral is insufficient to fully repay the loan. The identification of potential or actual loss exposure may warrant the use of either a split (substandard and loss) or a doubtful rating.

The examiner should also review the ORE portfolio, notes and accounts receivable, and other investments on the company's balance sheet for potential classifications. ORE may usually warrant a substandard classification due to an investment's nonearning status and an increased probability of loss on disposal of the underlying assets.

Assets that represent illegal or impermissible holdings or those that are subject to some regulatory concern should not be classified, per se, for these factors. Such holdings should be treated separately within the report. In those instances where a credit-quality issue is also present, the classification and the separate treatment should be cross-referenced.

The examiner should also review any off-balance-sheet exposure for which credit risk is retained. Loans sold to investors on a recourse basis have the potential of being put back to the servicer. The portion of the recourse portfolio that is severely delinquent should be classified according to the guidelines provided previously, since the exercise of this "put option" is highly likely.

At the end of the classification process, the examiner should evaluate the level and trend of classified assets to determine whether asset quality poses undue financial risk to the mortgage banking company or its parent bank holding company. A list of total classifications should be compiled and left with management.

As part of the analysis of asset quality, the aggregate of loss classifications plus an amount expected to ultimately be loss should be compared with the existing allowance for loan and lease losses. If the aggregate exceeds the existing contra asset balance(s) then additional loan-loss provisions are needed. In such situations, the parent company should be advised of the deficiency and reminded of its responsibility to ensure that an adequate allowance for loan and lease losses, as well as other contra asset valuation balances, is maintained by the subsidiary for its asset portfolio.

Any discrepancies between the classifications list and information contained on the company's MIS should also be discussed with management. If asset quality presents undue or excessive risk, appropriate comments should be documented and brought forward on Examiner's Comments and Matters Requiring Special Board Attention, page one of the report.

3070.0.5.4.2 Presentation of Classifications

As a minimum standard, brief write-ups stating the reason for classifications should be provided for any nonbank subsidiary's asset whose doubtful and/or loss classification exceeds the lesser of \$100,000 or 5 percent of the subsidiary's total assets. In general, substandard assets should be listed without a write-up, regardless of size. However, a brief write-up is required for any asset whose classification is challenged by management. The examiner has the option to provide a write-up for any classified assets, regardless of size.

8. See Regulation Y, subpart G (12 C.F.R. 225.61-67), and its incorporation by reference into Regulation H (12 C.F.R. 208.18).

While the following presentation guidelines may be useful in structuring the write-ups, the examiner may include any other format appropriate to the situation:

- recapitulation of the status and purpose of the loan, the lien position, type and appraised value of the collateral, its delinquency and accrual status, guarantors and other debit or credit balances related to the loan
- the problems with the loan, borrower, or collateral, presented in a concise, descriptive narrative
- the examiner's evaluation of the situation, indicating estimated values, major assumptions, and mitigating or negative factors
- the classification, which should represent a logical combination of the relevant factors presented in the first three elements

Within the elements presented, the examiner should stress accuracy, brevity, and clarity in the presentation, as well as a logical pattern leading to the classification. Historical information and financial data that are not pertinent or that are too stale to have a direct bearing on the present situation should not be included.

Presentations for OREO properties need not include the original loan date, history, and financial information, unless there is some relevance to the current condition (for example, the property has been foreclosed on for the second time or some circumstance before foreclosure continues to have an impact). For those companies in which numerous loans and OREO properties are classified, a summary of classifications, segmented by loans and real estate owned and indexed to the pages containing the classifications, presents clear benefits to the users of the report. This becomes more pertinent when numerous assets below the write-up line are included in total classifications. In addition, both management and the subsequent examiners will have an official listing of the classifications.

3070.0.5.4.3 Reserves

Management should establish and maintain adequate contra asset allowances and other contingency reserves to cover identified loss exposure. Policies and procedures, and financial statement disclosures, should clearly state the purpose of and intended accounting treatment for each reserve. Management should evaluate the level of each reserve account at least quarterly, docu-

ment this analysis, and replenish each reserve as necessary.

The financial presentation for reserves varies. Reserves maintained for on-balance-sheet exposure are generally reported as a contra asset. Reserves maintained for contingent liabilities relating to the sale of loans and servicing of loans for investors may be shown as a liability in practice.

Disclosures relating to valuation reserves should be consistent with GAAP. Examiners may wish to confer with the mortgage banking company's external auditors regarding the nature or appropriateness of any reserve accounts that are unusual.

3070.0.5.5 Earnings Performance

Earnings performance should be assessed in terms of the level, composition, quality, and trend of net income. The earnings analysis should consider internal factors such as the company's business orientation and management's growth plans, as well as relevant external factors such as interest rates and economic trends.

Unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, provisions for losses, salaries and overhead items, or income taxes should be discussed with management, as well as with internal or external auditors. Large write-downs or amortization adjustments relating to mortgage-servicing rights should also be investigated. (See section 3070.0.6.)

Current and historical ratio trend analysis, compared with published industry results (for example, see the Mortgage Bankers Association's annual statistics in the "Mortgage Banking Performance Report"), should also be incorporated into the profitability analysis, where appropriate. This includes income structure, expense structure, and operating performance ratios. However, ratios that compare earnings to average assets or equity may be of limited use unless the examiner also considers the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company's use of financial leverage. Finally, the examiner should consider the company's ability to generate sustainable positive earnings consistently over time, as well as the proportionate share of consolidated earnings (or losses).

3070.0.5.6 Liquidity and Funding

Management's ability to satisfy the company's liquidity needs and plan for contingencies with-

out placing undue strain on affiliate bank or nonbank resources or reliance on the parent bank holding company is crucial. Liquidity needs depend on the size of the warehouse, the nature and extent of longer-term assets, opportunities to issue debt at a reasonable price, and management's ability to forecast and plan for contingencies. Liquidity is often dependent on cash generated through short-term liquid assets and on short-term borrowings to fund operations. Earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity plans are all significant factors in the evaluation of liquidity. Liquidity can quickly erode if investor perceptions of a company's credit standing change. Consequently, the ability to fund mortgage operations under economic duress and access to alternate liquidity sources become key considerations.

Funding needs are driven by the need to temporarily finance mortgage loans and MBSs before their sale to a permanent investor. The examiners should do a trend review of external liquidity to assess how easy it is to sell mortgage-backed securities by the firm in the secondary market. The analysis should include the normal trading volume in MBS securities, the volume of loans held for sale and their market value, and the size of the "floating" supply of mortgage securities or loans that are not closely held. Liquidity needs must also take into consideration longer-term assets such as fixed assets, mortgage-servicing rights, and permanent loan and MBS portfolios. (See section 2080.05.)

3070.0.5.6.1 Financial Flexibility

The liquidity analysis should include a determination as to the company's financial flexibility. Financial flexibility is the ability to obtain the cash required to make payments as needed. Cash can be obtained from (1) business operations; (2) liquid assets already held by the company either in the form of cash or marketable securities or by selling liquid assets such as receivables or inventories for cash; and (3) external lines of credit, bank borrowings, or the issuance of debt or equity securities in the capital markets.

3070.0.5.6.2 Cash-Flow Analysis

The liquidity analysis should also include a review of the net current items on the cash-flow statement pertaining to cash flow from opera-

tions, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. The examiner's analysis of cash flows may reveal transactional trends between cash inflows and outflows. For example, within the Cash Flows from Operating Activities, cash flow from the sale and principal repayments on mortgage loans held for sale may correlate with originations and purchases of mortgage loans available for sale. With regard to investing activities, attention should be given to the differences between short-term purchases of mortgage loans held for investment versus principal repayments on mortgage loans held for short-term investment. In addition, purchases of real estate owned from the loan-servicing portfolio may correlate with net sales of real estate owned. A review of the financing activities should indicate if there is sufficient cash flow provided from revolving warehouse lines of credit, commercial paper, proceeds from the issuance of any other short-term debt, and net changes in advances payable to affiliates.

The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity. When analyzing liquidity, the examiner needs to consider the principles and guidelines set forth in section 2080.05, "Funding (Bank Holding Company Funding and Liquidity)" of this manual.

3070.0.5.6.3 Asset/Liability Management

In general, funding liability maturities should closely approximate the maturities of underlying assets to mitigate the risk of a funding mismatch. Otherwise, the company is exposed to short-term interest-rate fluctuations unless appropriately hedged. Funding mismatches can lead to significant earnings volatility in the event that interest rates change rapidly. Management's asset/liability management program should be evaluated in terms of the degree of matching, risk aversion, and the accuracy of information that is provided to the holding company through daily, weekly, or monthly management reports.

3070.0.5.7 Capital Adequacy

Capital must be adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by third-party creditors and investors.

At a minimum, a mortgage banking company must meet the nominal capital levels required by investors such as FannieMae (\$250,000) or FHLMC (\$1 million, based on financial reporting under GAAP, or \$500,000, adjusted for certain assets and any deferred-tax liability). Additional capital is required based on the outstanding principal balance of loans serviced for investors. If these requirements are not met, the company may not be able to sell mortgages to and/or service mortgages for these investors.

As noted above, these are minimum capital requirements. Management should identify the level of capital that is required to support current operations and projected future growth, given the risk tolerance preferences of management and the board. Capital levels, dividend payments, and capital planning should be addressed in a written capital plan that is reviewed and approved by the board at least annually in conjunction with the budgeting and strategic planning activities.

There also may be a need to meet minimum leverage ratios established by the parent bank holding company or to meet debt covenants set forth in either warehouse credit facilities or long-term debt instruments. Companies that have excessive off-balance-sheet risk or high growth expectations may require additional capital. In addition, risk-based capital guidelines impose certain reporting requirements and limitations regarding the amount of MSA mortgage banking companies may include in their regulatory capital.

Capital levels should be monitored and reported to the company's board of directors regularly to mitigate the risk of inadequate or eroding capital. Management and the board are further encouraged to adopt a capital policy that specifically addresses the particular needs of the company.

The examiner should evaluate capital adequacy, the amount of dividends that are upstreamed to the parent bank holding company, and the extent to which the parent company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. In some instances, the parent company may operate on the premise that the mortgage banking company requires little capital of its own as long as the parent company remains adequately capitalized.⁹ Under the Federal Reserve's source-

of-strength doctrine, the parent company must be prepared to support its subsidiaries should the financial need arise. If the parent is not prepared to inject capital and capital levels have declined, the examiner should comment on the mortgage banking company's extended leveraged position on page one of the inspection report. Under extreme circumstances, the examiner should also recommend that its leverage be reduced and its capital structure augmented to ensure that mortgage operations are conducted in a safe, sound, and prudent manner.

3070.0.5.8 Overall Assessment

The overall financial condition of the mortgage banking company should reflect its financial statement presentation, asset quality, earnings, liquidity and funding practices, and capital adequacy. Report comments should be prepared to the extent necessary.

3070.0.5.9 Inspection Objectives

1. To evaluate the financial condition of the mortgage banking company based on a review of the following:

- primary balance-sheet and income-statement levels and trends
- off-balance-sheet exposure such as the servicing portfolio
- asset quality
- earnings performance
- funding sources and liquidity needs
- capital adequacy

2. To determine the accuracy of regulatory reporting (regulatory accounting practices (RAP) and GAAP) and compliance with applicable state and federal laws and regulations.

3. To evaluate the quality of the mortgage banking company's assets for collateral sufficiency, performance, credit quality, and collectibility.

4. To assess earnings performance through the analysis of the level, composition, and trend of net income. If material, interest income, impairment of mortgage-servicing assets, gains and losses on asset sales, and personnel and other expenses should be factored into the analysis.

⁹ When MSAs are valued for inclusion in capital, the risk-based capital guidelines for banks and BHCs require the discount rate to be not less than the original discount rate

inherent in the intangible asset at the time of its acquisition, based on the estimated future net cash flows and price paid at the time of purchase.

5. To assess the funding and liquidity needs of the mortgage banking company through ratio analysis and a review of the funding instruments used.

6. To assess capital adequacy by ensuring that investor minimum requirements are met and by comparing capital levels with peer and industry data. Consideration of the capital needs of the individual mortgage banking company should override any comparison with peers.

3070.0.5.10 Inspection Procedures

Financial Statement Level and Trends

1. Review the mortgage banking company's financial statements and related notes over the previous three-year period.

2. Discuss significant balance-sheet and income-statement categories with management, as well as with internal and external auditors.

3. Determine whether financial trends are consistent with the economic environment, interest-rate movements, the company's business orientation, and management's intended growth strategy.

4. Determine whether reports filed with regulatory agencies are prepared accurately and submitted in a timely manner, with particular attention paid to the reporting for mortgage-servicing assets and recourse obligations retained by the mortgage banking company.

Asset Quality

1. Spread past-due and nonaccrual loans by balance-sheet asset category (for example, mortgage loans held for sale, mortgage loans held for investment), product type, and delinquency status (for example, 31–90 days, 91–180 days, and 181 days and over). Include any loans in the process of foreclosure.

2. Obtain a trial balance and delinquency listing for loans held for sale and loans held for investment.

a. Reconcile balances of the real estate held for sale and investment to the respective general ledger accounts.

b. Classify severely delinquent loans as required based on the financial condition of the borrower, his or her inability to make monthly payments as required, and the protection afforded by current collateral values.

c. Determine accounting policies and practices with respect to these loans. Review aging reports for loans held for sale and for investment. Discuss the frequency of reviews for loans held for sale, revaluation practices, and transfers among accounts. Verify that accounting practices are consistent with GAAP and RAP.

3. Obtain a listing of loans in the process of foreclosure and bankruptcy and discuss these with management for potential classification.

4. Reconcile all other real estate owned by the mortgage banking company to the general ledger and classify based on risks and any income-producing characteristics of the properties. Compare current appraisals to carrying value for potential write-downs.

5. Obtain a list of loans sold under recourse arrangements and assess for potential classification.

6. Discuss the methodology used to establish foreclosure reserves and related accounting procedures. Review analysis used to project future foreclosures.

- Evaluate the adequacy of foreclosure reserves based on the volume of projected foreclosure actions, average foreclosure costs, and the past history of reinstated loans.

7. Review other reserve accounts and assess for reasonableness.

Earnings Performance

1. Assess earnings performance in terms of the level, composition, and trend of net income. Consider internal factors, such as the company's business orientation and management's growth plans, and external factors, such as interest rates and the economic environment, when evaluating earnings trends.

2. Discuss any unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, reserves, write-downs or adjustments in MSA amortization, salaries and overhead items, or income taxes with management, as well as with internal or external auditors.

3. Incorporate ratio and industry comparisons into the earnings analysis, where appropriate. Bear in mind that ratios that compare earnings to total assets or equity are of limited use unless the transitory nature of the balance sheet and the impact of off-balance-sheet servicing

activities on the company's use of financial leverage are taken into consideration.

Liquidity and Funding

1. Determine the mortgage banking company's liquidity needs based on a review of the size of its warehouse and the nature and extent of other longer-term assets.

2. Determine whether sources of liquidity are adequate, both under current conditions and economic duress. Consider earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity-planning capabilities.

3. Evaluate financial instruments used to fund mortgage operations. Financial instruments may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and/or long-term debt. Review related credit agreements and systems used to monitor compliance with debt covenants.

4. Establish whether excessive borrowing activities have led to a highly leveraged financial condition that exposes the company to money market changes in the cost of funds. Evaluate the impact a change in the company's cost of funds would have on its net interest margin and earnings.

5. Determine the degree of financial flexibility the company maintains. Financial flexibility is the ability to obtain the cash required to make payments as needed. Does the company possess adequate financial strength and have access to lines of credit and/or assets that can be easily collateralized?

6. Review the net current items on the cash-flow statement pertaining to cash flow from operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. Determine whether sufficient positive cash flow exists from the level of current transactions. The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity.

7. Review asset/liability management practices to determine whether funding maturities closely approximate the maturities of underlying assets or whether a funding mismatch exists. Is the company exposed to short-term interest-rate fluctuations that may lead to signifi-

cant earnings volatility in the event that interest rates change rapidly?

Capital Adequacy

1. Determine whether capital levels are adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by investors whose loans are serviced and other external parties.

2. Review policies and procedures to determine whether management adequately monitors and reports capital levels to the board of directors. Review the capital plan to determine whether it adequately addresses the particular needs of the company.

3. Evaluate the amount of dividends that are upstreamed to the parent bank holding company, as well as the extent to which the parent company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. Is the parent company prepared to support its subsidiaries should the financial need arise? Are cash dividends paid by the mortgage banking subsidiary to the parent company reasonable?

Accounting

1. Review accounting procedures for retail loans. Determine whether loan fees in excess of cost are deferred in accordance with SFAS 91. Verify that income is recognized over the estimated life of the asset and not in the current period and that fees and costs are allowable under SFAS 91. Are controls in place to ensure proper recognition for net fee income when loans are sold? (SFAS 91 applies to loans held in portfolio, as well as to loans swapped for securities when the securities are retained.)

2. Determine if the accounting for recognizing sales of loans and mortgage-backed securities (including participation agreements) is in accordance with the three conditions for true sales recognition specified in SFAS 77, "Reporting for Transfers of Receivables with Recourse."¹⁰ Also determine if the sales price

10. A transfer is recognized as a sale if—

a. The transferor surrenders control of the future economic benefits of the receivables;

b. The transferor's obligation, under the recourse provisions of the sale agreement, can be reasonably estimated. The transferor should have had past experience with the recourse provisions so that a reasonable estimate can be made. The current transferred receivables should possess characteristics

was adjusted for all probable adjustments (as defined in SFAS 5, “Accounting for Contingencies”). If the mortgage banking company is a subsidiary of a bank, refer to the bank call report, glossary entry on “sales of assets.”

3. If servicing is retained, determine if a “normal servicing fee” is set and how it conforms to FannieMae/FHLMC fees and to FASB Technical Bulletin 87-3, “Accounting for Mortgage-Servicing Fees and Rights.”¹¹ If the mortgage banking subsidiary is a subsidiary of a bank, see the reporting instructions for Schedule F of the bank call report (Schedule RC-F for Other Assets, Item 3—Excess residential mortgage-servicing fees receivable).

Overall Financial Condition

1. Evaluate the overall financial condition of the mortgage banking company, considering its asset quality, earnings, liquidity, and capital adequacy. Update the financial component of the supervisory rating and prepare report comments as necessary.

3070.0.6 MORTGAGE-SERVICING ASSETS AND LIABILITIES

This subsection discusses mortgage-servicing assets (MSAs) and liabilities and provides guidance with respect to the measurement, impairment testing, and financial reporting requirements of MSAs. The subsection concludes with a discussion of MSA hedging practices and instruments.

SFAS No. 125 “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” was issued in June 1996

similar to previously transferred receivables evidencing the transferor’s relevant prior experience.

c. The transferor cannot require the transferee to repurchase the receivables, except as stated in the agreement’s recourse provisions.

11. According to FASB Technical Bulletin No. 87-3, the servicing-fee rates set by GNMA, FHLMC, and FannieMae in servicing agreements should be considered a normal servicing-fee rate for transactions with those agencies. If the normal service fees are expected to be less than the estimated servicing costs, the expected loss should be recognized at the time the loans are sold. If a seller/servicer sells mortgage loans directly to private-sector investors and retains servicing on the loans, the seller/servicer should consider the normal servicing-fee rate that would have been specified in comparable servicing agreements if the loans had been sold to or securitized by one of the federally sponsored secondary market makers. As of May 1995, normal servicing-fee rates established by GNMA, FHLMC, and FannieMae were 44, 25, and 37.5 basis points, respectively.

as an amendment to SFAS Nos. 65, 76, 77, and 115. The provisions of SFAS 125 supersede SFAS 122 and are to be applied prospectively in fiscal years beginning after December 31, 1996. The statement requires that a liability be derecognized when either (1) the debtor pays the creditor and is relieved of its obligation for the liability or (2) the debtor is legally released from being the primary obligor under the liability either judicially or by the creditor.

Under SFAS 125, a mortgage banking company is required to recognize as separate assets or liabilities the right to service mortgage loans for others, however those servicing rights are acquired. Servicing of mortgage loans includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interest in the mortgage loans. Servicing is inherent in all mortgage loans; however, it becomes a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing.

3070.0.6.1 Measurement

A mortgage banking company initially acquires MSAs either by (1) purchasing the right to service mortgage loans separately or (2) purchasing or originating mortgage loans and selling those loans with servicing rights retained. When a mortgage banking company purchases or originates mortgage loans, the cost of acquiring those loans includes the cost of the related MSAs.

With respect to SFAS 125, when an entity incurs an obligation to service financial assets, it must record servicing assets or a servicing liability for each servicing contract, unless it securitizes the assets and retains all of the resulting securities, classifying them as debt securities that are to be held to maturity. When servicing assets or liabilities are assumed, rather than being acquired by a sale or undertaken in a securitization of the financial assets that are to

be serviced, they are measured initially at fair value (that is, the price paid). A servicing asset or liability is amortized in proportion to and over the period of estimated net servicing income (loss). Any impairment of a servicing asset or liability is determined based on fair value.

When the mortgage banking company sells or securitizes the loans and retains the MSAs, management shall allocate the total cost of the mortgage loans (the recorded investment in the mortgage loans including net deferred loan fees or costs and any purchase premium or discount) to the MSAs and the loans (without the MSAs) based on their relative fair values if it is practicable to estimate those fair values. If a mortgage banking organization undertakes a servicing liability in a sale or securitization, the servicing liability should initially be measured at fair value.

The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information that is available, including prices for similar assets and the results of valuation techniques used by management. Valuation techniques may include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved; option-pricing models; matrix pricing; option-adjusted spread models; and fundamental analysis. Valuation techniques for measuring MSAs should be consistent with the objective of measuring fair value and should incorporate assumptions that market participants would use in their estimates of future servicing income and expense, including assumptions about prepayment, default, and interest rates. If it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs), the entire cost of acquiring the mortgage loans shall be allocated to the mortgage loans (without the MSAs) and no cost shall be allocated to the MSAs.

The amount capitalized as MSAs shall be amortized in proportion to and over the period of estimated net servicing income. Estimates of future servicing revenue shall include expected late charges and other ancillary revenue. Estimates of expected future servicing costs shall include direct costs associated with performing

the servicing function and appropriate allocations of other costs. Estimated future servicing costs may be determined on an incremental-cost basis.

MSAs are highly subject to interest-rate and prepayment-rate risk since the amount of future cash flows that are provided to the holder is derived from, and is thus dependent on, the outstanding balances of the underlying mortgage loans.¹² Prepayments of underlying mortgage loans accelerate during periods of declining interest rates as borrowers take advantage of the option they hold to refinance their loans. As interest rates decline, holders of MSAs are exposed to a risk of prepayment of the underlying loans, and thus a diminished amount of cash flow from their investment. Holders of interest-only stripped securities (I/O strips) are exposed to similar interest-rate and prepayment risks when interest rates decline. I/O strips possess very similar prepayment risk characteristics.

A particular mortgage company's exposure to prepayment risk can also be influenced by portfolio composition factors such as geographical mix, loan-to-value ratios, and the proportion of government (FHA/VA) and conventional loans in the portfolio. Government loans that may be assumable by the purchaser of a home are generally for smaller amounts and may be extended to borrowers with limited financial resources. As a result, government loans tend to prepay more slowly than conventional loans.

Unanticipated changes in interest rates, prepayment speed, or other valuation assumptions may impair the carrying value of MSAs and require accelerated amortization or a write-down. Therefore, the recoverability of the unamortized balance should be evaluated periodically, and amortization and/or the value of the asset should be adjusted accordingly. To the extent that impairment is not recognized, MSA values may be inflated. As a result, assets, earnings, and capital may be overstated.

12. Several conventions exist for quantifying prepayment speed. The most common convention is a measure developed by the Public Securities Association (PSA). The PSA measure was based on actual historical experience of FHA mortgages, but it is not predictive. The PSA measure assumes that mortgages prepay at a rate of .2 percent per year in the first month, increase by .2 percent each subsequent month up to 30 months, and remain at 6 percent per year thereafter until maturity. This 6 percent level is referred to as 100 percent PSA. Mortgages that prepay at 200 percent PSA pay off twice as fast as a mortgage that is performing at 100 percent PSA. Another convention is known as the conditional prepayment rate (CPR) measure. CPR assumes that a constant fraction of the remaining principal is prepaid each period, "conditional" on the previous period's remaining balance. Typically, CPR is computed over a one-month time period. The PSA model simply represents a series of stable CPR assumptions.

3070.0.6.2 Impairment Testing

SFAS 125 states that a mortgage banking company shall measure impairment of capitalized MSAs¹³ based on their fair value. For the purpose of evaluating and measuring impairment of capitalized MSAs, management should stratify those assets based on one or more of the predominant risk characteristics of the underlying loans.¹⁴ Those characteristics may include loan type, loan size, note rate, date of origination, term, and geographic location.

Impairment shall be recognized through a valuation allowance for an individual stratum. The amount of impairment that is recognized shall be the amount by which the capitalized MSAs for a given stratum exceed their fair value. The fair value of MSAs that have not been capitalized shall not be used in the evaluation of impairment.

Subsequent to the initial measurement of impairment, management shall adjust the valuation allowance to reflect changes in the measurement of impairment. Fair value in excess of the capitalized MSAs shall not be recognized. If the fair value of a mortgage-servicing liability increases above the book value, the increased obligation shall be recognized as a loss in current earnings. SFAS 125 does not address when a mortgage banking company should record a direct write-down of capitalized MSAs; therefore, examiner judgment in this area is required.

3070.0.6.3 Disclosures

SFAS 125 requires that the fair value of capitalized MSAs, and the methods and significant assumptions used to estimate that fair value, be disclosed. If no cost is allocated to certain MSAs, management shall describe those MSAs and describe the reasons why it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs). The risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment shall also be disclosed. For each period for which results of operations are presented, the activity in the valuation allowances for capitalized MSAs,

including the aggregate balance of the allowances at the beginning and end of each period, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances shall be disclosed.

3070.0.6.4 Intercompany MSAs

Intercompany MSAs may arise when a mortgage banking company originates loans, sells the loans to an affiliate bank, and the affiliate bank records related MSAs. Intercompany MSAs should be evaluated closely to determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

3070.0.6.5 Table Funding

One method of acquiring mortgage loans, and recording related MSAs, is through so-called “table-funding arrangements.” In a table-funding arrangement, the mortgage banking company provides the original funding when a mortgage broker or correspondent closes the mortgage loan with the borrower. Concurrent with the loan closing, the mortgage banking company acquires the loan and the related MSAs.

Emerging Issues Task Force Issue No. 92-10 (EITF 92-10), “Loan Acquisitions Involving Table Funding Arrangements,” clarified under what conditions these arrangements could be characterized as loan purchases. According to EITF 92-10, a mortgage banking company may account for a loan acquired in a table-funding arrangement as a purchase only if *all* of the following conditions are met:

- The correspondent is registered and licensed to originate and sell loans under the applicable laws of the states or other jurisdictions in which it conducts business.
- The correspondent originated, processed, and closed the loan in its own name and is the first titled owner of the loan, with the mortgage banking company becoming a holder in due course.

13. The term “capitalized mortgage-servicing rights” refers to the cost originally allocated to the MSAs less the amount amortized.

14. SFAS 65, as amended, applies to impairment evaluations of all capitalized MSAs. However, a mortgage banking company may continue to apply its previous accounting policies for stratifying MSAs to MSAs that were capitalized before the adoption of the amendments to SFAS 65.

- The correspondent is an independent third party and not an affiliate of the mortgage banking company as defined in SFAS 65. As a nonaffiliate, the correspondent must bear all of the costs of its place of business, including the costs of its origination operations.
- The correspondent must sell loans to more than one mortgage banking enterprise and not have an exclusive relationship with the purchaser.
- The correspondent is not directly or indirectly indemnified by the mortgage banking company for market or credit risks on loans originated by the correspondent. However, a commitment by the mortgage banking company for the purchase of loans from the correspondent is not considered to be an indemnification for purposes of this requirement.

If any one of the above criteria is not met, the mortgage banking company must account for the loan as an origination. MSAs that were recorded before the adoption of the SFAS 65 amendments should be reviewed to ensure that they were originated and funded consistent with the above requirements. MSAs that are recorded under SFAS 125 may arise in connection with either originated or purchased mortgage loan transactions.

3070.0.6.6 Regulatory Reporting

The examiner should also determine whether the method used to value MSAs is in accordance with the instructions for the Bank Report of Condition and Income (call report) and the BHC reporting instructions (FR Y-9C). If capitalized MSAs are not appropriately valued, they cannot be included in capital. Management should review the carrying amount at least quarterly, adequately document this review, and adjust the book value as necessary.

3070.0.6.7 Risk-Based Capital

Readily marketable MSAs may be included in a bank or bank holding company's tier 1 capital subject to certain limitations. Tier 1 capital for bank holding companies includes common equity, minority interest in the equity accounts of consolidated subsidiaries, qualifying noncumulative perpetual preferred stock, and limited qualifying cumulative perpetual preferred stock.^{14a} Tier 1

capital excludes goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, exceed 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, exceed 25 percent of tier 1 capital;¹⁵ all other identifiable intangible assets; and deferred-tax assets that are dependent upon future taxable income, net of their valuation allowance, in excess of certain limitations.

The amount of MSAs which may be included in capital is also limited to the *lesser* of—

- the amount recorded on the balance sheet under GAAP, or
- 90 percent of their fair market value. If both the application of the limit on MSAs and the adjustment of the balance-sheet amount for MSAs would result in an amount being deducted from capital, the bank holding company would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

3070.0.6.8 Previously Recognized Excess Servicing-Fee Receivables

SFAS No. 125, "Accounting for the Transfers and Servicing of Financial Assets and Extinguishments of Liabilities" (paragraph 20), addresses the accounting treatment for excess servicing-fee receivables based on contracts that were in existence before January 1, 1997. Previously recognized servicing rights and excess servicing-fee receivables are to be combined, net of any previous servicing obligations under the contract, as a servicing asset or a servicing liability. Any previously recognized excess servicing-fee receivables that exceed contractually specified servicing fees are to be reclassified as interest-only strips receivables.

3070.0.6.9 MSA Hedging Practices and Instruments

During the refinancing waves of 1992 and 1993, several mortgage banking companies experi-

25 percent of tier 1 capital.

15. Amounts of MSAs, non-MSAs, and PCCRs in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from an organization's core capital requirements in determining tier 1 capital. Identifiable intangible assets, however, exclusive of MSAs and PCCRs, acquired on or before February 19, 1992, generally will not be deducted from capital for supervisory purposes. They will, however, continue to be deducted for applications purposes.

14a. Cumulative perpetual preferred stock is limited to

enced large losses due to the impact of rising prepayments on the value of servicing rights. As a result, many companies have begun to hedge MSAs. An effective hedge program should reflect a solid understanding of the underlying MSA risk characteristics.

3070.0.6.9.1 Hedging Practices

Interest-rate and prepayment-rate risk are often reduced through the natural offset between the production and servicing functions; however, the degree of protection afforded by this relationship depends on the company's business orientation (originations versus purchases) and can be very difficult to measure.¹⁶ Other financial instruments are also used to mitigate interest-rate and prepayment-rate risks. The remainder of this subsection discusses existing hedge accounting guidance and rudimentary descriptions of certain customized MSA hedge products. Examiners should also refer to the Federal Reserve System's *Trading Activities Manual* for additional guidance on derivatives.

3070.0.6.9.2 Hedge Accounting

Existing accounting literature is vague with respect to the accounting treatment for MSA hedge products, particularly in the area of derivatives. However, analogies exist that facilitate the application of existing accounting standards. SFAS No. 80, "Accounting for Futures Transactions," provides financial reporting standards for exchange-traded futures contracts on both interest-rate products and raw materials (commodities). Several EITF issues releases provide financial reporting guidance for interest-rate swap transactions. Finally, an issues paper prepared by the American Institute of Certified Public Accountants (AICPA), "Accounting for Options," provides informal but nonauthoritative guidance relating to options contracts. The AICPA issues paper addresses options on all tangible goods, including both exchange-traded options and nonexchange traded options on interest-rate caps and floors.

16. When interest rates fall, increases in production volumes and related revenues tend to offset runoff in the servicing portfolio and reductions in servicing-fee income. Alternatively, to the extent that the marketing department hedges less than 100 percent of its estimated long position (closed loans plus rate-locked loans that are expected to close) and interest rates fall, the resulting marketing gains on the uncovered position tend to offset a portion of any required write-downs in the servicing portfolio.

To qualify for hedge-accounting treatment under SFAS 80, a financial instrument must meet two criteria:

- The hedged item exposes the entity to price or interest-rate risk.
- The financial instrument used as a hedge reduces that exposure and is designated as a hedge.

SFAS 80 states that at the inception of the hedge and throughout the hedge period, changes in the market value of the financial instrument used as a hedge should correlate highly with changes in the fair value of, or interest income or expense associated with, the hedged item(s) so that the results of the financial instrument(s) used as a hedge will substantially offset the effects of price or interest-rate changes on the exposed item(s). Although required correlation levels are not specifically defined, the accounting industry has determined that 80 percent is a reasonable benchmark.

Before claiming hedge-accounting treatment, management must obtain an opinion from its CPA or internal accountant confirming that the instrument that is proposed would qualify for such treatment. If these criteria are not met, the financial instrument should be carried at its market value (i.e., marked to market). Hedge performance should be monitored daily and reported to the responsible management or board committee at least quarterly.

3070.0.6.9.3 Relevant MSA Characteristics

To evaluate a mortgage banking company's hedge program for MSAs, one must first understand how MSAs perform. Duration, convexity, and amortization are useful concepts that will be reviewed as they relate to MSAs. Duration measures the change in the value of MSAs (or their cash flows) for a given change in interest rates. Duration can be either positive or negative. An asset with a positive duration, such as a fixed-income bond, tends to increase in value as interest rates fall. Conversely, an asset with a negative duration, such as an MSA, tends to decrease in value as interest rates fall.

Convexity measures the rate of change in an instrument's duration, or the nonlinearity of its price/yield curve. Like duration, convexity can

be either positive or negative. An asset with a positive convexity will rise more in value for a given change in interest rates than it will fall if interest rates move equally in the opposite direction. Conversely, an asset with a negative convexity will decline more in value for a given change in interest rates than it will increase in value if interest rates move equally in the opposite direction. Because of their prepayment characteristics, MSAs and most other mortgage-related assets are negatively convex within a specified range of interest rates. Borrowers can be expected to exercise their option to prepay a loan at a time that is most disadvantageous to the MSA holder.

MSAs are also an amortizing asset. When a prepayment occurs, the loss of value is permanent and cannot be recovered. The use of a nonamortizing asset as a hedge would necessitate an active hedge-management strategy to adjust the position as the unamortized balance of the MSAs declines. If the position is not adjusted correctly, this strategy may expose earnings and capital to additional risks that are not within the scope of the company's MSA hedge program.

3070.0.6.9.4 Hedge Instruments

An effective MSA hedge instrument will possess characteristics that mitigate the interest-rate and prepayment risks associated with MSAs without assuming additional basis risk. Basis risk measures how well changes in the value of the hedge instrument correlate to changes in the value of the MSA. An effective hedge should also be reasonable in terms of transaction costs and management's time.

Several types of specialized derivative products have evolved to meet the needs of mortgage banking companies. Early MSA hedge products were interest-rate-driven, utilizing zero-coupon Treasury bonds or interest-rate swaps. However, the basis risk of such hedges proved to be excessive. Next came principal-only (PO) and super-principal only (SPO) bonds, which were prepayment-driven.¹⁷ However, these products also proved ineffective due to geographic basis risk, potential average-life mismatches, additional capital requirements, and dissimilar

accounting treatment which led to accounting losses.

MSA hedge products generally fall into three categories: bond hedges, short-term option hedges, and long-term option hedges. Bond hedges use Treasury bonds, "plain vanilla" interest-rate swaps, interest amortizing rate swaps, positive convexity swaps, POs, and SPOs. Bond hedges may be either interest-rate-driven or prepayment-rate-driven. Prepayment-rate-driven products reduce more basis risk and are therefore more expensive. Although most bond hedges are positively convex, they fail to provide enough positive convexity to offset the negative convexity in MSAs. In other words, when interest rates decline, the value of the bond hedge will not increase in an amount sufficient to offset the simultaneous decline in the MSAs. Another disadvantage to bond hedges is that the downside risk is generally unlimited.

Short-term option hedges consist of over-the-counter (OTC) Treasury options, options on futures contracts, and options on OTC mortgage securities. Short-term option hedges generally contain enough positive convexity to offset the negative convexity of MSAs, and the downside risk is limited to the option premium paid at inception. However, option strategies using these products require frequent rebalancing, are therefore expensive, and do not work well in a rapidly changing interest-rate environment because they are not amortizing assets.

Long-term option hedges include prepayment caps, interest amortizing rate (IAR) servicing hedges, LIBOR floors, and swaptions. These products may protect the servicer and/or seller against changes in either interest rates or prepayments. As off-balance-sheet products, they impose very few capital constraints on the MSA holder.

A prepayment cap is an off-balance-sheet, prepayment-driven option product that can be used to hedge a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a payment from the counterparty every month that the option is "in the money." The option is in the money if the difference between the "strike balance" and the actual balance of a "reference portfolio," less the sum of previous balance differences, is positive. Each month the option is in the money, the counterparty will pay the "strike price," usually the book cost of the servicing portfolio, multiplied by this balance shortfall. The reference portfolio, strike price, and strike balance can be customized to match the servicer and/or seller's risk parameters and individual portfolio.

17. A special class of REMIC securities backed by POs. SPOs are a more leveraged type of PO.

An IAR servicing hedge is an off-balance-sheet, interest rate–driven option product that can be used as either a revenue or a balance-sheet hedge of a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a series of payments from the counterparty to the extent that amortization of a “reference balance” exceeds scheduled amortization of a “strike balance.” The main difference between an IAR and a prepayment cap is that with an IAR, option payments are based on the performance of a “reference portfolio” rather than the seller and/or servicer’s actual portfolio. For an IAR revenue hedge, the option payout is based on the current balance shortfall between the reference and strike balances. For an IAR balance-sheet hedge, option payouts are based on the cumulative excess amortization of the reference balance over the strike balance. IAR hedges are less expensive than comparable prepayment-linked hedges because they contain basis risk. If actual prepayments occur more rapidly than predicted at the onset of the hedge, the servicer and/or seller will be underhedged.

Numerous other types of customized hedge products are available. The advantages and disadvantages of each product should be well understood before it is incorporated into a mortgage banking company’s interest-rate risk management strategies.

3070.0.6.10 Inspection Objectives

1. To determine whether MSAs pose a significant financial risk to earnings and capital.
2. To evaluate management’s expertise and the oversight provided by the board of directors.
3. To determine whether policies and procedures used to initially record, amortize, and reevaluate MSAs are in conformance with GAAP and risk-based capital requirements, and whether actual practice is consistent with stated policies and procedures.
4. To verify that asset values are fairly stated.
5. To evaluate the methods used to hedge interest-rate and prepayment risks associated with MSAs, the degree of oversight provided by management or the board of directors, the adequacy of written policies and procedures, and the effectiveness of the company’s hedge program for MSAs.
6. To identify any excessive risk-taking which is caused by the company’s business mix and/or strategy.

3070.0.6.11 Inspection Procedures

1. Determine the extent of financial risk associated with MSAs through a review of the following:
 - a. Significant changes in the size of the servicing portfolio. Obtain a reconciliation for the servicing portfolio for the prior fiscal year and the most recent interim period. If significant growth has occurred, determine whether loans were originated, purchased individually (on a flow basis), purchased in bulk transactions, or acquired through whole company acquisitions. If the portfolio size has declined, determine the reason for such decline (sales of servicing rights, prepayments) and the impact on the remaining servicing portfolio.
 - b. The proportion of capitalized MSAs relative to the outstanding principal balance of mortgage loans in the servicing portfolio.
 - c. Other unusual characteristics of the servicing portfolio that may present undue risk, such as the weighted average coupon rates, weighted average maturities, delinquency characteristics, or mix of government (FHA/VA) loans versus conventional loans.

If the level of financial risk is sufficient to place earnings and capital at risk, the examiner should complete the remainder of the MSA procedures.

2. Review the qualifications of the individuals who are responsible for initially recording, amortizing and evaluating MSAs. Does management possess the necessary accounting expertise and experience with respect to valuation methodologies?

3. Review the accounting systems used to track MSAs. Is the necessary information being maintained in an understandable and useable form? Does the adoption of SFAS 65, as amended, and 125 pose any system problems for the company? Are such problems being addressed in a timely manner? At a minimum, MSAs should be tracked by product type and year of origination. The following information should be maintained for each pool of loans: the original and current principal balance for each pool; original and current book values of related MSAs; prepayment speeds, normal servicing fees, and the original discount rate used; and the actual historical payment experience for each pool.

4. Review written policies and procedures for initially recording, amortizing, and periodically reevaluating MSAs. Determine the manage-

ment or board committees responsible for approval of such policies, the date of last approval, and the frequency of their review.

5. Determine whether MSA policies and procedures are in conformance with GAAP and risk-based capital requirements and whether actual practice conforms with established policies and procedures. At a minimum, policies and procedures should clearly address the following areas:

a. Initial valuation of MSAs and related pricing policies. With respect to MSAs, policies and procedures should describe the method for allocating the total cost of originated and purchased mortgage loans to the MSAs and the related loans (without the MSAs) based on their relative fair values at the date of origination or purchase; procedures to be followed if a definitive plan for sale of the loans does not exist and loans are sold at a later date; procedures to be followed in the event that it is not practicable to estimate the fair value of the MSAs and the related loans (without MSAs); and MSAs recorded under table funding relationships with correspondents and/or brokers.

b. The method for amortizing MSAs over the estimated lives of the assets, and instances where amortization lives may be adjusted.

c. The method for measuring impairment of capitalized MSAs based on their fair value. Policies and procedures should address the basis for stratification of MSAs based on the risk characteristics of the underlying loans; the types of valuation allowances used to reflect changes in the measurement of impairment; the method used to arrive at the fair value of assets (quoted market prices, estimated prices for similar assets, and the results of valuation techniques); the frequency of revaluation tests; the presentation of valuation test results to senior management and the board of directors; instances where write-downs would be required; disclosures; and the basis for assumptions used.

6. Verify that the valuation techniques for measuring MSAs are consistent with the objective of measuring fair value. Review model output and related manuals and/or marketing materials. Evaluate the reasonableness of all key parameters and assumptions, with an emphasis on the source for prepayment speed estimates, the number of interest-rate "paths" used (vectoring or binomial models being more desirable than a single interest-rate projection path), the basis for the interest rate used to discount cash

flows, and the source of servicing revenue and cost data.

7. Review the most recent quarterly valuation process and the related output to determine whether necessary write-downs or amortization adjustments were made, management or board oversight was adequate, and actual practice is consistent with established policies and procedures. Ensure that any significant changes to the model's parameters and/or output are approved by the appropriate management or board committee and that such changes are adequately documented.

8. Verify that disclosures are accurate with respect to the following:

- the fair value of capitalized MSAs
- the methods and significant assumptions used to estimate that fair value
- a description of MSAs for which no cost has been allocated and the reasons why it is not practicable to estimate the fair values of those MSAs and the mortgage loans (without the MSAs)
- the risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment
- the activity in the valuation allowances for capitalized MSAs, including the aggregate balance of the allowances at the beginning and end of each period; aggregate additions charged and reductions credited to operations; and aggregate direct write-downs charged against the allowances

9. Obtain a list of intercompany MSAs as of the close of business for the most recent quarter-end. Determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

10. Review policies and practices regarding the sale of MSAs and liabilities to investors.

11. If the company sells loans with recourse, are recourse reserves established at the time of sale? Are estimated losses factored into the calculation of gain/loss on sale of loans?

12. Obtain an organizational chart to determine the individuals responsible for hedging MSAs. Review biographies to ensure that staff members responsible for this function are knowledgeable regarding accounting guidance, hedge products, and related strategies.

13. Review methods used to hedge the interest-rate and prepayment-rate risk associated with MSAs. Verify the management or board committee responsible for approving hedge instruments, the list of approved products, and the frequency and date of last review.

14. Review management reports to determine the correlation between hedge instruments and the underlying assets, the accounting treatment for hedges, related gains and losses, and the overall effectiveness of the company's hedge program. If hedge accounting treatment is being used, management and/or the company's external accountants must perform the appropriate level of due diligence and maintain adequate supporting documentation. In determining the effectiveness of the hedging program, the examiner should compare the actual results of hedge performance with the expected results.

15. Evaluate the quality of information that is communicated to senior management, the board of directors (if applicable), and the parent company's senior management and board of directors to determine whether management and directors are adequately informed regarding the financial risks associated with MSAs, amortization methods and hedging techniques, and the degree of risk inherent in the company's strategic focus and business mix with respect to the projected volume of MSAs.

3070.0.7 INTERCOMPANY TRANSACTIONS

A mortgage banking company that is organized as a nonbank subsidiary of a bank holding company often sells assets to, receives funding from, or services loans for its bank affiliates. Given the trend toward managing mortgage banking activities as a line function rather than by legal entity, such intercompany transactions have become an area of heightened supervisory concern.

In general, sections 23A and 23B of the Federal Reserve Act are designed to prevent a bank from being disadvantaged through the purchase of low-quality assets from an affiliate, the pressure to fund the majority of an affiliate's working-capital needs, and intercompany transactions that either inadequately compensate the bank or are not conducted on an arms-length basis.

3070.0.7.1 Section 23A of the Federal Reserve Act

Section 23A was enacted as part of the Banking Act of 1933 (the Glass-Steagall Act) for state

member banks and later extended to all federally insured banks.¹⁸ Section 23A defines companies that control or are under common control with the bank as affiliates of the bank. For example, the term "affiliates" includes bank holding companies and their subsidiaries as well as banks and nonbanking companies that are under common individual control.¹⁹ The two primary aspects of section 23A—quantitative restrictions and collateral requirements—are discussed next.

3070.0.7.1.1 Quantitative Restrictions

The quantitative restrictions imposed by section 23A generally limit the aggregate amount of so-called "covered transactions" to 10 percent of the bank's capital and surplus for transactions with a given affiliate, and 20 percent of the bank's capital and surplus for transactions with all of its affiliates.²⁰ Covered transactions include—

- a loan or extension of credit by a bank to an affiliate, such as a warehouse line of credit provided to the affiliate;
- the purchase of or investment in securities such as a privately issued MBS issued by an affiliate;
- the purchase of assets from an affiliate, such as a loan purchased either as an accommodation to a bank customer or for the bank's asset/liability management purposes;
- the acceptance by a bank of securities issued by an affiliate as collateral for a loan or extension of credit by the bank to any person or company (Securities might include either the stock of a publicly held affiliate or the stock from one of its officer's own business enterprises); or

18. As originally enacted, the Banking Act of 1933 covered only member banks. In 1966, Congress amended section 18(j) of the Federal Deposit Insurance Act, 12 U.S.C. 1828(j), to extend the coverage of section 23A to include insured nonmember banks. As a result, section 23A now applies to all federally insured banks. (12 U.S.C. 371c)

19. Nonbank subsidiaries of banks, as opposed to nonbank subsidiaries of bank holding companies, are not affiliates for purposes of section 23A, unless the Board of Governors of the Federal Reserve System determines otherwise. Banks that are part of a chain banking organization are subject to the restrictions of section 23A.

20. For section 23A purposes, the definition for capital and surplus includes the allowance for loan and lease losses.

- the issuance by a bank of a guaranty, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate (A letter of credit might be posted by the bank to cover an excessive number of GNMA pools that lack final pool certification.).

The examiner should determine the bank's method for identifying covered transactions and applying the quantitative limits for section 23A purposes. If a covered transaction is found that exceeds these quantitative limits, either on an individual or an aggregate basis, an apparent violation of section 23A has occurred. All such apparent violations of law should be discussed with management and cited in the report.

Particular attention should be paid to inter-company asset transfers and funding arrangements to determine whether they constitute covered transactions under section 23A. In Interpretation 250.250 (12 C.F.R. 250.250)²¹ the Board determined that a member bank's purchase, without recourse, and at face value, of a mortgage note, or a participation therein, from a mortgage banking subsidiary of the parent bank holding company, which had no financial interest in the underlying asset on which it had granted credit through the note, did not involve a "loan" or "extension of credit"²² from the member bank to the seller of the mortgage note within the meaning of section 23A if—

- the member bank's commitment to purchase the loan or participation therein was obtained by the affiliate within the context of a proposed transaction or series of proposed transactions in anticipation of the affiliate's commitment to make such loan(s),
- the commitment to purchase the loan was based on the bank's independent credit evaluation of the creditworthiness of the mortgagor(s),²³ and
- there could be no blanket advance commitment by the member bank to purchase a stipulated amount of loans that bore no reference to specific proposed transactions. Accord-

ingly, the nonbank affiliate must have adequate and independent working capital to fund its operations.

The Board stated that if the bank followed these procedures, then the bank would be taking advantage of an individual investment opportunity and thus should be exempt from section 23A. However, the Board was concerned that the bank should not be allowed to set up a business relationship with any affiliate which could create the opportunity for the bank, at some time in the future, to engage in unsafe transactions because the bank felt impelled by an improper incentive to alleviate the working-capital needs of the affiliate. Accordingly, the bank's transactions with the affiliate should not be of such a volume as to create pressure on the bank to relax its sound credit judgment concerning the individual loans involved and thereby result in an inappropriate risk to the soundness of the bank.

3070.0.7.1.2 Collateral Requirements

In addition to the quantitative restrictions, certain covered transactions between a bank and an affiliate must also be secured at the time of the transaction by collateral having a certain market value. Unless otherwise exempted, covered transactions that must be adequately secured include loans or extensions of credit, guaranties, acceptances, and letters of credit issued on behalf of the affiliate.

Collateralization requirements range from 100 percent to 130 percent depending on the type of collateral used. Acceptable forms of collateral include U.S. government or U.S. government-guaranteed obligations, instruments that are acceptable at the Federal Reserve's discount window, bank deposits that are segregated into accounts specifically earmarked for this purpose, other debt instruments, stock, leases, or other real or personal property. According to an August 31, 1987, Board interpretation (at FRRS 3-1164.3), mortgage-servicing rights do not constitute a permissible form of collateral for purposes of section 23A because of (1) their inherent volatility, making it difficult to accurately value the rights, and (2) the need to secure permission to transfer servicing rights from the legal owner of the underlying mortgage.²⁴

21. See also *Federal Reserve Regulatory Service*, 3-1133.

22. Under section 23A, as amended by the Garn-St Germain Act in 1982, a member bank's purchase of a loan from its nonbank affiliate that was made to an unaffiliated party is now considered a purchase of an asset from the affiliate unless it is excepted under interpretation 250.250.

23. Dual employees may not be used to satisfy the independent credit evaluation requirement.

24. Item (2) refers to the bank's ability to sell the mortgage-servicing rights if the affiliate defaults on its loan.

An example of a covered transaction that is subject to both the quantitative restrictions and the collateral requirements of section 23A would be an overdraft in the mortgage company's checking account with an affiliate bank, which is considered an extension of credit. A line of credit by a bank to a nonbank affiliate also constitutes a covered transaction. It is important to remember that the full value of the line, not just the portion drawn down, must satisfy the quantitative and the collateral requirements of section 23A at all times. The examiner should review checking accounts and funding arrangements to ensure that the appropriate level and type of collateral is maintained. Collateral values should be monitored regularly so that depreciated or matured collateral is replaced as needed.

3070.0.7.1.3 Prohibited Transactions

In addition to the quantitative and collateral requirements, section 23A also prohibits certain affiliate transactions altogether. Most importantly, a bank and its subsidiaries may not purchase a low-quality asset (generally a classified or past-due asset) from an affiliate or accept a low-quality asset as collateral for a loan. Section 23A also requires that all covered transactions be conducted on terms that are consistent with safe and sound banking practices.

3070.0.7.1.4 Exemptions from Section 23A of the FRA

As mentioned previously, several types of intercompany transactions are exempted from the requirements of section 23A. For example, transactions between banks in which 80 percent or more of each bank's stock is owned by the same bank holding company (so-called "sister banks") are exempt from most provisions of section 23A.²⁵ Other transactions that are exempt include the following:

- deposits received from the affiliate during the ordinary course of business (checks in the process of collection)

25. Foreign banks do not qualify as sister banks for section 23A purposes. These transactions are still subject to the prohibition against the purchase of low-quality assets and to the requirement that covered transactions be on terms and conditions that are consistent with safe and sound banking practices. It should also be noted that federal savings banks do qualify for the sister-bank exemption if all banks in the corporate chain have met their fully phased-in capital guidelines, as provided for in the Home Owner's Loan Act.

- immediate credit given to an affiliate for uncollected items received in the ordinary course of business
- loans, extensions of credit, guaranties, acceptances, or letters of credit issued on behalf of the affiliate that are fully secured by obligations issued or guaranteed by the U.S. government or a segregated earmarked account in the bank
- the purchase of assets having a readily and identifiable market price at the time of purchase
- transactions that are deemed to be in the public interest and consistent with the purposes of the act

Internal controls should be in place to ensure that all transactions are adequately reviewed. Documentation should be maintained for intercompany transactions that are exempted from the requirements of section 23A.

3070.0.7.2 Section 23B of the Federal Reserve Act

The Competitive Equality Banking Act of 1987 amended the Federal Reserve Act to add a new provision, known as section 23B. In general, section 23B provides that covered transactions between a bank and its affiliates must be on terms and under circumstances, including credit standards, that are substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If no comparable transactions exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonaffiliated companies. A bank is also generally prohibited from purchasing as a fiduciary securities or assets from an affiliate except under specified circumstances. Finally, a bank and its affiliate may not advertise or enter into an agreement that suggests the bank is in any way responsible for the obligations of the affiliate.

Section 23B applies to any covered transaction with an affiliate, as that term is defined in section 23A. However, section 23B excludes banks from the term "affiliate." Therefore, transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B.

3070.0.7.3 Management and Service Fees

The Federal Reserve System's 1979 policy statement on diversion of bank income practices is intended to prevent excessive or unjustifiable management or service fees, as well as any other unwarranted payments or practices that, by diverting bank resources to the parent company or a nonbank affiliate, may have an adverse financial impact on a subsidiary (paying) bank (see section 2020.6). Diversion of income practices with respect to a mortgage banking company might potentially include, but are not limited to—

- servicing fees, or other payments assessed by the mortgage banking company and paid by the bank that bear no reasonable relationship to the fair market value, cost, volume, or quality of services rendered by the nonbank subsidiary in its role as servicer and/or seller;
- balances maintained by the bank primarily in support of mortgage banking company borrowings without appropriate compensation to the bank;
- prepayment of fees to the mortgage banking company for services not yet rendered;
- nonreimbursed origination fees, marketing costs, or other expenses incurred by the bank that primarily support the mortgage banking company's activities; and
- loan repurchase agreements between the bank and the mortgage banking company while the mortgage banking company is processing loans in the mortgage pipeline.

Purchase and funding agreements should adequately itemize and document the types of services provided and the basis for fees. Billing statements and other documentation should clearly evidence that fees actually charged and paid are reasonable and consistent with regulatory policy requirements as described.

3070.0.7.4 Tie-In Considerations of the BHC Act

Section 106 of the BHC Act Amendments of 1970 contains five restrictions intended to prohibit anticompetitive behavior by banks: two prohibit tying arrangements; two prohibit reciprocity arrangements; and one prohibits exclu-

sive dealing arrangements.²⁶ The tying restrictions, which have the greatest effect on industry practices, prohibit a bank from restricting the availability or service (the *tying product*) on the condition that a customer purchase another product or service offered by the bank or by any of its affiliates (the *tied product*).

Section 106 was adopted in 1970 when Congress expanded the authority of the Board to approve proposals by bank holding companies to engage in nonbanking activities. The provisions of section 106 were based on congressional concern that banks' unique role in the economy, in particular their power to extend credit, would allow them to create a competitive advantage for their affiliates in the new, nonbanking markets that they were being allowed to enter.²⁷ Congress therefore imposed special limitations on tying by banks—restrictions beyond those imposed by the antitrust laws. Section 106 is a broader prohibition; unlike the antitrust laws, a plaintiff in action under section 106 need not show that (1) the seller has market power in the market for the tying product, (2) the tying arrangement has had an anti-competitive effect in the market for the tied product, or (3) the tying arrangement has had a substantial effect on interstate commerce.

Section 106 applies only when a *bank* offers the tying product.²⁸ The Board has authority to grant exceptions to section 106, which it has used to allow banking organizations to package their products when doing so would benefit the organization and its customers without anticompetitive effects.

3070.0.7.4.1 Section 225.7(d) of Regulation Y

The Board originally extended section 106, which covers tying arrangements by *banks* only, to cover nonbank affiliates and bank holding companies. The Board rescinded this extension of the statute effective April 21, 1997. Thus, unless subject to another exemption, section 106 *prohibits*—

- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from the bank; and

26. 12 U.S.C. 1972.

27. See S. Rep. No. 1084, 91st Cong., 2d Sess. (1970).

28. See 1997 FRB 275.

- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from an affiliate of the bank.

Section 106 and the Board’s regulation allow—

- a section 20 affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from an affiliated bank; and
- a section 20 affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from a nonbank affiliate.

These distinctions make sense if one keeps in mind the concern of the statute: banks (*not* nonbanks) have special power over credit and, thus, are able to induce or coerce their customers into purchasing products that they would otherwise prefer not to purchase or to purchase from someone else.²⁹

3070.0.7.4.2 *Interaffiliate Tying Arrangements Treated the Same as Intrabank Arrangements*

Section 106 contains an explicit exception (the *statutory traditional bank product exception*) that permits a bank to tie any product or service to a loan, discount, deposit, or trust service offered by that bank.³⁰ For example, a bank could condition the use of its messenger service on a customer’s maintaining a deposit account at the bank. Although the statutory traditional bank product exception appears to have been effective in preserving traditional relationships between a customer and bank, the exception is limited in an important way—it does not extend to transactions involving products offered by affiliates.

The Board has adopted a *regulatory traditional bank product exception* that extends the statutory exception to transactions involving affiliates.³¹ Although the Board has previously limited the scope of this extension, interaffiliate arrangements are now exempt to the same extent as intrabank arrangements.³²

29. The Board’s rule also includes a limited prohibition on tying arrangements involving electronic benefit transfer services (12 C.F.R. 225.7(d)).

30. 12 U.S.C. 1972(1)(A).

31. See 12 C.F.R. 225.7(b)(1).

32. A similar action was taken for interaffiliate reciprocity arrangements, in which section 106 permits a bank to condition the availability of a product or service on the customer’s

3070.0.7.4.3 *Foreign Transactions under Section 106*

The Board has adopted a “safe harbor” from the anti-tying rules for transactions with corporate customers that are incorporated or otherwise organized and that have their principal place of business outside the United States, or with individuals who are citizens of a foreign country and are not resident in the United States. However, the safe harbor would not protect tying arrangements in which the customer is a U.S.-incorporated division of a foreign company. Furthermore, the safe harbor would not shelter a transaction from other antitrust laws if they were otherwise applicable.³³

3070.0.7.4.4 *Technical Change*

The Board also has adopted a definition of “bank” for purposes of the anti-tying rules. The definition clarifies that any exemptions afforded to banks generally also would be applicable to credit card and other limited-purpose institutions and to United States branches and agencies of foreign banks.³⁴

3070.0.7.5 *Inspection Objective*

1. To evaluate transactions between a mortgage banking company organized as a direct subsidiary of a bank holding company and affiliated banks for compliance with federal laws and regulations, and related policy guidance.

3070.0.7.6 *Inspection Procedures*

1. Review management’s method for monitoring and identifying section 23A and 23B covered transactions and applying the quantitative limitations. Determine whether—

- a. all covered transactions have been identified;
- b. quantitative limits are calculated correctly;
- c. covered transactions, including any overdrafts and lines of credit, meet both the

providing to the bank some product or service “related to and usually provided in connection with” a loan, discount, deposit, or trust service (12 U.S.C. 1972(1)(C)).

33. See 12 C.F.R. 225.7(b)(3).

34. See 12 C.F.R. 225.7(e).

quantitative limits and collateral requirements of section 23A; and

d. adequate collateral values have been maintained over the life of the covered transactions (For example, collateral is maintained for the full amount of any credit lines with the bank, and any depreciated or matured collateral has been replaced as required.).

2. Review purchase and funding contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine that—

a. asset purchases by the bank are either within the quantitative limits of section 23A or meet the exemption requirements of C.F.R. section 250.250,

b. all purchases are at fair market value and consistent with market terms as required by section 23B,

c. no low-quality assets were transferred to the bank since the previous inspection,

d. the method of compensating the bank for balances maintained and net interest income earned on warehouse loans or lines is reasonable and based on market terms.

3. Review servicing contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine—

a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?);

b. the nature of all services provided; and

c. billing arrangements, the frequency of billing, the method of computation, and the basis for such fees.

4. Review the bank holding company's policy statement on the prohibition of tie-in arrangements, the adequacy of training provided to employees, and whether its respective subsidiaries are in full compliance with internal policy.

against stipulated public benefits cited in Board orders, and reviews of various activities for technical compliance.

While not specifically detailed in this guidance, the examiner may find it necessary to conduct a review of the company's ledgers and accounts that is sufficient to disclose possible impermissible activities and potential violations of law. The audit function, both internal and external, should not be solely relied on for this disclosure because the auditor's program may emphasize other areas of concern. As a nonbank subsidiary of a bank holding company, reference should be made to part 225 of the Code of Federal Regulations (such as section 225.28(b) of Regulation Y) and other relevant sections thereof.

Concurrent with the review of assets for credit quality, the examiner should undertake a review of asset-related activities for compliance with the subsidiary's approval orders. In mortgage banking firms, it is possible that the company is engaging unknowingly in certain impermissible activities, such as those described by 12 C.F.R. 225.126 (i.e., real estate brokerage, land development, real estate syndication, and property management) and those deemed impermissible by Board order (see sections 3000.0.4 and 3700.0 to 3700.12). The Board of Governors has ruled (1972 FRB 429) that the purchase and development of land for sale to third parties constitutes land development by a nonbank subsidiary. However, the completion of a foreclosed property to facilitate the recovery of funds advanced under the loan appears to be permissible, provided that the additional work brings the project underway at foreclosure up to a saleable condition. The Board has also ruled that property management for third parties is impermissible (1972 FRB 652). However, property management as a fiduciary, for operating premises of affiliates, or for properties acquired for debts previously contracted (DPC) is permissible. In addition to the other impermissible activities, engaging in real estate joint ventures has also been ruled impermissible. If such impermissible activities are found, they represent violations and should be appropriately treated. The servicing agreements should be reviewed to determine that no additional liabilities, real or contingent, are imposed on the company beyond its responsibilities as a servicing agent.

The usual source of growth in the servicing portfolio is the company's own origination activity. However, it is not uncommon for a company to supplement this growth with bulk purchases of serviced mortgages from other companies. Under certain circumstances, usu-

3070.0.8 REGULATION Y COMPLIANCE

During the course of the on-site inspection, the examiner is expected to conduct sufficient tests and inquiries to determine whether the company is in compliance with Regulation Y and the act. Such tests and inquiries would include a listing of company offices which can be compared with the approved offices, comparisons of credit-related insurance policies and rate schedules

ally relating to the relative percentage of the seller's portfolio, these transactions may not comply with 12 C.F.R. 225.132. Since these transactions may represent the effective acquisition of a going concern subject to prior approval by the Federal Reserve System, "servicing portfolio" acquisitions should be reviewed for compliance.

Section 225.22(d)(1) of Regulation Y provides an exemption from required Board approval for DPC property acquired in good faith and divested within two years of acquisition. The Board may permit additional extensions that can result in the property being held by a bank holding company for a total of 10 years, if the property has value and marketability characteristics similar to real estate. In conjunction with the review of real estate owned, the examiner should determine if any subsidiary holds title to any property that should have been disposed of within the time limits of Regulation Y, the book value of which has been reduced to zero and the property is not disclosed on the balance sheet. See section 3030.0 "Acquisition of DPC Shares or Assets," for additional information on DPC property acquired.

ing subsidiaries should be fully inspected at least once every three years.

3070.0.9 ON-SITE INSPECTION OF MORTGAGE BANKING SUBSIDIARIES

Scheduling of on-site inspections of mortgage banking nonbank subsidiaries of bank holding companies should be done in accordance with the Board policy for frequency and scope of inspections, beginning at section 5000.0.2. After reviewing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by non-accrual and delinquency reports, the level of risk exposure to the organization (see section 4030.2), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected that would require a visit, even though a satisfactory condition had been determined during the previous inspection. Mortgage subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected. All significant mortgage bank-

3070.0.11 APPENDIX A—FIRST DAY LETTER

FEDERAL RESERVE BANK
OF BOSTONP. O. BOX 2076
BOSTON, MASSACHUSETTS 02106-2076

June 15, 19x9

Mr. John Doe
President
XYZ Mortgage Bank Corporation
Boston, Massachusetts 02107

Dear Mr. Doe:

In conjunction with the inspection of the XYZ Bank Holding Company, we plan to begin an inspection of XYZ Mortgage Bank Corporation on July 15, 19x9. To facilitate this inspection, please provide a copy of or make available the following information relative to your organization's mortgage banking activities. Information should be as of xx/xx/xx and should be delivered to the examiner-in-charge as soon as it is available. Whenever possible, standardized management reports should be provided. Please include the name and telephone extension of the appropriate persons to contact, by department, if additional information is necessary.

Board Oversight and Management

1. Provide a listing of the mortgage banking company's board of directors that includes each individual's name, place of employment, title and position, age, management responsibilities (if any), and the length of time he or she has served on the board.
2. List significant management and board committees and have minutes from these meetings available for examiner review. Provide a copy of standardized reports that are provided before each meeting.
3. Provide an organizational chart that highlights individuals who are responsible for the following functional areas: production, warehousing and funding, marketing, servicing, finance, mortgage-servicing asset (MSA) valuations, internal audit, quality control, loan review, compliance, and legal. Include biographies and salary information.
4. Describe any organizational changes that have taken place at the mortgage banking company since xx/xx/xx, including any mergers, acquisitions, or consolidation of mortgage banking activities. Describe any management changes at or above the senior vice president level and provide details on management's new responsibilities.
5. Provide a copy of standardized management reports that are used to monitor compliance with established policies, operating procedures, and controls within each functional area.
6. Provide a copy of the mortgage banking company's most recent operating budget and its long-term strategic plan. Evaluate how interest-rate movements, competition, and other external factors have affected product mix, staffing levels, and the allocation of capital.
7. Describe the internal control environment and the internal control programs that are in place within the mortgage banking company. Have available for examiner review the following reports that were conducted since xx/xx/xx:
 - a. internal and external audits
 - b. loan reviews

- c. internal control and compliance audits completed by or on behalf of agencies such as HUD, FHA, GNMA, FannieMae, FHLMC, state agencies, and private investors

Also have available management's response to each report and the most recent copy of any management reports that monitor the status of outstanding issues or problems.

8. Provide an organization chart for the *internal audit* department. Indicate the scope and frequency of internal audits for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make internal audit workpapers available for examiner review.
9. Provide an organization chart for the *loan review* department. Indicate the scope and frequency of loan reviews for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make loan review workpapers available for examiner review.
10. Provide details on the nature and scope of the quality control program for loans originated and/or serviced for investors. Include an organization chart for the unit(s) involved in such activities, details on any outsourcing programs used since the previous inspection, copies of quality control reports submitted to senior management, and management responses.
11. Describe the method for ensuring compliance with state and federal laws and regulations. Make available for examiner review the procedures manual, work programs, and workpapers compiled by the person/department responsible for compliance.
12. Describe the insurance coverage in effect for the mortgage banking company and its officers and the date it was last reviewed by the board of directors.
13. Recap all mortgage banking–related legal claims/lawsuits in excess of \$1 million. Indicate the nature of any legal reserve that is maintained and the method used to assess reserve adequacy.
14. Describe the system for logging, tracking, and responding to customer complaints. The customer complaint file should be made available for examiner review while on-site.
15. Provide a copy of the disaster recovery plan and describe safeguards in place to protect loan documents and data processing input records.

Production and Correspondent Lending Data

16. Provide detailed organization charts for departments within the company which relate to the production function (i.e., retail originations, wholesale purchases, processing, underwriting, closing, shipping).
17. Provide information on the total number and dollar amount of loans generated by the following sources during the two most recent fiscal years and the interim year-to-date period. For purchased loans, please specify the method of purchase (i.e., bulk versus flow), program name, and amount subject to recourse back to either the seller or the investor):
 - a. originated by the mortgage banking company
 - b. purchased from affiliates
 - c. purchased from nonaffiliated third parties
18. Provide written policies and procedures manuals that describe traditional and nontraditional mortgage products, underwriting standards, closing and funding procedures, exception reporting practices, management and employee compensation methods, and training programs for loan production personnel. State methods used to establish ongoing compliance with written policies and procedures and provide copies of relevant management exception reports.
19. Describe the credit approval process used for in-house originations. Include information on rate commitment options extended to the borrower, the average length of the commitment period,

controls that are in place to monitor fallout caused by processing backlogs, and procedures for expired commitments.

20. Provide details on the correspondent lending program, including a list of approved institutions and copies of the most recent loan-quality reports. Describe the credit review process before purchase and any controls that are in place to protect the mortgage banking company against future losses on loans purchased from affiliates and from correspondents.
21. Determine whether rate-locks are provided to correspondents on best effort production programs. What methods are used to verify reported loan fallout?
22. Provide information on the average income and cost per origination and compare with industry standards. Describe the method of accounting used for origination fees and other related noninterest income and expenses.
23. If the mortgage banking company is a subsidiary of a state member bank or sells loans to a bank affiliate that is subject to Regulation O, furnish a list of extensions of credit to “an executive officer, director, or principal shareholder” (as defined in section 215.2 of Regulation O) of—
 - a. the state member bank;
 - b. a bank holding company of which the state member bank is a subsidiary;
 - c. any other subsidiary of that bank holding company;
 - d. a company controlled by an insider, as defined by Regulation O; and
 - e. a political or campaign committee that benefits or is controlled by an insider as defined by Regulation O.

For all such extensions of credit, include the amount, date the loan(s) was originated or renewed, interest rate, collateral requirements, total amount of loans outstanding to that individual or company, and date of approval by the board of directors. Also include the aggregate amount of loans outstanding to all such insiders as of the inspection date in relation to the bank’s unimpaired capital and unimpaired surplus as defined in Regulation O. (See subsection 2050.0.3.2.)

Marketing and Hedging Data

24. Provide detailed organization charts for departments within the company that relate to the marketing and hedging functions. Describe management’s roles and responsibilities with respect to the sale of loans in the secondary market, asset securitization, funding, liquidity risk management, interest-rate risk management, and interaction with the asset/liability management function at the parent company.
25. Provide a copy of written policies and procedures used to hedge interest-rate risk associated with the pipeline and closed-loan warehouse. Describe any parameters and limits that are in place and provide a list of securities dealers with whom management is authorized to conduct business.
26. Provide management reports on pipeline and closed-loan (warehouse) inventory volume, mix, yield, age, and turnover as of the inspection date. Describe the method used to project fallout and any models that are used to determine the sensitivity of the pipeline to interest-rate fluctuations.
27. Indicate the methods used to securitize loans for sale in the secondary market, including the use of third-party guaranties and other forms of credit enhancement. Are securities generally sold or retained on the balance sheet?
28. Provide information on the number and volume of securities that lacked final pool certification as of the inspection date. State whether this volume is in compliance with investor guidelines. If

applicable, indicate whether the requirements for obtaining a letter of credit or other guaranty have been satisfied.

Servicing Data

29. Provide a detailed organization chart for the servicing department.
30. List subservicers and vendors who are employed to perform servicing functions. Briefly describe the nature of the services provided.
31. Indicate whether any contracts with subservicers and/or vendors have been terminated for cause since the prior inspection.
32. Provide the monthly servicing management reports since the prior inspection, including the number of loans serviced, dollar volume, and composition of the servicing portfolio in terms of product mix, average loan size, weighted average coupon rates, weighted average maturities, geographic location, and delinquencies and foreclosures.
33. Provide a list of investors for whom servicing was performed as of the most recent quarter-end. Identify any recourse or repurchase provisions and/or forbearance requirements.
34. State whether any investors have terminated servicing contracts with the mortgage company and/or its affiliates for cause since the prior inspection, or if any are likely to be terminated in the near future.
35. Provide a list of all major bulk purchases and sales of servicing since the prior inspection. Identify the terms of each sale and any resulting gains or losses.
36. Provide a list and aging of all outstanding advances to investors as of the date of inspection.
37. Provide access to the servicing policies and procedures manual. Indicate the frequency with which manuals are updated. How does management ensure that subservicers and vendors comply with these same policies and procedures?
38. Provide a servicing-fee schedule (in basis points) for conventional, government, and nontraditional loans serviced for third parties.
39. Provide copies of management reports used to track portfolio runoff.
40. Provide a loan delinquency report segmented into 30, 60, 90, 120, and 180 foreclosure categories. Indicate the volume and number of loans in each segment by loan type. Also include information on the number and dollar volume of delinquent loans that were purchased out of investor pools.
41. Detail the number and dollar volume of other real estate (ORE) parcels segregated by company-owned and investor-owned. Provide a list of loans in foreclosure for which action has been delayed, if applicable.
42. Provide access to the customers' complaint file so that examiners can review it while on-site.

Financial Data

43. Provide copies of the Report of Condition and Income and/or Y-series report that was filed by the mortgage banking company for the two previous fiscal years and the most recent interim period.
44. Provide an internally prepared balance sheet and income statement that reconcile with the most recent Report of Condition and Income and/or Federal Reserve Board Y-series report.

45. Provide the latest published financial statements, if applicable, including the annual report, SEC 10K, 10Qs, and any press releases.
46. Provide copies of the accounting policies pertaining to mortgage loans, securities, and other assets held for sale and held for investment. Also provide copies of management reports that monitor compliance with SFAS No. 115 (securities), the current SFAS No. 65 (loans), SFAS No. 125 (mortgage-servicing assets), and internal policies as of the close of business of the most recent quarter.
47. Provide details on all formal and informal funding mechanisms, including but not limited to repurchase agreements, commercial paper programs, and debt issuance facilities. Indicate the counterparties, where applicable; the amount uncommitted; and the amount outstanding under each facility as of the close of the most recent quarter. Provide copies of all formal and informal written agreements.
48. Provide copies of credit agreements for all funding lines from affiliated and nonaffiliated institutions. Describe methods used to monitor the credit quality of all funding sources. The following information should be included:
 - a. lending bank (include copies of confirmation letters)
 - b. total credit line
 - c. amount in use as of the inspection date
 - d. amount available for use and by whom
 - e. expiration date
 - f. compensating balance and/or fee arrangements
 - g. purpose
 - h. whether the credit lines are contractual obligations of the lenders
 - i. reciprocity arrangements, if any
 - j. collateral requirements
 - k. legal opinions evidencing compliance with sections 23A and 23B of the Federal Reserve Act, as amended
49. Provide copies of any contingency planning documents that outline alternative courses of action should the condition of traditional funding sources deteriorate.
50. Provide a copy of any standardized financial presentations made to the executive management team and to the board of directors.
51. Provide a copy of standardized management reports used to measure and track the quality of originated, purchased, and serviced assets. Include an aging report that identifies loans that are past due 30, 60, 90, 120, and 180 or more days and indicate whether such loans are *held for sale*, *held for investment*, or *serviced for investors*.
52. Provide a copy of internal policies that apply to loans held for investment. Indicate the date each loan that was on the books as of the most recent quarter-end was transferred to this account, its amortized cost, market value, and any write-downs or adjustments to yield at the date of transfer. Indicate the person responsible for reviewing these loans for collectibility, the frequency of such reviews, and any adjustments or write-downs taken over the past year.
53. Provide detail pertaining to the transfer or sale of assets between the nonbank mortgage banking company and affiliated entities since the last inspection and that supports the FR Y-8 Reports. Also provide related documentation evidencing methods for asset valuation and credit-quality determination.
54. Provide detail on the allowance for loan and lease losses, contra asset valuation allowances, and

other reserve accounts as of xx/xx/xx (fiscal) and xx/xx/xx (interim). For each account in use, provide a copy of the most recent analysis and a description of the applicable loan and other losses provisions reserving methodology.

55. Provide a copy of the company's policy with respect to real estate appraisals.
56. Provide a copy of management reports that are used for liquidity, funding, and asset/liability management. If these activities are coordinated with affiliate bank or parent bank holding company personnel, provide copies of the information that is routinely provided.
57. Indicate the method for assessing capital adequacy at the mortgage company level. Provide a copy of the company's capital and dividend policies, as well as a list of dividends paid to shareholders during the two previous fiscal years and the most recent interim period. Are any changes in the level of dividends planned or anticipated?

Mortgage-Servicing Assets

58. Provide an organization chart highlighting those areas and individuals responsible for the recording, measurement, and impairment testing for originated and purchased mortgage-servicing rights (MSAs).
59. Provide an inventory listing of all MSAs as of the close of business of the most recent quarter.
60. Discuss the various loan-origination and -purchase programs that give rise to MSAs; the method for calculating and communicating the price paid to correspondents and brokers for service release premiums; whether MSAs are recorded on table-funded loans; and the details on any bulk purchases since the previous inspection, including the price paid and yield realized.
61. Discuss the various loan-sale programs that give rise to MSAs, the method for calculating and recording the initial value of MSAs.
62. Provide a copy of detailed written policies and procedures regarding the initial recording, amortization, and periodic revaluation and impairment testing for MSAs. Indicate the management and/or board committee responsible for approving such policies and the date of last approval.
63. Provide detailed information on any valuation models used for MSA revaluations and a copy of the output as of the most recent quarter-end. Indicate whether such revaluations are performed in-house or by an outside vendor and the frequency of such revaluations.
64. Reconcile fair market values of MSAs to their respective book values as of the most recent quarter-end. Provide a copy of management reports and related journal entries used to record amortization adjustments and/or write-downs.
65. Provide copies of worksheets used to calculate the amount of MSAs included in Tier 1 capital for regulatory reporting purposes as of the most recent quarter-end.
66. Furnish copies of any management reports or presentations to the board of directors or a committee thereof regarding the risk characteristics of MSAs, business risk analysis, and methods used to hedge the interest-rate and prepayment-rate risks associated with capitalized MSAs.
67. Provide an organization chart highlighting those areas and individuals responsible for hedging the interest-rate and prepayment-rate risk associated with MSAs.
68. Provide information on any financial instruments used to hedge interest-rate and prepayment-risk associated with MSAs. Include a detailed prospectus on any customized hedge products that are purchased from investment bankers and a statement from either internal or external accountants on whether such instruments qualify for hedge accounting treatment under SFAS No. 80.

69. Provide a copy of management reports that identify the number of contracts or instruments used, their current market value, and the degree of correlation between the hedge instrument and the underlying MSAs being hedged. Such reports should demonstrate the effectiveness of the hedge under varying market conditions.
70. Provide information on the number and dollar volume of servicing rights sold during the most recent fiscal year and interim period.
71. If mortgage-servicing assets are sold, provide information on the number and dollar volume sold during the most recent fiscal year and interim period.

Intercompany Transactions

72. Provide an organizational chart on a legal-entity basis that includes the bank holding company and all directly held bank and nonbank affiliates.
73. If the mortgage banking company is a direct nonbank subsidiary of the bank holding company, describe the method for identifying transactions that constitute “covered transactions” under sections 23A and 23B of the Federal Reserve Act, as well as the method for applying quantitative limits for section 23A and 23B purposes.
74. Provide a current listing of collateral that is maintained for covered transactions. Indicate whether collateral is maintained for the full amount of any credit lines with the bank and whether any depreciated or matured collateral has been replaced since the previous review.
75. Provide copies of any purchase and funding contracts between the mortgage banking company and affiliated bank(s). Please address whether any or all of the following conditions are met and/or provide written support, where applicable:
 - a. asset purchases by the bank have been reviewed by management and are either within the quantitative limits of section 23A or meet the exemption requirements of section 250.250
 - b. all purchases are at fair market value and consistent with market terms as required by section 23B
 - c. no low-quality assets were transferred to a bank affiliate since the previous inspection
 - d. the method of compensating bank affiliates for balances maintained by the parent company or its nonbank subsidiaries and the net interest income earned on warehouse loans or lines is reasonable and based on market terms
76. Provide copies of any servicing contracts between the mortgage banking company and affiliate bank(s). If not so stated, indicate the following information:
 - a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?)
 - b. the nature of all services provided
 - c. billing arrangements, the frequency of billing, the method of computation and the basis for such fees
 - d. the date of last review and approval by the mortgage banking company’s board of directors
77. Provide a copy of the bank holding company’s policy statement on the prohibition of tie-in arrangements, a description of training that is provided to employees in this area, and an attestation as to whether the nonbank subsidiary is in full compliance with internal policy.
78. If the mortgage banking company charges management or other fees, describe the nature of the

fees, the method of computation for such fees, and the settlement procedures. Include a listing of fees charged for the prior two fiscal years and the most recent interim period.

79. Provide a copy of the bank holding company's intercompany tax allocation policy. Indicate the amount and timing of intercompany tax payments and credits received during the two previous fiscal years and the most recent interim period. If credits are due, please indicate the amount owed to the subsidiary and the date the intercompany receivable originated.

Sincerely yours,

Vice President,
Federal Reserve Bank of Boston

3070.0.12 APPENDIX B—ACCOUNTING LITERATURE

The following is a list of generally accepted accounting principles (GAAP) governing the mortgage banking industry that are in the form of accounting standards and interpretations. Accounting standards may change over time. Current accounting literature should be reviewed with management during each inspection.

Statements of Financial Accounting Standards (SFAS)

SFAS No. 5, “Accounting for Contingencies”

SFAS No. 65, “Accounting for Certain Mortgage Banking Activities,” as amended

SFAS No. 77, “Reporting by Transferors for Transfers of Receivables with Recourse”

SFAS No. 80, “Accounting for Futures Transactions”

SFAS No. 91, “Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases”

SFAS No. 115, “Accounting for Certain Investments in Debt and Equity Securities”

SFAS No. 125, “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities”

FASB Technical Bulletin

Technical Bulletin No. 87-3, “Accounting for Mortgage Servicing Fees and Rights”

Emerging Issues Task Force (EITF)

Issue No. 85-13, “Sale of Mortgage Service Rights on Mortgages Owned by Others”

Issue No. 85-26, “Measurement of Servicing Fee under FASB Statement No. 65—When a Loan Is Sold with Servicing Retained”

Issue No. 85-28, “Consolidation Issues Relating to Collateralized Mortgage Obligations”

Issue No. 86-38, “Implications of Mortgage Prepayments on Amortization of Servicing Rights”

Issue No. 86-39, “Gains from the Sale of Mortgage Loans with Servicing Rights Retained”

Issue No. 87-25, “Sale of Convertible, Adjustable-Rate Mortgages with Contingent Repayment Agreement”

Issue No. 87-34, “Sale of Mortgage Servicing Rights with a Subservicing Agreement”

Issue No. 88-11, “Allocation of Recorded Investment When a Loan or Part of a Loan Is Sold”

Issue No. 89-4, “Accounting for a Purchased Investment in a Collateralized Mortgage Obligation Instrument or in a Mortgage-Backed Interest-Only Certificate”

Issue No. 89-5, “Sale of Mortgage Loan Servicing Rights”

Issue No. 90-21, “Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement”

Issue No. 92-10, “Loan Acquisitions Involving Table Funding Arrangements”

3070.0.13 APPENDIX C—REGULATORY GUIDANCE

The following is a list of sections in this manual that examiners may find particularly useful in the review of mortgage banking activities. Regulatory guidance also evolves over time. This list is not all inclusive.

2010.0.1	Policy Statement on the Responsibility of Bank Holding Companies to Act as Sources of Strength to Their Subsidiary Banks
2020.0–.7	Intercompany Transactions
2050.0	Extensions of Credit to BHC Officials
2060.0–.6	Management Information Systems
2065.2	Determining an Adequate Level for the Allowance for Loan and Lease Losses
2080.05	Bank Holding Company Funding and Liquidity
2080.0–.3	BHC Funding Practices
2125.0	Trading Activities of Banking Organizations
2126.0	Nontrading Activities of Banking Organizations
2126.1	Investment Securities and End-User Derivatives Activities
2130.0	Futures, Forward, and Option Contracts
2150.0	Repurchase Transactions
2190.0	Asset Securitization
3070.0	Section 4(c)(8)—Mortgage Banking
3080.0	Section 4(c)(8)—Servicing Loans
4000 sections	Financial Analysis
4030.0.2	Nonbanks (Analysis of Financial Condition and Risk Assessment)
4070.0	BHC Rating System

3073.0.1 EXPANDED STUDENT-
LOAN-SERVICING ACTIVITIES

A bank holding company applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and section 225.23 of Regulation Y to expand the student-loan-servicing activities of its nonbank subsidiary. The activities would consist of—

1. providing student-loan authorities (the authority) with regular reports that include information in the aggregate and by individual lenders concerning the volume of loans being serviced for the authority and the volume of loans outstanding;
2. preparing projections for approval by the authority of student loans to be purchased and commitments to be issued in the future, based on the volume of loans being serviced and commitments outstanding, consistent with the amount of funds available to the authority as the result of its sale of bonds;
3. advising eligible lenders, borrowers, and other interested parties of the authority's student-loan-purchase program, including the criteria used by the authority in purchasing student loans and the extent to which the authority will be purchasing loans in the future based on the availability of funds; and
4. meeting regularly with the authority to advise it of the nonbank subsidiary's efforts in connection with the student-loan activities.

Under no circumstances would the nonbank subsidiary be authorized to bind the authority or its bank trustee to commit to purchase or actu-

ally to purchase student loans from eligible lenders.

The proposed activities were regarded as being equivalent to the activities of a mortgage banking subsidiary of a bank holding company, authorized under section 225.28(b)(1) of Regulation Y, with respect to acquiring and servicing mortgage loans for institutional investors or in connection with the secondary-mortgage market. The activities proposed and currently conducted by the applicant, to the extent that they were different from the services performed by any institution that services loans for others, were perceived as being different only in that they related to servicing student loans for a governmental authority. Banks and their nonbank subsidiaries generally provide comprehensive loan-acquisition and -servicing "packages" for investors in mortgage and other loans. The bank holding company's nonbank subsidiary was the nation's largest servicer of student loans, and was thus particularly well equipped to perform the proposed expanded services.

In addition to determining that the proposed activities were closely related to banking to approve the application, the Board had to conclude that the proposed activities would produce benefits to the public that would outweigh any possible adverse effects, such as unsound banking practices, unfair competition, conflicts of interests, or undue concentration of resources. The Board made that conclusion in addition to determining that the balance of public interest factors that it is required to consider under section 4(c)(8) of the BHC Act was favorable. Accordingly, the application was approved on July 1, 1985 (1985 FRB 725).

A bank holding company or its subsidiary may engage in the activity of servicing loans or other extensions of credit for either affiliated companies or for persons or institutions not affiliated with the holding company. The service will often be carried on as an additional activity of a credit-extending subsidiary, such as a mortgage company, where the loan serviced was originated by the subsidiary and subsequently sold to an investor. A servicing company provides the collection vehicle through receipt and disbursement of funds for investors who may not possess the resources to accomplish the activity. The purpose of servicing is to keep a sound loan in good standing for a passive investor. The servicing company's remuneration is usually based upon a percentage of the outstanding balance of the loan.

The traditional servicing arrangement arises from the normal business of a mortgage company. The company grants extensions of credit to qualified borrowers and subsequently packages and sells these loans, normally without recourse, to individuals or institutional investors who contract the collection of the credit to the mortgage company. The company may also purchase mortgages or other extensions of credit in the open market with the intention of reselling the credit and retaining the servicing or can simply purchase servicing portfolios (12 C.F.R. 225.132). The collection itself is basically a bookkeeping function.

Servicing loans for others is relatively risk-free to the company when the credits are sold without recourse to investors. A credit which has been sold with recourse represents an unusual circumstance and should, therefore, be reviewed in detail. The serviced loans will generally be high quality mortgages which are in turn purchased from the company by passive investors desiring a fixed rate of return on their funds. The risk to a servicing company lies in its portfolio of unsold loans, or its "warehouse." The risk is two-fold: (1) the loan may not be of high enough quality to attract an investor so that the servicing company will have to continue to carry the credit for its own account, and (2) the loan was made at an interest rate which is below current market rates. In the latter case, the servicing company must either sell the loan at a discount or continue to hold the credit for its own account. In either case, the loan is treated as an asset of the company and involves credit risk.

The inspection of a servicing company, or a servicing department of a credit-extending sub-

sidary, should focus on adequacy of documentation and controls, and on the quality and marketability of the warehoused loans. The examiner should obtain a past due report for the portfolio and note in the inspection report significant credits which are past due together with the period of delinquency, the type of loan, and the asset classification, if any. The nature of the servicing business is such that the number of past dues should be small because loans are only warehoused for a short period of time until they can be sold to an investor. As a rule, a past due loan or a current loan which has been warehoused for more than several months is indicative of some problem with the credit. Each loan should be evaluated to determine the reason it has not been sold.

During periods of rising long-term interest rates, the warehouse portfolio becomes subject to the risk that a loan may not be marketable, except at a discount, because of its relatively low yield. This affects both the servicer's income and liquidity.

In the case of the parent company acting as a servicer, the inspection should also determine whether the activity is being carried on under the proper exemption. A bank holding company may act as a servicer under section 4(c)(8) of the Act or under the provisions of sections 4(a)(2) and/or 4(c)(1) of the Act. If carried on under Section 4(a)(2) of the BHC Act, the holding company is limited to servicing loans only for its own account or its banking and nonbanking subsidiaries. If carried under Section 4(c)(1)(C) of the BHC Act, the bank holding company is limited to servicing loans only for its own account or its banking subsidiaries.

Finally, the income of the company should be subject to scrutiny. A servicing company should be a profitable business. The servicer receives a fee based upon a percentage of the outstanding balance of the loan. In the early years of the payback period, the fee should significantly exceed the cost of the service, and because much of the portfolio will be refinanced either prior to its maturity or prepaid, the fee income should be sufficient to cover the servicer's cost plus profit. The reason for poor earnings in this activity is generally either inefficiency in the collection area, failure to attain the breakeven point of servicing volume, or the inability to turnover the warehouse portfolio often enough to maintain new fee generation. In the event that

the servicer is unprofitable, the examiner should determine the reasons and clearly set them forth in the inspection report.

The servicing arrangement is of a fiduciary nature and as such it gives rise to certain contingent liabilities. In the situation where the servicer is not fully and properly discharging its servicing responsibilities in accordance with the servicing agreement, the holder of the serviced notes might bring legal claims against the servicer. The inspection process should direct attention to this area including a review of the servicing agreement and verification that the servicer is fulfilling its obligations. Management should be reminded of the significant loss exposure which can result from improper attention to its fiduciary responsibilities.

3080.0.1 INSPECTION OBJECTIVES

1. To determine that internal controls are adequate to administer effectively the servicing of the loan portfolio.

2. To determine the level of exposure to credit risk of loans held for the firm's own account.

3. To determine if the firm's earnings are sufficient so as not to be a burden on the parent or subsidiary bank.

3080.0.2 INSPECTION PROCEDURES

1. Review the balance sheet to determine the volume of credits held for the firm's own account and evaluate their asset quality.

2. Review internal controls and evaluate their adequacy.

3. Review earnings and appraise the impact on the parent and bank subsidiaries.

4. Review servicing agreements and evaluate the potential or contingent risks to which the firm is exposed in the event of failure by a borrower to service its loan properly.

5. Determine whether mortgage servicing rights are recorded as an asset and whether they are being amortized over the average life of the loans being serviced.

Section 4(c)(8) of the BHC Act (Asset-Management, Asset-Servicing, and Collection Activities) Section 3084.0

A bank holding company may engage under contract with a third party in the management, servicing, and collection¹ of the types of assets that an insured depository institution may originate and own. The company cannot engage in real property management or real estate brokerage services as part of these services. See Regulation Y, section 225.28(b)(2)(vi). Provided below are some initial historical examples of Board orders that involve asset-management services related to this nonbanking activity. The commitments and conditions provided for within the Board orders should not be considered to be currently applicable.

3084.0.1 ASSET-MANAGEMENT SERVICES TO CERTAIN GOVERNMENTAL AGENCIES AND UNAFFILIATED FINANCIAL INSTITUTIONS WITH TROUBLED ASSETS

Three bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in providing asset-management services to the Resolution Trust Corporation and the Federal Deposit Insurance Corporation, and generally to unaffiliated financial institutions with troubled assets. The applicants committed to conduct these activities under the same terms and conditions as set out in 1988 FRB 771.

The commitments and conditions of this order required that (1) the asset-management activities would be provided to the banks and savings associations, (2) the applicant would obtain the Board's approval before providing asset-management services for pools of assets that were not originated or held by financial institutions and their affiliates, (3) the applicant would cause its asset-management subsidiary to establish procedures to preserve the confidentiality of information obtained in the course of providing asset-management services, and (4) neither the applicant nor its management subsidiary would take title to the assets managed by the asset-management subsidiary.

The applications of these holding companies were approved by a Board order on December 24, 1990 (1991 FRB 124). Two additional

orders about providing asset-management services were approved on March 25, 1991 (1991 FRB 331 and 334).

3084.0.2 ASSET-MANAGEMENT SERVICES FOR ASSETS ORIGINATED BY NONFINANCIAL INSTITUTIONS

Two bank holding companies (the applicants) applied jointly for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in collection-agency activities pursuant to Regulation Y through a joint venture. The Board concluded that the collection activities were permissible.

The bank holding companies also applied for the Board's approval to engage in asset-management, asset-servicing, and collection activities through a nonbank of the joint venture located in New Jersey. The subsidiary would provide asset-management services to the Resolution Trust Corporation (RTC) and the Federal Deposit Insurance Corporation (FDIC). It would also provide these services to unaffiliated third-party investors that purchase pools of assets assembled by the RTC or the FDIC. Under the proposal, neither the applicants nor this nonbank subsidiary would acquire an ownership interest in the assets that they manage or in the institutions for which they provide the asset-management services. The applicants further committed that they would not provide real property management or real estate brokerage services as part of the proposed activities.

The Board previously determined that, within certain parameters, providing asset-management services for assets originated by financial institutions (banks, savings associations, and credit unions) and their bank holding company affiliates is an activity closely related to banking (see 1991 FRB 331, 334 and section 3600.15.3). The applicants proposed to conduct all asset-management activities subject to the same conditions as in the Board orders previously cited.

The applicants proposed to engage in asset-management activities for assets originated by nonfinancial institutions as well as by financial institutions. These assets include real estate, consumer, and other loans; equipment leases; and extensions of credit. Assets of nonfinancial institutions include pension funds, leasing com-

1. Asset-management services include acting as agent in the liquidation or sale of loans and collateral for loans, including real estate and other assets acquired through foreclosure or in satisfaction of debts previously contracted.

panies, finance companies, and investment companies formed to engage in asset-management activities. The managed assets would be limited to the types of assets that financial institutions have the authority to originate. The Board concluded that the applicants would have the expertise to engage in managing these types of assets,

regardless of the originating entity. The Board also determined that the proposal was consistent with the asset-management proposals approved in its prior orders. The Board concluded that the applicants' proposed activities are closely related to banking and approved the order on December 21, 1992. (1993 FRB 131)

Section 4(c)(8) of the BHC Act (Receivables)

Section 3090.0

Two nonbanking activities authorized under section 4(c)(8) of the BHC Act, per Regulation Y in section 225.28(b)(1), are the discount purchasing of a client's accounts receivables (factoring) and the establishment of a revolving

credit facility secured by an assignment of accounts receivable (accounts receivable financing). These activities date back to Board orders issued in 1951. See sections 3090.1 and 3090.2.

3090.1.1 INTRODUCTION

Factoring is the discount purchasing of the client's accounts receivable invoices for goods that have been manufactured and shipped. Factoring differs from accounts receivable financing in that the factor assumes the credit risk of collecting payment from the recipient of the goods. The principal advantage of factoring is that the client is assured of the collection of the proceeds of its sales, regardless of whether the factor is paid.

A factor generally offers four basic services: (1) credit investigation and approval; (2) buying the client's accounts receivable at a discount (generally between .75 and 1.5 percent) after shipment of the goods to which there is no subsequent claim, just a claim against the invoices; (3) bookkeeping in the form of posting accounts; and (4) advancing funds in the form of an "open account" when there could be 30 days between shipment and payment. The later allows the client to replenish inventory loans for working capital or expansion.

Maturity factoring and advance factoring are the basic techniques of the industry. In maturity factoring, an average maturity due date is computed for the receivables purchased during a period and the client receives payment on that date. Advance factoring uses the same computations, however, the client has the option of taking advance payments equal to a percentage of the balance due at any time *prior* to the computed average maturity due date. The unadvanced balance, sometimes called the "client's equity," is payable on demand at the due date.

The factor's balance sheet reflects the purchases as "factored receivables" and the liabilities as "due to clients." Usually the due to clients balance will be significantly less than the factored receivables balance because of payments and advances to the clients. The income statement will show factoring commissions, which represent the discount on the receivables purchased. Interest income for advances on the due to client balances may or may not be a separate line item.

The factor is a pivoting point between the buyer and the seller. The buyer must pay or all parties lose. Also the seller must have a reputation for delivering quality merchandise. The factor must know the business well enough to account for sudden increases in returns for out-of-specification merchandise or for merchandise of low quality. If the seller does not perform adequately, payment for the goods may not be

forthcoming, and if bankruptcy threatens the seller, buyers may hold back their future purchases.

3090.1.2 FUNDING

Since factors traditionally provide financing to industries with seasonal borrowing requirements, such as textiles, shoes, clothing, and other consumer goods, their own funding programs will usually reflect this volatility. It may be expected that factors generally will have greater access to short-term unsecured credit facilities than would be expected for other non-bank activities. This would hold true for factors funded solely from internal sources as well as external sources.

Because of a factor's inherent funding volatility, a major portion of a factor's liabilities will be short-term debt. For the internally funded company, this source will be predominantly commercial paper proceeds from the parent company, with perhaps some bank line proceeds intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries. The terms and covenants of long-term debt appear to allow for relatively more flexibility in operations and more highly leveraged positions than similar debt for other financing industries in recognition of the volatility of factoring operations and the liquidity of factoring assets.

The principal suppliers of senior and subordinated funds to factors and accounts receivable financiers appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data is limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy. The "due to clients" account is another significant measure of a factor's liabilities. As noted before, the account represents the

accumulation of the amounts payable to the clients upon the maturity of their factored receivables. This liability is, to a large extent, self-liquidating through the collection of those receivables.

An analysis of the changes in the relative proportions of the “due to clients” account should provide valuable input into the analysis of a factor’s earnings. Since factoring is a highly competitive industry, price cutting has reduced factoring commissions to a point where they provide minimal support to earnings; therefore, the interest margins on factoring advances have a significant impact on net income. The implication of the analysis of proportional changes is that as more clients take advances (reducing “due to clients”), profit margins should widen, and conversely, as the “due to clients” proportion of total liabilities rises, profit margins may be expected to narrow.

3090.1.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.

2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios, and whether lending, monitoring and collection policies are adequate to maintain sound asset conditions.

4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.

5. To determine the viability of the company as a going-concern, and whether its affiliate status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.1.4 INSPECTION PROCEDURES

The inspection procedures for a factor have been divided into two phases, preliminary and on-site, when considered necessary.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site. The on-site segment of the procedures expresses some of the

typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. System approvals for offices and activities, including stipulated public benefits;

2. Financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns;

3. All management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status;

4. External debt instruments to determine material restrictive covenants;

5. Internal audit reports and workpapers;

6. Minutes of the board of directors, executive committee and loan committee, if available at the parent company;

7. The results of a parent company loan review, if any.

8. To be requested:

a. Schedules of past due loans, intercompany participations, and large loans;

b. Schedules of problem accounts, liquidating accounts, and repossessed assets;

c. General ledger trial balance;

d. Loan trial balance, including over-advances;

e. Statements of company lending, accrual, and other policies;

f. Reconciliation of the loan loss reserve for the period between inspections;

g. Listing of common borrowers between affiliates.

3090.1.4.1 On-Site Procedures

After reviewing the material available at the parent company, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision are relative size, current earnings performance, overall contribution to the corporation’s condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be

inspected each time the parent company is inspected.

The following comments provide a general outline of the factor's basic operation. This outline will provide a background for the comments in the inspection procedures.

While the typical factoring agreement stipulates that all accounts receivable of a client are assigned to the factor, not all are purchased without recourse. The agreement between the factor and the client will usually state that receivables subject to shipping disputes and errors, returns, and adjustments are chargeable to the client because they do not represent bona fide sales. In addition, sales made without the factor's approval are considered *client risk* receivables, with full recourse to the client if the customer fails to pay.

The usual approval process requires the client to contact the factor's credit department before filling a sales order on credit terms. The credit department will research its files, determine the credit worthiness of the customer, and approve or reject the sale. As stated before, if the credit department rejects the sale, the client may complete the sale, but at its own risk. The most common reasons for rejection are sales to affiliates, sales to known bad risks, sales to customers whose credit cannot be verified, and sales to customers whose outstanding payables exceed the factor's credit line.

Once a sale has been made and the receivable assigned to the factor, approved or not, the client's account will be credited for the net invoice amount of the sale. That is, any trade or volume discounts, early payment terms, and other adjustments are deducted from the invoice amount. The receivable then becomes part of the client's "availability" to be paid in advance or at the computed due date, depending upon the basis of the factoring arrangement.

Each month the client will receive an "accounts current" statement from the factor which details the transactions on a daily basis. This statement will reflect the daily assignments of receivables, remittances made, deductions for term loans, and interest charges and factoring commissions. Credit memos, client risk, charge backs, and other adjustments will also be shown. Client risk charge backs are the amounts deducted from the balance due to the client upon the failure of customers to pay receivables factored at client risk.

The accounts current statement and the availability sheets will be necessary for the asset analysis process. Considering the volume of transactions, the accounting system that develops this data will probably be automated, which

may allow the factor to obtain comparison and monitoring data on the client. If a monitoring system is in place, the data provided will be valuable in the asset analysis process.

The evaluation of a factor includes a review of its systems and controls as well as an analysis of the quality of its assets, both of which may be accomplished by a two segment analytical approach. A major portion of a factor's assets will be factored receivables, for which the credit department has the responsibility for credit quality and collection. The other major portion of the assets will be the client loans and credit accommodations, for which the account officers are responsible. The procedures for each area will be dealt with separately.

3090.1.4.2 Credit Department

Because of its integral function in the credit and collection process, the credit department is the heart of a factor. The department maintains credit files, which are continually updated as purchases are made and paid for by the customers. These files will include financial statements, credit bureau reports, and details of purchasing volume and paying habits. Usually, each customer will have an assigned credit line, which is the credit department's estimate of the customer's credit capacity.

The evaluation of this department should take the form of a review of a sample of the customer files. The sample may be drawn from lists of large volume customers and closely monitored customers, or it may be a random sample. The examiner should have either a copy of departmental policies and procedures or a verbal understanding of them prior to the review. It should be kept in mind that the objective of the review is to critique the credit and collection process and to verify departmental effectiveness, and not to obtain classifications.

3090.1.4.3 Asset Evaluation

Prior to the review of asset quality, the examiner should receive the lists of problem clients, client over-advances, term loans, and credit accommodations; as well as the aging schedule of factored receivables including client risk receivables. These will be used as the basis for selecting the clients to be reviewed. It is recommended that the selection be made from the list of clients with term loans, largest first, in addition to the

acknowledged problems. Clients with high dilution rates and those with client risk receivables equal to 20 percent or more of factored volume may also be included.

It should be noted that a factor usually collects principal and interest payments directly from the client's availability, which means that the expected delinquency rate is minimal. Past due factored volume is not an effective measure of client quality.

A maturity client's availability is the sum of all factored receivables, less trade and other discounts, factoring commissions, credit memos, and client risk charge-backs. There may also be other deductions for letters of credit and other credit accommodations. An advance client's availability would be further reduced by advances on the factored receivables, interest charges, and the reciprocal of the contractually agreed upon "advance" percentage. This reciprocal, 20 percent in the case of an 80 percent advance client, is sometimes referred to as the client's "equity" in the factored receivables. Availability may be increased by liens on additional collateral such as inventory, machinery and equipment, real estate, and other marketable assets.

The review and analysis of asset quality will be procedurally similar to that used in accounts receivable financing. However, certain aspects of the financial statements may need elaboration. The client's balance sheet will have a "due from factor" account instead of accounts receivable. The account balance may be somewhat lower than a normal receivables balance, which would affect turnover ratios and other short-term ratios. The difference relates to the client's ability to convert sales to cash faster with a factor than if the receivables were to be collected normally. In addition, the analysis of the statements should incorporate an assessment of the client's ability to absorb normal dilution and the potential losses associated with client risk receivables, particularly when these factors are higher than usual for the portfolio.

As a factor's systems and controls for client loans are somewhat similar to those for accounts receivable financing, the evaluation of asset quality must consider these factors before the classification of a client is made. While the typical client may have less than satisfactory financial statements, the factor's working knowledge of the client's operations and industry tends to mitigate the risk factors present.

For classification purposes, "client risk

receivables" is the only portion of factored volume that is appropriate for use in the amount classified. Because of the recourse aspect the balance is considered as an indirect obligation rather than a direct obligation.

As a further step in the evaluation of the lending area and its controls, the evaluation of the steps taken and the results of at least one recent client liquidation should be made. By reviewing the chronology of events along with the loan and collateral balances, the effectiveness of systems and controls under extended circumstances may be assessed. The type of liquidation will have a bearing on the losses taken. Losses tend to be higher when client fraud is involved.

In the process of evaluating a factor's condition, the adequacy of systems and controls and the capability of management are considered significant measures. Asset quality, as measured by classifications, may be influenced by seasonal aspects and should be carefully analyzed to allow for such influences. Because of a lack of regular and consistent comparative data for the industry, earnings and capital adequacy are evaluated in terms of the company's own performance.

The review of the company's internal systems and controls should be continuous during the inspection. Considering the large volume of daily transactions that flows through a factor, any internal control that can be easily negated represents a potential problem and should be brought to management's attention. In the broad context, this review would include the credit controls for both clients and customers. Since credit problems can develop rapidly in factoring, credit controls and systems must be responsive to the identification of these problems. Deficiencies noted should be discussed with management and, if significant, cited in the report. The company's earnings trends may be evaluated by using a comparative yield on assets approach. By analyzing yields on asset categories from period to period the examiner will be able to make a judgment as to the efficiency of the systems. Factors are subject to the same price competition in the commercial finance market as accounts receivable financiers. Declining portfolio yields may reflect the inroads made by competition and may indicate a decline in future profitability.

The subject of capital adequacy is influenced by the aforementioned seasonal characteristics. Over the period of a year, the comparisons of equity to assets and equity to liabilities will vary significantly. It is suggested that an average balance sheet be used to stabilize the variations.

In addition to balance-sheet ratio analysis, the effects of dividends and fees paid to the parent company on the capital accounts may be analyzed to determine the rate of internal capital generation. If the company is in a growth profile, or attempting to gain market share, the

comparisons between fiscal periods may reflect a declining trend. Such a trend should be discussed with parent company management.

The report comments should summarize these considerations in a clear, concise presentation.

3090.2.1 INTRODUCTION

Accounts receivable financing is a revolving credit facility secured by an assignment of accounts receivable. As a financing technique, it allows the client (the financed company) to obtain working capital without waiting for customer payments. This form of financing is frequently used by companies with working-capital shortages, companies in seasonal industries, and companies with weak financial conditions. Typically, the funding requirements of these companies are in excess of any amounts that would be available through unsecured bank financing.

The financing process begins with a bona fide credit sale by the client and the assignment of the resulting receivable to the financier. Upon assignment, the financier advances a specific percentage of the receivable to the client. The loan is repaid by customers' direct payments or, in the case of a lockbox, by the remittance of the customer's payment to the financier, who returns the amount in excess of the loan to the client. While a simple concept for a single transaction, the operations of an accounts receivable financier become a complex process when many clients and perhaps thousands of receivables are involved.

Companies engaged in accounts receivable financing usually incorporate the full range of commercial financing activities into their operation. These activities would include inventory financing, loans secured by machinery and equipment, some forms of real estate loans, and loans secured by other assets. As a general statement, these companies will provide working-capital financing using almost any form of viable collateral to secure the loans. These additional activities are facilitated by the financier's in-depth knowledge of the borrowers' financial conditions and cash flows. This knowledge comes from the controls placed on the borrowers, such as periodic field audits, the flow of the borrower's cash through the company, and an internal staff that specializes in the financed industries.

3090.2.2 FUNDING

Accounts receivable financing companies, like factors, traditionally provide working-capital financing to seasonal industries. Consequently, the funding programs of these financing companies will reflect these variations in their increased use of short-term funds relative to other nonbanking activities.

Since many accounts receivable clients have

seasonal businesses, a large portion of the financier's liabilities will be short-term debt. For internally funded financiers, this debt will be predominantly commercial paper proceeds from the parent company, with perhaps some bank lines intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries, another parallel to factoring. The terms and covenants of long-term debt appear to allow for more flexibility in operations and somewhat more highly leveraged positions than similar debt for other financing industries. This practice is apparently in recognition of the volatility of this form of financing and the liquidity of the assets supporting the financier's loans.

The principal suppliers of senior and subordinated funds to collateral lenders (factors and accounts receivable financiers) appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance-sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data are limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy.

3090.2.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.

2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.

4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.

5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.2.4 INSPECTION PROCEDURES

The inspection procedures for an accounts receivable company have been divided into two phases, preliminary and on-site.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site, if required. The on-site segment of the procedures expresses some of the typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status
4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers—
 - a. internal control exception report to determine weaknesses and corrective actions,
 - b. flow charts in the workpapers which will enable the examiner to become familiar with company systems, and
 - c. additional internal reports may be identified which may assist the inspection on-site
6. minutes of the board of directors, executive committee and loan committee, if available at the parent company
7. the results of a parent company loan review, if completed
8. To be requested:
 - a. schedules of past-due loans, inter-company participations, and large loans
 - b. schedules of problem accounts, liquidating accounts, and repossessed assets
 - c. general ledger trial balance
 - d. loan trial balance
 - e. statements of company lending, accrual, and other policies
 - f. reconciliation of the loan-loss reserve for the period between inspections
 - g. listing of common borrowers between affiliates

3090.2.4.1 On-Site Procedures

After reviewing the material available at the parent company level, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The on-site inspection procedure will be similar to that used in a commercial department of a bank. Selection and evaluation of the assets, review of internal controls, identification of lending policies, and credit review procedures are all familiar areas to the examiner and do not need further explanation. However, the accounting and reporting systems are somewhat different and will require the examiner to become familiar with systems and policies before proceeding with the asset evaluation process.

3090.2.4.2 Accounting and Controls

There are two basic systems within the accounting and control environment of an accounts receivable company. The first system provides accounting and control for client loans and collateral balances and is frequently automated to handle the large flows of data generated in the operation. It is also common to find lockbox arrangements with banks that tie into the client system for the receipt of customer remittances. Such lockbox arrangements provide a greater degree of control over remittances.

The mechanics of the client system will be detailed in the internal audit file, which should also indicate the adequacy and efficiency of the system's controls. The audit file may also indicate the accounting techniques used and the client-monitoring reports that are generated by the system, such as dilution rates and trends, and year-to-year volume and operating comparisons. The client system provides the basic data for the company's accounting and control sys-

tem. While the basic accounting considerations are outlined in the AICPA *Industry Audit Guide: Audits of Finance Companies*, there are certain accounting aspects which deserve additional treatment. In some cases where a group of related companies are clients, the financing arrangements may include cross-guarantees and cross-collateralization agreements. In these cases, the financier might utilize excess availability for some of the related entities to offset the over-advance of another entity. Another treatment that may be applied is the use of a “reserve for liquidating accounts,” which in some instances is a specific reserve for a problem account that reverses at least current period earnings for the account. This reserve is in addition to the allowance for bad debts and may not be an explicit balance sheet account, but an offset to gross loans outstanding.

3090.2.4.3 Definitions

While many of the following comments define certain routine accounting and control considerations for accounts receivable financing, certain of the concepts are necessary for proper evaluation of client quality (i.e., availability, dilution, over-advances, and advances on other collateral). These definitions are general in nature as is the terminology, however, the processes will be similar in almost every company.

Loans to the client are based upon a contractual percentage of the client’s eligible receivables against which the financier has agreed to advance funds. Eligible receivables include all assigned receivables, less trade discounts, early payment discounts, contra-accounts (reciprocal sales between the client and customers), receivables past due beyond the eligibility period specified in the contract, and other adjustments. The advance percentage is determined by a number of factors which include the expected average dilution rate (disputed invoices, misshipped goods, returns and allowances, etc.) and the client’s expected gross profit margin. As a general rule, lenders in this field try to finance only the cost of sales and not the client’s profits.

Because this form of financing involves rapidly changing collateral balances, a high volume of customer payments, and frequent loan requests, the financier has to determine the client’s “availability” (loanable funds) before advancing the loan. Availability is the total of eligible receivables times the advance percentage less credit memos and the current loan balance. Credit memos are adjustments to the customer’s account for errors in the client’s shipments (i.e.,

the quantity shipped was less than that ordered). It is the client’s responsibility to provide this information to the financier on a daily basis. If there is sufficient availability, the requested amount is usually advanced. On occasion, the availability computation will show the client to be “over-advanced,” that is the loan balance exceeds the agreed percentage advance against collateral. This situation may have occurred because some receivables have become past due, or the financier may have authorized additional funds to meet some valid client requirement. As a rule, over-advance positions are usually subject to a quick paydown to reduce the loan balance to the original contractual terms.

At times, the availability computation will reflect additional collateral value in the form of inventories, machinery and equipment, and other assets, shown net of an advance percentage. These categories usually indicate term loans, secured by liens against the respective assets, which expand the collateral base and provide additional support to the client’s working capital requirements. These term loans should not be confused with loans for the acquisition of such assets which might appear only in the client’s monthly statement.

The accounts receivable financier charges interest on the daily cash borrowings of the client and accumulates these charges on the client’s monthly statement. The total interest charge for advances on receivables and other loans is deducted directly from remittances received by the financier. Accordingly, the expected delinquency rate for an accounts receivable operation is low except for the rare loan which is paid directly by the client and other assets which formerly belonged to a defunct client.

3090.2.4.4 Over-Advances and Other Loans

It was indicated earlier that an over-advance represented funds advanced in excess of available loanable funds and that there are two basic causes for over-advances. Some over-advances occur because a portion of eligible receivables becomes past due and ineligible for advances. This condition is usually corrected by the assignment of additional receivables or receipt of customer payments, and therefore may exist only for a few days.

The other basic over-advance occurs when a client requires additional funds for valid busi-

ness purposes, such as an inventory buildup at the beginning of a season. In such cases, the over-advance is set up as a very short-term loan and paid down rapidly out of the client's availability. While the policy for over-advances varies between financiers, when they are permitted they are usually carefully analyzed by the internal credit committee and closely monitored until paid off.

If a client is involved only in receivables financing and has made an over-advance request, the financier generally will prefer to take a lien against inventory rather than make an unsecured over-advance. Regardless of the purpose of the inventory loan, the financier will advance only a small percentage of the inventory value (40 to 50 percent) to allow for shrinkage, spoilage and obsolescence of the collateral. While inventory liens are in effect, the field audit staff will partially verify the inventory during each audit.

While machinery and equipment may be pledged as additional collateral to support working capital loans during the business period, most client companies will also finance equipment purchases on a secured basis. In either case, the financier usually advances a percentage of the quick sale or auction value of the equipment as determined by an appraisal. During field audits, the presence of the equipment and appropriate lien tagging are verified by the field auditors.

On occasion, a lien on real estate is part of the pledged collateral. The real estate may be operating premises, land, or the property of the principal of the client. Such liens may occur when the client is acquiring new, or expanding old, operating facilities and is using the financing relationship to fund the project. However, in many cases the lien was taken to provide additional collateral for working capital loans. In either case, appropriate documentation and appraisals should be on file.

It should be noted that loans on real estate collateral are limited to those providing support to the primary business of the client. Loans to finance speculative real estate acquisitions, and unrelated commercial property are not considered to be the usual practice of this industry, and would be considered as not complying with the general activities of a commercial finance company, unless specifically approved.

3090.2.4.5 Asset Evaluation

In selecting the loans to be reviewed, the first

group to be considered is the acknowledged problem accounts. The next sample should be drawn from accounts with high dilution rates, those with frequent or large over-advances, and those which constantly take down all of their availability. Participations, purchased or sold, between affiliates should also be included in the examiner's sample. While this approach may exclude some of the larger accounts, it is intended to include those accounts which are potential problems in the primary review group. Should the company have a monitoring system for potential problem accounts, the system should be used for drawing the review sample.

The principal tools for the review process should include: the credit file, the field audit file, the monthly statement for the inspection date, the availability sheet for the inspection date, and updated information for the interim period ending with the on-site inspection date. Within the credit file, the copies of the financing agreements will indicate the specific terms of the borrowing relationship: the pledged collateral; advance percentage; interest rate; guarantees; appraisals; and the required communications, such as monthly receivables agings, inventory and machinery and equipment certification, etc. The usual file information will also include management's analysis of the client's operations.

The field audit file will contain the audit reports originated by the financier's field audit staff. These reports are usually quite comprehensive, with a primary focus upon critical financial areas. As a minimum, the auditors will analyze trade payables, State and federal taxes, cash flows, inventories, and receivables. Particular attention is paid to the client's sales and shipping procedures in order to ascertain that valid invoices are being assigned to the financier. The client's accounting procedures are also analyzed to determine their effectiveness and accuracy. These reports represent a primary source of information regarding the general financial condition of the client.

The client's monthly statement and availability sheets represent spot information on the client's activity. Many clients operate in seasonal industries such as clothing and textiles. In such industries, a client will tend to use all of its availability, as well as seasonal over-advances, during its inventory buildup period, and will pay off the over-advances and may have excess availability during the sales and collection period. The examiner will have to analyze the client's current position with regard to its particular operating cycle. Over-advances granted to a client for valid reasons do not necessarily repre-

sent undue exposure or a substandard asset for the financier.

The financial statements of a client quite frequently reflect a “relatively unsatisfactory or weak” financial condition, with minimal working capital, high leverage, and uncertain earnings as prime ingredients. There have been cases where both deficit working capital and deficit net worth were in evidence, however, the financing relationship has continued to function properly. The financier can continue these relationships if the short-term factors (sales volume, receivables and inventory turnover, and current liabilities) are appropriate and the character of the principals warrants the exposure. Analysis of a financed client should emphasize the short-term analytical factors and the related trends in the evaluation of asset quality.

Such factors as the success of the selling season, availability of materials, and fad merchandising will have direct impact on the client’s financial condition. While the loan may be adequately protected by pledged collateral, the ability of the client to continue operations may be affected by these short-term factors.

For classification purposes, the financier’s controls will have to be considered in addition to weighing the degree and quality of collateral protection, short-term factors, and the client’s ability to withstand any financial reverses that are evident. Clients with deficit net worth, past-due trade obligations, and delinquent taxes should be considered to be problems and appropriately classified. The ability of the financier to control the risk exposure in the portfolio will be an important consideration in determining whether to classify a specific loan.

3090.2.4.6 DPC Assets

In some companies, assets acquired from defunct clients remain in the loan account instead of being reclassified to another balance-sheet category. Usually, these assets are uncollected accounts receivable, inventory, and machinery and equipment which have not been liquidated. However, these assets may include securities, as well as business and personal real estate, which had been pledged as collateral. By retaining these assets in the loan category, effective liquidation of the respective assets may be delayed because they usually represent small dollar amounts. Apart from this consideration, classification as loans may disguise the fact that certain of the assets may be subject to provisions of Regulation Y and the act, such as control and retention considerations. Separate control of these assets is recommended.

It is common practice in the accounts receivable and factoring industry for the lender to require a pledge of client company stock by the principals, particularly in overextended situations. Additional pledges of securities owned by the principals may also provide added collateral. While such pledges are not precluded by Regulation Y and the act, once they become company assets they should be reviewed for control and retention purposes.

3090.2.4.7 Financial Condition

Secured lending relies upon the four C’s of credit: the traditional Capital, Character, Capacity, and Collateral. Pragmatically, these lenders practice a fifth C, Control. In this context, control implies the continuous monitoring of the client’s financial condition, continued evaluation of the collateral, constant contact with the client, and the adjusting of the credit accommodation to conform to the client’s current situation. This control is the reason that the secured lender can maintain a proper and mutually profitable financing arrangement with the client.

It is to be expected that the typical portfolio may include clients with less than satisfactory financial conditions. Considering the controls imposed upon the borrowing relationships, the secured lender has compensated for some of the additional risk in the loans. The combination of field audits, collateral controls, and account officer contact can be expected to reduce the exposure to unsatisfactory clients to a minimum. However, clients do fail and losses may be taken in liquidating the account. The incidence rate of liquidations and the extent of losses taken may be an indicator of the effectiveness of company controls.

The earnings of an accounts receivable company are based upon loans carrying interest rates above prime, which means that loan volume is a major determinant of revenues. Because this industry is very competitive, loan pricing is frequently used to obtain new clients from other lenders in order to promote growth in loan volume. Increases in loan volume combined with declining interest margins may be an indicator of price competition that is yielding negative results. Analysis of client turnover may verify this possibility.

In summary, management’s ability to control risk and achieve profitability is essential to the soundness of an accounts receivable operation.

The effectiveness of company policies, the expertise of the lending staff and field audit staff, and the adequacy of systems and controls are the expressions of this ability to control risk. Company profitability is a measure of man-

agement's ability to obtain satisfactory client quality and terms in a price-competitive environment. The examiner will have to balance these factors in assessing the condition of the company.

3100.0.1 INTRODUCTION

The basic activity of a consumer finance company is making installment loans to individuals and is permissible pursuant to section 225.28(b)(1) of Regulation Y and section 4(c)(8) of the BHC Act (the act). In most areas, a company may make these loans under one or more of the following licenses: consumer discount, small loan, sales finance, or second mortgage. Most of a company's activity will probably be direct cash lending, in which the borrower and the lender come into direct contact with one another in the credit-extension process. However, a significant volume of lending is done through third-party contact. This is sales finance lending in which the company purchases, or discounts, the loans originated by a durable goods dealer in daily retail sales activity. Second mortgage lending may be originated from either direct contact or through home-improvement contractors.

Most consumer finance companies offer credit-related insurance as part of their services, and may have a captive insurance subsidiary if they are large enough. Inspection considerations and procedures for reviewing credit-related insurance activities are covered in section 3170.0.

3100.0.2 FUNDING

In some holding companies, management has elected to use a conventional industry funding pattern to support its consumer finance company operations. This pattern makes use of long-term subordinated debt in a specific proportion to equity capital. The further addition of senior long-term and short-term debt is then limited by restrictive covenants incorporated into the subordinated debt agreements. These covenants also provide operating limits for management in such areas as the proportions of specific classes of assets, minimum levels of net worth to be maintained, and the maximum dividend payout allowable. Since the wording and limits of these covenants are negotiated between the borrower and the subordinated debt holder, generalizations regarding the usual terms are not practicable.

It appears that certain life insurance companies supply most of this subordinated debt to the consumer finance industry. Along with their general knowledge of the industry, these insurance companies police their loans by requiring periodic reports from the borrower and by sending teams of their people to review the borrow-

er's operations. In a sense, this approach to funding represents regulation and control by market forces rather than by governmental intervention.

In other holding companies, management has elected to support these operations using holding company funding sources such as commercial paper and lines of credit. In using this approach, operating management is generally free from market restrictions on operations.

It is likely that most affiliated consumer finance companies will have a funding plan that falls somewhere between these two extremes. Since commercial paper generally carries a lower total cost than bank lines of credit, the examiner may find that the senior short-term debt component is almost completely supplied by the parent company. On the other hand, long-term debt may have been obtained directly, or with the parent company's guaranty, or it may have been borrowed from the parent company's sources—that is, the parent borrows from a third party and re-lends the proceeds to the subsidiary.

Since a large volume of consumer installment paper carries maturities of three years or more, the use of commercial paper proceeds with maximum maturities of 270 days warrants some comment. Securities Act Release No. 401 specifically recognizes this use of commercial paper as appropriate. Further information may be found in the Code of Federal Regulations, 17 C.F.R. 231.4412. Also see sections 2080.1 and 5010.16 for information on commercial paper.

3100.0.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.
2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.
3. To determine the quality of the asset portfolio, and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.
4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.
5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence on the condition of the consolidated corporation or the subsidiary bank(s).

3100.0.4 INSPECTION PROCEDURES

After reviewing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by delinquency reports and industry comparisons (detailed later in this section), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted, providing that a fairly recent on-site inspection had been conducted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The inspection procedures for a consumer finance company have been divided into two phases: preliminary and on-site. The preliminary phase entails the gathering and analysis of information at the parent company to determine the scope of the field work to be performed on-site. The on-site phase establishes a minimum scope of the inspection at the main office, and includes considerations to be incorporated into a visit to field offices if the inspection scope is expanded to that degree.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, delinquencies, and other reports regarding loan portfolio and company status including the Robert Morris Associates' *Direct Cash Lending Questionnaire* and similar reports

4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers:
 - a. internal control exception reports to determine weaknesses and corrective actions
 - b. flow charts in the workpapers to become familiar with company systems
 - c. additional internal reports may be identified which may assist the inspection on-site
6. examination reports of any state regulatory agencies having jurisdiction over the company's offices
7. minutes of the board of directors, executive committee, and any other such committee, if available at the parent company
8. the results of a parent company loan review or operations review, if conducted and available
9. the following items to be requested from management:
 - a. detailed past-due schedules and inter-company participations
 - b. schedule of problem accounts, liquidating accounts, and repossessed assets
 - c. general-ledger trial balance
 - d. loan trial balance
 - e. policy statements on lending, accrual, and charge-offs

 - h. listing of company offices with addresses and operating licenses

3100.0.4.1 On-Site Phase

The procedures of the on-site inspection are intended to evaluate management and its supervisory efforts, to determine the soundness and compliance with the company's operating policies, and to analyze the impact of these policies on the company's financial condition using ratio analysis. A thorough understanding of the policies and systems of the company is necessary for the examiner to accurately determine the company's condition.

During the initial period on-site, the examiner may obtain an overview of the company's systems by interviewing the key staff officers. These individuals can provide the examiner with the detailed reports, policy manuals, and other information necessary for the inspection.

3100.0.4.2 Policy Evaluation

Because of its large volume of transactions and the number of offices involved, the typical consumer company will maintain an extensive set of policy and procedure manuals which are intended to guide company personnel in their daily activities. During the review of these manuals, the examiner should bear in mind that liberal policies and procedures may allow the company to mask portfolio problems and reflect other than an accurate condition in its financial statements.

The principal policies to be considered cover such areas as:

1. extensions of credit;
2. treatment of delinquent accounts and partial payments;
3. loan renewals;
4. loan charge-offs;
5. provisions for loan losses;
6. bulk purchases of loans, for both credit and account purposes; and
7. treatment of deferred income.

After assessing the soundness of company policies, the next step is to test their implementation through a review of the company's supervisory structure.

3100.0.4.3 Evaluation of the Supervisory Structure

The effectiveness of the supervisory structure is a key element in the condition of a consumer finance operation. This system serves two functions: it communicates the policies to the field personnel, and it enforces those policies. Assuming that management's policies are valid, the effectiveness of this system will be partially reflected in the ratio analysis of the company. However, it may take close analysis to determine whether any poor ratios are due to inadequate policies or ineffective enforcement.

In order to evaluate the supervisory effort, the examiner may review a sample of the various supervisor's reports which are prepared after visits to the loan offices. The sample should represent a cross-section of the offices and supervisors in order to obtain a balanced view of the company.

A further evaluative step may be undertaken if there are sufficient resources available to the examiner. The on-site visits to selected loan offices may provide considerable input to the examiner in assessing supervisory effort. In selecting the offices to be visited, well-performing as well as poor-performing offices

should be selected. Concentration on poor offices will result in a biased assessment of the supervisory effort and may result in an invalid evaluation of company policies. The selection of the offices may be made by using the number of policy exceptions cited, poor performance records, or local economic conditions as criteria.

3100.0.4.4 Detailed Procedures for an Office Visit

The following steps outline a general procedure for determining field compliance with company policies and assessing the effectiveness of the supervisory effort. The examiner may modify, eliminate, or expand any of these steps or may devise any procedure deemed appropriate under the circumstances present.

The review of loans on-site should be oriented toward confirming the implementation of company policies for delinquency, balance renewals, charge-offs, extensions, partial payments, collection, and loan approvals. This review is intended to be a test of compliance and not a review of specific assets for classification purposes.

1. Review the detailed delinquency report for the selected office for a short period before the inspection date, generally two or three months. Trace the well overdue loans through to resolution, pay-off, charge-off, or reinstatement. Check these loans against the loan register to determine whether new loans have been granted to these customers and if so, determine if they are in accordance with company policy.
2. Review the controls for charging off loans and determine the effectiveness of the collection and recovery effort.
3. Review the loans to present borrowers. While renewals are usually granted to the better customers, the examiner will find a volume of renewals ("under 10 percent new money advanced" loans). In some companies, these "under 10 percent new money" loans represent efforts to rehabilitate borrowers with poor payment records due to ill health, unemployment, etc. However, the examiner may find that management is using this approach to adjust and control delinquency and loss rates. There should be sufficient internal controls present to prevent the continuous renewal of such loans to poor borrowers.

The examiner may find that some office personnel are circumventing these controls, for example, by advancing 11 percent new money to the borrower. If found, such circumvention raises serious questions regarding portfolio quality, the adequacy of internal controls, and the effectiveness of the supervisory effort. A high volume of “under 10 percent” loans or evidence of circumvention of controls may warrant separate treatment in the report.

4. Review partial-payment, interest-only, and extension accounts. Significant numbers of these accounts may indicate potential problems for the loan portfolio and the office.
5. Review credit-extension and loan documentation procedures, especially if the office’s portfolio has a high level of losses or frequent litigation. Proper credit controls and documentation are essential for sound operations. If the office extends second mortgage financing, appraisals and lien searches should be included with the documentation.
6. Test the office’s delinquency reporting. There are two methods for computing delinquencies, a contractual basis and the recency basis. On a contractual basis, principal reductions are applied to the most overdue payment under the contract and the loan is considered past due from the date of the oldest unsatisfied payment. On a recency basis, delinquency is computed from the date of last payment regardless of contract terms.

As an example, assume a loan was granted with payments beginning the first of March. The borrower makes the first payment on time and the second payment on the first of June. On the first of April, the loan is a 30-day recency account and current contractually. On the first of May, the loan is a 60-day recency account and a 30-day contractual account. Upon receipt of payment in June, the loan is current on a recency basis and a 60-day (two-payment) contractual account. Notice the difference in computations between the banking industry and the consumer finance industry.

The consumer finance industry has begun to institute contractual delinquency reporting standards. As these standards are developed and refined, changes in the computation of delinquent accounts may be expected.

7. Review the collection effort. The past-due accounts will be under the control of the collection manager, whose objective is to

return these accounts to current status. The manager’s collection efforts must begin early in the delinquency pattern if the loans are to be salvaged from charge-off. Consistent, persistent, frequent effort is expected.

The foregoing steps should provide the examiner opportunity to evaluate the company’s policies, procedures, and supervisory systems.

3100.0.4.5 Additional Procedures

While field visits are a desirable aspect of the inspection procedure, the examiner may have to rely on other procedures to be satisfied with certain aspects of company operations, particularly when the company reports past-due receivables on a recency rather than a contractual basis. The additional procedures may be necessary when the examiner has other reasons to question portfolio quality or the adequacy of internal controls.

The examiner may perform an extensive review of the most recent audit of the company, including the workpapers and programs of the internal and independent auditors, when available. In this review, the examiner should be able to determine whether internal controls are adequate, and portfolio characteristics are properly reported.

3100.0.4.6 Compliance

Certain aspects of the company are subject to review for compliance with the requirements of the act and Regulation Y. These include public benefits, office activities and locations, and bulk purchases of assets.

1. Public benefits stipulated in approval orders frequently require continuing reduced interest rates or insurance charges as part of the approval to operate. It is expected that these relative public benefits continue in effect despite changes in state-mandated rates.
2. Office locations and activities are subject to approval by the Board before opening for business. The operating licenses and activities of the offices should also be reviewed for compliance with the respective approvals.
3. On occasion, a consumer finance company may make a bulk purchase of loans or other assets of another finance company. Under certain circumstances, these purchases require the prior approval of the Board (12 C.F.R. 225.132). These bulk purchases should not be confused with the bulk purchase of sales finance contracts from a retailer recently signed to a dealer agreement.

4. While most consumer finance activity relates to consumer installment loans, some companies also extend credit under the “large loan” provisions of the consumer lending statutes of certain states. While the limitations vary from state to state, these provisions allow loans of many times the size of normal consumer loans. A review of these large loans may indicate that there are extensions of credit to local businesses which may constitute commercial installment lending. Unless specifically approved by the System, this activity may not be permissible for the company being inspected. Review for compliance with various consumer regulations is the responsibility of the Federal Trade Commission.

3100.0.4.7 Asset Classification Policy

As previously discussed, companies use one of two different methods of delinquency computation. In general, classifications should be based on the *contractual* reporting basis whenever possible. Since much of the industry utilizes *recency* reporting, which tends to reduce classifications comparatively, the classification approach enumerated above may unduly penalize an affiliated company using the contractual basis. This is particularly true when such important measures of portfolio quality as the liquidation ratios are in line with industry averages. Therefore, formula classification may result in more severe classifications for companies using the contractual method than those reporting on a recency basis. Examiners should indicate the reporting method used when calculating classifications.

Classification information is used to evaluate the adequacy of the loss reserve. In assessing the adequacy of the loss reserves, the examiner should take into consideration the charge-off frequency, the period of delinquency which would require charge-off under company policy, and the controls regarding renewal of severely past-due accounts. A shorter charge-off cycle prevents the accumulation of poor-quality assets; in this respect, monthly charge-offs are preferable to annual charge-offs. An unlimited “when deemed uncollectible” charge-off policy is considered lax and inadequate. The delinquency period to required charge-offs refers to the period of time a loan is past due before it is charged to the reserve; a six-month period is understandably preferred to a nine-month or one-year period. Management should have sufficient controls in place to prevent the continued

renewal of loans to avoid charge-off. Adequate controls might include special coding of such loans, with supervisory review of the renewals. Inadequate controls over these assets represent poor management practices deserving special comment.

Most subordinated debt agreements provide for an adjustment (reduction) to net worth when calculating compliance with leverage limits for any loans past due 60 days on a recency basis that exceed loss reserves. As there are some seasonal characteristics to the loan portfolio, it may be of benefit to compare the delinquency statistics on inspection date to the company’s seasonal pattern as revealed in both the subordinated debt calculations and monthly past-due reports. It is possible that a currently adverse portfolio condition may be due to local economic conditions which correct themselves over a period of time. Such conditions may relate to a tourist economy, an agricultural community, or a strike at a major local employer’s plant. Consumer finance companies are very sensitive to these local factors; therefore, these factors may temper the examiner’s evaluation of the loss reserves.

3100.0.4.8 Ratio Analysis

In order to assess the condition of a company using ratio analysis, the examiner will have to be familiar with the company’s accounting policies and systems. It will become obvious from the data used in the ratios that, under certain accounting treatments, the data can be misinterpreted. The following analysis has been structured around the *Direct Cash Lending Questionnaire*, published by the Robert Morris Associates and endorsed by the National Consumer Finance Association, in an effort to provide both a format for developing the information and a means of minimizing the possibility of misinterpretation. While some consumer companies do not prepare the questionnaire, much of the information is required for management purposes and should be available from company systems.

The analytical factors presented have been derived from two principal sources: *A Lender’s Approach to a Realistic Analysis of Consumer Finance Companies* by Richard E. Edwards (Philadelphia: The Philadelphia National Bank, 1970) and the *Industry Audit Guide: Audits of Finance Companies* by the Committee on Finance Companies (New York: American Institute of

Certified Public Accountants, 1988). These sources provide basic information on certain accounting and management policies and are recommended as references for the examiner. While the Federal Reserve System stipulates no specific accounting policies, the examiner may choose to criticize those policies which result in a misleading presentation of the company's financial condition.

Each year the *Annual Statement Studies*, published by Robert Morris Associates, includes sets of consumer finance company operating ratios. This information will provide a background against which the performance of the company under inspection can be measured. Such compiled ratios should be used only as background as they represent the "average company" in the respective sample. Attention should be directed toward the company's trends as they compare to the industry's trends and the changes in the company that are indicated by those trends.

3100.0.4.9 Delinquency

As shown in the *Annual Statement Studies*, the delinquency rates are on a recency-of-payment basis. *While past-due statistics based on contractual payments are preferred*, companies continue to report on a recency basis. It is important to have full knowledge of the company's reporting, lending, and renewal policies in order to fully understand the implications of this data. The trends for "interest-only" accounts and "partial-payment" accounts will provide some measure of the adherence of the operating personnel to company policy regarding these loan categories.

3100.0.4.10 Liquidation

Liquidation ratios provide two types of information. First, they indicate the amount of principal cash flowing back to the company for liquidity purposes. Secondly, they indicate the amount required to pay senior debt and the period of time required to do so. Several ratios follow:

1. Average monthly cash principal collection to average net monthly outstanding.

The higher this percentage, the more liquid the portfolio. A company following conservative policies such as requiring full payments and a contractual aging of receivables

will tend to show a higher principal collection percentage and, accordingly, a higher liquidity. This ratio can be used to estimate near term collections as compared to current outstandings.

Monthly cash collections should not include loan renewals or rebates during the period. On an industry-wide basis, there appears to be a pattern of increased loan renewals during November and December, which would be reflected in a seasonal decrease in principal cash collections. Lower than expected collections may be indications of changes in local economic patterns or of increased market effort by a competitor which has resulted in loan payoff. In any event, adverse change in the collection pattern should be reviewed for the underlying causes.

2. The ratio of unsubordinated liabilities less cash and near cash to estimated monthly principal collections results in the number of months it would take to pay senior debt.
3. The ratio of senior debt to gross receivables reflects the proportion of gross receivables which would have to be liquidated to repay senior debt. The higher the percentage, the more senior lenders are relying on the assets for protection.

3100.0.4.11 Loss Reserves

Analysis of the loss reserve for a specific entity has to include company policy regarding loan charge-offs, delinquencies, payments, and charge-off frequency. In addition, if charge-offs are made gross of deferred income, the reserve account may be slightly larger than if charge-offs were net of deferred income. Ratios used to evaluate loss reserves include—

1. Reserve for loan losses to total receivables, net of deferred income,
2. Loans charged off less recoveries to average outstandings (net or gross of deferred income, depending on policy).

Unless the company's charge-off and delinquency policies are realistic, this ratio will not depict true losses over the periods, and

3. Recoveries to loans charged off tends to be higher in companies with conservative charge-off policies than those with liberal policies. This ratio is indicative of the effectiveness of a company's collection and follow-up policy.

can provide the examiner with some information regarding the company's renewal and credit policies.

Lengthening of loan maturities during the current period will be reflected in the future average monthly principal collections and in the company's liquidity. While loans of longer maturity are not necessarily indicative of an adverse trend, the reasons behind a longer maturity portfolio should be analyzed. Ratios used to evaluate loan volume include:

1. *New money advanced to present borrowers to total loan volume.*

This ratio is somewhat indicative of whether the company's renewal policy is conservative or liberal. A high percentage may indicate that a volume of new money is being advanced along with the renewal of the previous balance.

2. *Loans to present borrowers with less than 10 percent new money advanced to loan volume.*

A high ratio can indicate the possibility of disguised delinquencies and potential charge-offs. The examiner may take a random sample of loans in the new money advanced to present borrowers category and review them to determine whether or not the company's "balance renewal" policy is being followed.

The preceding ratios were presented because they represent a means of measuring the effect of certain company policies. The analysis of company operations may be expanded to include other ratios such as return on equity, return on assets, interest margins, and other conventional measurements. The particular format utilized will, of course, vary to some degree between companies, however, the analysis should be broad enough in scope to determine the company's trends and the causes of those trends.

3100.0.4.13 Evaluation of the Company's Condition

Ratio analysis of a consumer finance company is a feasible technique for evaluating its condition because of the "portfolio effect" of its assets. However, the examiner must look beyond the ratios and analyze the effects of company policies on the elements of the ratios. As an example, if a company only charges off loans once a year, the losses determined by a formula classification would be less just after the charge-off date than just before.

In comparing classifications from one inspection to another, there might be a difference in the loss classifications which may be interpreted as an apparent improvement or decline in asset quality should the inspections bracket the charge-off date. Similar misinterpretations can occur from a change in charge-off frequency, a change to an automatic charge-off policy, or a shortening in the past-due period required for charge-off.

Certain accounting and reporting techniques may also be misleading in ratio analysis. For example, an artificial improvement in earnings would be reported when a company changes from a collection basis to an accrual basis of income recognition, if the collection and follow-up policy had been poor or deteriorating. Only a thorough review of the accounting policies and an understanding of their interplay with operating policies will prevent this type of misinterpretation. In some cases, the company's accounting system may yield results that inadvertently distort the ratios. A company recognizing income on a straight-line basis would, during a period of low loan volume, reflect improving gross interest income as a percentage of loans outstanding. While the importance of realistic accounting policies cannot be overstated, neither can the proper interpretation of reported results be overstressed.

One of the key elements in the evaluation of the company's performance is reflected in the ratios, but not quantified by the analysis. The company's internal controls and management information systems are the primary means of controlling asset quality and communicating management's policies. The supervisory effort is not only reflected by the ratios, but also in such areas as personnel turnover, citations in state supervisory reports, audit exceptions, and litigation. The systems relied on by management should be responsive not only to the changing needs of the company, but also to the changing climate of consumer regulations.

In the inspection report commentary, the examiner should maintain an objective view of the company under inspection. Management's corrective actions for exceptions and plans to reverse adverse trends are a necessary ingredient in the commentary. Report comments should give the reader an accurate picture of the condition of the company and its relationship with, and impact on, the financial condition of the consolidated corporation and the subsidiary bank(s).

3100.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Activities not closely related to banking		225.126	4-184	
Marketability of collateral under section 23A			3-1121	1935 FRB 395

Expansion of activities of a trust company, or acquisition of a de novo bank, to include consumer lending		225.28(b)(1)		1984 FRB 371 1985 FRB 51 1985 FRB 55 1985 FRB 61 1985 FRB 253

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

The Board amended Regulation Y, effective April 21, 1997, to include the acquiring of debt in default as an authorized nonbanking activity for bank holding companies (see Regulation Y, section 225.28(b)(2)(vii)). A bank holding may acquire debt that is in default at the time of acquisition if the company—

1. divests shares or assets securing debt in default that are not permissible investments for bank holding companies, within the time period required for divestiture of property acquired in satisfaction of a debt previously contracted under section 225.12(b) of Regulation Y;
2. stands only in the position of a creditor and does not purchase equity of obligors of debt in default (other than equity that may be collateral for such debt); and
3. does not acquire debt in default secured by shares of a bank or bank holding company.

The Board held that these restrictions were necessary to define the scope of the activity and to ensure that the activity remains the acquisition of debt instead of an impermissible nonbanking activity involving the acquisition of securities or other assets. As for calculating the time period for disposing of the underlying shares or assets, the time period is the same as that applied under the BHC Act to disposing of shares or assets acquired in satisfaction of a debt previously contracted. During this period, a bank holding company can divest the property or, in the case of any debt that has been previously contracted, restructure the debt.

The initial Board order that was issued to permit the acquisition of defaulted debt is summarized here as a historical example of the nonbanking activity. Provisions or commitments made in the Board order should not be relied upon. The current requirements are found in section 225.28(b)(2)(vii) of Regulation Y.

3104.0.1 ACQUISITION OF DEFAULTED DEBT—BOARD ORDER

A bank holding company (the applicant) within the meaning of the BHC Act gave notice under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and the Board's Regulation Y that it proposed to acquire a company (the company) and engage nationwide in asset-based commercial lending and management of assets.

The applicant proposed to engage through the

company in managing certain assets as the corporate general partner in two limited partnerships (the partnerships).¹ The applicant committed to conduct the activities, which the Board previously determined to be permissible, through the partnerships, subject to the limitations previously established by the Board.²

One nonbanking activity proposed by the partnerships, acquisition of defaulted debt, was an activity that the Board had not previously approved. The partnerships are engaged primarily in making, servicing, and investing in discounted bank loans and other debt securities.³ The partnerships acquire debt that has been or is in the process of being restructured, including secured and unsecured debt in the form of bank loans, privately placed and publicly traded debt instruments, bonds, notes, debentures, and discounted receivables.⁴ The applicant stated that the partnerships will take an active role in the restructuring of the defaulted debt they acquire, including participating on creditors' committees. The applicant indicates that such discounted debt would be acquired for the purpose of restructuring the debt to achieve a higher yield and greater collateral protection.

Some of the debt the partnerships would acquire may be in default at the time of acquisition and may be secured by voting shares or

1. The first partnership group (in which the company owned more than a 50 percent interest) was to terminate by December 31, 1995. The company owned less than 50 percent of the second partnership group, which would terminate by December 31, 1999.

2. See 1994 FRB 736. The partnerships, together with the applicant and its affiliates, would hold not more than 5 percent of any class of voting securities of any issuer and not more than 25 percent of the total equity, including subordinated debt, of any issuer. In addition, the applicant committed that no directors, officers, or employees of the applicant or its affiliates will serve as directors, officers, or employees of any issuer of which the applicant and its affiliates hold more than 10 percent of the total equity. The applicant also committed that future limited partnerships would be structured in the same manner as the current partnerships.

3. The partnerships are not leveraged, and the applicant stated that the partnerships will not be leveraged. The applicant has committed that neither the applicant nor any of its subsidiaries would be permitted to make loans to the partnerships.

4. The debt investments may include investments in companies that may be contemplating, be involved in, or recently have completed a negotiated restructuring of their outstanding debt or a reorganization under chapter 11 of the Federal Bankruptcy Code.

other assets that would be impermissible for a bank holding company to hold without Board approval.⁵ Because the partnerships would have the right in some cases to take title immediately to shares or assets securing defaulted debt that they acquire, the applicant committed that the partnerships would treat this collateral, as well as any other assets acquired in renegotiating this debt, as assets acquired in satisfaction of a debt previously contracted (DPC). Under the BHC Act, a bank holding company must divest any shares or assets acquired as DPC within two years from the date the asset is acquired. For this purpose, the applicant has committed that it will consider shares or assets acquired in satisfaction of defaulted debt to have been acquired on the date the defaulted debt is acquired.⁶

The Board stated that the acquisition of defaulted debt under the circumstances and conditions proposed by the applicant is an activity that is closely related to banking. The applicant stated that it will only purchase debt, not equity, and will stand in the position of a creditor.

Based on all the facts of record, the Board concluded that the proposed activities are closely related to banking. The Board approved the notice on October 17, 1995 (see 1995 FRB 1128). Approval was specifically conditioned on the applicant's compliance with the commitments made in connection with the notice.

5. The applicant has committed that the partnerships will not acquire debt in default that is secured by shares of banks or bank holding companies.

6. The applicant could apply for up to a three-year extension. See 12 C.F.R. 225.22(d)(1). The Board notes that the divestiture requirement would be satisfied if, during the divestiture period, the partnerships renegotiate the debt into a performing obligation and release the collateral to the borrower as part of the renegotiation. To the extent that defaulted debt acquired by the partnerships is secured by assets or shares that would be permissible investments for a bank holding company, this divestiture commitment would not apply.

Section 4(c)(8) of the BHC Act (Credit Card Authorization and Lost/Stolen Credit Card Reporting Services) Section 3105.0

A bank holding company applied for the Board's approval, pursuant to section 4(c)(8) of the BHC Act, to engage de novo, through its existing nonbank subsidiary, in credit card authorization services and lost/stolen credit card reporting services. The credit card authorization activity would consist of providing, for a fee, a service to issuers of credit cards that would enable merchants to determine the validity and credit limits of cards tendered to them. In addition, the applicant was to provide, for a fee, a reporting service to credit card holders, that would enable them to report the loss or theft of any of their credit cards via a single toll-free telephone call to the nonbank subsidiary.

A number of banks indirectly offer the service of reporting lost cards that are issued by other institutions by arranging with independent companies to provide the service under a trade name associated with the bank. With respect to

credit card authorization services, banks have a financial interest in the security of the credit cards and the availability of credit. Based on the foregoing, the Board believed that banks generally have, in fact, provided the services proposed by the applicant and are particularly well suited to provide the proposed services. On that basis, the Board concluded that the proposed services were closely related to banking.

Since the proposed credit card reporting service would create more competition and provide greater conveniences by allowing an individual who loses more than one card to report all lost cards at once to one source rather than having to make separate notifications to each card issuer, and there was no evidence of adverse effects as a result of the proposal, the application was approved by the Board on January 5, 1985 (1985 FRB 648). See Regulation Y, section 225.28(b)(2).

Section 4(c)(8) of the BHC Act (Stand-Alone Inventory-Inspection Services) Section 3107.0

A domestic bank holding company (the applicant) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of the Board's Regulation Y to engage de novo, through a wholly owned subsidiary, in the following services to customers who make loans secured by inventory:

1. identifying inventory and deciding its general condition, level of protection, and amount of use, as appropriate
2. identifying inventory subject to a purchase-money security interest under the Uniform Commercial Code
3. identifying missing inventory and any credit exposure that could result
4. supporting the proper allocation of loan payments that are related to the aging or sale of inventory¹

The applicant would provide the above inventory-inspection services only in connection with an extension of credit either by the

BHC (applicant) or a third party. The service would be provided throughout the United States, but only in connection with inventory pledged as collateral for a loan.

Bank holding companies currently inspect and survey collateral for loans made or services provided by them. Banks inspect collateral for loans originated in direct lending activities. The applicant suggested that its proposed collateral-inspection services to third-party lenders are identical to the collateral-inspection services performed for its own extensions of credit.

In accordance with section 225.28(b)(1) of Regulation Y, the Board authorized bank holding companies to make, acquire, and service loans for the company's own account or for the account of others. The Board believes that these activities include collateral-inspection services provided to third parties in connection with third-party extensions of credit. The Board also believes that bank holding companies have the necessary expertise to provide this service for other lenders (on a stand-alone basis).

The Board found that public benefits would result from a potential increase in the availability of inventory financing. It noted that there was no evidence suggesting that the proposal would result in significant adverse effects. The financial and managerial resources of the applicant were believed to be consistent with previous approvals. The Board, based on the facts of record, and the commitments and conditions made by the applicant, approved the request on September 13, 1993 (1993 FRB 1053).

1. For example, a loan may be secured by a pool of inventory collateral, but there may be an agreement to apply loan proceeds to specific items of collateral in a specified order. Equipment used beyond a stated number of hours might be of limited value, and the lender might agree to release its security interest in such items. The inspection of inventory collateral would verify the equipment's proceeds to pay off the oldest (or the youngest) items of collateral first (or last), rather than applying the proceeds pro rata to all items.

A bank holding company may acquire or retain an industrial bank to the extent authorized by state law, under section 225.28(b)(4) of Regulation Y only if the industrial bank acquired by the holding company is not a “bank” within the meaning of the Bank Holding Company Act. Industrial loan companies, industrial banks, and Morris Plan banks are state-chartered financial institutions which engage primarily in the business of furnishing consumer loans and small-business loans. The distinction between these institutional forms and consumer finance companies lies in the ability to generate funds through the acceptance of deposits or issuance of certificates of indebtedness (thrift notes). Although some of these institutions have the same charters as banks (in some states), they traditionally have not been considered to be banks for purposes of the Bank Holding Company Act as they cannot both make commercial loans and accept demand deposits, although in some states they have been empowered to offer NOW accounts. Under a decision of the Supreme Court, NOW accounts are not demand deposits for the purposes of defining what a bank is. Thus, industrial loan companies and similar institutions may offer NOW accounts and make commercial loans without being treated as banks for purposes of the Bank Holding Company Act. These institutions may be insured by the Federal Deposit Insurance Corporation and are eligible for membership in the Federal Reserve System. Many of the companies are “self-insured” (by a consortium of similar institutions in the form of a guaranty corporation) or are uninsured.

3110.0.1 NONBANKING ACQUISITIONS NOT REQUIRING PRIOR BOARD APPROVAL

In accordance with 12 C.F.R. 225.22(d)(8) of Regulation Y, the Board’s prior approval is not required for certain asset acquisitions by a lending company or industrial bank. This refers to the assets of an office(s) of a company of which all, or substantially all, the assets relate to making, acquiring, or servicing loans for personal, family, or household purposes, if—

- the acquiring company has previously received Board approval to engage in lending or industrial banking activities under Regulation Y;
- the assets acquired during any 12-month period do not represent more than 50 percent of the

risk-weighted assets (on a consolidated basis) of the acquiring lending company or industrial bank, or more than \$100 million, whichever amount is less;

- the assets acquired do not represent more than 50 percent of the selling company’s consolidated assets that are devoted to lending activities or industrial banking business;
- the acquiring company notifies the Reserve Bank of the acquisition within 30 days after the acquisition; and
- the acquiring company, after giving effect to the transaction, meets the Board’s capital adequacy guidelines and the Board has not previously notified the acquiring company that it may not acquire the assets under the exemption.

3110.0.2 INSPECTION OBJECTIVES

1. To determine the quality of the loan portfolio and the overall condition of the company.
2. To determine what exposure the subsidiary presents to the holding company and subsidiary bank(s).
3. To determine compliance with applicable laws and regulations.

3110.0.3 INSPECTION PROCEDURES

1. Contact the applicable state regulatory agency to determine the legal parameters within which the company operates and to assess the degree to which the company is supervised. Each of the institutional structures under this exemption is state chartered, and the laws and regulations vary widely from state to state. The company may be directly supervised by its state department of banking or may be subject to virtually no supervision or regulation. If the company is insured by the Federal Deposit Insurance Corporation or is a member of the Federal Reserve System, the company is primarily subject to the primary supervision and regulation of that agency. In cases in which the company is supervised by a banking agency, that agency’s report of examination will generally suffice. However, when the company is not supervised or examined, or when the Reserve Bank finds the supervisory

ing agency's report inadequate, an on-site inspection is necessary.

2. Focus on an evaluation of the loan portfolio and securities account, a determination of the volatility of the deposits, an appraisal of the adequacy of the audit program, and a review of the company's internal policies.
3. Review the receivables representing lending activities. The company should provide a schedule of the aging of the consumer receivables. It is preferable that the aging be done on a contractual method. Classification of the consumer paper may be done on a formula basis. The larger credits must be given a complete evaluation.
4. Review the adequacy of the allowance for loan and lease losses in conjunction with the asset evaluation.
5. Price the securities portfolio, with particular emphasis placed upon determining its liquidity. Since the deposits of these institutions are not always insured, they are more susceptible to a deposit run off; therefore, the requirement of adequate liquidity is of paramount importance.

The deposits may be insured by a guaranty corporation up to a certain limit in some states. These guaranty corporations have provided some stability to the industry. The guaranty corporations are indepen-

dent of any government agency or municipality and therefore are limited in the amount of protection which can be offered depositors.

6. Review back-up lines of credit available to ensure secondary liquidity to the company.
7. Review the deposit accounts of the company. The deposits are evidenced by certificates of indebtedness, or thrift notes. Information regarding the number of deposits, the size of accounts, and maturity distribution should be obtained to assess the stability of the funding base.
8. Determine that the institution makes proper disclosure to the public as to the type of instrument the certificate represents. Some states require that a disclosure statement, or a prospectus, be filed with the public yearly, which sets forth the uses to which the funds are being put and states that the funds are not insured. This prospectus should be reviewed for proper disclosure of the required information to ensure against possible suits.
9. Check the company's policy concerning withdrawals, giving recognition to state law requirements, to ascertain whether funds are generally not allowed to be withdrawn without prior notice.
10. Review the scope of the internal or external audits.

3110.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i>	<i>Orders</i>
Reference for authorized nonbanking activity—activity closely related to banking		225.28(b)(4)		1982 FRB 253 1983 FRB 921 1984 FRB 231 1984 FRB 234 1984 FRB 371 1984 FRB 469 1984 FRB 741 1985 FRB 476
Nonbanking acquisition not requiring Board approval (conditions specified)		225.22 (d)(8)		

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Before 1989, the Board had determined that the operation of a savings association is closely related to banking but concluded, as a general matter, that the operation of a savings and loan association is not a proper incident to banking because the potential adverse affects of generally allowing the affiliations of banks and thrift institutions were not outweighed by the potential public benefits (1977 FRB 280). In other individual cases, the Board found that the adverse effects of the affiliation would be outweighed by the public benefits of preserving the failing thrift institution as a competitor in its market and ensuring public confidence (see 1985 FRB 462). The 1982 Garn–St Germain Act recognized the Board’s authority under section 4(c)(8) of the BHC Act to approve such acquisitions by authorizing the Board to dispense with the usual notice and hearing requirements of this section under appropriate emergency circumstances.

Provisions of the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA) amended section 4 of the Bank Holding Company Act to give bank holding companies the authority, effective August 9, 1989, to acquire any savings association. The legislation lifted the previously existing “tandem operations” restrictions as they apply to savings associations that are owned by bank holding companies (see 1989 FRB 716, appendix I). These restrictions provided that savings associations acquired by a bank holding company could not be operated in tandem with any other subsidiary of the bank holding company, and required approval by the appropriate Federal Reserve Bank before the savings association engaged in any transactions with the bank holding company or its other subsidiaries. The Board is now prohibited from imposing such restrictions on such transactions in the future, except for those required by sections 23A and 23B of the Federal Reserve Act. With respect to previous Board approvals of the acquisition of problem thrifts by BHCs, FIRREA required the Board to modify those approvals by limiting any restrictions on transactions between the savings association and its holding company affiliates to those required under sections 23A and 23B of the Federal Reserve Act. In 1989 FRB 716, the Board removed the tandem restrictions imposed on the operations of savings association subsidiaries of a bank holding company.

The Board amended Regulation Y pursuant to FIRREA, effective October 10, 1989 (see 12 C.F.R. 225.28(b)(4)(ii)). The regulation allows bank holding companies to acquire healthy as

well as failed or failing savings and loan associations in accordance with FIRREA. The regulation permits bank holding companies to acquire savings and loan associations in any state, regardless of whether the holding company may operate a bank in that state. It does not impose any operational or branching conditions on the operations of savings and loan associations. The regulation authorizes, as a permissible activity under section 4(c)(8) of the BHC Act, the owning, controlling, or operating of a savings association, if the savings association engages only in deposit taking, lending, and other activities that are permissible for BHCs.¹ The Board has permitted a short divestiture period for impermissible investments and other activities (see 1992 FRB 707).

FIRREA established a five-year moratorium on any acquisition that involved the transfer of deposits from one federally insured deposit fund to another, with limited exceptions. As a general matter, the moratorium prevented an institution whose deposits are insured by the Savings Association Insurance Fund (SAIF) from converting to an institution whose deposits are insured by the Bank Insurance Fund (BIF). A provision of FIRREA provided that this moratorium does not apply to the merger of a SAIF-insured savings association owned by a bank holding company into a BIF-insured bank subsidiary of the same holding company. This provision, known as the Oakar Amendment,² authorized bank holding companies to merge troubled savings associations into bank subsidiaries during the moratorium period, as well as avoid the payment of

1. Section 225.2(m) of Regulation Y defines a savings association as (a) any federal savings association or federal savings bank; (b) any building and loan association, savings and loan association, homestead association, or cooperative bank if such association or cooperative bank is a member of the Savings Association Insurance Fund (SAIF); and (c) any savings bank or cooperative which is deemed by the director of the Office of Thrift Supervision to be a savings association under section 10(l) of the Home Owners’ Loan Act.

2. The Federal Deposit Insurance Corporation Act of 1991 amended the Oakar provision (commonly referred to as “Oakar II Amendment”) to authorize a bank that is not a subsidiary of a bank holding company to merge directly with a thrift. The Riegle Community Development and Regulatory Improvement Act further amended the Oakar provisions to eliminate the requirement for prior Federal Reserve Board approval of Oakar transactions when the bank involved (in an acquisition of a thrift) is a BIF member subsidiary bank of a bank holding company.

exit and entrance fees to the deposit insurance funds required under FIRREA for other savings association conversion transactions.

One provision that has a significant bearing on BHCs is a FIRREA provision (12 U.S.C. 1815(e)) addressing the liability of commonly controlled institutions. Any insured depository

institution is liable for any loss incurred by the FDIC in connection with a commonly controlled insured depository institution in default or in danger of default. (See section 2090.8 for a discussion of this provision as well as section 2020.1 with regard to the sister-bank exemption from section 23B of the Federal Reserve Act.)

3111.0.1 LAWS, REGULATIONS, INTERPRETATIONS, ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

The performance of trust services by a trust company subsidiary that is neither a “bank” nor a nonbank bank encompasses virtually any kind of fiduciary, agency, or custodial service commonly performed by a trust company so long as the subsidiary does not accept demand deposits or make loans, except as expressly permitted by paragraph (b)(5) of section 225.28 of Regulation Y. Generally, under Regulation Y, a trust company may only accept deposits arising out of trust funds not currently invested; perform escrow services, such as receiving, holding, and disbursing downpayments and other funds deposited by purchasers in real estate transactions; and act as an agent for an issuer of, or broker or dealer in securities, in a capacity of a paying agent, dividend disbursing agent, or securities clearing agent, so long as the funds are not used by the customer as a general-purpose checking account and do not bear interest. The subsidiary’s lending activities are restricted to making call loans to securities dealers and to purchasing money market instruments; however, such loans may not be used to provide funding for nonbank subsidiaries of the holding company.

Trust companies may be either state-chartered or nationally chartered. Some nationally chartered trust companies have national bank charters but have agreed through limitations in their by-laws to engage only in those activities permitted for trust departments of national banks. In order to prevent the use of a trust company as a vehicle for evasion of section 3(d) of the act, the Board has conditioned its approval of certain interstate acquisitions by requiring that (1) the trust company’s demand-deposit-taking activities not be operated in tandem with any other subsidiary, (2) demand-deposit and commercial lending services of affiliates will not be linked in any way, and (3) the trust company will not engage in any transactions with affiliates, other than the payment of dividends or the infusion of capital, without the Board’s approval

(for example, see U.S. Trust Corporation, 1984 FRB 371). The scope of these conditions may be reviewed by the Board in connection with nonbank bank applications.

As part of normal administration of its trust accounts, a trust company will from time to time engage in an activity, such as property management or land development, which has been determined to be *not* closely related to banking by the Board. Any such service may only be performed incidentally to fiduciary account administration and may not be offered or marketed as a separate service.

3120.0.1 ON-SITE INSPECTIONS

Trust companies are normally engaged in activities such as management of funds for individuals. These activities are significant to the integrity of the banking system and involve significant potential liability to the bank holding company if not properly conducted. Therefore, periodic on-site inspections should be performed. If the trust company is examined by a state banking department, then alternate-year examination procedures may apply. If nationally chartered, a review of the periodic on-site examinations of the Comptroller of the Currency will generally suffice. If not subject to a regular examination by another federal banking agency (i.e., if an uninsured, state-chartered nonmember trust company), the Reserve Bank should perform regular on-site inspections to include, at minimum, full-scope reviews of the trust activity. The inspections would utilize procedures such as those utilized in the examinations of trust activities of state member banks. This portion of the inspection should be performed by examiners specially trained in trust examinations. Holding company inspectors should specifically review for compliance with any conditions imposed by the Board in connection with the approval of an application.

Section 4(c)(8) of the BHC Act (General Financial and Investment Advisory Activities) Section 3130.0

The main sections that follow (sections 3130.1 through 3130.9) address all financial and investment advisory activities under section 4(c)(8) of the BHC Act and section 225.28(b)(6) of Regulation Y that have been authorized by the Board. This section provides general inspection objectives and procedures that relate to such financial and investment advisory activities. These objectives and procedures can be applied to the BHC inspection of every advisory activity when advisory activities are not listed separately in any of this manual's individual advisory sections.

Any commitments that were made by the bank holding company or its nonbank subsidiaries to the Federal Reserve System pertaining to its financial and investment advisory nonbanking activities should be reviewed by the examiner for compliance and applicability, in accordance with the current statutory and regulatory provisions. Any existing commitments or conditions that relate to the financial resources of a bank holding company or its subsidiaries or to commitments or conditions that relate to the risk-management policies of the organization should remain intact and should be reviewed by an examiner for compliance during each inspection.

The Board's Regulation Y, effective April 1997, resulted in a structural reorganization of financial and investment advisory nonbanking activities. The provision of discretionary investment advice is no longer limited to institutional customers. Bank holding companies and their subsidiaries may engage in financial and investment advisory activities without restriction. Bank holding companies can manage retail customer accounts outside of the trust department of an affiliated bank (to the extent permitted by law). Further, bank holding companies may engage in any combination of permissible nonbanking activities listed in Regulation Y. Accordingly, bank holding companies may provide financial and investment advice jointly with permissible agency transactional service, investment or trading transactions as principal, or any other listed nonbanking activity.

The rules in Regulation Y provide examples of financial and investment advisory activities that are illustrative rather than exclusive. With regard to the examples, a bank holding company may act as an investment or financial adviser without restriction to any person, including

1. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to an investment company

- registered under that act, including sponsoring, organizing, and managing a closed-end investment company;
2. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies;
3. providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, financing transactions and similar instruments, and conducting financial-feasibility studies;
4. providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instrument;
5. providing educational courses and instructional materials to consumers on individual financial-management matters; and
6. providing tax-planning and tax-preparation services to any person.

Sections 3130.1 through 3130.9 include many historical examples of various financial and investment advisory activities that have been approved by the Board. These examples are to be viewed as historical references. They should be considered as to their applicability to current statutory and regulatory provisions. Some examples include, but are not limited to, providing financial advice in rendering fairness opinions and providing valuation services in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, and capital structurings. Other examples include providing advice on financing and similar transactions with respect to private and public financings and loan syndications; conducting financial-feasibility studies; and providing financial advice to state and local governments with respect to the issuance of their securities.

3130.0.1 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of its management to conduct business, and to determine whether they are satisfactory.

2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.
3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts to determine whether they are appropriate.
6. To evaluate funding sources, including indebtedness, and their management with respect to maturities and interest rates.
7. To determine the adequacy of internal and external audits.
8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.
 - c. avoids executing customer transactions when acting in an advisory capacity.
2. Prepare financial statements for the last two fiscal years, plus interim if appropriate. Analyze for adverse trends and evaluate for negative effects on affiliates.
3. Evaluate asset quality when warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate reserve adequacy.
4. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates' concentrations, and dependability. Review borrowings from affiliate banks for compliance with section 23A of the Federal Reserve Act.
5. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
6. Review the company's revenue sources to determine that it has not taken positions and does not, itself, execute transactions when acting in an advisory capacity.
7. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
8. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct transactions for the company's customers. Determine whether the bank is being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the company.
9. Review checking-account statements for all accounts at affiliate banks for overdrafts since the previous inspection.
10. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or are using bank assets. If so, is the bank adequately compensated?
11. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
12. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and evaluate potential effects on the financial condition.
13. Obtain and review internal and external audit reports and workpapers.

3130.0.2 INSPECTION PROCEDURES

1. Review System approval and activities for conformance with any limitations. Determine if the activity is conducted through a separately incorporated subsidiary of the bank holding company that—
 - a. refrains from taking positions for its own account;
 - b. observes the standards of care and conduct applicable to fiduciaries with respect to its advisory and transactional services; and

14. Obtain and review internal and external asset-review reports.
15. Obtain and review copies of the board of directors' and senior management's policies and procedures.
16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal shareholders and their related interests of the holding company and its affiliates.
18. Evaluate insurance for adequacy.
19. Obtain or verify that workpapers contain the following permanent documentation:
 - a. System approval letters
 - b. date of incorporation or date acquired
 - c. date activity commenced
 - d. articles of incorporation and by-laws
 - e. commitments
 - f. supervisory actions
 - g. other pertinent correspondence
20. Obtain and review a listing of shareholders for each class of stock outstanding, and a schedule of officers, directors, and their related interests.

A bank holding company or its nonbank subsidiary that engages in investment or financial adviser activities is subject to section 225.28(b)(6) of Regulation Y. The purpose of an inspection of a company providing investment or financial advice is to determine that it is operating according to applicable laws, regulations, and interpretations, and to determine that the company is subject to an adequate audit program. Regulation Y allows a bank holding company to serve as an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940 (15 U.S.C. 80a-2(a)(20)), which defines an "investment adviser" of an investment company as "...any person who pursuant to contract with such company regularly furnishes advice to such company with respect to the desirability of investing in, purchasing or selling securities or other property, or is empowered to determine what securities or other property shall be purchased or sold by such company..."

The Board has issued an interpretive rule regarding the investment adviser activities of bank holding companies under Regulation Y (12 C.F.R. 225.125). The following is a list of some of its provisions:

1. Bank holding companies, including their bank and nonbank subsidiaries, may act as investment advisers to various types of investment companies such as mutual funds and closed-end investment companies. Mutual funds and closed-end investment companies are described in the interpretation.
2. Bank holding company investment adviser activities are limited by the Glass-Steagall Act (Banking Act of 1933 (12 U.S.C. 24, 78, 377, 378)). This act generally prohibits member banks from engaging in the purchase or sale of equity securities other than in an agency capacity.
3. A bank holding company may not sponsor, organize, or control a mutual fund. This does not apply to closed-end investment companies so long as they are not primarily or frequently engaged in the issuance, sale, or distribution of securities.
4. A bank holding company should not act as investment adviser to an investment company which has a name similar to the bank holding company or any of its subsidiary banks, unless the prospectus of the investment company contains certain required disclosures. In no case should a bank holding company act as investment adviser to an investment company that has either the

same name as the name of the bank holding company or any of its subsidiary banks, or that has a name that contains the word "bank."

5. Since investment adviser activities may create potential conflicts of interest, the Board determined that a bank holding company and its subsidiaries should not purchase in their sole discretion, in a fiduciary capacity (including as managing agent), securities of any investment company for which the bank holding company acts as investment adviser, unless the purchase is specifically authorized by (1) the terms of the instrument creating the fiduciary relationship, (2) court order, or (3) the law of the jurisdiction under which the trust is administered.
6. A bank holding company may not engage, directly or indirectly, in the underwriting, public sale, or distribution of securities of any investment company for which it or any nonbank subsidiary acts as investment adviser, except in compliance with section 20 of the Glass-Steagall Act. The Board has determined, however, that the conduct of securities brokerage activities by a bank holding company or its nonbank subsidiaries, when conducted individually or in combination with investment advisory activities, is not deemed to be the underwriting, public sale, or distribution of securities prohibited by the Glass-Steagall Act.
7. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to conduct securities brokerage activities (either separately or in combination with investment advisory activities) may act as agent, upon the order and for the account of customers of the holding company or its nonbank subsidiary, to purchase or sell shares of an investment company for which the bank holding company or its subsidiaries act as an investment adviser.
8. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to provide investment advice to third parties generally (either separately or in combination with securities brokerage services) may provide investment advice to customers with respect to the purchase or sale of shares of an investment company for

which the holding company or any of its subsidiaries acts as an investment adviser.

9. A bank holding company or its subsidiary bank, at the time a service is provided, must caution customers to read the prospectus of the investment company before investing. Customers must be advised in writing that the investment company's shares are not insured by the Federal Deposit Insurance Corporation and are not deposits, obligations, or endorsed or guaranteed in any way by any bank (unless that is the case). The role of the company or affiliate as adviser to the investment company must be disclosed in writing. Such disclosures may be done orally, but the customer must be given such disclosures in writing immediately thereafter.
10. Because of potential conflicts of interest, a bank holding company which acts both as custodian (pursuant to section 225.25(b)(3) of Regulation Y) and investment adviser for an investment company should exercise care to maintain at a minimum level demand deposit accounts of the investment company which are placed with a bank affiliate, and should not invest cash funds of the investment company in time deposit accounts (including certificates of deposit) of any bank affiliate.

had traditionally existed between banks and state and local governments, and the net public benefits that would result from provision of advice to such governments by bank holding companies, the Board indicated that it would be more flexible in determining what particular services constitute "providing financial advice" rather than "management consulting" when the services are solely for state and local governments rather than other nonbank organizations. With the Board's April 1997 revision of Regulation Y, investment and financial advisory activities were grouped together and a bank holding company could act as an investment or financial adviser without restriction.

The Board also allowed the provision of management consulting services regarding any financial, economic, accounting, or audit matter to any company. These financial activities are directly related to the activities and expertise of bank holding companies. Management consulting services are subject to a revenue limitation, however. They may be provided to any customer on any matter, provided that the total annual revenue derived from the management consulting services does not exceed 30 percent of the company's total annual revenue derived from management consulting activities. Thus, any services provided to state and local governments that are deemed management consulting services are subject to this revenue limitation.

3130.1.1 REAL ESTATE DEVELOPMENT ADVISERS FOR STATE AND LOCAL GOVERNMENTS

Advising state and local governments about methods available to finance real estate development projects, and evaluating projected income to determine if debt resulting from proposed development projects can be adequately serviced is permissible if the activities are authorized under section 225.28(b)(6) of Regulation Y.

Before this activity was incorporated into Regulation Y, in 1980, the Board had received certain comments noting that certain aspects of these advisory services may be within the scope of the activity of "management consulting." The Board had found that it was not permissible for bank holding companies to offer management consulting services to nonaffiliated companies. Certain management consulting advice could be provided to unaffiliated depository institutions, however. In view of the relationship that

3130.1.2 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of management to conduct business, and to determine whether they are satisfactory.
2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.
3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts, and to determine whether they are appropriate.

6. To evaluate funding sources, including indebtedness, and their management based on maturities and interest rates.
 7. To determine the adequacy of internal and external audits.
 8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
 9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
 10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
 11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.
8. Review checking-account statements for all accounts at affiliate banks, checking for overdrafts since the previous inspection.
 9. Complete the inspection checklist (see the sections beginning at 3130.1.3.2) based on the guidance provided in section 3130.1.3.1.
 10. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
 11. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and summarize the matters in litigation (or in threatened litigation) and any compromise actions. Evaluate the potential effects on the company's financial condition.
 12. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
 13. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
 14. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or whether bank assets are being used. If so, is the bank adequately compensated?
 15. Review FR System approvals, and check conformance with any specified limitations or commitments.
 16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
 17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal shareholders and their related interests of the holding company and its affiliates.
 18. Evaluate insurance, including bond coverage, for adequacy. Determine the extent of current liability insurance relating to the adviser function, and evaluate the adequacy of such coverage—particularly the extent to which possible significant surcharges would be covered by such insurance.
 19. Obtain a listing of shareholders for each class of stock outstanding and a schedule of officers, directors, and their related interests.

3130.1.3 INSPECTION PROCEDURES

1. Obtain the company's policy and procedure manuals, and distribute relevant portions to the examiners for review and compliance evaluation.
2. Review the minutes of meetings of the board of directors, audit committees, and any officer-level committees. Ensure that examiners performing other portions of the inspection review relevant minutes or summaries thereof.
3. Obtain, review, and evaluate the adequacy of internal and external audit procedures, reports, and workpapers.
4. Prepare financial statements for the last two fiscal years, plus the interim period, if appropriate. Analyze and evaluate the information for adverse trends and for negative effects on affiliates.
5. Obtain, review, and evaluate internal and external asset-review reports.
6. Evaluate asset quality where warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate the adequacy of contra asset allowances.
7. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates, concentrations, and dependability. Review borrowings from affiliate banks for compliance

20. Obtain or update biographical and experience information for key management personnel, together with overall staffing and salary levels as appropriate for full evaluation.
21. Determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with contractual responsibilities.
22. Ascertain if senior management is aware, or has adopted the procedures necessary to become aware, of its current and potential responsibilities in connection with any regulatory-reporting and/or regulatory-compliance requirements.
23. Obtain or verify that workpapers contain the following permanent documentation:
 - a. System approval letters
 - b. date of incorporation or date acquired
 - c. date activity commenced
 - d. articles of incorporation and by-laws
 - e. commitments
 - f. supervisory actions
 - g. other pertinent correspondence

3130.1.3.1 Scope of Inspection

It is expected that inspections of investment adviser subsidiaries will generally be conducted as part of regularly scheduled bank holding company inspections. If, however, the investment adviser subsidiary provides portfolio management services for a significant portion of trust assets held by a state member bank, the Reserve Bank should inspect the investment adviser subsidiary at the same time it examines the trust operations of the bank subsidiary. The scope of the inspection should be based on a review of the nature and complexity of the financial services provided to customers. An adviser which merely provides investment advice and does not provide any additional financial services, such as portfolio management, safekeeping, recordkeeping, or trading services, may not require an inspection. However, an adviser which provides portfolio management, safekeeping, or other services will require an inspection. To determine the scope of the inspection, it is essential to identify what types of services are being offered to customers and to assess the risks associated with those services.

The examiner needs to understand the adviser's operations, including how it represents itself to clients and whether the adviser has any vested

interests in the financial services which it offers. As indicated in SR-88-11 (April 28, 1988), examiners should use their discretion to schedule inspections based on the size and complexity of the adviser's operations. Most section 4(c)(8) BHC subsidiaries will be subject to SEC registration requirements. (See SR-91-4 (SA).) Appropriate checklist questions should be completed for registered investment advisers which provide investment advice to affiliated banks or trust companies and for investment advisers which engage in activities which could have a significant impact on the bank holding company's financial safety and soundness. The checklist should also be completed for all advisers that manage investment portfolios for their customers. The checklist is only a guideline and some of the sections in the checklist may not be applicable. Conversely, the scope of such examinations is not limited to the items included in this checklist.

3130.1.3.2 Inspection Checklist

The questions in this checklist will assist the examiner in evaluating various areas of supervisory concerns.

3130.1.3.2.1 Review of Fundamental Policies and Procedures

The investment adviser's policies and procedures should be reviewed using the following checklist to ensure that fundamental policies and procedures have been established and implemented.

1. Are adequate minutes of the board and board committee meetings prepared?
2. Is the adviser properly chartered and registered?
3. Does the adviser have sufficient blanket bond or other fidelity or liability coverage in place?
4. Is corporate and regulatory reporting performed on a timely basis?
5. Does the above reporting fairly present the accounting and supplemental data reflected by the corporate records?
6. Are internal accounting controls, provided by a segregation of duties or a need for administrative approvals, adequate?
7. Are duties properly segregated in the receiving, disbursing, and recording of cash and cash transactions?
8. Are fee calculations and billing procedures adequate to ensure accuracy and propriety?

9. Are all security transactions authorized or approved by the appropriate management level, and is there documented evidence of the authorization or approval?

3130.1.3.2.2 Supervision and Organization

Supervision refers to the conduct of an adviser's board of directors and senior management in establishing, communicating, and enforcing a system of policies, procedures, and practices suitable to its business objectives and legal requirements. Organization may be characterized as the framework of committees and the assigned responsibilities through which supervision functions. The examiner should (1) review the structure of the organization for adequacy of management information systems and (2) the organization framework as both relate to meeting the entity's stated responsibilities as well as generally accepted standards of conduct. The examiner should review the supervisory function by first identifying the duties and responsibilities of the board of directors. The directors owe the duty of reasonable supervision, including appropriate attention to areas in which the adviser is assuming sensitive and complex fiduciary responsibilities. The next level of review is the committee and officer positions to which certain authority has been delegated. In reviewing this level of supervision, the examiner should keep in mind that certain functions cannot be delegated; for example, approval of significant new services or lines of business, approval of formal policies designed to ensure that the adviser operates in basic compliance with laws and regulations, and the selection and supervision of senior management cannot ordinarily be delegated. Informal delegations and operating practices represent the last level of review. In reviewing both formal and informal delegations, consideration should be given to the institution's size and complexity. A final determination of the adequacy of supervision and organization must be based on findings of the entire inspection of the bank holding company or its nonbank subsidiaries. While topics that have direct or indirect impact on the adequacy of director supervision and management competence are of particular sensitivity, examiners nevertheless have a responsibility to carefully address and comment upon such issues. During the course of the inspection, the examiner should review the supervisory and organizational structure of the bank holding company, with particular reference to investment-related

activities. The examiner should determine whether the board of directors has developed adequate objectives and policies.

3130.1.3.2.2.1 Supervision and Organization Checklist

1. If the board of directors does not directly supervise investment adviser activities—
 - a. has a responsible board committee(s) been named to exercise this function?
 - b. are any delegations consistent with by-law provisions and other appropriate principles?
 - c. do the board's minutes nevertheless reflect periodic but timely review of the conduct and operating results of the function?
2. Do minutes of the board, or its committee(s), reflect that members—
 - a. attend meetings with reasonable frequency?
 - b. require and approve, where necessary, appropriate written policies, strategic plans, and management reports relating thereto?
 - c. review audit and regulatory reports (and management proposals and corrective measures in response thereto), litigation developments, earnings and expense reports, and changes to fee schedules?
3. Through adoption of formal policies and provisions for auditing, does the board adequately seek to ensure the integrity of the organization's records and operational systems?
4. Are policies and procedures adequately communicated to officers and staff?
5. Does the board or a board committee consider, periodically review, and provide for insurance protection?
6. Does the bank holding company maintain access to competent legal counsel and, where appropriate, obtain written opinions on significant legal questions such as—
 - a. pending or threatened litigation?
 - b. account agreements whose terms are unclear or ambiguous or raise complicated points of law?
 - c. proposed actions or policies involving matters such as conflicts of interest, restricted securities, ERISA, and other matters involving possible legal exposure?
7. If an account's securities are registered in a nominee name(s)—

- a. is the nominee agreement current?
 - b. is the nominee registered with the American Society of Corporate Secretaries (to guard against duplication of the nominee name) and state authorities (where required by local law)?
8. Is staffing adequate, in terms of both numbers and qualifications, to handle the current volume of business?
 9. Is there adequate provision for management succession, or for continuing operations in case of the loss of key personnel?
 10. Is senior management aware of its responsibilities in connection with, and has it established written policies and procedures to ensure compliance with, any applicable regulatory-reporting requirements?
 11. Are significant functions of the investment adviser subject to either internal or external audit? If not, ascertain whether an audit program should either be developed or expanded.
 12. When appropriate in light of the size and complexity of the adviser's operations, has management had an audit of financial statements performed by certified public accountants?
 13. Have all significant exceptions and recommendations in audits or examinations or inspection reports been corrected, implemented, or otherwise satisfactorily resolved?

3130.1.3.2.3 Portfolio Management

Investment selection is the process whereby the adviser evaluates, selects, and reevaluates those securities or other financial assets it will buy or sell for its clients, or for which it will make recommendations. It includes the process of researching and selecting recommended individual stocks and bonds, and setting objectives or strategies for diversifications by types and classes of securities into general or specialized portfolios, as well as the process of communicating and executing overall strategies for particular accounts.

When an adviser holds itself out as a professional, the adviser will be held to a high standard of prudence and expertise in the investment-selection and -review process. Therefore, advisers must carefully consider policies and procedures in this area in accordance with the size and character of the investment-selection responsibilities undertaken. In furnishing portfolio invest-

ment advice, particularly to retail clients, an investment adviser should observe the standards of care and conduct applicable to fiduciaries.¹

3130.1.3.2.3.1 Investment Standards and Research

1. Are the general investment standards and review and selection responsibilities defined and approved by the board of directors?
2. Does management or senior investment personnel review overall investment policy and potential investment problems at least annually?
3. Is portfolio management policy adequately communicated to appropriate personnel (for example, by including it in committee minutes, directives, or memoranda circulated to such personnel)?
4. Does the institution, where appropriate, diversify investments according to—
 - a. types of assets, such as common stocks, fixed-income securities, and real estate?
 - b. types of securities by characteristics such as income, growth, and size of company?
 - c. types of securities by industry and specific companies within industries?
 - d. maturities of debt securities?
 - e. geographic location of companies of issue, such as utilities?
 - f. tax-exempt income?
5. If the institution has a list of securities approved for purchase, retention, and/or sale—
 - a. are recommendations for additions to or deletions from such list(s) approved by a committee or group with appropriate authority and expertise?
 - b. are periodic reviews made of the lists of securities approved for purchase, retention, or sale to assess the current appropriateness of the investments listed?
6. If the institution uses any research or analysis in its general investment-review and -selection process—
 - a. are appropriate factors taken into account?
 - b. is appropriate documentation obtained and filed to reflect consideration of such factors?
7. If the size and character of the entity's discretionary investment responsibilities are such that the type of detailed research consider-

1. The term "portfolio investment" is intended to refer generally to the investment of funds in a "security" as defined in section 2(1) of the Securities Act of 1933 (15 U.S.C. 77b) or in real property interests, except when the real property is to be used in the trade or business of the person being advised. In furnishing portfolio investment advice, bank holding companies and their subsidiaries shall observe the standards of care and conduct applicable to fiduciaries.

- ations and files envisioned in the previous question are not relied on, does it use ratings by acceptable financial-rating agencies, such as Moody's or Standard and Poor's, together with evaluation of basic relevant factors pertaining to the type of security under consideration?
8. Where appropriate, does the organization differentiate its investment-selection process as to the type of account in question, such as those for which the need for growth or income is paramount, or for taxable versus tax-free trusts or retail versus institutional accounts?
 9. Do personnel possess sufficient expertise and experience to properly implement the firm's investment-selection systems and responsibilities?
5. As appropriate to the size and character of business, are account synopses and historical data used in the review of account assets?
 6. Does the investment-review information include—
 - a. amount and description of investment?
 - b. categories of investment, such as bonds and stocks?
 - c. types of investments within each category, such as industry groups for stocks?
 - d. cost?
 - e. market or appraised value at review date?
 - f. annual income?
 - g. yield at market?
 - h. rating of recognized financial service?
 7. For accounts in which the adviser makes investments at the direction of the client, does the adviser—
 - a. review the account to detect illegal, non-conforming, substandard, or otherwise unsuitable investments?
 - b. advise the power holder of any improper investments?
 - c. inform parties at interest in the account if any improper investment is not disposed of, and seek legal relief, if necessary?
 - d. resign from the account if corrective action is not taken concerning improper investments?

3130.1.3.2.3.2 Account Administration

Special consideration has to be given to accounts subject to the Employee Retirement Income Security Act of 1974 (ERISA), which imposes fiduciary responsibilities upon any person who has any power of control, management, or disposition over the funds or other property of any employee benefit fund. When an adviser exercises investment discretion over such plans, the extensive fiduciary responsibility and prohibited transaction rules of ERISA will apply.

1. Does the adviser have portfolio management procedures which provide for—
 - a. consideration of the needs and objectives of particular types of accounts, such as the need for income versus growth or taxable versus tax-free income?
 - b. conformity with investment provisions of governing instruments?
 - c. consideration of the liquidity needs of the account for anticipated distributions?
 - d. appropriate diversification, including avoidance or elimination of concentrations in individual securities and by type and subclass of securities?
2. When assets in discretionary accounts are considered unsuitable, is a program of prudent and timely sale of such assets followed unless retention is required?
3. In order to determine the advisability of retaining or changing assets, does the adviser have procedures for periodic reviews?
4. Do minute books or other records—
 - a. identify reviewed accounts?
 - b. report written conclusions on the advisability of retaining or disposing of assets in the accounts?
8. Have proxy voting policies and procedures as listed below been established for ERISA accounts that are suitable in relation to assumed responsibilities?
 - a. voting of routine proxies?
 - b. identification and handling of proxy or tender determinations when sensitive social issues, conflicts of interest, significant increases in management power or perquisites, or merger or buy-out proposals are involved?

NOTE: For requirements relating to proxy processing and the Shareholder Communications Act of 1985, see *Operations and Internal Controls in the Trust Examination Manual*. For questions relating to the voting of affiliate stock, see *Conflicts of Interest in the Trust Examination Manual*.

When an adviser invests accounts in options and/or futures, the following checklist questions (numbers 9 through 13) should be completed. For additional information as to appropriate uses of options and futures

contracts, see SR-83-2(SA) and SR-83-39(SA).

9. When an adviser uses options and/or futures, has the board of directors or a directors'-level committee approved a policy and strategy for their use? Does the policy address—
 - a. the investment objectives to be accomplished by the use of these contracts?
 - b. the specific types of contracts to be used?
 - c. the types of accounts authorized to use these contracts?
 - d. restrictions and/or conditions upon use of contracts, such as selection of brokerage houses, position limits, time frames, leveraging, etc.?
10. Was adequate disclosure made and adequate authorization obtained to execute contract transactions for various types of participating accounts?
11. Are adequate systems and controls in effect to ensure—
 - a. proper tax treatment?
 - b. proper segregation of securities and/or monies?
 - c. conformance with account objectives?
 - d. adherence to adopted strategy, position limits, and related program parameters?
 - e. periodic management evaluation and reporting systems with respect to—
 - results of contract activities upon overall investment performance?
 - market developments, including current liquidity of relevant futures and options contracts in which positions are taken?
 - financial condition, fee competitiveness, and performance of involved broker-dealers?
12. Does the accounting system accurately reflect contract activities with respect to—
 - a. transaction details?
 - b. current gains or losses on open contract positions?
 - c. necessary tax information?
13. Do operating personnel appear sufficiently knowledgeable relative to the level of contract-transactions activity?

3130.1.3.2.4 Conflicts of Interests

The inspection of an investment adviser subsidiary which provides services to an affiliated trust company or bank with a trust department requires expanded inspection procedures. Often the invest-

ment adviser subsidiary was organized for the purpose of providing investment advice and services for the trust accounts held at one or more of its affiliates. These subsidiaries often employ the same individuals who worked in the banks or trust company which they advise.

Conflict-of-interest problems may arise when the adviser exercises any “discretion” when there are mutually opposing interests. The most serious conflict of interest is self-dealing, which could include transactions such as an investment in affiliated banks or the purchase of securities from or through an affiliate. To resolve conflicts of interest, such transactions and the fees associated with them must be fully disclosed and authorized by the appropriate parties.

Potential conflict-of-interest situations are not limited to transactions between affiliates, but can be between the adviser and any of its directors, officers, or employees individually. Due to the complexity, sensitivity, and exposure involved in conflicts of interest, it is particularly important that an adviser develop the awareness and policies and procedures to identify and deal with conflicts situations. Therefore, it is considered highly desirable, even when not specifically required by regulation, that written policies be adopted and periodically revised as necessary.

3130.1.3.2.4.1 Self-Dealing

1. Has the adviser—
 - a. acquired any assets from itself or its affiliates?
 - b. acquired any assets from directors, officers, or employees of the organization or its affiliates, or from any other individuals with whom a connection exists that might affect their best judgment?
2. Has the adviser sold or transferred any account assets, by loan or otherwise, to—
 - a. any affiliates?
 - b. directors, officers, or employees of any affiliates?
 - c. other individuals or corporations with whom such a connection exists or other organizations in which such an interest exists that might affect the exercise of its best judgment?
3. Has the company purchased any securities for a customer account from any member of an undivided syndicate for which the adviser or any of its affiliates are participating, or from a private placement which the adviser assisted?

4. Does the company have satisfactory policies and procedures, in terms of its size and character of business, to address the preceding situations?
5. If the company directs extra fee-producing business to itself or an affiliate (for example, brokerage services or options-trading services), or if it charges separate fees to accounts for securities transactions or other services commonly provided as part of general account administration (for example, fees for cash management or investments in mutual funds when management or administration fees are received by the company or an affiliate)—
 - a. has it identified those accounts which may properly participate in such services in accordance with adopted policy, legal opinion, a Department of Labor ruling, and/or other necessary determinations?
 - b. has it made appropriate prior disclosures and obtained adequate specific authorizations for those accounts identified as entitled to the services?
6. Have any assets held by the company in one account been sold to another account? NOTE: The transaction may be permissible if appropriate disclosure is made, authorization is received, and the law or the governing instrument do not prohibit it. However, an interaccount transaction for ERISA accounts may be a prohibited transaction. In addition, difficult problems can arise in establishing or documenting a “fair” price for the transaction, particularly if the asset is a thinly traded security or is a unique asset.
7. Does the company have appropriate policies and procedures to ensure—
 - a. its discretionary accounts are not left in uninvested cash positions beyond a minimum period of time?
 - b. its accounts are invested in affiliate interest-bearing deposits only for appropriate temporary or other purposes? NOTE: To the extent the company has long-term affiliate deposits or significant aggregate holdings, a special review should be made of the company’s documentation evidencing the suitability of such investments in view of available alternate vehicles.
8. Are securities of affiliates only purchased upon proper direction or specific authorization in account instruments?
9. When the adviser purchases securities which are underwritten by an affiliate, does the adviser do so only upon proper direction and specific authorization of the customer?
10. Does the company act as investment adviser to an open-end or closed-end investment company that is registered under the Investment Company Act of 1940? If so, do its activities conform with the Board’s interpretation at 12 C.F.R. 225.125, which defines the scope of permissible activities?

3130.1.3.2.4.2 Broker Selection

1. When volume of activity warrants, is allocation of brokerage business controlled through an approved list which is periodically reviewed and approved by the company’s board or a senior-officer-level committee?
2. Does management attempt to obtain the best service for customers, including periodic evaluations of broker qualifications such as—
 - a. financial condition?
 - b. past record of good and timely delivery and payment on trades?
 - c. quality of execution and ability to handle specialized transactions?
 - d. quality of research received, if applicable?
3. Are there procedures to monitor or periodically survey available negotiated commission prices in order to ascertain reasonable costs for the execution requirements of its accounts?
4. If commissions higher than the “lowest” available negotiated commissions are being paid for executions in order to receive goods and/or services—
 - a. have such goods and/or services been determined to reasonably qualify as “brokerage and research services” as defined in section 28(e)(3) of the Securities Exchange Act of 1934?
 - b. does an appropriate committee periodically (at least annually) review and determine that the value of the goods and services justifies the payment of the higher brokerage commissions?
5. Does the entity periodically review and maintain records of all goods and/or services received from brokers or third parties in return for brokerage and/or dealer business allocated to particular firms?
6. Do policies and procedures preclude—
 - a. selection of broker-dealers on the basis of deposit balances?
 - b. agreements or understandings for allocation of specific amounts of business to a

broker-dealer such that the adviser company would not be able to cease allocating business to the firm if it were no longer providing acceptable execution?

7. Are auditing and other monitoring controls and reporting procedures in effect to verify the compliance of traders with policies regarding broker selection and payment of commissions? NOTE: Under section 28(e) of the Securities Exchange Act of 1934, the adviser may also legitimately pay more than the lowest-available commission for reasons of execution, financial soundness, and efficiency of delivery and payment.
8. In addition to advisory services, are brokerage services provided for customers pursuant to section 225.28(b)(7)(i) of Regulation Y? If so, the examiner should refer to the discount brokerage examination procedures in SR-85-29 (FIS), which contains guidelines and checklist questions for the inspection of brokerage activities.

3130.1.3.2.4.3 Trading Policies and Practices

1. When trading specialists are employed, are there adequate written or unwritten standards of competence, education, and training for such individuals?
2. When specialists are not employed, are the individuals responsible for trading reasonably trained and informed in relation to the volume and character of trading activity they are required to perform?
3. When transactions are permitted to be crossed between accounts, are procedures adequate to ensure fair pricing of the transactions? If it is not clear the transactions are permitted, has the company determined through counsel that crossing is permissible under applicable law?
4. When specialists are employed and volume of activity permits, are block trades considered in order to obtain more favorable trade prices and execution prices for accounts?
5. If applicable, do procedures, including establishment of time frames in advance of such trading, require special authorization and attention for large or block trades which are to be executed in a number of transactions?
6. If procedures permit the combining of purchase or sale orders of the same security—
 - a. are resulting benefits in price and/or execution costs applied on a pro rata or

average basis to the participating accounts?

- b. are allocable shares similarly pro-rated to participating accounts when a combined trade is not executed at once, but in a number of transactions over a period of time?
7. Does the adviser maintain policies “reasonably designed to prevent the misuse of material non-public information?”

3130.1.3.2.5 Recordkeeping

Registered investment advisers are subject to extensive recordkeeping requirements. SEC Rule 204-2 imposes recordkeeping standards and requires that registered investment advisers keep accurate records. In addition to this recordkeeping, the adviser is subject to the “brochure rule” (Rule 204-3). This rule requires an investment adviser to deliver a specified disclosure statement with respect to its background and business practices to every client or prospective client. In addition to an initial disclosure, the adviser must offer annually to deliver a current disclosure statement upon request. Those advisers which have custody or possession of securities of any client must maintain certain additional records, including separate ledger accounts for each client, copies of confirmations, and a position record showing the interest of each client and the location of the securities.

1. Does the investment adviser make and keep current appropriate books and records including—
 - a. journals or summary journals?
 - b. a memorandum of each order given by the firm or instructions received, showing terms and conditions of the orders?
 - c. all checkbooks, bank statements, canceled checks, and cash reconciliations?
 - d. all bills or statements, paid or unpaid?
 - e. trial balances, financial statements, and internal audit papers?
 - f. written communications received or sent by the firm?
 - g. list of discretionary accounts?
 - h. powers of attorney and discretionary powers?
 - i. written agreements?
 - j. copies of each notice, circular, advertisement, newspaper article, investment letter, bulletin, or other communication recommending the purchase or sale of a security?
2. Does the adviser maintain a record of every transaction in which the adviser or any

- “advisory representative” has a direct or indirect beneficial interest?
3. Are partnership articles, articles of incorporation, charter, minute books, and stock certificate books maintained at the adviser’s principal office?
 4. If required books and records are photocopied or microfilmed, or if they are produced or reproduced on computer storage media—
 - a. are such media indexed and arranged to permit immediate location of any particular record?
 - b. were any copies or printouts of such records promptly provided on request?
 - c. is at least one copy of the original records that are now on such media stored in a separate location from the original for the time required?
 - d. does the adviser maintain procedures for the maintenance and preservation of, and access to, records so as to reasonably safeguard them from loss, alteration, or destruction?
 - e. does the adviser have facilities for the immediate, easily readable projection of microfilmed records and for producing easily readable facsimile enlargements?
 5. Do the entries in the general ledger and journals properly reflect payments or receipts of monies or other goods or services?
 6. Do the financial statements, canceled checks, deposit slips, and check register properly reflect payments or receipts of monies or other goods or services?
 7. When the adviser’s financial records indicate that it is capitalized with client funds (through either loans or equity), have adequate disclosures been made to clients about the risks and conflicts of interest involved?
2. Does the adviser gain effective access to client assets through practices, arrangements, or relationships with clients, such as trustee, executor, or account signator?
 3. When the adviser has custody of client funds or securities, does the adviser maintain the following records:
 - a. a record reflecting all purchases, sales, receipts, and deliveries of securities, and all debits and credits to such accounts?
 - b. a separate ledger account for each client, showing purchases, sales receipts, and deliveries of securities?
 - c. copies of confirmations of all transactions for such clients?
 - d. a record for each security in which any client has a position, reflecting the name of the client, amount of interest, and location of security?
 4. When the adviser renders investment-management services, are the following records maintained:
 - a. for each client, a record of securities purchased and sold, containing the date, amount, and price of each transaction?
 - b. a record for each security in which any client has a current position, showing the name of each client and current interest or number of shares owned by each client?
 5. Are client assets physically segregated from the adviser’s own assets?
 6. For the vault and other related security-processing areas, are adequate controls/safeguards in effect which include the following:
 - a. Are assets maintained under a system of joint custody or dual control?
 - b. Is access to these areas restricted to designated/authorized personnel?
 - c. As appropriate, are other controls/safeguards systems in place (for example, rotation of assignments, key/lock combinations, or vault or area entrance log(s))?
 - d. Is a security-ticket system used as a vault and asset-movement control system?
 7. If a security-ticket system is used, are adequate controls/safeguards in effect which include the following:
 - a. Are security tickets prenumbered?
 - b. Does each copy of the security ticket clearly indicate its destination to ensure prompt and accurate delivery?

3130.1.3.2.6 Security Storage and Processing

Investment advisers generally do not take possession and control of client funds and securities. However, in those cases in which such responsibilities are assumed, the inspection must evaluate those internal controls which are in place for the safeguarding of client funds and securities. Controls and related processing procedures must be appropriately designed and implemented by the adviser to efficiently and safely facilitate such operations.

1. Does the adviser have custody of client funds or securities?

- c. Does the security ticket provide the necessary information to ensure proper processing and recording of the transaction?
 - d. Does the security ticket contain sufficient copies to ensure that sound internal control is maintained over the physical security-movement process by providing the following with a copy (or copies):
 - portfolio managers who initiated the transactions?
 - appropriate vault/operations personnel?
 - the audit/asset control function?
 - e. Are unissued security tickets properly safeguarded and subject to adequate numeric controls?
8. Does the control of security ticket/transaction cancellation and replacement include—
- a. restricting the ability to initiate such action to supervisory personnel?
 - b. reporting such activity to the audit/asset control function and other function(s) affected by such action?
 - c. procedures to ensure that securities are returned to the vault or that funds charged from an account are redeposited, or that the securities or funds are immediately placed under the control of a new security ticket/transaction?
 - d. identifying a replacement security ticket by recording such information on the replacement ticket?
 - e. requiring all copies of the replaced security ticket to be forwarded to the audit/asset control function?
9. For assets received, are adequate controls/safeguards in effect which include the following:
- a. Are all assets received promptly placed under joint custody or control?
 - b. Is appropriate documentation required and on file for all assets received, and is it compared to actual assets received and posted to control ledgers?
 - c. As applicable, are procedures in place for controlling and properly handling assets received by other means, including delivery by mail or messenger?
 - d. If assets are not to be physically held or issued (for example, mutual fund shares), is a receipt, statement, or acknowledgment obtained from the issuer or holder and processed by receipt ticket or other means to ensure proper accountability?
 - e. If securities received are not properly registered in the company's nominee name, are procedures in place to ensure prompt re-registration, control, and follow-up until re-registration?
10. For the delivery of assets, are adequate control/safeguards in place which include the following:
- a. Are appropriate receipts obtained and on file for securities delivered?
 - b. Are procedures in place to ensure that bearer securities are not mailed in amounts in excess of the company's insurance limits?
11. Do vault custodians—
- a. compare securities received/withdrawn to the security ticket?
 - b. for withdrawals, verify that the security ticket is signed (initialed) by authorized personnel?
 - c. for securities temporarily withdrawn from the vault (for example, for transfer, re-registration, or account/portfolio manager review), is a copy of the security ticket retained by vault personnel pending the return of the security to the vault?
12. For pending security transactions, are adequate controls in effect which include the following:
- a. Are pending items periodically reviewed by operations personnel?
 - b. Do procedures provide for prompt follow-up on items which have not been completed within established time periods?
 - c. Are exceptions promptly reported and resolved by appropriate personnel (for example, management, supervisors, and/or the audit/asset control function)?
 - d. Are current pending security items in compliance with established procedures for reporting exceptions, and are those transactions which have not been completed within established time periods been followed up satisfactorily? NOTE: Examiner judgment should be used in determining the scope of this review. However, at a minimum, the review should include procedures for handling security transactions pending 30 days or more.
13. Does the security-processing system—
- a. contain a sufficient number of controls/safeguards to properly reflect the current status of and limit an individual's control over a security transaction?

- b. contain sufficient information to identify, locate, and trace the movement of each asset?
 - c. provide for adequate segregation of duties and responsibilities?
14. Has individual accountability or responsibility been properly assigned for the physical protection of the securities and related cash flow, if applicable, throughout the security-processing system?
 15. Do procedures require that orders for trades originate with account or portfolio managers, with the signature or initials of the authorizing party shown on the order form or purchase/sale ticket?
 16. Are transactions made on a first-in, first-out basis (that is, executed in order of receipt), except when combined in blocks for execution pursuant to appropriate written procedures?
 17. Do operations personnel perform independently of account or portfolio managers to—
 - a. reconcile trade tickets to brokers' confirmations?
 - b. monitor and promptly follow up on any outstanding transactions, such as confirmations not received within specified time periods or purchases/sales which have not settled on settlement date?
 - c. promptly post payments for purchases/sales to the recordkeeping system and promptly record/remove assets?

3130.1.3.2.7 *Other Matters*

1. Is the adviser or any of its principals involved in litigation or arbitration which will have an impact on its ability to fulfill its contract with clients?
2. Were any matters of a material nature found in the adviser's correspondence, such as significant client complaints?
3. Did a review of customer-complaint files reveal any possible areas for special inspection focus?
4. Did a review of the adviser's current financial condition raise concerns as to the adviser's solvency or its ability to otherwise continue to provide advisory services?
5. Are there any other aspects of the adviser's operations, or the operations of an affiliate, which raise concerns?

3130.1.4 INSPECTION FINDINGS

A written summary of the subsidiary's activities should be presented to the examiner in charge of the bank holding company inspection and should be included in the inspection report or its supporting workpapers. Material exceptions should be noted with management's responses under an appropriate caption in the open section of the report. Any comments in the report regarding the scope of the investment advisory inspections should note that such inspections are primarily focused on safety-and-soundness considerations and not on compliance with securities laws.

In those cases in which a separate Report of Bank Holding Company Inspection on Investment Advisory Activities is prepared, examiners may use the Uniform Interagency Trust Rating System (see SR-98-37 FRB, revised October 13, 1998, and effective January 1, 1999), which provides a basis for the evaluation of critical areas of supervisory concern. The rating system is generally used by federal supervisory agencies to assess the condition of trust companies. However, the system can be adopted to report on advisory operations as well. When the inspection uncovers significant deficiencies which require corrective action, and the inspection was not done in conjunction with a concurrent bank holding company inspection, a separate report should be prepared and delivered to the inspected nonbank adviser. Send a copy of the summary and any report comments to the Trust Activities Program, Washington, DC 20551.

3130.1.5 ON-SITE INSPECTION BY TRUST EXAMINERS

An investment advisory subsidiary of a bank holding company will normally be registered as an investment adviser under the federal securities laws, and will be subject to examinations of its advisory activities by the Securities and Exchange Commission (SEC). Nevertheless, because investment responsibility is involved in any investment adviser's activities, and since the SEC's routine examinations may be infrequent, periodic on-site inspections should be conducted as an integral part of BHC inspections.

Consideration should be given to using trust examiners to conduct, or at least participate in, on-site inspections of financial and investment advisory nonbank subsidiaries, especially when the subsidiary provides services to an affiliate

bank trust department examined by the Board of Governors of the Federal Reserve System. If the bank holding company has to “spin off” the investment research and selection process of its banks’ trust departments into an investment advisory subsidiary, there may be a need to review the activities of the trust departments together with those of the advisory subsidiary through an on-site inspection.

The companies being advised on a contractual basis and which were sponsored by the holding company or any affiliate are also defined as affiliates in sections 23A and 23B of the Federal Reserve Act. The examiner should therefore be alert to any intercompany transactions between a bank subsidiary and the advised company. A review of financial statements of such companies is warranted.

3130.1.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Limitations and activity approval	15 U.S.C. 80; section 23A FRA 371c	225.28(b)(6) 225.125	4-177	1997 FRB 275 1971 FRB 512 1972 FRB 149, 571

4(c)(8)—Advice on Mergers and Similar Corporate Structurings, Capital Structurings, and Financing Transactions Section 3130.3

This section renders inspection guidance on financial and investment advisory activities that are provided in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, and financing transactions and similar transactions, and on conducting financial-feasibility studies.¹ This section also provides historical examples of financial and investment advice previously approved by Board order. The examples consist of various kinds of advice with regard to mergers and similar corporate transactions under the current Regulation Y, section 225.28(b)(6)(iii). Some of the examples of advisory nonbank activities were approved for inclusion into Regulation Y long before the revision of Regulation Y that was effective April 21, 1997. The reader of these examples must only take into consideration the current provisions of Regulation Y. There should be no reliance on Board order commitments, old regulatory provisions, supervisory policies, and interpretations made before April 21, 1997, unless they were not revised. Certain former provisions or commitments may no longer be applicable. The historical examples discussed in this section have been revised according to the new regulatory provisions.

If inspection objectives and procedures are stated in a specific section, the examiner should use this specialized guidance. In addition, the examiner should use the generalized inspection objectives and procedures in section 3130.0, which are generally applicable to all advisory activities.

3130.3.1 ADVISER TO A MORTGAGE OR REAL ESTATE INVESTMENT TRUST

An adviser to a mortgage or real estate investment trust (REIT) furnishes expertise in the areas of funds acquisition, lending, investing, and servicing that is similar to the role of adviser to a mutual fund. The contracted service is performed on a fee basis that is generally based on a percentage of the trust's total assets. The intention of the exemption, found in section 225.28(b)(iii) of Regulation Y, is to allow the relationship to be advisory in nature as opposed to controlling. However, in some instances, the

relationship between trusts and their advisers has gone beyond the parameters of advice and resulted in legal entanglements, conflicts of interest, and financial exposure for the bank holding company. Because of the potential risk exposures which may result when a bank holding company or its subsidiary engages in this activity, the overall relationship must be subject to particular scrutiny during an inspection.

REITs were established by the U.S. Congress in 1960, effective January 1, 1961. A REIT is a hybrid form of an investment vehicle which is essentially a financial intermediary specializing in real estate lending and investment. A REIT obtains funds by borrowing from financial institutions or other lenders or by issuing shares (equity capital). It invests the funds in real estate, either as a lender or equity owner. REITs are usually owned by passive owners, not operators. REITs are designed to take advantage of benefits within the federal Internal Revenue Code.

There are generally four types of REITs: equity, mortgage, hybrid, and "finite-life." An equity REIT acquires income-producing properties, deriving its earnings mostly from rents. A mortgage REIT provides financing to real estate projects that are owned by others, deriving its earnings from interest charged on the loans. A hybrid REIT combines the equity REIT and the mortgage REIT. The finite-life REIT is structured to self-liquidate within an established time frame.

By meeting certain prescribed requirements during a taxable year, a REIT may function as a conduit with respect to income distributed to its beneficiaries. If at least 95 percent of the trust's income is distributed to the beneficiaries (excluding capital gains), the trust pays no taxes on the distributed income, thus avoiding the double taxation associated with corporations. Therefore, this investment vehicle has the tax advantage of a partnership but offers the limited liability and perpetuity of a corporation.

A REIT must be a corporation (other than an insurance company or bank), an association, or a trust, or it must be managed by at least one trustee, with transferable shares of beneficial interest as form and evidence of ownership. There must be at least 100 beneficial owners, and the trust must elect to be treated as a REIT for tax purposes. A REIT must meet the following threefold gross income test. At least 95 per-

1. Feasibility studies do not include assisting management with the planning or marketing for a given product or providing general operational or management advice.

cent of the trust's income must come from real property rentals, dividends, abatements and refunds of real property taxes, interest on loans, or gains from the sale of securities or real estate, with the further stipulation that no less than 75 percent of the trust's income must be directly related to real property. Also, less than 30 percent of the trust's income can be derived from the sale of any securities held for less than six months and from foreclosure property and real property held for less than four years that is not involuntarily converted.

In addition to the threefold gross income test, there is a twofold investment test which must be met. First, at least 75 percent of the value of the trust's total assets must be real estate assets, government securities, and cash. Second, 25 percent of the trust's total assets may be securities, but the trust cannot hold securities from one issuer which amount to greater than 5 percent of the trust's total assets and more than 10 percent of the outstanding voting securities of the issuer.

3130.3.1.1 Evaluating Advisory Activities for a REIT

A bank holding company may have an insignificant amount of capital invested in the advisory company. However, if the bank holding company or its subsidiaries have extensions of credit or unfunded commitments outstanding, an evaluation of the credit may be needed using normal classification criteria as to their collectibility, particularly if there is substantial risk exposure. Examination/inspection reports of subsidiaries should be reviewed to determine the consolidated exposure. The holding company or its banking subsidiaries may be participating in exchanges or swaps with the advised REIT, whereby trust assets are exchanged for forgiveness of bank debt. Such pending asset swaps should be considered in conjunction with the credit evaluations. The swaps may be for the purpose of reducing the REIT's liabilities, which can involve an exchange of assets with the lender. The lender's balance sheet reflects an exchange of one asset for another together with, possibly, a lump-sum payment of cash to the trust. If a swap is pending, review the criteria that the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap. Also, determine the

amount of any cash or earning assets that will be given to the trust.

A holding company and a trust have separate and distinct shareholders but common management. The potential exposure in such cases may be pronounced. Such relationships should be reviewed for conflicts of interest. Loans may be booked by the holding company or its subsidiary and subsequently sold to the trust. The credit decision may have been made by the subsidiary, and the REIT's purchase of the loans may have been approved by the affiliated adviser. The benefits to the holding company may include receiving the origination fee and selling the loan to the trust, thereby increasing the REIT's assets, upon which the holding company's advisory fee is based. Following receipt of the sale's proceeds, the process may be repeated. If the holding company has participated in this type of process, there is potential for a conflict of interest. The holding company or its subsidiary may have to repurchase the credit.

Threatened or pending litigation may result from loans that were originated by the holding company or its subsidiaries or that were recommended by the adviser. The number of such loans together with the current payment status of the credit should be determined. If there are numerous loans on a nonaccrual status, the holding company may have accumulated a significant loss. Finally, any suit involving the adviser which pertains to services it performed should be explored as to its validity and potential financial exposure.

3130.3.2 INSPECTION OBJECTIVES

1. To determine the level of risk involved when the bank holding company or its subsidiaries have extensions of credit and unfunded commitments outstanding to the advised trust.
2. To review for conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
3. To review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
4. To review all covered transactions between a bank holding company's subsidiary bank and a REIT, if the REIT is sponsored and advised on a contractual basis by the bank or any subsidiary or affiliate of the bank, to ensure that transactions are permitted pursuant to sections 23A and 23B of the Federal Reserve Act.

5. To determine whether the REIT has been advised to sell real estate in the ordinary course of business and, if so, whether the appropriate liability account for corporate federal and state taxes has been established by the advised subsidiary.
 6. To determine whether the REIT adviser is providing the appropriate advice to the REIT to generate nonspeculative high yields; adequate liquidity; portfolio diversification; sufficient cash flow to pay dividends; continuous repricing; and adequate public disclosure, including the extent of risk involved.
 7. To determine the adequacy and quality of professional management and the level of management's equity stake in the REIT.
 8. To determine the effect on net earnings from floating interest rates on asset yields that may have been caused by prepayment risk.
3. Review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
 - a. Determine the number and amount of such loans together with the current payment status of the credit and whether any loans are on a nonaccrual status.
 - b. Evaluate any suit involving the adviser which pertains to services it performed as to the suit's validity and potential financial exposure.
 4. Evaluate the effect on net earnings and dividends that declining rates (floating-rate assets) have on the prices of floating-rate mortgage assets. Determine the results and the nature of any hedging strategies that are used to offset a decline in net earnings.

3130.3.3 INSPECTION PROCEDURES

1. Determine if there are any significant extensions of credit or unfunded commitments outstanding. If so—
 - a. evaluate the credit using normal classification criteria as to collectibility;
 - b. review examination/inspection reports of the holding company's subsidiaries and determine the consolidated exposure; and
 - c. review any pending asset swaps in conjunction with the credit evaluations, if the holding company or its banking subsidiaries are participating in exchanges or swaps with the advised REIT whereby trust assets are exchanged for forgiveness of bank debt:
 - Review the lender's balance sheet to make certain that it reflects an exchange of one asset for another, as well as any lump-sum payment of cash to the trust.
 - Review the criteria the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap.
 - Determine the amount of any cash or earning assets that will be given to the trust.
2. Determine and evaluate any significant conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
 - a. Determine if there are any loans booked by the holding company or its subsidiary and subsequently sold to the trust, if the credit decision was made by the subsidi-

- ary, and if the REIT's purchase of the loans was approved by the affiliated adviser.
- b. If significant conflicts of interest exist, determine whether the holding company or its subsidiary must repurchase any associated credit.

See also the inspection procedures in sections 3130.0 and 3130.1.

3130.3.4 FINANCIAL ADVICE ON ISSUING SECURITIES OF FOREIGN GOVERNMENTS IN THE UNITED STATES

3130.3.4.1 Financial Advice to the Canadian Federal, Provincial, and Municipal Governments

An example of providing financial and investment advisory activities is a Board order that was previously approved (now authorized under section 225.28(b)(6)(iii) of Regulation Y). The order specifically authorized the providing of financial advice to the Canadian federal and provincial governments for issuing their securities in the United States. Also, the Board's Regulation K authorizes the provision of such investment, financial, or economic advisory services to foreign governmental entities (see section 211.5(d)(8)). The Board approved the proposed activity on February 12, 1988 (1988 FRB 249).

Another Board order authorized a foreign bank, subject to the BHC Act, to acquire a securities firm to engage in this activity, but to

expand the activity to include the providing of such advice to the Canadian municipal governments in addition to the federal and provincial governments. The Board concluded that the slight modification would not alter the activity to render it less closely related to banking. The Board approved the order on March 28, 1988 (1988 FRB 334). Other approved Board orders for this activity are 1988 FRB 500 and 1988 FRB 571.

3130.3.4.2 Providing Financial Advice to the Japanese National and Municipal Governments and Their Agencies

Another example of providing advice to foreign governments is a bank holding company that applied for the Board's approval to engage, through its wholly owned securities subsidiary, in certain securities-related, foreign-exchange, and investment and financial advisory activities. The activity, which consisted of providing financial advice to the Japanese national and municipal governments, had not previously been authorized for bank holding companies. When making its decision, the Board referred to similar orders as well as to the facts provided. It approved these advisory services by order on June 4, 1990 (see 1990 FRB 654).

The Board, effective September 10, 1992, added the providing of financial advice to foreign governments, such as advice with respect to the issuance of their securities, to the activities permissible by Regulation Y, currently authorized by section 225.28(b)(iii).

3130.3.5 PROVIDING FINANCIAL-FEASIBILITY STUDIES AND VALUATION SERVICES

The following provides an example of a bank holding company that was authorized to provide financial-feasibility studies and valuation services, including expert witness testimony in connection with the valuation services. A bank holding company ("applicant") had requested the Board's approval to acquire 100 percent of the voting shares of a company ("the company") which engaged in investment advisory, investment management, and financial advisory services. The company engaged in providing (1) financial-feasibility studies for specific projects of private corporations, (2) valuations

of companies and of large blocks of utility stock for a variety of purposes, and (3) expert witness testimony on behalf of utility companies in rate cases.

In providing financial-feasibility studies, all financial aspects of the particular project were evaluated, including economic conditions, sales and earnings statements, balance sheets, and cash-flow data. Each engagement involved analyzing and projecting the income to be generated by a particular project. The Board believed that this activity was functionally similar to the financial advice traditionally offered by banks to their commercial lending customers. The applicant provided evidence revealing that certain major banks perform similar financial-feasibility-analysis services for their customers. The Board thus approved the provision of such financial-feasibility studies for corporations. Certain commitments were made to guard against any possible conflicts of interests and related adverse effects between the applicant's credit-extending subsidiaries and the company, acting as an adviser regarding the financial-feasibility studies. Included was the condition that the company's financial advisory activities would not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis.

Upon consideration of the above, the Board also determined the activity of providing valuations of companies, as well as the expert witness testimony incidental to such valuations, to be permissible. The commercial lending and trust departments of banks commonly make valuations of a broad range of tangible and intangible property, including the securities of closely held companies. The applicant provided evidence that numerous banks compete directly with the company in offering corporate valuations for a fee.

The Board, effective September 10, 1992, added the providing of financial-feasibility studies to the list of nonbanking activities permitted by Regulation Y (see section 225.28(b)(6)(iii)). With the Regulation Y revisions, effective April 1997, the Board specifically determined that feasibility studies do not include assisting management with the planning or marketing for a given project or providing general operational or management advice. The 1992 amendment to this regulation permitted bank holding companies to conduct feasibility studies for high net worth individuals, as well as corporations, and financial and nonfinancial institutions. With the April 1997 amendment, such services could be provided to any person.

3130.3.5.1 Valuation Services

The valuation services included the following activities:

1. the valuation of a company for purposes of acquisitions, mergers, and divestitures
2. tender-offer evaluations
3. advice for management or for a bankruptcy court on the viability and capital adequacy of financially troubled companies and on the fairness of bankruptcy reorganizations
4. valuation opinions on transactions in publicly held securities
5. valuations on the fair market value of employee stock ownership trusts
6. periodic valuation of stock of privately owned companies held in pension or profit-sharing plans, charitable trusts, or venture-capital funds
7. the valuation of a privately owned company or of a large block of publicly owned securities for estate-tax purposes
8. for estate-tax purposes, valuations of a company's common stock and other securities for recapitalization of a privately held company

3130.3.5.2 Utility-Rate Testimony in Support of Utility-Company Valuations

The company frequently provided expert witness testimony on behalf of utility firms in rate cases. The company's personnel were retained to give expert testimony on financial matters such as the cost of capital, economic conditions, and the rate of return expected by investors in utility securities. The Board believed that to a large degree the activity may be considered incidental to the company's general provision of economic information and advice which is permissible under section 225.28(b)(6)(ii) of Regulation Y. Also, banks routinely calculate the cost of capital for customers to advise them regarding financial alternatives.

3130.3.6 EDUCATION-FINANCING ADVISORY SERVICES

Four bank holding companies (collectively, the notificants) gave notice pursuant to section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of their intention to each acquire more than 5 percent of a company (the company) that would

provide education-financing advisory services.² The company would enable state governments to assist parents in financing the higher education of their children.

The company will (1) develop and manage an educational savings and lending program on behalf of the state, (2) design and provide necessary computer software for the program, (3) provide marketing and program materials, and (4) train state personnel to implement the program. The notificants would eventually provide the services to various state governments nationwide.

As part of developing the education savings and lending program, the company would assist in formulating and defining its overall scope; provide the research necessary to begin operations; design the program's operations; and organize the program in cooperation with all interested parties, including coordinating participation among the state authorities. The company would also coordinate key functions of a college-funding program, such as marketing, public relations, training, investment, lending, legal documentation, financial recordkeeping, and ongoing program evaluation. In addition, the company would design, install, and maintain the computer software necessary to implement the program's services. The company's compensation would be based on application fees received by a state educational assistance authority and the amount of investment and loan balances held by the program.

All of the intended services are integrally related to advising and administering student-loan and college-savings programs. Banks offering their own student-loan and college-savings programs engage in many of the planned activities and are uniquely suited to advise and assist other potential providers, including state governments, in structuring and implementing student-loan and college-savings programs.³ The Board previously concluded that bank holding companies may provide similar advisory and support services to state authorities that are engaged in making student loans.⁴ Accordingly,

2. The notificants would have varying ownership interests in excess of 5 percent. Other individual ownership interests of less than 5 percent would be held by various banks and savings institutions located in one state. Each notificant committed that the company would be treated as a subsidiary within the meaning of the BHC Act (12 U.S.C. 1841(d)).

3. See 12 C.F.R. 225.28(b)(1) and (6).

4. See 1985 FRB 725.

based on all the facts of record, the Board concluded that the proposed activities are closely related to banking under section 4(c)(8) of the BHC Act. The Board approved the notice on

September 25, 1995 (1995 FRB 1042). Approval of this proposal is specifically conditioned on the notificants' compliance with the commitments made in connection with this notice.

3130.3.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Providing financial-feasibility studies, valuation services, utility-rate testimony, but not “public” credit ratings		225.28(b)(6)(iii)		1985 FRB 118, 120
Financial-feasibility studies for issues of tax-exempt revenue bonds and private corporations				1987 FRB 59
Advice in connection with merger, acquisition/ divestiture, and financing transactions and advice regarding loan syndications, interest-rate swaps, and interest-rate-cap transactions		225.28(b)(6)(iii)		1987 FRB 59
Providing financial advice to the Canadian federal, municipal, and provincial governments, such as with respect to the issuance of their securities in the United States		225.28(b)(6)(iii)		1988 FRB 249 1988 FRB 334

3. Federal Reserve Regulatory Service reference.

3130.4.1 INFORMATIONAL, STATISTICAL FORECASTING, AND ADVICE ON SUCH TRANSACTIONS AS FOREIGN EXCHANGE, SWAPS, COMMODITIES, AND DERIVATIVES

Providing financial and investment advisory activities may consist of a bank holding company's providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.¹ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection with currency swaps is permissible,² as well as providing advice regarding loan syndications.³ This section provides an example of a February 16, 1983, Board order permitting a bank holding company to establish a de novo subsidiary to offer certain informational, advisory, and transactional services including the provision of the following:

1. General economic information and statistical forecasting with respect to foreign exchange and money markets through time-sharing networks. The services included the analysis of foreign-exchange and money market trends in the context of economic and political developments and the provision of information with respect to foreign exchange.
2. Advisory services designed to assist customers in monitoring, evaluating, and managing their foreign-exchange exposure, including making recommendations regarding policies and procedures to enhance a customer's ability to identify, measure, and manage financial risks in a multicurrency environment. The newly formed subsidiary would also provide advice on the timing of purchases and sales of foreign exchange in both spot and forward markets.
3. Transactional services with respect to foreign-exchange exposures. The subsidiary would arrange foreign-exchange transactions by affiliated bank holding company and other commercial banks.

As a condition for approval, the applicants were required to seek the Board's authorization if they engaged in any additional activities within the United States. (See 1983 FRB 221.)

Effective February 6, 1984, the Board amended Regulation Y to allow bank holding companies to offer foreign-exchange advisory and transactional services that include providing general information and statistical forecasting with respect to foreign-exchange markets. The activity included arranging for "swaps" among customers with complementary foreign-exchange exposures and the execution of foreign-exchange transactions, provided the activity would be conducted through a separately incorporated subsidiary of the bank holding company that will observe the standards of care and conduct applicable to fiduciaries with respect to its foreign-exchange advisory and transactional services.

3130.4.1.1 Inspection Objectives

1. To determine the financial effect of the activity on the parent BHC and its bank subsidiary (or subsidiaries).
2. To determine that the specific activities provided by the company are permissible.
3. To determine that the company is not exposing itself to conflicts of interest between its own role of recommending foreign-exchange positions to its customers and any role its affiliates may have in executing foreign-exchange transactions.

3130.4.1.2 Inspection Procedures

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiary (or subsidiaries).
2. Review the company's policies and procedures to determine that the following are present:
 - a. adequate minutes of the board and board committee meetings
 - b. adequate blanket bond coverage
3. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.

1. See 62 Federal Register 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.

2. See 1989 FRB 308.

3. See 1987 FRB 220.

4. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct foreign-exchange transactions for the company's customers. Determine whether bank subsidiaries are being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the bank holding company or its nonbank subsidiaries.
5. Review the company's revenue sources to determine that it has not taken foreign-exchange positions and does not execute foreign-exchange transactions.

3130.4.2 FINANCIAL ADVICE AS TO THE STRUCTURING OF AND ARRANGING FOR LOAN SYNDICATIONS, INTEREST-RATE SWAPS, CAPS, AND SIMILAR TRANSACTIONS

A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in swaps, caps, and similar transactions; commodities; and any forward contract, option, future, option on a future, and similar instruments.⁴ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible.⁵ The Board has also found the provision of advice regarding loan syndications to be permissible.⁶

An example of a Board order regarding providing financial advice is one in which a bank holding company (BHC) applied for the Board's approval to establish its company de novo as a financial advisory firm. The Board had not previously approved the structuring of and arranging for loan syndications (see section 225.25(b)(6)(ii) of Regulation Y) or arranging for interest-rate "swaps" and interest-rate caps, and similar transactions (see section 225.28(b)(6)(iv) of Regulation Y). Interest-rate caps are contractual agreements wherein the seller of a cap agrees to make payment to the purchaser of a cap if a particular interest-rate index (prime) exceeds a predetermined level, with payments

calculated on an assumed principal amount for a deferred time period. The caps and swaps are typically used to manage or hedge outstanding positions in the financial markets.

The Board's authorization included the following conditions:

1. The advice rendered by the company on an explicit fee basis will be rendered without regard to correspondent balances maintained by the customers of the company at any depository institution subsidiary of the BHC.
2. Company's financial advisory activities shall not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis. The Board, on November 28, 1986, approved the activity by order (1987 FRB 59). (See 1990 FRB 756.) The Board subsequently, effective September 10, 1992, added this nonbanking activity to the list of activities permitted by Regulation Y. (See section 225.28(b)(6)(iii) for loan syndications and 225.28(b)(6)(iv) for interest-rate swaps and caps.)

Reference can also be made to another Board order (1991 FRB 184) relating to providing advice on joint ventures, leveraged buyouts, restructurings, recapitalizations, and other corporate transactions (see 225.28 (b)(6)(iii) of Regulation Y), as well as to providing advice regarding the structuring and arranging of swaps, caps, and similar transactions relating to interest rates, currency and exchange rates and prices, and economic and financial indexes (see 225.28(b)(6)(iv) of Regulation Y).

3130.4.3 ADVICE RELATING TO THE STRUCTURING OF AND ARRANGING FOR CURRENCY SWAPS

A foreign bank subject to the BHC Act applied for the Board's approval to acquire a company engaged in certain securities, foreign-exchange, and financial advisory activities. The Board previously determined the activities proposed by the BHC, except for providing advice relating to the structuring of and arranging for currency swaps, to be closely related to banking. As for advice on currency swaps, it was noted that most banks that provide advice relating to interest-rate swaps also provide advice relating to currency swaps. Providing advice as to currency swaps was deemed to be functionally and operationally similar to providing advice relating to the structuring of and arranging for interest-

5. See 1989 FRB 308.

6. See 1987 FRB 220.

rate swaps. Both transactions have the common objectives of securing low-cost funds and converting one type of risk to another, and both transactions require similar documentation. The Board approved the activity by order on February 13, 1989 (1989 FRB 308). The Board, effective September 10, 1992, added providing advice as to currency swaps to the nonbanking activities permitted by regulation. See section 225.28(b)(iv) of Regulation Y.

3130.4.4 ADVICE WITH RESPECT TO FUTURES CONTRACTS

3130.4.4.1 Limited Advisory Services with Respect to Futures Contracts on Stock Indexes and Options on Such Futures Contracts

The following is an example of a bank holding company that applied to the Board to engage de novo, through a wholly owned subsidiary, in the provision of advisory services with respect to futures contracts on stock indexes and options thereon. The advisory services to be provided consisted of general research and advice on market conditions and hedging strategies, client-account information and reconciliation of trades, and communication linkage between clients and exchange floors in connection with the subsidiary's futures commission merchant activities. The services offered to customers were provided either as part of an integrated package of services or for a separate fee.

The futures advisory services were essentially identical to the advisory services previously approved by the Board by regulation and order with respect to other financially related futures contracts. The Board concluded the applicant's provision of advisory services for futures contracts on stock indexes and for options thereon to be permissible (1987 FRB 220 and section 225.28(b)(6)(iv) of Regulation Y).

Previously, the Board had approved the execution and clearance of futures contracts on stock indexes and options thereon (1985 FRB 251). At that time, however, the Board had not approved a proposal to provide investment advisory services in connection with the execution and clearance of such instruments.

3130.4.4.2 Advice on Certain Futures and Options on Futures

This section is a historical example of a bank holding company that requested the Board's

approval to provide de novo investment advice concerning futures and options on futures contracts on foreign exchange, government securities, and bullion and money market instruments. In addition, the company would provide portfolio investment advice, for which applicant had previously received authorization pursuant to Regulation Y (the authorization is currently included in section 225.28(b)(6)(iv)).

Previously, the Board had approved the provision of investment advice as a futures commission merchant (FCM) (section 225.28(b)(7)(iv)(A)) or as a commodity trading adviser (CTA) registered with the Commodity Futures Trading Commission (CFTC). The provision by an FCM or CTA of such advice could include providing counsel, publications, written analyses, and reports relating to the purchase and sale of futures contracts and options on futures contracts that bank holding company futures commission merchant subsidiaries are permitted to execute and clear. Such advisory services could also consist of providing written or oral presentations on the historical relationship between the cash and futures markets or the functions of futures as hedging devices, demonstrating examples of financial futures uses for hedging, and assisting in structuring a hedging strategy for a cash position. FCMs and CTAs are subject to registration with and regulation by the Commodity Futures Trading Commission pursuant to the Commodity Exchange Act, as amended. (7 U.S.C. 1).

Before incorporation of the advisory activity into Regulation Y (see 1986 FRB 369), the Board had determined by order that the provision of futures and options advice by FCMs is permissible and closely related to banking (see 1985 FRB 168 and 111, 1984 FRB 780, and 1984 FRB 369). A CTA could provide such advice even though it is not acting as an FCM.

The issue presented by this latter proposal was whether the conduct of this activity by company would be a proper incident to banking if company, serving as an adviser, did not meet the *former* Regulation Y requirement of registering with the CFTC as a CTA or FCM. The applicant expected to qualify for a statutory exemption (7 U.S.C.6m) from the registration under section 4m of the Commodity Exchange Act. This exemption provides that any person who, during the previous 12 months, has not furnished commodity advisory services to more than 15 persons and has not represented himself or herself to the public as a CTA is exempt from

the registration requirements for CTAs under the act. The applicant's proposal permitted company to provide commodity trading advice without those safeguards. The Board held that it expects the adviser to disclose to its customers substantially the same information required for registered CTAs, including the CTA's performance record, conflicts of interest, possible trading risks, and civil and criminal actions against the CTA.

The Board concluded that the possible adverse effects would be further minimized by the following conditions:

1. Company will remain subject to the antifraud provisions of the Commodity Exchange Act as well as other restrictions in the act.
2. The adviser will not trade for its own account (except to hedge), will limit its advice to instruments that banks deal in extensively (foreign exchange, bullion, government securities, and money market instruments), and will only serve customers that are financially sophisticated and have significant dealings or holdings in the underlying commodities or instruments. The Board approved the application by order on October 18, 1988 (1988 FRB 820).

3130.4.5 PROVIDING DISCRETIONARY PORTFOLIO MANAGEMENT SERVICES ON FUTURES AND OPTIONS ON FUTURES ON NONFINANCIAL COMMODITIES

With respect to the Regulation Y provisions effective April 21, 1997, discretionary portfolio management advice is not separately listed in section 225.28(b)(6)(iv). Discretionary investment advice is discussed, however, within the preamble to the final rule. The preamble emphasizes that such advice may be provided to any person (such advice is no longer limited to institutional investors) regarding contracts relating to financial and nonfinancial assets.

Foreign banking organizations (applicants) subject to the BHC Act provided notice to engage through their subsidiary (company) in providing investment advisory services with respect to futures and options on futures on financial and nonfinancial commodities, including discretionary portfolio management ser-

VICES.⁷ The Board previously determined that the proposed activities, with the exception of providing discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities, are closely related to banking.

The Board had permitted bank holding companies to provide investment advice with respect to futures and options on futures on both financial and nonfinancial commodities. (See section 225.28(b)(6)(iv) of Regulation Y.) The Board also previously approved providing discretionary portfolio management services with respect to futures and options on futures on financial commodities. (See 1995 FRB 386.) In addition, the Office of the Comptroller of the Currency permits national banks to engage in discretionary funds management with respect to futures and options on futures on nonfinancial commodities. (See OCC Interpretive Letter No. 494 (December 20, 1989).)

In this regard, applicants committed that company would provide the proposed discretionary portfolio management services only at the request of the customer. Applicants also committed that company would comply with applicable law, including fiduciary principles. In addition, applicants proposed that company exercise its discretionary portfolio management authority only in purchasing and selling exchange-traded futures and options on futures contracts previously approved by the Board. (See SR-93-27.) The Board gave its approval on June 30, 1995 (1995 FRB 803).

3130.4.6 COMBINATION OF PROVIDING ADVICE WITH OTHER NONBANKING ACTIVITIES

3130.4.6.1 Providing Nonfinancial Futures Advice and the Combining of Foreign-Exchange, Government Securities Advisory, and Execution Services

A BHC applicant requested the Board's permission to engage in trading options on foreign exchange and offering investment advice on financial and nonfinancial options and futures contracts, securities, and interest-rate and currency swaps. The applicant applied to provide these advisory services through a partnership, of which it would own 80 percent of its equity.

7. Company does not trade futures or options on futures for its own account or provide futures commission merchant execution or clearance services.

This partnership would provide these advisory services only to the applicant, its affiliates, and the applicant's partner, a commodity trading organization. The partnership would provide execution services only to the applicant and its affiliates, not to the applicant's partner.

The Board had not previously approved the provision of nonfinancial futures advice for bank holding companies. The Board noted that the Office of the Comptroller of the Currency (OCC), by OCC Interpretive Letter 494 (December 20, 1989), determined that a national bank could provide execution, clearing, and advisory services for customer transactions in standardized, exchange-traded "nonfinancial" futures contracts and options, such as futures on oil and agricultural products. The OCC determined that the contracts are financial products and that the provision of investment advice was essentially the same as the advice given with respect to financial futures contracts. The OCC contends that investment advice is incidental to the bank's authority to purchase and sell the instruments on behalf of its customers.

The Board has permitted bank holding companies to provide advice with respect to futures and options on futures relating to bank-eligible securities, bullion, and foreign exchange (12 C.F.R. 225.28(b)(6)(iv)). The Board also has permitted bank holding companies to provide investment advice with respect to options and futures contracts based on broad-based indexes of stock and bonds (1990 FRB 770). The Board thus determined that the provision of investment advice with respect to investing in options and futures, based on nonfinancial instruments, to be the functional equivalent of providing advice on options and futures based on financial instruments. In each case, the bank holding company subsidiary is furnishing advice with respect to trading of a financial instrument. The partner-

ship would not provide advice to third parties without Federal Reserve approval. The Board thus approved the providing of investment advice on nonfinancial futures, options, and options on futures.

The applicant also proposed that the partnership provide execution services to the applicant's wholly owned subsidiary and to the applicant's U.S. branches with respect to—

1. over-the-counter options on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments;
2. exchange-traded transactions in futures, options, and options on futures on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments; and
3. spot and forward transactions in foreign exchange.

The Board previously approved the combination of advice and execution for—

1. foreign-exchange transactions (1990 FRB 649),
2. transactions on derivative instruments based on U.S. government securities and other money market instruments (1990 FRB 664), and
3. securities brokerage (1989 FRB 396).

The Board approved by order the providing of the combination of foreign-exchange and government securities advisory and execution services on December 21, 1990 (1991 FRB 126).

For these reasons, the Board approved the providing of discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities on June 30, 1995. (See 1995 FRB 803).

3130.4.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Provide information and advice on foreign operations and arrange foreign-exchange transactions				1983 FRB 221

4(c)(8)—Providing Educational Courses and Instructional Materials for Consumers on Individual Financial Management Section 3130.5

The financial and investment advisory nonbanking activity of consumer financial counseling may consist of providing advice, educational courses, and instructional materials to individuals on consumer-oriented financial-management matters, including debt consolidation, applying for a mortgage, bankruptcy, budget management, real estate tax shelters, tax planning, retirement and estate planning, insurance, and general investment management. The authority for this advisory activity is currently derived from section 225.28(b)(6)(v) of Regulation Y.

This nonbanking activity was added to the Regulation Y “laundry list” in 1986. Previously, the Board authorized the provision of consumer financial counseling services by order. (See 1979 FRB 65, 1979 FRB 265, 1985 FRB 253, and 1985 FRB 662. These references are only historical examples.) A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.¹ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection

with currency swaps is permissible,² as well as providing advice regarding loan syndications.³ The revised Regulation Y, effective April 1997, deleted restrictions on consumer-counseling services that prohibited bank holding companies from promoting specific products and services, and from obtaining or disclosing confidential customer information without the customer’s consent. These restrictions do not apply to banks that engage in the above activities.

Prudent management should take into consideration certain actions to prevent potential conflicts from arising. When considering these orders, the Board was concerned that the provision of consumer financial counseling activities could potentially result in unfair competition, conflicts of interest, and other adverse effects. (See 1979 FRB 267.) Examiners should be alert to problems that may arise from such conflicts as they review this nonbanking activity. Further, the examiner should determine whether counselors, as a general practice, are advising each customer that they are not required to purchase any services from affiliates, and determine whether customers have the option to exclude themselves from service and product offerings provided by affiliates.

1. See 62 *Federal Register* 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.

2. See 1989 FRB 308.
3. See 1987 FRB 220.

3130.5.1 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Providing financial-management courses, counseling, and related instructional materials				1979 FRB 265
Engaging, through an acquired bank, in consumer financial counseling				1985 FRB 253
Providing consumer financial counseling services as a permissible nonbanking activity		225.28(b)(6)(v)		1986 FRB 833 1985 FRB 662

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Financial and investment advisory services include tax-planning and tax-preparation services. Tax planning involves providing advice and strategies designed to minimize tax liabilities. For individuals, this includes analysis of the tax implications of retirement plans, estate planning, and family trusts; for corporations, it includes analysis of the tax implications of mergers and acquisitions, the portfolio mix, specific investments, previous tax payments, and year-end tax planning. Tax preparation involves the preparation of tax forms and advice concerning liability based on records and receipts supplied by the client. This nonbanking activity was included in the Regulation Y “laundry list” in 1986. (See section 225.28(b)(6)(vi).) Such services may be provided to any person. Effective April 21, 1997, certain restrictions were removed. These Regulation Y revisions deleted restrictions in the area of tax-planning and tax-preparation services that prohibited bank holding companies from promoting specific products or services and from obtaining or disclosing confidential customer information without the customer’s consent. These restrictions do not apply to banks. This fact needs to be considered when referring to the historical examples that follow.

The Board had previously approved, by order (1985 FRB 168), the activity of tax-preparation services for individuals. Since tax-preparation services for corporations is functionally or operationally similar to the tax-preparation services that banks already provide to individuals as well as to their affiliates and other financial institutions, the Board approved the providing of corporate tax-preparation services. When the nonbanking activity was incorporated into Regulation Y in 1986, tax-planning and tax-preparation services were authorized, not only for individuals and corporations, but for noncorporate businesses, such as partnerships and sole proprietorships and tax-exempt nonprofit organizations. Tax-planning and tax-preparation services must be conducted in accordance with applicable jurisdictional law.

3. To determine whether the company has formal written policies and procedures to ensure accurate, timely, and confidential preparation and maintenance of customers’ tax returns.
4. To determine whether the tax-return preparers are appropriately qualified to provide such tax services, and to determine the extent of management’s involvement in the activity.
6. To identify the potential and extent of off-balance-sheet risk associated with the activity.

3130.6.2 INSPECTION PROCEDURES

1. Review the company’s financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent company or the bank subsidiaries.
2. Determine whether bonding and other insurance coverage is adequate in relation to the risks associated with the activity.
3. Review pertinent contracts, client lists, public advertising and information, correspondence, and other documentation representing the services provided, and determine if charges for the tax-preparation service are on an explicit fee basis that is not dependent on the amount of tax savings achieved.
4. Determine if the client has a written legal opinion on file certifying that the activity is not considered the practice of law.
5. Review pertinent correspondence and the minutes of board of directors and board committee meetings, and determine if any significant law suits, Internal Revenue Service adverse actions, or other potential or contingency losses are pending and probable because of inaccurate tax-return preparation. Analyze their probable effect in relation to the financial condition of the company.
6. Review the company’s formal written policies and procedures for assurance of professional competence in providing sound tax-planning advice and the accurate, timely, and confidential preparation and maintenance of customer’s tax returns. The policies and procedures should require that tax-planning advice be clearly communicated by persons who are adequately supervised and who possess the necessary professional technical training and experience needed to provide tax-planning advice.

3130.6.1 INSPECTION OBJECTIVES

1. To ascertain whether the customer has the option to be excluded from promotions of other specific products and services.
2. To determine what financial effect the activity has on the parent company and its subsidiaries.

3130.6.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Preparation of tax returns in a non-fiduciary capacity is closely related to banking				1985 FRB 168
Permissible nonbanking activity		225.28(b)(6)(vi)		1986 FRB 833

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

3140.0.1 LEASING AUTHORIZATIONS
WITHIN REGULATION Y

Leasing is a form of financing which provides a lessee (the customer) the right to use land or depreciable assets without tying up working capital, and provides the lessor (the owner of the property) with a generally higher rate of return than just lending as a result of the tax benefits that can arise from the ownership of the equipment, real property, or tangible personal property. In 1971, “leasing personal property or acting as agent, broker, or adviser in leasing such property” was added to the list of permissible nonbanking activities for bank holding companies under Regulation Y. In 1974, the authority to engage in this activity was expanded to include leasing of real property.

In 1997, restrictions on leasing activities were removed to permit greater flexibility to acquire leaseable property in quantity and to sell or re-lease property upon the lease’s expiration. Removed restrictions consisted of the maximum lease term, maximum holding period for leased property, limit on acquisitions of property to specific leasing transactions, restriction on leases to those that served as the functional equivalent of extensions of credit, and 100 percent limit on the amount of reliance that could be placed on the value of leased property. Added clarifications consisted of more details on the requirements for a nonoperating lease, particularly those for automobile rentals.

3140.0.2 PERMISSIBLE LEASING
ACTIVITIES

Two types of leasing activities are permissible for bank holding companies: full-payout leasing and high residual value leasing. A *full payout lease* is the functional equivalent of an extension of credit that relies primarily on rental payments and tax benefits to recover the cost of the leased property and related financing costs. *High residual value leasing* may involve significant reliance on the expected residual value of the leased property—on average, under 50 percent. However, this value can extend up to the full original cost of the property (that is, to recover the full acquisition cost of the leased property plus related financing costs).

When leasing personal or real property, or acting as agent, broker, or advisor, only those leasing transactions meeting the following criteria are considered permissible:

1. The lease must be on a nonoperating basis.
2. The initial lease term must be at least 90 days.
3. For leasing involving real property—
 - a. at the inception of the initial lease, the effect of the transaction must yield a return that will compensate the bank holding company, as lessor, for its full investment in the property plus the estimated total cost of financing the property over the term of the lease (This includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease.) and
 - b. the estimated residual value (yield) of the property at the expiration of the initial term of the lease may not exceed 25 percent of the acquisition cost of the property to the bank holding company (lessor).

With respect to leasing personal or real property on a nonoperating basis, this means that the bank holding company or its subsidiary may not engage in operating, servicing, maintaining, or repairing leased property during the lease term. A bank holding company, however, can arrange for a third party to provide the services or products.

As for automobiles, this means that a bank holding company may not (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories either in bulk or for an individual vehicle after its delivery to the lessee; (3) provide the loan of an automobile during the vehicle’s servicing; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle’s license (registration) without authorization from the lessor.

3140.0.3 ACCOUNTING FOR LEASES

Leasing has become a prominent financing vehicle. Lessors have employed a number of different methods in structuring and accounting for leases. Statement No. 13 of the Financial Accounting Standards Board (FASB),¹ “Account-

1. Other FASB releases dealing with leasing are FASB Statements 22, 23, 27, 28, 29, 76, 77, 92, 94, 98, and 109; FASB Interpretations 19, 21, 23, 24, 26, and 27; and FASB Technical Bulletins 79-10, 79-12, 79-13, 79-14, 79-15, 79-16, 85-3, 86-2, and 88-1.

ing for Leases,” has become the uniform standard in accounting for leases.

The accounting for leases must be viewed from the perspective of the parties involved in the leasing transaction, the lessee and the lessor. Negotiations and closing costs incurred with respect to the lease should be written off over the life of the lease.

In applying FASB Statement No. 13, certain terminology is used. Basic terms that should be considered are described below.

Inception of a lease. The inception of a lease refers to the date the lease contract was signed or the date that the construction was completed, or if earlier, the date of the written commitment stating the significant terms.

Term of the lease. The lease term consists of the noncancelable term and the period comprising the bargain renewal option.

Fair value of lease property. The fair value of a lease consists of the price that the property could be sold in an arms-length transaction.

Economic life of the leased property. The economic life of the leased property represents the period over which the property is expected to be economically beneficial to one or more users for its intended purpose.

Estimated residual value of the leased property (ERV). The residual value is the estimated

fair value of the leased property at the expiration of the lease term.

Interest rate implicit in the lease. The implicit interest rate is the discount rate that causes the sum of the minimum lease payments and the unguaranteed residual value at the end of the lease term to be equal to the fair value of the property at the beginning of the lease term.

Lessee’s incremental borrowing rate. The incremental borrowing rate is the interest rate at which the lessee could borrow the funds to purchase the leased property.

3140.0.3.1 Accounting for Leases by a Lessee

There are two methods for accounting for leasing transactions by a lessee. These are the operating method and the capitalized lease method.

3140.0.3.1.1 Operating Method of Accounting for Leases

The operating accounting method merely records the cost of the rental payments as an expense when it is required to be paid in accordance with the terms of the lease agreement.

Example: Assume that equipment is leased for \$100,000 per year for three years. Under this method, the annual cost would be recorded as a rental expense on the Income Statement:

Dr. Rent	\$100,000	
Cr. Cash		\$100,000

To record an annual payment of rent based on an operating lease agreement.

3140.0.3.1.2 Capitalized Lease Method of Accounting for Leases

3140.0.3.1.2.1 When a Lessee Is to Use the Capitalized Lease Method

If *any one* of the following conditions exist, the lessee must capitalize the lease:

1. The asset is owned by the lessee at the end of the lease term.
- *2. The lease term is equal to or more than 75 percent of the estimated economic life of the asset.

3. The lessee can purchase the asset below its fair market value before or at the end of the lease term (bargain purchase option).
- *4. The present value of the minimum lease payments at the beginning of the least term is equal to or more than 90 percent of the fair market value of the property.

* If the lease begins in the remaining 25 percent of the asset's estimated economic life, these items do not apply; such leases are considered operating leases.

Using this method, the lease is recorded as an asset at the lesser of the present value of the rental and other minimum lease payments or the fair value of the leased property as though the lease obligation was being purchased on credit. The payment made is treated as a payment made on an installment debt. At the same time, the asset is being amortized over the lease term. The lease obligation is treated as a long-term debt. The discount rate that is used to capitalize the lease is the lessee's incremental borrowing rate or the interest rate implicit in the lease agreement.

Example #1: This example illustrates the capitalized lease method using the same example as above with the added fact that the lease agreement contains an interest rate of 10 percent. Assume that the interest rate of the lease agreement is the same as the lessee's marginal borrowing rate.

Dr. Capitalized Lease	\$248,685	
Cr. Lease Obligation		\$248,685

To record an equipment lease obligation under a capitalized lease agreement.

(Present value of \$100,000 per year for three years at a 10 percent interest rate)

1st Year

Interest Expense	\$ 24,869	
Lease Obligation	75,131	
Cash		\$100,000

To record the first year's payment on an equipment lease obligation.

$(\$248,685 \times .10 = \$24,869)$

Dr. Equipment Lease Amortization	\$ 82,895	
Cr. Capitalized Lease		\$ 82,895

To record the annual amortization of a capitalized equipment lease.

$(\$248,685/3 \text{ years})$

2nd Year

Dr. Interest Expense	\$ 17,355	
Dr. Lease Obligation	82,645	
Cr. Cash		\$100,000

To record the second annual lease payment under a three-year capitalized lease agreement.

$$(\text{Interest} = \$248,685 + 24,869 - \$100,000 = \$173,554 \times .10 = \$17,355)$$

Dr. Lease Amortization	\$ 82,895	
Cr. Capitalized Lease		\$ 82,895

To record the second year's lease amortization under a three-year capitalized lease.

3rd Year

Dr. Interest Expense	\$ 9,091	
Dr. Lease Obligation	90,909	
Cr. Cash		\$100,000

To record the third year's lease payment under a three-year capitalized lease obligation.

$$(\text{Interest} = \$173,554 + \$17,355 = \$190,909 - \$100,000 = \$90,909 \times .10 = \$9,091)$$

The financial statements are to include footnotes that disclose the present value of noncancelable lease commitments where the lessor either recovers more than 75 percent of the economic life of the asset leased or the investment plus a reasonable return.

3140.0.3.2 Accounting for Leases by a Lessor

3140.0.3.2.1 Operating Lease (Lessor)

A lessor would have the following accounting entries for an operating lease:

Dr. Cash	\$xxx,xxx	
Cr. Rent Income on Leased Assets ²		\$xxx,xxx
Dr. Depreciation Expense	\$xxx,xxx	
Cr. Accumulated Depreciation—Leased Assets		\$xxx,xxx

In order for the *lessor* to be able to capitalize a direct financing lease, any one of the same four criteria for a lessee must apply along with two additional criteria:

² Any rent received in advance would be initially credited to "unearned rent revenue."

1. Collectibility of the minimum lease payments must be reasonably predictable.
2. No important uncertainties exist as the amount of unreimbursable costs incurred.

In accounting for the lessor's capitalized lease transactions, there are some common accounts that are used. These are described below.

Unearned income from lease financing receivables. Unearned income represents the unearned interest liability account that is netted against the total of lease payments receivable which includes the estimated residual value for balance-sheet presentation. It represents the "interest" income equal to the excess of rentals receivable over the fair value of the property at the inception of the lease.

Lease financing receivables. This asset account is established in the amount of total lease payments to be received from the lessee. The amount by which the rentals receivable exceeds the cost of the property is the functional equivalent of interest and represents a portion of the income

to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed asset account, then transferred to lease payments receivable.

Throughout the lease term, the rentals receivable account is periodically reduced by the full amount of each rental payment received.

3140.0.3.2.2 Direct Financing Capitalized Lease

In this situation, a finance company purchases equipment from a manufacturer (recorded as equipment [asset] when purchased). The finance company (lease financing nonbanking subsidiary) then leases that equipment and records it as a normal financing lease. There is *no* dealer profit from the sale of the asset. Unearned interest income is recognized over the life of the lease using the effective interest method. Since the lessor has "sold" the asset, no depreciation is recorded.

Example #1: Lease with No Guaranteed Residual Value by the Lessee

Assume that the finance company purchases equipment costing \$100,000. It then leases the equipment to a lessee under a five-year lease agreement that requires annual payments of \$25,000 per year. At the end of the lease term, the lessee will own the equipment. The implied interest rate is 7.931 percent (comparison of the present value of the equipment of \$100,000 against the \$25,000 annual payment for five years).

Dr. Equipment	\$100,000

Example #2: Lease with a Residual Value (Guaranteed by the Lessee)

A lessor acquires property to be leased for \$14,000 (its fair value at the inception of the lease). The estimated economic life of the property is five years. The lease has a noncancelable lease term of four years with a rental payment due of \$3,649 at the end of each year. The lessee guarantees the residual value at the end of the four-year lease term in the amount of \$4,000. The lessor's implied rate of interest in the lease is 10.8695 percent. The present value of the minimum lease payments at this interest rate and monthly payments exceeds 90 percent of the fair value of the property at the inception of the lease ($.90 \times \$14,000 = \$12,600$).

$$(\$6,898 + 751 - \$3,649 = \$4,000)$$

3140.0.3.2.3 Balance-Sheet Presentation

The lease payments receivable would be reported on the balance sheet as a single amount "net investment" (Lease Financing Receivables less the balance of the Unearned Income from Lease Financing Receivables). If the lessor has established an allowance for possible lease losses, this amount is shown separately as a deduction from the net investment. The net investment in the direct financing lease is \$18,000 for example #2 above. It consists of the gross investment of \$18,596 ($\$3,649 \times 4$ annual rental payments) plus the \$4,000 residual value less the unearned income of \$4,596.

interest rate method, and that the lease is now considered a loss. Further assume that the third payment should have been received eight months ago. It is determined during the inspection that the lease should be classified as doubtful of collection. The balance to be classified is the net investment of \$7,728. This consists of the balance of Lease Financings Receivable of \$9,513 (includes the \$4,000 estimated guaranteed residual value) less the balance of Unearned Income from Lease Financings Receivable of \$1,785 ($\$1,034 + \$751 =$ amount due on regular payment intervals) or a net investment of \$7,728.

3140.0.3.2.4 Classification

If it is deemed appropriate to classify a lease, the amount to be classified (in example #2 above) would be the net investment. For illustration, assume that two of the four payments had been received on the lease, that income has been recognized monthly according to the effective

3140.0.3.2.5 Delinquency

It is considered appropriate to state in the inspection report the percentage of delinquency in the lease portfolio. The percentage is calculated by dividing the aggregate rentals receivable on delinquent leases (less unearned income on the delinquent leases) by the total of rentals receivable on all leases (less their unearned income). Estimated realizable values would not be included in the delinquent amounts unless they were guaranteed by the lessee.

3140.0.4 LEVERAGED LEASES

The lessor can “leverage” a lease transaction by borrowing a substantial portion of the acquisition cost from a long-term lender, with the rentals and the property pledged as collateral for the loan. The lessor borrows in order to finance a leasing transaction with a small, or perhaps, a negative equity in the property to be leased.

The initial step in accounting for this type of lease involves calculating the cash flows over the term of the lease. The cash flows include the income tax effects of tax deductions to the lessor, the lessor’s initial investment in the property, the rental receipts net of debt service, and the proceeds expected to be received from the sale of any residual. The next step in accounting for a leverage lease involves determining the applied interest rate that, when applied to the net investment in the years that the net investment will be positive, would precisely allocate the net income to the positive years. See appendix E of SFAS 13 for an example as to how to account for a leveraged lease.

3140.0.5 INSPECTION OBJECTIVES

1. To determine the effect of the investment in the leasing subsidiary upon consolidated operations, and indirectly upon the bank subsidiaries’ safety and soundness.
2. To determine if the company is operating in compliance with applicable laws and regulations, and to ensure that corrective action is initiated if warranted.
3. To determine if policies, procedures, and controls are adequate to protect the company from mismanagement, unnecessary risk, and loss.
4. To assess the management’s ability to operate the company in a safe and sound manner.
5. To determine that accounting practices do not overstate income.

3140.0.6 INSPECTION PROCEDURES

The decision whether the operations of a leasing subsidiary will be inspected “on-site” is based on the availability and adequacy of leasing company data at the offices of the parent company. Item 1 below provides a listing of information necessary to the inspection process. If this and any other information necessary to assess the overall condition of the subsidiary is available at the parent’s office or can be obtained through a written request to the subsidiary, an on-site

inspection may not be necessary. The inspection frequency requirements, found in section 5000.0.4, should be reviewed in making such a determination.

1. The following information should be available at the start of the inspection:
 - a. trial balance of all leases and outstanding credits,
 - b. listing of accounts on which payments are delinquent 30 days or more, or on which payments are otherwise not being made according to schedule,
 - c. comparative interim and fiscal financial statements of the leasing company,
 - d. listing of unbooked assets and contingent liabilities,
 - e. cash-flow projections for the current fiscal year and the next fiscal year,
 - f. listing of available lines of credit,
 - g. copies of the most recent internal and external audit reports, and
 - h. minutes of board and executive committee meetings since the date of the previous inspection.
2. Establish a “credit line” above which all leases will be reviewed. The line can be set at an amount that will cause a certain percentage of the dollar volume of the lease portfolio to be reviewed (e.g., between 70 percent and 80 percent), or at an amount that will cause the review of each lease exceeding a certain percentage of gross capital. Leases on which payments are delinquent are to be reviewed regardless of amount.
3. Analyze the creditworthiness of the lessees. Consideration is given to the figures derived from the lessee’s financial statements, as well as cash flow, trends and projections of growth in sales and income, and the qualifications of management.

Delinquency on a lease obligation is potentially more serious than delinquency on a conventional loan. If the property under lease is necessary for the lessee’s continued production of income, as is frequently the case, the lessee’s financial condition will be seriously deteriorated before the lessee is willing to risk losing the property by default.
4. For those leases which might result in loss to the lessor, or for which financial information was not adequate to make such a determination, transcribe the following information to line sheets:
 - a. name and line of business of lessee

- b. name of guarantor(s)
 - c. original date of the lease contract
 - d. original amount of the rentals receivable
 - e. ERV of the property
 - g. book value of the investment in the lease as of the inspection date
 - h. cost of the property
 - i. description and location of the property
 - j. amount and frequency of rental payments
 - k. original amount, term, rate, and schedule of amortization of any nonrecourse debt associated with the lease
 - l. lessor's percentage of equity participation in the lease obligation, if applicable
 - m. summary financial data indicating the creditworthiness of the lessee, and guarantors, if applicable
5. Before the conclusion of the inspection, discuss with management all classified leases. Inadequate or negative cash flow and unfavorable trends reflected in financial statements of the lessee are usually indicative of a substandard lease. Leases classified doubtful typically include those on which payments are delinquent for an extended period and those on which the lessor's recovery of investment is dependent upon an event of unknown probability, such as a pending lawsuit or insurance claim.
- A loss classification results from the lessee's inability or refusal to continue making payments.
6. Prepare a write-up to support the classifications. The write-up should include the lessee's type of business, present financial status, circumstances which led to the classification, the probability that the terms of the lease can be met, and the amount of protection afforded by sale or re-lease of the underlying property.
7. Review a sample of the lessor's computations of lease yields to determine whether the lessor will recover not less than the full investment in the property plus the estimated total cost of financing the property over the term of the lease. This includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease.
- With respect to the full-payout lease, governmental entities may be prohibited from entering into leases for periods exceeding one year. In that case, the bank holding company or its subsidiary (as lessor) should demonstrate that the lease is expected to be continually renewed until the cost is fully recovered.
8. Ascertain whether title to the property rests with the lessor, and that the lessor has taken steps to protect its ownership rights. Evidence of filing under the Uniform Commercial Code, where appropriate, should be found in the documentation file. Aircraft should be registered with the FAA, interstate vehicles with the ICC, and ships with the Coast Guard.
 9. Check for cancellation or other provisions in the contract which could jeopardize the full-payout status of the lease. There is no need to take exception to a cancellation provision which provides for payment by the lessee of an amount which allows the lessor to recover fully its investment in the property.
 10. Check that insurance coverage is effective on leased property and is provided by the lessee in compliance with all insurance provisions of the contract in an amount sufficient to protect against loss from property damage. Public liability insurance should also be provided to protect against loss from lawsuits which could arise from situations such as the crash of leased aircraft.
 11. Review the lessee's duties under the contract with respect to repairs and taxes. Determine whether the lessor has instituted procedures to check that the lessee's required duties are being performed.
 12. Review the status of all property acquired for lease purposes but which is not now under lease. Determine the reason for the "off-lease" status of the property, ascertain the realizable value of the property, and investigate whether the off-lease property will be sold or re-leased within the required two-year period.
 13. Investigate the lessor's procedures for periodic review of the reasonableness of the estimated residual value. The estimate should be reviewed at least annually and reduced in amount on the books if the value has declined on a presumably permanent basis.
 14. Review past operations of the lease company to determine if projections of income and ERV have been realistic in light of actual experience.
 15. Review the minutes of the meetings of the board and executive committees to determine whether purchases of property and delinquent leases are reported to the board.
 16. Determine if the company has entered into leases with companies owned or controlled by one director, officer, or 10 percent share-

- holder of the leasing company or holding company. Compare the rates and terms on such leases to the rates and terms offered on leases to companies of similar credit standing.
17. Check for lease concentrations to any one lessee or industry and prepare a comment for the inspection report if any concentration is considered unwarranted.
 18. Determine whether the company has established limits for the maximum amount of "credit" to be extended to a single lessee. If such limits have been established, investigate whether the company adheres to them. If they have not been established, inquire as to the company's policy on this matter.
 19. Provide the examiner-in-charge with information to be included in the inspection report, including:
 - a. scope of the inspection (on- or off-premises)
 - b. comments concerning any policies or conditions having an adverse effect on the leasing company or parent company
 - c. brief history of the company and a description of its activities
 - d. summary analysis of financial factors of the company, including trends in the volume and classification of receivables, adequacy of capital and reserves, return on assets, and contribution to consolidated income and consolidated assets
 - e. statutory authority under which the company operates
 - f. details of all borrowings of the company from within the holding company system and from external sources
 - g. details of any litigation in which the company is a defendant
 - h. scope and frequency of audit of the company by both internal and external auditors
 20. Compare current earnings performance and balance-sheet ratios of the company with past performance and industry composites.
 21. Determine whether cash flows of the company are adequate to service all debts.
 22. Assess the adequacy of internal controls over the company's operations.
 23. Check for action taken on matters criticized in the most recent audit reports and the previous inspection report. Determine if leases classified "loss" were removed from the books.
 24. Investigate whether any affiliated banks maintain compensating balances for lines of credit of the leasing company, and if so, whether the leasing company compensates the bank for maintenance of the balances. If "loss" leases have not been removed from the books, discuss with management the reasons why the charge-offs were not made. Determine whether the financial statements and reports submitted to the Board of Governors were misstated as a result of the "no charge-off" decision.
 25. For higher residual value leasing, determine that—
 - a. the residual values have been estimated accurately;
 - b. residual values are reviewed and adjusted annually;
 - c. the initial terms of the lease are at least 90 days;
 - d. the lessor relies on a residual value of the leased property that will recoup the acquisition cost of the property and any related financing or other associated costs;
 - e. the aggregate book value of all tangible personal property held for such a lease, having an estimated residual value in excess of 25 percent of the acquisition cost of the property, does not exceed 10 percent of the BHC's consolidated domestic and foreign assets;
 - f. the BHC maintains separately identifiable records of the leasing transactions and activities; and
 - g. each company maintains capitalization fully adequate to meet its obligations and support its activities, and that its capital levels are commensurate with industry standards for companies engaged in comparable leasing activities.

3140.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Automobile leasing				1976 FRB 930
Consumer leasing	15 U.S.C. 1667			
Higher residual value leasing				1991 FRB 490,187 1990 FRB 462, 960
Personal or real property leasing activities of bank holding companies		225.28(b)(3)		
Special-purpose leasing corporation			3-712	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

The Board considers the making of equity and debt investments in corporations or projects designed “primarily to promote” community welfare as an activity closely related to banking. The Board includes such investments in the list of permissible nonbanking activities in Regulation Y; however, bank holding companies must obtain prior approval to engage in these activities. The Board, effective April 21, 1997, included the provision of advisory and related services for programs designed primarily to promote community welfare into Regulation Y. Such advisory activities had previously been permitted only by Board order. For examples of advisory services approved for community development projects, see 1990 FRB 671, 1989 FRB 576, and 1988 FRB 140.

3150.0.1 INVESTMENTS IN CORPORATIONS OR PROJECTS TO PROMOTE COMMUNITY WELFARE—BOARD INTERPRETATION

The Board also provides guidance with regard to investments in community welfare projects through its interpretation (see section 225.127 of Regulation Y (12 C.F.R. 225.127)). This interpretation describes projects that the Board has considered as promoting community welfare as their primary intent. These include but are not limited to—

1. projects to construct or rehabilitate housing for low- or moderate-income persons,
2. projects for construction or rehabilitation of ancillary local commercial facilities necessary to provide goods or services principally to persons residing in low- or moderate-income housing, and
3. projects designed explicitly to create improved job opportunities for low- or moderate-income groups.

Because the Board believes that bank holding companies should take an active role in the quest for solutions to the nation’s social problems, it has not defined other types of investments designed primarily to promote the community welfare in order to give bank holding companies greater flexibility in developing new and creative approaches to resolving community problems. Accordingly, the Board has maintained the flexibility to determine whether an

activity is primarily designed to promote the community welfare. Factors that the Board might consider include whether the activity benefits low- and moderate-income individuals in areas such as housing and employment and the need for specialized community development activities in different localities. The Board will consider a range of different activities, but will probably not approve a proposal that does not in some way either benefit low- or moderate-income individuals or benefit the specialized needs of local communities.

Once a bank holding company has obtained Board approval to engage in community development activities pursuant to Regulation Y, the holding company may, without further System approval, engage either directly or through a subsidiary in certain community development activities, so long as such activities do not exceed 5 percent of the bank holding company’s total consolidated capital stock and surplus.

A bank holding company may invest and provide financing—

1. to a corporation or project or class of corporations or projects that the Board previously has determined is a public welfare project pursuant to paragraph 23 of section 9 of the Federal Reserve Act (12 U.S.C. 338a);
2. to a corporation or project that the Office of the Comptroller of the Currency previously has determined, by order or regulation, is a public welfare investment pursuant to section 5136 of the Revised Statutes (12 U.S.C. 24 (Eleventh));
3. to a community development financial institution (other than a bank or bank holding company) pursuant to section 103(5) of the Community Development Banking and Financial Institutions Act of 1994 (12 U.S.C. 4702(5));
4. for the development, rehabilitation, management, sale, and rental of residential property if a majority of the units will be occupied by low- and moderate-income persons or if the property is a “qualified low-income building” as defined in section 42(c)(2) of the Internal Revenue Code (26 U.S.C. 42(c)(2));
5. for the development, rehabilitation, management, sale, and rental of nonresidential real property or other assets located in a low- or moderate-income area provided the property

is used primarily for low- and moderate-income persons;

6. to one or more small businesses located in a low- or moderate-income area to stimulate economic development;
7. for the development of, and to otherwise assist with, job training or placement facilities or to foster programs designed primarily for low- and moderate-income persons;
8. to an entity located in a low- or moderate-income area if that entity creates long-term employment opportunities, a majority of which (based on full-time equivalent positions) will be held by low- and moderate-income persons; and
9. for providing technical assistance, credit counseling, research, and program development assistance to low- and moderate-income persons, small businesses, or nonprofit corporations to help achieve community development.

3150.0.2 EXAMPLES OF BOARD-APPROVED ACTIVITIES DESIGNED TO PROMOTE COMMUNITY WELFARE

With its primary thrust to promote community welfare rather than creating a focus on a collateral effect, economic rehabilitation and development should focus on providing housing, services, or jobs for low- or moderate-income residents or groups. Examples of projects previously approved by the Board include an investment in—

1. an agricultural test farm (testing crops, equipment, alternative farming methods and chemicals, and providing student agricultural research opportunities and financial planning workshops for farmers (see 1990 FRB 671);
2. an entity that provides education to young persons (see 1991 FRB 70) through a nonprofit, tax-exempt bank holding company (educational programs consisted of the American economic system, how to start a business, college financial planning, and career opportunities in banking);
3. the acquisition and redevelopment of a sole medical clinic in a small rural town without public transportation that was located 30 miles from another facility and was needed to attract new physicians to replace those retiring (see 1991 FRB 63); and
4. a limited partnership to develop a nearly vacant office building into a hotel complex

within a major city, located adjacent to a public housing project. Commitments included providing training to welfare recipients residing in public housing projects and employing low- and moderate-income individuals at the hotel complex, and donating a portion of the profits to a nonprofit corporation designated to provide low-cost housing, employment, and business opportunities for disadvantaged residents. (See 1996 FRB 679.)

3150.0.3 EXAMPLES OF INVESTMENTS VIEWED AS NOT PROMOTING COMMUNITY WELFARE

The Board has indicated that some investments are not designed primarily to promote community welfare unless there is substantial evidence to the contrary, even though the investment may benefit the community to some extent. Examples include investments to build or rehabilitate high-income housing or commercial, office, or industrial facilities which are not designed explicitly to create job opportunities for low-income persons, even though the investment may benefit the community to some extent. This latter point was made in an order (see 1996 FRB 679) whereby the Board denied an application by a bank holding company to acquire an investment in an industrial development corporation involved in the construction of a shopping and office complex in an urban renewal area. The Board identified the critical issue as whether the project was devised primarily to promote the community welfare or primarily designed as a profit-making venture in which the benefits to the community were merely a collateral effect.

In another case, the Board denied a proposal intended to acquire a company that indirectly acted as a managing general partner of a private development venture. The venture was a large-scale, urban redevelopment initiative, jointly sponsored by government and private entities, that was intended to revitalize a geographic area that was largely abandoned within a working middle-class community. (See 1990 FRB 672.)

3150.0.4 INSPECTION OBJECTIVES

1. To determine that new investments and financing in community development and other corporations and projects are designed primarily to promote community welfare.
2. To determine that previous investments and financings continue to meet the standards

- imposed by section 225.28(b)(12) of Regulation Y.
3. To determine that the activity remains within the scope of regulatory approval when such approval involves specific rather than general investments.
 4. To determine that advisory and related services for programs designed primarily to promote community welfare are being conducted within the scope of their regulatory approval.

3150.0.5 INSPECTION PROCEDURES

As is standard practice in the examination of other subsidiaries engaged in nonbanking activities, a thorough review of pertinent books, records, contracts, and financial statements should be undertaken by the examiner. To fulfill the inspection objectives concerning this activity, the examiner may have to go beyond routine investigative practices. Since this activity

encompasses a wide variety of programs, procedures will have to be developed on an ad hoc basis. When federal or state approval of the program is required, the examiner may wish to review applications and other materials submitted to such authorities. The terms or conditions imposed by such bodies as well as the subsidiary's continued eligibility may also be of importance. Contact with responsible federal or state officials may be deemed appropriate in certain cases. Such contacts, however, should be initiated only in accordance with respective Reserve Bank procedures. When a community welfare project or financing does not include the involvement of another governmental body, the examiner will need to verify directly whether goals essential to the nature of the activity, such as providing housing for the elderly or jobs for low- or moderate-income people, are being met. In this regard, the burden should be on the holding company to provide such data. In some instances, an on-site visit to the project may be appropriate.

3150.0.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Permissible investments described	1701	225.28(b)(12) 225.127	4-178	1972 FRB 495 1978 FRB 45 1984 FRB 452

Denial of a venture that would revitalize an abandoned area in a middle-class community				1994 FRB 733

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

3160.0.1 PROVISION OF DATA
PROCESSING AND TRANSMISSION
SERVICES

Under section 4(c)(8) of the BHC Act, the permissibility of bank holding company data processing activities is generally predicated upon the type of data processed or transmitted. Subsidiaries formed under this section may engage in business directly with outside customers, unlike section 4(c)(1) subsidiaries, which can act only as servicers for affiliates¹ and cannot deal directly with outside customers.

The intent of section 4(c)(8) is to permit bank holding companies and their nonbank subsidiaries to directly provide to customers financially or economically oriented services (or those that are similar to these services) that banks have traditionally used in their own internal operations and provided to their customers. Such services (with prior approval) are unrestricted as to location and may be provided from out-of-state locations. Regulation Y generally prohibits bank holding companies from providing data processing for other than banking, financial, or economic data.

3160.0.2 INCIDENTAL ACTIVITIES

The Board regards the following as incidental activities necessary to carrying on permissible data processing activities:

1. Making excess computer time available to anyone as long as the only involvement by the bank holding company system is furnishing the facility and the necessary operating personnel. This stipulation applies when—
 - a. the equipment is not purchased solely for the purpose of creating excess capacity to sell;
 - b. hardware is not offered in conjunction with excess capacity; and
 - c. the facilities for the use of the excess capacity do not include providing any software other than systems software (including language), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.

2. Selling by-products of permissible data processing and data transmission activities where they are not designed, or appreciably enhanced, for the purpose of marketability.
3. Furnishing any data processing service upon request of a customer if the service is not otherwise reasonably available in the relevant market area.

3160.0.3 SECTION 4(c)(8) vs.
SECTION 4(c)(1)

Section 4(c)(1) data processing subsidiaries, which do not require prior approval, are limited as follows:

1. They can furnish computer services *only* for the internal operations of the bank holding company and its bank affiliates.¹
2. Direct computer services to nonaffiliated customers are not permitted. Any contract to furnish services to nonaffiliated customers must be between the affiliate bank and its customer, with the data processing subsidiary acting as a servicer for its affiliate bank. In addition, the kinds of services furnished are limited to those that a bank can normally provide.

Section 4(c)(8) data processing subsidiaries may deal directly with the customer. In accordance with section 4(c)(8) of the BHC Act and section 225.28(b)(14) of Regulation Y, the kinds of services subsidiaries may provide to others are—

1. data processing and transmission services, facilities (including hardware, software, documentation, or operating personnel), databases, advice, and access to such services, facilities, or databases by any technological means, if—
 - a. the data to be processed or furnished are financial, banking, or economic data and
 - b. the hardware provided in connection with the data processing and transmission services is offered only in conjunction with software designed and marketed for the processing and transmission of financial, banking, or economic data, and the general-purpose hardware does not constitute more

1. In this context, “affiliates” is limited to other organizations that have subsidiaries of the same parent bank holding company as the servicer.

than 30 percent of the cost of any packaged offering.

2. data processing and transmission services that are not financial-, banking-, or economic-related if the bank holding company's revenues derived from data processing and transmission activities do not exceed 30 percent of the company's total annual revenue. See 1993 FRB 1158 and section 3160.2.

3160.0.4 MINI-COMPUTER ACTIVITIES

Some data processing subsidiaries are actively engaged in placing mini-computers with some of their customers. However, if the subsidiary acts as sales agent for the manufacturer and receives a commission, it is in violation of section 225.28(b)(14) of Regulation Y and should be advised to cease the practice.

3160.0.5 HARDWARE AND SOFTWARE AS AN INTEGRATED PACKAGE

Customers of data processing services require that suppliers provide them with hardware and software as an integrated package. Providing general-purpose hardware is permissible only if the cost of the hardware does not exceed 30 percent of the cost of the packaged offering, and only in conjunction with permissible software. When hardware is provided in a specialized form (such as ATMs), its provision meets the *National Courier* test and is closely related to banking and therefore not subject to the 30 percent limitation.

3160.0.6 PACKAGED FINANCIAL SYSTEMS

The Board found that providing packaged financial systems, including data processing hardware and software, to be installed on the premises of the customer is closely related to banking if conducted within the limits of Regulation Y.

3160.0.7 EXCESS CAPACITY

The sale of excess computer time is currently treated in a Board interpretation as a permissible

incidental activity. The interpretation (12 C.F.R. 225.123(e)(1)) currently permits a bank holding company to make excess computer time available to anyone so long as the only involvement of the holding company is furnishing the facility and the necessary operating personnel. Data processors that process time-sensitive data must maintain sufficient capacity to meet peak demand and provide back-up in case of equipment failure. Excess capacity necessarily results from such needs and thus the sale of excess capacity is necessary to reduce costs and to remain competitive. Bank holding companies are limited in the sale of excess capacity as follows:

1. A bank holding company may not purchase data processing equipment solely for the purpose of creating excess capacity.
2. A bank holding company may not sell hardware in conjunction with excess capacity.
3. A bank holding company may provide only limited types of software in connection with its sale of excess capacity. This includes systems software (that is, software designed only to control and operate the hardware and not to perform substantive operations), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.

3160.0.8 BY-PRODUCTS

The sale of by-products for the development of a program for a permissible data processing activity is treated in a Board interpretation (12 C.F.R. 225.123(e)) as a permissible incidental activity. By-products may be data, software, or data processing techniques or information developed by the bank holding company. By-products *may not* be designed or appreciably enhanced for the purpose of marketability.

3160.0.9 REQUIREMENT OF SEPARATE RECORDKEEPING

The Board's data processing interpretation is designed to minimize any possibility of unfair competition. A bank holding company subsidiary or related entity that provides permissible data processing and data transmission activities (services, facilities, by-products, or excess capacity) must keep separate books and records and provide the documents to any new or renewal customer upon request.

3160.0.10 SUMMARY

Holding company EDP proposals are evaluated from the standpoint of whether the proposed data processing activities involve banking, financial, or related economic data within the meaning of the Board's Regulation Y. Processing and transmitting data that are not financial, banking, or economic is permissible if the revenues derived from those activities do not exceed 30 percent of the company's total annual revenues. For examples of previous Board authorizations for data processing and transmission services in accordance with Regulation Y, see sections 3160.1 through 3160.3.

The data processing that is permissible under Regulation Y encompasses various data processing services, including sales analysis, inventory analysis, freight payment, municipal tax billing, credit union accounting, and savings and mortgage company bookkeeping and payroll processing.

3160.0.11 INSPECTION OBJECTIVES

1. To determine that the full range of EDP services performed are permissible financially oriented activities in compliance with applicable laws and regulations.
2. To review the relationship between the data processing subsidiary and its affiliates and the effect of those relationships on the affairs and soundness of the bank affiliate.
3. To determine if operating policies are adequate and if management is operating in conformance with the established policies.
4. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

NOTE: All bank-related EDP servicers receive EDP examinations conducted by the primary bank regulator, which cover detailed operations, audit, proper back-up, and overall computer operations. The bank holding company-related inspection should focus on the types and permissibility of services performed, the types of customers serviced, and transactions between affiliates, and should provide an overall financial evaluation.

3160.0.12 INSPECTION PROCEDURES

3160.0.12.1 Pre-Inspection

1. Where available, review the EDP examina-

tion report in conjunction with the lead bank examination for details of the subsidiary's operations and management.

2. Review correspondence files and the application memo for the history of the subsidiary.

3160.0.12.2 On-Site

1. Have a brief meeting with the chief executive officer of the subsidiary to establish contact and present a brief indication of the scope of the inspection.
2. Ask the controller of the company for the schedules and other information requested in the entry letter.
3. Request the following information and schedules in addition to what was requested in the entry letter:
 - a. complete list of the computer applications the subsidiary performs
 - b. list of customers
 - c. policy and procedure manual, if any
 - d. copy of the latest internal and external financial and operational audits and internal control reviews
 - e. copy of the types of management reports the subsidiary submits to the parent company and directors
 - f. internal management organization chart
 - g. copy of the agreement executed with the affiliates concerning the services provided and the fees collected
4. Review the board of directors' minutes and the executive committee's minutes to determine the broad types of operations of the company.
5. Determine the scope of the inspection based on evaluations of—
 - a. corporate minutes;
 - b. schedules;
 - c. accounting records;
 - d. internal controls; and
 - e. the scope of the work performed by the internal auditor.
6. Review the trial balances and compare them against the respective general-ledger control accounts.
7. Where necessary, interview pertinent division heads.
8. Review the data processing and transmission services provided to customers for violations of the Board's regulations and inter-

- pretations and obtain sufficient documentation for the workpapers.
9. Prepare a statement of condition with a minimum two-year comparison. More than two years may be prepared if the information is available and meaningful.
 10. Prepare a statement of income using the same procedures outlined above.
 11. Review all significant internal policies. Determine if the policies were developed internally or by the parent company.
 12. Review the manner and frequency in which the subsidiary management reports to the parent company. Is the reporting complete? Is the parent company fully aware of the subsidiary's operations or problems?
 13. Review the adequacy of internal and external financial and operational audits and internal control reviews. Interview the EDP auditor and review the audit reports and CPA management letters (for the period of the inspection) and conduct interviews with the auditors, including the EDP auditor (if one was engaged).
 14. Review the condition of the company's records, that is, their availability, completeness, and accuracy. Deficiencies should be discussed in detail with recommendations for improvement.
 15. Review all intercompany transactions. Be consistently alert for any transactions with affiliate bank(s) that would be a violation of section 23A and section 23B of the Federal Reserve Act.
 16. Review significant litigation and other contingent liabilities.

Section 4(c)(8) of the BHC Act (EDP Servicing—Network for the Processing and Transmission of Medical Payment Data) Section 3160.1

A bank holding company applied for the Board's approval to acquire all the shares of a nonbank data processing company to engage in the processing and transmission of certain medical-payment data. The nonbank subsidiary plans to engage in activities that specialize in a range of medical-payment electronic funds transfer services, including the development of software products related to the processing of medical-claims payments.

Basic network services. The Board determined by order that a nonbank subsidiary of a bank holding company may provide a network for the processing and transmission of medical-payment data between health-care providers (such as physicians, hospitals, and pharmacies) and entities responsible for paying medical benefits (such as health insurers, health maintenance organizations, and preferred provider organizations). These nonbanking activities are permissible under the Bank Holding Company Act and the Board's Regulation Y (12 C.F.R. 225.28(b)(14)). The information on the patient's medical-benefits card (made available by paying organizations) would be used to access the system (similar to a debit or credit card). In general, health-care providers would enter claims information into the network with a request for payment, and the payers would authorize electronic fund transfers for full or partial payment of the claims.

The bank holding company's nonbank subsidiary would also process and transmit medical-treatment data necessary for the processing of claims, and would furnish providers with access to a coverage-information database. The database would transmit information about the terms of a particular payer's medical coverage contract, such as the extent to which specific medical treatments are covered by the patient's insurance policy. While such medical and coverage data are not financial data, the processing and transmission of these data are essential to the transmission and processing of the medical payments and financial information in the network. Also, these data processing services allow the electronic transfer of funds. The Board found that the processing and transmission of the medical and coverage data, in connection with the nonbank subsidiary's operation of a payments network, are permissible as incidental activities. The Board further determined that the nonbank subsidiary's operation of a medical-payments network would constitute permissible data processing and data transmission activities under the BHC Act.

Adjudication software. The Board also authorized the bank holding company's nonbank subsidiary to furnish claims-adjudication software to payers. The software is designed for the processing of routine claims and would include the basic rules of a payer's coverage contract. Claims-adjudication processing would involve the interaction of financial and banking data and medical and coverage data as a necessary prelude to electronic funds transfer. The Board found that the processing of medical and coverage data involved in claims adjudication is an integral and necessary part of the processing of related financial and banking information, and the nonbank subsidiary's processing of underlying payment transactions. The Board concluded that the nonbank subsidiary's provision of claims-adjudication software is permissible as an activity incidental to its provision of software for the processing of banking and financial data and to its operation of a medical-payments network.

Electronic data interchange. The bank holding company's nonbank subsidiary also plans to provide medical-payments system participants with statistical and other data derived from the information in its database. Each participant would have on-line access to all of the data it places into the system, and third parties designated by a payer or provider could also receive access to the data owned by that customer. The Board has previously stated that bank holding companies may provide byproducts of permissible data processing and data transmission activities as long as the byproducts are not designed, or appreciably enhanced, for the purpose of marketability (12 C.F.R. 225.123(e)(2)). The Board has also indicated that byproducts include data, software, or data processing techniques that may be applicable to the data processing requirements of other industries.

The nonbank subsidiary may perform limited selection, combination, and similar functions on raw data so that the data can be transmitted to the customer in a reorganized and more usable form. It may also design software that would enable customers to perform similar reorganization functions on raw data. The Board concluded that the proposed electronic data interchange services would constitute permissible byproducts of the nonbank subsidiary's primary data processing activities, and are therefore permissible as an incidental activity.

The Board's approval of the application on December 22, 1993, is based on the facts of record and is subject to the commitments and representations that were made by the applicant and the conditions referred to in the order. (See 1994 FRB 139.)

Engaging in Electronic Benefit Transfer, Stored-Value Card, and Electronic Data Interchange Services

Section 3160.2

Four bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act to engage de novo, through their joint venture corporation (the company), in nonbanking activities consisting of engaging in electronic benefit transfer services, stored-value card services, and electronic data interchange services. The applicants proposed to engage in the activities throughout the United States. The applicants provide data processing and transmission services through the company to retail merchants using point-of-sale (POS) terminals and to banks who are members of the company's automated teller machine (ATM) network.

3160.2.1 ELECTRONIC BENEFIT TRANSFER SERVICES

The electronic benefit transfer services would involve data processing and transmission services required to permit the delivery of governmental program benefits (such as welfare payments and food stamps) through the ATM and POS terminals of participating merchants and banks. Under a benefits services system, a benefit recipient would be issued a magnetically encoded card, similar to an ATM card, which could be used to obtain access to a government benefit account maintained on behalf of the recipient. The Board concluded that such activities are financial activities that are operationally and functionally similar to the electronic payment and data processing services provided by banks and bank holding companies in the operation of ATM and POS networks. In particular, the proposed benefit services involve the processing of access and authorization requests submitted to, and electronic payments originating from, financial accounts on the same basis as transactions initiated with traditional credit and debit cards. The Board thus concluded that such electronic benefit transfer activities are closely related to banking, permissible for bank holding companies under the BHC Act.

3160.2.2 STORED-VALUE CARD SERVICES

Stored-value card services would involve data processing and transmission services and electronic payment services related to stored-value cards. These cards are similar to credit or debit cards in which authorized funds can be trans-

ferred and credited using magnetic stripe or computer chip technology. The services would be provided in connection with both "closed" and "open" stored-value card systems. Closed systems include both single-vendor stored-value card systems and systems designed for single-use sites. An open system, by contrast, refers to multiple-vendor, multiple-site stored-value card systems.

3160.2.2.1 Stored-Value Card Closed Systems

In most current closed systems, cash must be deposited in a particular vendor's card-dispensing terminal, and the card received from the terminal may be used only for purchases from that specific vendor. The card itself is disposable, and the only account reconciliation that may be required would involve the vendor's own cash receipts, the amount of funds debited from the cards at turnstiles or other points of sale, and the amount of the vendor's liabilities stored on outstanding cards. The company intended to play a role in the operation of this basic type of closed system, as well as to help develop and operate more complex closed systems. These systems would use a plastic card containing electronic technology, such as a computer chip or magnetic stripe, to which funds could be credited and from which funds could be debited, for an indefinite period of time. The company proposed performing accounting functions in customer accounts and accounting for the level of the vendor's stored liabilities. In such a capacity, the company would be responsible for the settlement and reconciliation of these customer and vendor accounts. The company would also perform other functions, such as embossing and issuing cards and arranging for funds collection.

3160.2.2.2 Stored-Value Card Open Systems

The applicants anticipate that stored-value cards eventually will operate in an open system similar to a POS network, which allows value stored on a card to be used with a wide range of participating vendors. The applicants expect that the company's principal stored-value card

activities would involve the development and operation of such open systems.

In an open system, customers' debit cards would hold an integrated computer chip or some type of comparable technology capable of storing value for use in stored-value card transactions. Value could be placed on the card at an ATM adapted to read and place value on the chip, at a limited purpose ATM-type machine whose only functions would be to add value to the chip and to transfer stored value back to the customer's account, or at a cash-to-card machine or other value transfer device (collectively, value terminals). These value terminals would be operated, in at least some cases, by the company. Once value is placed on a card, equivalent funds could be transferred to the company, which would hold the funds for payment of stored-value card transactions. Stored value would leave the chip when the customer purchases goods or services either at a POS terminal (which may be operated by the company) or at a vending machine, telephone booth, mass transit turnstile, or other unmanned delivery location (collectively, reader terminals), or when the customer transfers funds back to an account at a value terminal. Reader terminals generally would be off-line devices, not connected to the company's ATM or POS networks. Instead of a direct electronic connection, a reader terminal would retain, for a period of time, value representing the amount of customer purchases at the terminal. Then, at the vendor's convenience, the company, the vendor, or a third party would collect value from the reader terminals using specially designed collection cards issued by the company. The collection cards would then be submitted to the company so that funds can be properly credited. Once these transactions occur, the company would be responsible for making settlement by transferring funds to the accounts of participating merchants and other appropriate parties.

The Board concluded that the company's activities in providing stored-value card services, in both closed and open systems, are closely related to banking. The activities involve processing debits and credits to the stored-value cards and performing related accounting and settlement functions, and are thus a data processing activity. Financial balances are maintained and adjusted at POS and other terminals as the customer purchases various items or adds value to the card, and the activity constitutes the processing of banking, financial, or economic

data within the meaning of Regulation Y. In addition, aspects of the company's stored-value card services are functionally similar to the issuance and sale of consumer payment instruments such as travelers' checks, which are activities that banks conduct and that the Board has previously determined to be closely related to banking within the meaning of the BHC Act. The Board concluded that the company's proposed services in connection with stored-value cards, in either an open system or a closed system, are closely related to banking.

3160.2.3 ELECTRONIC DATA INTERCHANGE SERVICES

The company also proposes to furnish retail merchants with data collected from sales transactions consummated at the merchant's place of business (data services). The data collected and furnished would relate to specific items and quantities of products purchased by the customer, as well as customer purchasing patterns over a period of time. The data would be formatted so that it could be used by the merchant for inventory control, targeted marketing, and other purposes. The company's data services generally would be furnished to merchants as an adjunct to its POS transaction processing services and would be rendered through a retail merchant's POS terminals. The company does not intend to offer data services independently. In addition, the data that are collected by the company would be furnished only to the merchant that is a party to the underlying sales transaction; that is, the company does not intend to provide such information to third parties.

The company's data services would be limited to capturing, formatting, and furnishing data collected from sales transactions consummated at a particular merchant's place of business. In addition, the data collected would be furnished only to that merchant and only in accordance with the merchant's specific instructions. The company does not intend to provide software, render advice, or provide other services associated with the marketing or other uses of the data. The applicants do anticipate, however, that the company could provide additional related functions, such as issuing store coupons or credits related to a merchant's marketing programs at POS terminals. Based on the facts presented, the Board determined that the sales data that would be processed under the proposed data services are financial and economic data within the meaning of Regulation Y.

3160.2.4 BOARD APPROVAL

Based on all the facts of record, the Board approved the applications. The Board's approval is specifically conditioned on compliance with the commitments made in connection with the applications and with the conditions referred to in the order. (See 1993 FRB 1158.)

Regulation Y has been revised to clarify that a bank holding company may render advice to anyone on processing and transmitting banking, financial, and economic data (see 12 C.F.R. 225.28(b)(14)). The following two restrictions

on permissible data processing activities have been deleted: (1) All data processing services must be provided pursuant to a written agreement with the third party that describes and limits the services; and (2) data processing facilities must be designed, marketed, and operated for processing and transmitting financial, banking, or economic data. The data processing activity has also been revised to permit bank holding companies to derive up to 30 percent of their data processing revenues from processing and transmitting data that are *not* financial, banking, or economic.

Eleven bank holding companies (the applicants) applied for the Board's approval to engage through a joint venture corporation (the company) in certain nonbanking activities related to the operation of a retail electronic funds transfer network, including data processing and data transmission activities related to automated teller machine (ATM) and point-of-sale (POS) transactions, as well as electronic benefit transfer, stored-value card, and electronic data capture and interchange services. (A complete list of the proposed activities is found at 1994 FRB 1110-1111.)

The applicants also proposed to offer through the company certain data processing and data transmission services not previously considered by the Board. Those services consisted of allowing customers to use their ATM cards at an ATM terminal to withdraw funds from a bank account in the form of travelers' checks or postage stamps. Payment for the transactions would be accomplished by a debit to a cardholder's deposit account.

The transactions would occur at terminals that would not be owned and operated by the company. Cardholders buying postage stamps or travelers' checks at an ATM terminal would

purchase those products from the bank owning the ATM. The decision on which travelers' checks to issue would remain with the bank that owns the ATM terminal, and the company would not be the issuer of the travelers' checks.

The company's primary activities would be processing and transmitting access requests and payment authorizations. The company would also provide terminal-driving services, load ATM terminals with postage stamps and travelers' checks, and market the products through the network.

The Board determined that the proposed activities involved the processing of access and authorization requests submitted to deposit accounts on the same basis as other transactions initiated with a traditional debit card. The activity is operationally and functionally similar to the data processing services provided by banks and bank holding companies in their operation of ATM and POS networks. Traditionally, banks have been permissibly engaged in the sale of travelers' checks and postage stamps. The Board thus found the company's proposed data processing and transmission activities, with respect to these transactions, to be closely related to banking. (See 1994 FRB 1107.)

Five bank holding companies (the applicants) applied for the Board's approval to engage, through a joint venture subsidiary (the company), in certain data processing activities pursuant to Regulation Y. The applicants, through the company, would provide data processing and related services to banks and other automated teller machine (ATM) owners in connection with the distribution through ATMs of tickets, gift certificates, prepaid telephone cards, and other documents evidencing a prepayment for goods or services.¹

The company would provide the software and telecommunications channels necessary to transmit cardholder requests, card-issuer authorizations, and related switching and account reconciliation services. Specifically, the company would provide terminal driving services that include—

- establishing and maintaining an electronic link between an ATM and a telecommunications switch to transmit cardholder requests and card-issuer authorizations; and
- operating the feature and functions displays on an ATM screen using computer software to permit an ATM to dispense various products in addition to currency.

The company would also provide switching services and transaction processing to transmit account debiting, transaction authorization, and settlement data between the ATM owner, or its bank, and the cardholder's bank.

A typical transaction would consist of an ATM cardholder selecting a particular product, such as a concert ticket, from a menu displayed on the ATM screen. The electronic commands

transmitted by the company would verify that the deposit account or line of credit designated by the cardholder had sufficient funds to effect the purchase. Following authorization, the ATM would dispense the product and issue a receipt. The card-issuing bank would then debit an amount equal to the cost of the purchase from the cardholder's designated account and transfer the funds to the account of the merchant or ATM owner, using settlement procedures established by the company's ATM network.

The Board previously determined that a bank holding company could provide data processing and related services necessary to permit customers to use an ATM card to debit a deposit account or line of credit at an ATM terminal for cash and credit transactions, and for the purchase of travelers' checks, money orders, and postage stamps. The Board has further determined that a bank holding company may provide data processing services that support the use of credit cards by consumers in the direct purchase of goods and services from a merchant. (See 1995 FRB 492, 1990 FRB 549, and 1985 FRB 113.)

The data processing proposed in this case involves the same type of data processing support as the Board has previously approved for credit card transactions and other more traditional types of ATM transactions. The Board thus concluded that the activities proposed by the applicants are permissible, consisting of data processing and transmission services encompassed within the Board's Regulation Y, and are thus closely related to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. (See 1996 FRB 848.)

1. The tickets would include public transportation tickets and tickets to entertainment events. Gift certificates and prepaid telephone cards would be issued in fixed denominations for a specific merchant or group of merchants, and they would evidence prepayment of the purchase price of merchandise or services to be selected by the bearer at some time in the future. The ATM owners would also sell products that could be offered for sale directly by a financial institution, such as mutual fund shares or insurance policies, where permitted by applicable law.

3160.5.1 ENGAGE IN TRANSMITTING MONEY IN THE UNITED STATES

A bank holding company gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through two companies (the companies) in the activity of transmitting money for customers within the United States and its territories ("domestic money transmission services") to third parties located in foreign countries.¹ The activity was to be conducted at first through a network of approximately 1,200 "outside representative offices" located in California, Florida, Illinois, and Texas that are under contract with the companies to provide money transmission services.² The bank holding company proposes to engage in the planned activity nationwide. The companies are corporations that currently engage in the business of money transmission to Mexico through representatives in California, Florida, Illinois, and Texas.

Domestic money transmission services would be provided in the following manner: A customer would contact the companies directly by means of a dedicated telephone located in the outside representative office to request that the companies transmit funds to a third party for a fee. The outside representative would collect cash and a fee from the customer, issue a receipt, and deposit funds in an account maintained by the outside representative solely for the purpose of receiving funds in trust to be transmitted to a third party. The outside representative may maintain this account at any bank, including a subsidiary bank, but would have no agreement with any bank to accept deposits on its behalf. Neither the outside representatives nor the companies would be FDIC-insured institutions.

The companies would collect funds deposited in an outside representative's account daily through an automated clearinghouse (ACH) or similar transaction and deposit an amount equal to the amount to be transmitted into an account they maintain at a bank, which may include one

of its subsidiary banks, located near the third party receiving the funds. The third party would be notified that money is available at a local disbursement site, which could include a bank subsidiary of the bank holding company or consumer finance office or an unaffiliated check-cashing, finance, or other type of office. Funds would be made available to the third party by a check drawn on the companies' account almost immediately after the transmission order is placed by the customer.³

A customer would not transmit funds to any bank account maintained by the customer or any third party. Thus, the bank holding company would not use this service to collect deposits for customers of its subsidiary banks or any other bank.

There was no agreement between a customer and a bank to accept money in an account for use by the bank in connection with the proposed domestic money transmission services. The companies and their outside representative would accept money from a customer for the sole purpose of transmitting funds to a third party. A customer would not give funds to the companies with the expectation that the companies would permit the customer to reclaim the funds on demand or after a period of time. Moreover, the companies would not maintain balances or pay interest on the money they receive, and they would only hold funds long enough to transmit them to the designated third party.⁴

The Board previously determined that money transmission abroad is closely related to banking.⁵ The Office of the Comptroller of the Currency (OCC) also has concluded that it is permissible for a national bank to accept money from nonbank affiliates for the purpose of transmitting the funds to a foreign country and that a

1. The Board previously approved the bank holding company's acquisition of a company to engage in the activity of transmitting funds to third parties in Mexico by using an unaffiliated foreign bank to make the cash payments. See 1995 FRB 974.

2. Outside representative offices would be expanded to include consumer finance offices in addition to existing grocery stores, travel agencies, pharmacies, and insurance agencies.

3. The domestic money transmission services do not involve lending money because only funds provided by the customer would be transmitted to a third party. The plan does not involve the paying of checks. Although the third party receives money by means of a check drawn on an account maintained by the companies, the receipt of funds in check form is not the payment of a check (see *Independent Bankers Ass'n of America v. Smith*, 534 F.2d 921, 943-45 (D.C. Cir. 1976)).

4. Many states permit companies that are not chartered as banks to transmit money without deeming this activity to involve the taking of deposits. The bank holding company is required to conduct the proposed activities in compliance with licensing and other requirements of relevant state law.

5. See 1990 FRB 270.

nonbank affiliate that participates with the national bank in transmitting money abroad would not become a branch of the bank.⁶ Based on all the facts of record and for the reasons discussed in this and the Board's previous orders, the Board concludes that domestic money transmission services are closely related to banking. The Board has relied on the fact that the companies are subject to licensing and examination by state authorities.⁷ The companies have committed to comply with all applicable reporting requirements, including reporting all transactions over \$10,000 to the Internal Revenue Service. The bank holding company committed to apply the internal controls currently in place at the finan-

6. The OCC has reasoned that nonbank offices that transmit funds through a national bank to a third party do not constitute "branches" under federal law.

7. This order was specifically conditioned on requiring the bank holding company to obtain all necessary state licenses.

cial services company to ensure compliance with the Bank Secrecy Act.⁸

Based on the foregoing and all the facts of record, the Board approved the notice on October 17, 1995 (see 1995 FRB 1130). The Board's decision was specifically conditioned on the bank holding company's complying with all the commitments made in connection with the notice and obtaining all necessary approvals from state regulators.

8. These procedures include a weekly review of all transactions over \$10,000. In addition, the companies will require customer identification, including the customer's current address and occupation, for all transmissions above \$3,000. The companies also will run a computer match of all remitters and recipients by name and Social Security number so that reporting requirements cannot be evaded by means of a series of transactions.

The Board has included within Regulation Y (section 225.28(b)(10)(ii)(B)) the authority for bank holding companies to engage in the printing and selling of magnetic ink character recognition (MICR)-encoded items as part of support services. This activity includes this primary activity and also the printing and selling of corporate image checks, cash tickets, voucher checks, deposit slips, savings withdrawal packages, and other forms that require MICR encoding. The activity was initially authorized as a permissible activity by Board order, whereby such documents were to be printed for and sold exclusively to depository institutions. The applicant associated with that Board order proposed

to acquire a controlling interest in a printing company that prints and sells checks and related documents. It planned to engage in a joint venture with another company that engages in check printing and other printing activities. The Board concluded for that application that checks and other MICR-encoded documents used in the payments process are provided in specialized form and that they are an integral part of a fundamental banking service, and thus the activity is deemed closely related to banking. See 1986 FRB 794. The Board included the non-banking activity in the Regulation Y “laundry list,” effective April 1997.

Section 4(c)(8) of the BHC Act (Insurance Agency Activities of Bank Holding Companies) Section 3170.0

3170.0.1 INSURANCE ACTIVITIES PERMISSIBLE FOR BANK HOLDING COMPANIES

Before the enactment of the 1970 amendments to the Bank Holding Company Act, the Board by order authorized certain bank holding companies to engage in insurance activities. The specific type of permissible insurance activity for each bank holding company was described in its Board order. These few bank holding companies that commenced insurance agency activities before January 1, 1971, have grandfather rights under the current statutes and regulations (section 4(c)(8)), exemption G and 12 (CFR 225.28(b)(11)(vii)). These bank holding companies may, with the prior approval of the Board, engage in general insurance agency activities without restriction as to location or to type of insurance sold. (See section 3170.0.3.7)

The 1970 amendments to the Bank Holding Company Act authorized the Board to determine permissible nonbanking activities under section 4(c)(8). Subsequently, on September 1, 1971, the Board amended Regulation Y to permit bank holding companies to engage in certain insurance agency activities.

The Board further amended the section of Regulation Y concerning permissible insurance agency activities on September 1, 1981. The 1981 amendments limited permissible insurance activities previously authorized by Regulation Y. The first amendment deleted from the Board's regulations the authority for bank holding companies to act under section 4(c)(8) of the Bank Holding Company as agent for the sale of insurance for themselves and their subsidiaries. This amendment reflected a court decision of the United States Court of Appeals for the Fifth Circuit that acting as agent for the sale of insurance for the bank holding company and its nonbanking subsidiaries was impermissible (permissible for banks, however). Such insurance is permissible, however, if conducted pursuant to section 4(c)(1)(C) of the BHC Act.¹ The second 1981 amendment deleted from the Board's regulations the authority to act as agent for insurance

sold as a matter of convenience to the public. The opinion also found that the part of the Board's regulation relating to the sale of "convenience insurance"² exceeded the scope of the provisions of section 4(c)(8) of the Bank Holding Company Act. The sale of this other insurance was considered impermissible.

On October 15, 1982, Congress enacted the Garn-St Germain Depository Institutions Act (Public Law 97-320). Title VI of that act amended section 4(c)(8) of the Bank Holding Company Act. This amendment stated that insurance agency, brokerage, and underwriting activities are *not* "closely related" to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. However, the amendment provided for seven exceptions to the general prohibition of bank holding companies engaging in insurance activities. One of the seven exceptions contains grandfather exemptions for insurance agency activities conducted on May 1, 1982, or for those insurance activities approved by the Board on or before May 1, 1982. As a result, bank holding companies receiving Board approval on or before May 1, 1982, may continue to engage in their insurance agency activities. (See section 3170.0.3.4)

The seven types of insurance activities allowed as permissible for bank holding companies are as follows:

1. Acting as agent, broker, or principal (i.e., underwriter) for credit-related life, accident and health, or unemployment insurance.
2. For bank holding company finance subsidiaries, acting as agent or broker for credit-related property insurance in connection with loans not exceeding \$10,000 (\$25,000 in the case of a mobile home loan) made by finance company subsidiaries of bank holding companies. (The Board interpreted this provision as permitting only the sale of insurance that does not exceed the outstanding balance of the loan—vendor's single interest insurance rather than general property insurance that covers the borrower's equity interest.)

1. The Board's Regulation Y was amended as of December 1983 to include the sale of insurance for a holding company based on the services provision of section 4(c)(1)(C) of the BHC Act, which did not require any prior Board approval. Included in the regulation were the services of selling, purchasing, or underwriting such insurance as blanket bond insurance, group insurance for employees, and property and casualty insurance for the bank holding company or its subsidiaries.

2. "Convenience insurance" consisted of insurance that was sold as a matter of convenience to the purchaser. The premium income from the sale of this insurance was expected to constitute less than 5 percent of the aggregate insurance premium income of the holding company. The sale of this insurance was not designed to permit entry into the general insurance-agency business.

3. Acting as agent for the sale of any type of insurance in a place with a population not exceeding 5,000, or with insurance agency facilities that the bank holding company demonstrates to be inadequate.
4. Any insurance agency activity engaged in by a bank holding company or its subsidiaries on May 1, 1982 (or approved as of May 1, 1982), including (i) insurance sales at new locations of the same bank holding company or subsidiaries in the state of the bank holding company's principal place of business or adjacent states or any state or states in which insurance activities were conducted by the bank holding company or any of its subsidiaries on May 1, 1982, or, (ii) insurance coverage functionally equivalent to those engaged in or approved by the Board as of May 1, 1982.
5. Acting, on behalf of insurance underwriters, as supervisor of retail agents who sell fidelity insurance and property and casualty insurance on holding company assets or group insurance for the employees of a bank holding company or its subsidiaries.
6. Any insurance agency activities engaged in by a bank holding company having total consolidated assets of \$50,000,000 or less. Life insurance and annuities sold under this provision, however, must be authorized by (1), (2), or (3) above.
7. Any insurance agency activity that is performed by a registered bank holding company, which was engaged in some insurance activity before January 1, 1971, pursuant to the approval of the Board.

These seven types of insurance allowed by the amendment to section 4(c)(8) of the Garn-St Germain Act are generally consistent with the types of insurance activities previously authorized by the Board. The one general exception related to the prohibition of the sale of property and casualty insurance.

3170.0.2 INSURANCE AGENCY ACTIVITIES

Insurance agency activities are among the most widely practiced nonbank activities engaged in by bank holding companies. Many bank holding companies are involved in the sale of insurance at some level in the organization; however, the inspection focuses on these activities only when performed by the parent company or by a non-

bank subsidiary (excluding bank-owned subsidiaries). Many of the smaller bank holding companies engage directly in these activities rather than through insurance agency subsidiaries. In either arrangement, however, sales are usually conducted on the premises of the subsidiary bank by personnel who most often serve as officers or employees of the bank or parent company.

Performance of insurance agency activities has been profitable for most bank holding companies with many of the smaller companies relying heavily on the commissions generated to service acquisition or other related indebtedness. In most cases, little or no expenditures for fixed assets are required since the premises of the subsidiary banks or parent company are utilized. Likewise, little or no liabilities are incurred since there are minimal assets to be financed.

3170.0.3 PERMISSIBLE TYPES OF COVERAGE INCLUDING GRANDFATHER PRIVILEGES

As noted above, the Board, effective November 7, 1986, approved a revision of specific insurance agency and underwriting activities permissible for bank holding companies under section 4(c)(8) of the BHC Act (section 225.28(b)(11) of Regulation Y). In clarifying the scope of insurance activities that are closely related to banking and permissible for bank holding companies under the Garn-St Germain Act, the Board included in its revised Regulation Y the seven specific exemptions contained in that statute.

3170.0.3.1 Insurance Activities Permissible for Bank Holding Companies per Section 225.28(b)(11)(i) of the Board's Regulation Y

Permissible insurance agency activities include the sale of life, accident and health, and involuntary unemployment insurance that is directly related to an extension of credit by a bank holding company with respect to its own extensions of credit and those of its subsidiaries. For the purpose of determining what activities are permissible, the Board interpreted the term "extension of credit" to include direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases meet all the criteria contained in section 225.28(b)(3) of Regulation Y, which

defines leases as the functional equivalent of an extension of credit. (See the discussion of leasing in section 3140.0.)

The regulation requires that insurance coverage be limited to the “outstanding balance due” on an extension of credit. The “outstanding balance due” is calculated as follows:

1. Include:
 - a. principal and interest
 - b. reasonable administrative fees outstanding on the loan
 - c. the balance of payments due in a lease transaction
2. Exclude:
 - a. the residual value of the leased item (since the lessor owns the leased item and the lessee is not obligated to purchase the item by paying the residual value)

The insurance may provide for total repayment of the extension of credit in the event of the death of the borrower or for periodic payments on the extension of credit when the borrower is temporarily disabled or unemployed. Such single or periodic payments may not exceed the balance on the loan and thus provide for additional general life or accident coverage.

While ordinarily such credit-related insurance coverage would be declining term as payments reduce the balance due on an extension of credit (loans in connection with first mortgages), a bank holding company may write or sell a level term policy on nonamortizing loans. Policies written or sold pursuant to this paragraph, moreover, may be individual rather than group policies, and the premiums on such policies may be age-related. The Board continues to require that insurance policies sold or written to cover the “outstanding balance due” insure only named borrowers or lessees of a particular bank holding company. Accordingly, such policies could cover both spouses jointly only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company.

The Board permits, with regard to an extension of credit, the sale and underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions, as previously discussed, when such lease transactions are the equivalent of loans; (2) in connection with loans secured by residential first mortgages; and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

The regulation explicitly permits the sale of life, disability, and involuntary unemployment

insurance with respect to a lease transaction, provided the lease is the type of nonoperating, full payout lease described as permissible for bank holding companies in section 225.28(b)(3) of Regulation Y. The Board has determined that such leases are the “functional equivalent of an extension of credit.” It believes that this type of lease is encompassed in the term “extension of credit” as it is used in exemption A of the Garn–St Germain Act.

As discussed previously, the first exemption of the Garn–St Germain Act permits the sale of any type of life, disability, and involuntary unemployment insurance relating to an extension of credit, including home mortgage redemption insurance. Home mortgage insurance insures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. The Board has determined that home mortgage redemption insurance is closely related to banking because it supports the lending function (1986 FRB 339 and 671) by providing for repayment of residential mortgage loans at a time when the death or disability of the borrower may delay or disrupt the scheduled repayment of such loans. Home mortgage redemption insurance in connection with residential mortgage loans is considered as fulfilling the same function as credit life and credit accident and health insurance with respect to other types of loans. The Board recognized that such insurance functions as credit insurance in supporting a bank’s lending function (see the Board’s approval for the *sale* of such insurance by bank holding companies within 1975 FRB 45).

In approving the activity of home mortgage redemption insurance by order, the Board previously relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. The Board continues to require that such notices be provided to borrowers. In addition, the Board continues to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrowers’ ability to rescind the insurance and to limit premium financing as an incentive to sell such insurance.

The Board considers an “extension of credit” as covering loans that are made or purchased by the bank holding company or its subsidiaries. Credit-related insurance may be continued on the loans that were sold, and are now only being serviced, provided that they were made or purchased by the bank holding company or its subsidiaries. The Board permits bank holding companies to sell credit-related life, accident and health, and involuntary unemployment insurance where the bank holding company previously placed funds at risk. In this situation, the bank holding company must continue to limit its insurance coverage to the outstanding balance due on the extension of credit by the borrower.

A bank holding company may not sell or underwrite insurance when merely servicing a loan and *it has never placed its funds at risk* either by originating or purchasing the loan; the bank holding company is permitted to collect and transmit insurance premiums, act as intermediary in renewing existing policies or adjusting coverages, and engage in other activities which are incidental to the servicing of loans. The bank holding company may collect a fee for such services, providing that the fee is based on the provision of the service and is not a premium for insurance sold. In that case, the bank holding company would be engaging in loan servicing rather than insurance activities.

3170.0.3.2 Section 225.28(b)(11)(ii) of Regulation Y—Sale of Credit-Related Property Insurance by Finance Company Subsidiaries of a BHC

The Garn–St Germain Act restricts the authority of bank holding companies to engage in property and casualty insurance activities. Before 1982, the Board approved the sale of property and casualty insurance that was directly related to an extension of credit by a bank or bank-related firm in the bank holding company system. The sale of property insurance is now limited to an extension of credit made by a finance company that is a subsidiary of a bank holding company, acting as agent or broker. A finance company subsidiary may only engage in the sale of such property insurance if—

1. the insurance is limited to assuring repayment of the outstanding balance on such extension of credit in the event of loss or damage to any property used as collateral for the extension of credit;

2. the extension of credit is not more than \$10,000, or \$25,000 if it is to finance the purchase of a residential manufactured home³ and the credit is secured by the home; and
3. the applicant commits to notify borrowers in writing that—
 - a. they are not required to purchase such insurance from the applicant;
 - b. such insurance does not insure any interest of the borrower in the collateral; and
 - c. the applicant will accept more comprehensive property insurance in place of such single interest insurance.

3170.0.3.2.1 Definition of a Finance Company

A “finance company” for purposes of the sale of property insurance includes all non-deposit-taking financial institutions that engage in a significant degree of consumer lending (excluding lending secured by first mortgages) and all financial institutions specifically defined by individual states as finance companies that engage in a significant degree of consumer lending. Finance companies, under this provision, include those entities that may be authorized to accept limited types of time or savings deposits under state law but which a state has defined to be a finance company. Since exemption B of the Garn–St Germain Act is directed to consumer loans, the regulation requires that a qualifying company be engaged in that type of lending to a significant degree as measured by either number of loans, percentage of loans, percentage of loan amounts outstanding, or some similar measure. The Board will evaluate the amount of the consumer lending on a case-by-case basis.

3170.0.3.2.2 Property Insurance a Finance Company May Sell

Section 225.28(b)(11)(ii) of Regulation Y permits finance company subsidiaries of bank holding companies to engage in the sale of single-interest property insurance that insures against damage or loss only to the extent of the lender’s interest in the property that serves as collateral for a loan. The Garn–St Germain Act limits the permissible insurance coverage to “the out-

3. These limitations increase at the end of each year, beginning with 1982, by the percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers published by the Bureau of Labor Statistics.

standing balance due on an extension of credit.” It does not contemplate general property insurance that covers the entire value of the property, including the balance due the lender and the equity interest of the borrower/owner. Generally such insurance is declining balance and the only interest in the collateral property that may be insured is that of the lender.

The sale of single-interest insurance is permitted provided that the BHC finance company subsidiary does not require such insurance of borrowers who have adequate property insurance on the loan collateral. In addition, the finance company subsidiary is required to disclose in writing that such insurance, if required, need not be purchased from the lender and that such insurance does not cover the borrower’s interest in the property. The requirement is also imposed by the Board’s Regulation Z, section 226.4(d)(2), if the premium is excluded from the finance charge.

3170.0.3.3 Section 225.28(b)(11)(iii) of Regulation Y—Insurance in Small Towns

Engaging in any insurance activity is permitted in a place where the bank holding company or a subsidiary of the bank holding company has a lending office in a community that—

1. has a population not exceeding 5,000 (as shown by the last preceding decennial census) or
2. has inadequate insurance-agency facilities, as determined by the Board, after notice and opportunity for hearing.

In order to provide insurance agency activities in a town with a population not exceeding 5,000, or in a community that has inadequate insurance agency facilities, the bank holding company must have a lending office that serves the public in the small town. The regulation specifically requires that the office be a lending office in order to provide the bank holding company with a link to the town, to avoid remote operation from a central location of a network of small-town insurance agencies, and generally to maintain insurance as a fee-generating activity to help sustain a small-town lending office as an independent, viable profit center.

The *current* requirement does not limit the sale of insurance to a “principal place of banking business” located in a community not exceeding a population of 5,000. Also, a bank holding company insurance agency is not precluded from selling insurance to those residing outside the community who initiate the transac-

tion at the agency’s place of business in the town of less than 5,000. Advertising in the community newspaper or a telephone book that may serve an area larger than the community of 5,000 is also not prohibited. The current regulation requires that the bank holding company or a subsidiary thereof establish or have a lending office in the community that has a population not exceeding 5,000.

3170.0.3.4 Section 225.28(b)(11)(iv) of Regulation Y—Insurance Agency Activities Conducted on May 1, 1982

This provision of the regulation includes engaging in any specific insurance agency activity⁴ if the bank holding company, or subsidiary conducting the specific insurance agency activity, conducted the insurance agency activity on May 1, 1982, or received Board approval to conduct the insurance agency activity on or before May 1, 1982. Activities engaged in on May 1, 1982, include activities carried on subsequently as the result of an application to engage in such activities pending before the Board on May 1, 1982, and approved subsequently by the Board or as the result of an acquisition by such company pursuant to a binding written contract entered into on or before May 1, 1982, of another company engaged in such activities at the time of the acquisition.

A bank holding company or subsidiary engaging in a specific insurance-agency activity under section 225.28(b)(11)(iv) of Regulation Y may—

1. engage in such specific insurance-agency activity only at locations—
 - a. in the state in which the bank holding company has its principal place of business (as defined in 12 U.S.C. 1842(d));
 - b. in any state or states immediately adjacent to such state; and
 - c. in any state in which the specific insurance-agency activity was conducted (or was

4. Nothing in paragraph (iv) precludes a BHC subsidiary that is authorized to engage in a specific insurance-agency activity under this clause from continuing to engage in the particular activity after merger with an affiliate, if the merger was for legitimate business purposes and prior notice has been provided to the Board.

approved to be conducted) by such bank holding company or subsidiary thereof or by any other subsidiary of such bank holding company on May 1, 1982; and

2. provide other insurance coverages that may become available after May 1, 1982, so long as those coverages insure against the types of risks as (or are otherwise functionally equivalent to) coverages sold or approved to be sold on May 1, 1982, by such bank holding company or subsidiary.

This provision of the regulation parallels exemption D of the Garn–St Germain Act and grandfathers those insurance agency activities in which individual bank holding companies were engaged on May 1, 1982. Under this provision, a bank holding company or subsidiary thereof may continue to engage in particular types of insurance agency activities that were permissible before the passage of the Garn–St Germain Act but which are now prohibited by that act. A qualifying bank holding company may engage, for example, in the sale of property and casualty insurance on property serving as collateral for loans made by a lending subsidiary of the holding company.

A qualifying bank holding company may also engage in grandfathered insurance related to the provision of “other financial services” previously authorized under section 225.28(b)(11)(i)(B) of Regulation Y. This type of insurance is not considered to be related to an extension of credit under the Garn–St Germain Act. As a result, the Board *no longer permits* the sale of insurance related to the provision of the general financial services offered by a bank or bank-related firm. Such insurance included, for example, insurance on the contents of safe deposit boxes, or savings completion insurance on certificates of deposit, Christmas club accounts, individual retirement accounts, tuition completion plans, or credit-related insurance for serviced loans. Prior to the Garn–St Germain Act, insurance related to the provision of general financial services was permitted to be sold to borrowers whose loans were neither purchased nor originated, but may have been serviced by the bank holding company. Insurance with respect to loan servicing was the primary type of insurance previously permitted by the Board as related to such financial services. Now, the Garn–St Germain Act limits the sale of insurance by bank holding companies in general to insurance related to an extension of credit.

3170.0.3.4.1 Limitations on Expansion of Grandfather Rights

Exemption D provides for limited expansion of grandfathered insurance agency activities in order to permit qualifying bank holding companies to remain effective insurance agent competitors. The exemption presented three issues that the Board resolved in paragraph (iv) of the regulation: (1) defining which subsidiaries of a bank holding company may engage in otherwise impermissible insurance agency activities under exemption D; (2) the scope of permissible geographic expansion; and (3) the scope of product-line expansion.

Specific Subsidiaries That May Engage in Grandfathered Activities

Grandfather rights do not inure to the benefit of the entire holding company system by virtue of the fact that a particular subsidiary was engaged in insurance agency activities before May 1, 1982. Only the subsidiary of the bank holding company that was engaged in insurance activities on May 1, 1982, or received Board approval to engage in insurance activities before May 1, 1982, has grandfather status.

The Board believes that the emphasis in the legislative history on the transfer of grandfather rights shows the intent of Congress to prohibit not only the transfer of such rights from “grandfathered” subsidiaries to those affiliates wholly without grandfather rights, but also to prohibit the transfer of grandfather rights with respect to particular kinds of insurance from one “grandfathered” subsidiary to another. Thus, a subsidiary that sold only credit life insurance before the grandfather date should not acquire grandfather rights to sell property and casualty insurance solely because an affiliate sold property and casualty insurance before the grandfather date. The grandfather rights of a particular subsidiary are limited to the precise activities (or their functional equivalent) engaged in before May 1, 1982. This requirement does not preclude the transfer of grandfather rights in the case of a bona fide merger (1983 FRB 554, 555).

Section 225.28(b)(11) of the Board’s Regulation Y is only intended to clarify the exemptions in title VI of the Garn–St Germain Act. It does not authorize any bank holding company to commence any insurance activity, or to acquire a company with insurance activities, without compliance with the notice and application requirements of section 4(c)(8) of the BHC Act.

Geographic Expansion by a Grandfathered Subsidiary of a Bank Holding Company.

The language of exemption D of the Garn–St Germain Act, while limiting the grandfathered activities to those agency activities conducted by the specific grandfathered subsidiary, *does allow* expansion into states where such specific types of agency activities “were conducted by the bank holding company or any of its subsidiaries on May 1, 1982 . . .” If a bank holding company subsidiary is selling a particular type of insurance in a given state, the Board does not believe there is any regulatory or business purpose served by restricting another grandfathered subsidiary from engaging in the same activity in the same location.

Product-Line Expansion

The Board’s regulation provides for product-line expansion. A grandfathered subsidiary of a bank holding company may seek approval from the Board to engage in the sale of new types of insurance that protect against the same types of risks as, or are otherwise functionally equivalent to, insurance sold on the grandfather date.

3170.0.3.4.2 Transfer of Grandfather Rights among Subsidiaries

A grandfathered subsidiary of a bank holding company (or its successor) may retain its grandfather rights after merger with an affiliate, if such merger is based on legitimate business concerns, for example, centralized management or increased efficiency, rather than as a means of extending insurance powers. The regulation further provides that bank holding companies must advise the Board before any such merger for legitimate business purposes in order to confirm the transfer of grandfather rights.

3170.0.3.5 Section 225.28(b)(11)(v) of Regulation Y—Bank Holding Company’s Insurance Coverage for Internal Operations

The Garn–St Germain Act approved, and the revised Regulation Y included, insurance agency activities where the activities are solely limited to supervising on behalf of insurance underwrit-

ers the activities of retail insurance agents who sell—

1. fidelity insurance and property and casualty insurance on the real and personal property used in the operations of the bank holding company or its subsidiaries and
2. group insurance that protects the employees of the bank holding company or any of its subsidiaries.

This provision of Regulation Y is reflective of an intent on the part of Congress to avoid preempting certain practices permissible under Texas law. This insurance relates to a particular situation that may have little applicability elsewhere.

3170.0.3.6 Section 225.28(b)(11)(vi) of Regulation Y—Small Bank Holding Companies

The Board has determined in section 225.28(b)(11)(vi) of its Regulation Y that engaging in any insurance agency activity is permissible if the bank holding company has total consolidated assets of \$50 million or less. A bank holding company performing insurance agency activities under this paragraph *may not* engage in the sale of life insurance or annuities except as provided in section 225.28(b)(11)(i) and (iii) of Regulation Y, and it may not continue to engage in insurance agency activities pursuant to that provision more than 90 days after the end of the quarterly reporting period in which total assets of the holding company and its subsidiaries exceed \$50 million.

A bank holding company is required to cease general insurance-agency activities pursuant to this provision within 90 days after the end of the quarterly reporting period in which the bank holding company’s total assets exceed \$50 million. Thereafter, the bank holding company may continue to engage in the sale of insurance pursuant to other exemptions.

3170.0.3.7 Section 225.28(b)(11)(vii) of Regulation Y—Insurance Agency Activities Conducted before 1971

The Board has determined in section 225.28(b)(11)(vii) of its Regulation Y that any insurance agency activity performed at any loca-

tion in the United States directly or indirectly by a bank holding company that was engaged in insurance agency activities before January 1, 1971, as a consequence of approval by the Board before January 1, 1971, is permissible.

3170.0.3.7.1 Agency Activities

The Board adopted a position in section 225.28(b)(11)(vii) permitting any qualifying bank holding company to engage in general insurance-agency activities without restriction as to location or to type of insurance sold (1985 FRB 171 and 1984 FRB 235, 470). A company qualifies under this provision if it was engaged in insurance agency activities as a consequence of Board approval before January 1, 1971. A very limited number of active bank holding companies received such Board approval in the period from passage of the BHC Act in 1956 until January 1, 1971.

The regulation does not limit the insurance agency activities of a qualifying company by requiring that the company engage only in the sale of such types of insurance as it sold before 1971 from such locations as it conducted insurance agency activities before 1971. The Board's regulation permits the limited number of qualifying companies to engage in general insurance-agency activities pursuant to exemption G regardless of their precise insurance agency activities before 1971 (1985 FRB 171 and 1984 FRB 470).

3170.0.4 INCOME FROM THE SALE OF CREDIT LIFE INSURANCE

3170.0.4.1 Policy Statement on Income from Sale of Credit Life Insurance

Effective May 1, 1981, the Board adopted a policy statement (1981 FRB 431) generally prohibiting employees, officers, directors, or others associated with a state member bank from profiting personally from the sale of life insurance in connection with loans made by the bank. The bank may, however, allow their employees and officers to participate in the income under a bonus or incentive plan not to exceed 5 percent of the recipient's annual salary. Income from the sale of credit-related life insurance should most appropriately be credited to the bank, or alternately to a bank

holding company or other affiliate of the bank so long as the bank receives reasonable compensation for its role in selling the insurance. As a general rule, "reasonable compensation" means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the bank's credit life insurance sales. (Insurance agency activities engaged in directly by a bank subsidiary are regulated by the chartering authority. However, intercompany transactions should be reviewed by BHC inspection personnel.)

3170.0.4.2 Disposition of Credit Life Insurance Income

The Comptroller of the Currency has issued a regulation dealing with sales of credit life, health, and accident insurance by national banks which prohibits transfer of insurance commissions to an affiliate of the bank unless commission income in proportion to the shares held by the bank's minority shareholders is placed in trust and paid to them periodically. Where the subsidiary bank is wholly owned by a bank holding company, however, the regulation allows the commissions to be credited to the holding company or to its wholly owned subsidiaries (12 C.F.R. 2).

3170.0.5 INSPECTION OBJECTIVES

1. To determine the extent of insurance operations and the overall condition of subsidiaries engaged in insurance agency and underwriting activities.
2. To determine whether the types of insurance sold are in accordance with the provisions of section 225.28(b)(11) of Regulation Y.
3. To determine the impact of the performance of the activities on the parent bank holding company and its subsidiaries.
4. To suggest corrective action when necessary in the areas of policies, procedures, or laws and regulations.

3170.0.6 INSPECTION PROCEDURES

Where the insurance activities are performed through an insurance agency or underwriting subsidiary, perform the following activities:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6 and the annual report to the state insurance department.

2. Review minutes of the board of directors meetings.
 3. Review the activity's compliance with the Board's policy statement on income from the sale of credit life insurance (See section 3170.0.4.1) and the Comptroller of the Currency's regulation dealing with the sales of credit life, health, and accident insurance by national banks (12 C.F.R. 2).
 4. Review any agreements, guarantees, or pledges between the subsidiary and its parent holding company or affiliates.
- Where the insurance activities are performed through an insurance agency or underwriting subsidiary or directly by the parent company, perform the following procedures:
1. Obtain copies of insurance policies issued to determine that the types and terms of insurance coverage sold are within the scope of those permitted by the Board under section 225.28(b)(11) of Regulation Y.
 2. Check for compliance with section 106(b) of the 1970 Amendments to the BHC Act (prohibition against tie-in arrangements).

3180.0.1 INSURANCE
UNDERWRITING ACTIVITIES

On December 11, 1972, after consideration of a public hearing held on March 24, 1972, the Board amended Regulation Y to add the activity of underwriting credit life insurance and credit accident and health insurance to the list of activities in which a bank holding company may engage, provided that such insurance is directly related to an extension of credit by the holding company system. Such insurance ensures a bank or bank-related firm of repayment of a credit extension in the event of death or disability while at the same time providing the borrower with financial security in either event. In approving this activity, the Board set forth, in a footnote to Regulation Y, requirements to ensure that performance of the activity would result in demonstrable benefits to the public. The Board stated that applications to engage in underwriting activities would be approved only in cases in which the applicant demonstrates that such approval would benefit the consumer or result in other public benefits and that normally such a showing would be made by a projected reduction in rates charged the public for the insurance or an increase in other public benefits resulting from bank holding company performance of this service.

On October 3, 1986, the Board adopted a revision of the provisions of Regulation Y that deals with permissible insurance agency and underwriting activities for bank holding companies. The general revision of the insurance provisions of Regulation Y combined both the insurance agency and insurance underwriting activities reflects amendments to the Bank Holding Company Act by the Garn–St Germain Depository Institutions Act of 1982. The revision of the provisions relating to insurance underwriting eliminated the rate-reduction requirement that previously applied to those companies engaged in the underwriting of credit life, credit accident and health, and involuntary unemployment insurance. Accordingly, bank holding companies engaging in this activity may charge premiums as permitted by the states.

In order for insurance underwriting (including home mortgage redemption insurance) to be permissible in accordance with section 225.28(b)(11) of the Board’s revised Regulation Y, the insurance must—

1. be directly related to an extension of credit¹ by the bank holding company or any of its subsidiaries and
2. be limited to ensuring the repayment of the outstanding principal balance due on the extension of credit in the event of the death, disability, or involuntary unemployment of the debtor.

3180.0.1.1 Insurance Underwriting
Activities Permissible for Bank Holding
Companies per Section 225.28(b)(11)(i)
of the Board’s Regulation Y—Credit
Insurance

The Board permits the insurance underwriting activities described above as well as the insurance agency activities described in section 3170.0.

In section 225.28(b)(11)(i) of Regulation Y, the Board issued three significant interpretations of the term “extension of credit” as contained in the Garn–St Germain Act. It permits the underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions where such lease transactions are the equivalent of loans (leasing is addressed in section 3140.0), (2) in connection with loans secured by residential first mortgages, and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

Permissible insurance underwriting requires that the credit insurance must be directly related to an extension of credit by the bank holding company or any of its subsidiaries. An “extension of credit” includes direct loans to borrowers, and the lease of real or personal property, and loans purchased from other lenders. The first significant interpretation, noted above, allows the inclusion of leasing personal or real property, provided the lease is a nonoperating and full-payout lease, the insurance ensuring the payment of the remaining lease payments that are due in the event of the death, disability, or involuntary unemployment of the lessee.

1. “Extension of credit” includes direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases are nonoperating and full-payout leases.

The interpretation thus defines leases as the functional equivalent of an extension of credit.

The second interpretation in paragraph (i) of the regulation involving the definition of “extension of credit” is the permissibility of underwriting home mortgage insurance, which ensures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. Exemption A of the Garn–St Germain Act permits the underwriting of any type of life, disability, and involuntary unemployment insurance related to an extension of credit by a bank holding company as long as the face value of the insurance policy does not exceed the “outstanding balance due” on the extension of credit. The Board continues to require that insurance policies written insure only named borrowers or lessees of a particular bank holding company. Such policies could cover both spouses jointly, but only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company (see 1974 FRB 138).

The Board had previously held that the underwriting of home mortgage insurance is not closely related to banking in part because it is more like general life insurance than credit life insurance and in part because banks have not generally underwritten such insurance (see 1980 FRB 660 and 1982 FRB 318). Recently, however, the Board permitted bank holding companies to underwrite such insurance (see 1986 FRB 339 and 1986 FRB 671). In permitting this activity by order, the Board provided detailed findings that the underwriting of home mortgage redemption insurance is permitted by exemption A of the Garn–St Germain Act, is closely related to banking, and does not present the possibility of such significant adverse effects that it should not be added to the list of activities permissible for bank holding companies. The Board also found that home mortgage insurance supports the lending function. The Board thus believes, for the reasons cited in the above-cited orders, that the underwriting of home mortgage redemption insurance is permissible for bank holding companies.

In approving the underwriting of home mortgage insurance by order, the Board relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for

written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. In processing applications to engage in the underwriting of home mortgage redemption insurance pursuant to the current regulation, the Board, and the Reserve Banks acting pursuant to delegated authority, will continue to require that such notices be provided to borrowers. In addition, the Board will continue to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrower’s ability to rescind the insurance and to limit premium financing as an incentive to sell and underwrite such insurance.

A third significant interpretation of the term “extension of credit” found in exemption A of the Garn–St Germain Act involves the underwriting of insurance in connection with the serviced loans (see section 3170.0.3.1) The Garn–St Germain Act limits bank holding companies in general to insurance related to an extension of credit. The term “extension of credit” is used in exemption A to describe transactions in which the funds of the bank holding company or its subsidiaries have been placed at risk, including direct loans or leases or loans that have been purchased. Loans that are merely being serviced by the bank holding company generally would not be covered by this definition.

The underwriting of insurance on loans being serviced is necessary only when the term of the insurance was originally shorter than that of the loan. The bank holding company that is selling and underwriting insurance on the loan that it originated and is servicing is, in effect, only extending the term of its original insurance policy to be coterminous with the duration of the loan. It is providing insurance that it could have provided previously. A bank holding company may not underwrite insurance in the case where it is merely servicing a loan and it has never placed its funds at risk either by originating or purchasing the loan.

3180.0.2 LIMITED PROPERTY INSURANCE RELATED TO AN EXTENSION OF CREDIT (FINANCE COMPANY SUBSIDIARY OF A BANK HOLDING COMPANY)

The Board’s revised regulation does not permit the underwriting of this type of insurance. See section 225.28(b)(11)(ii) of Regulation Y and section 3170.0.3.1 for information on authorized insurance agency activities.

3180.0.3 INSURANCE ACTIVITIES BEFORE 1971

The Board's revised regulation (section 225.28(b)(11)(vii)), as it relates to exemption G of the Garn–St Germain Act, does not authorize underwriting activities for bank holding companies. See section 3170.0.3.7 for information on the respective authorized insurance-agency activities under exemption G.

3180.0.4 UNDERWRITING AS REINSURER

The majority of bank holding company subsidiaries engaged in insurance underwriting are reinsurers rather than direct underwriters. As reinsurer, these companies engage a direct insurer to issue the policies, collect the premiums, pay claims, maintain accounting books and records, prepare federal and state tax returns, and perform other services necessary to conduct the insurance activities. Usually, such reinsurance companies will have executed a reinsurance agreement and a service agreement with the direct underwriter which spell out all services to be performed and set the fees to be paid for such services. The above arrangement involves a minimum of activity by the reinsurer and is probably most often chosen by bank holding companies since it does not place additional burdens on management and precludes hiring actuaries and other professional personnel to manage the insurance company.

There are many ratios or measures used to evaluate the condition of insurance underwriters. The National Association of Insurance Commissioners has developed a system consisting of nine ratios that measure various aspects of life and health insurance companies' financial condition and stability (*The Early Warning System for Life and Health Insurance Companies*). These tests establish benchmarks which are likely to distinguish between troubled and sound companies. The examiner may wish to compare the subject company's ratios to these benchmarks. When making comparisons, however, the examiner should recognize that one insurer may require a somewhat better ratio than another due to greater underwriting and investment risks. Smaller companies will generally maintain a proportionately larger surplus account since loss experience on a small volume of business tends to fluctuate more widely.

Another possible source of information available to help determine a company's condition is *Best's Insurance Reports*. The report is pub-

lished annually and provides pertinent financial and historical data for legal reserve life insurance companies operating in the United States and Canada. It assigns a rating for each company in the report. Information presented in the report is taken from annual statements filed with the state insurance departments. It should be noted that reports filed with the insurance departments are prepared using the statutory method of financial accounting and presentation rather than generally accepted accounting principles. Beginning in 1973, insurance companies were required to adhere to generally accepted accounting principles for certification of financial statements (see *Audits of Stock Life Insurance Companies*, American Institute of Certified Public Accountants), however, they continue to report under the statutory method to the state insurance departments. The statutory method is basically a cash-basis accounting presentation which generally depicts a more conservative position. Certain assets are "not admitted" by regulatory authorities in the financial presentation because they are not readily convertible into cash for the payment of claims and expenses.

Policy reserves represent the primary liability portion of underwriters' balance sheets. There are several acceptable methods permitted by state authorities for calculating these reserves. Most of these methods are rather complicated and a description of their calculation is beyond the scope of this manual. However, insurance companies are generally closely regulated by state authorities, which place primary importance on determining the adequacy of the policy reserves. A review of the latest available insurance examination report should give an evaluation of the adequacy of the reserves.

Reinsurance arrangements may distribute the insurance and losses in many different ways between the direct insurer and the reinsurer. An understanding of such arrangements is essential in determining the extent of risk incurred by the company being inspected.

3180.0.5 INSPECTION OBJECTIVES

1. To determine the extent of underwriting activities and the overall condition of subsidiaries engaged in underwriting.
2. To determine whether the activities performed are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3. To determine the impact of the underwriting operations on the parent bank holding company and its subsidiaries.
4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.
4. Review intercompany transactions, including balances maintained with or assets purchased from affiliated banks.
5. Review any agreements, guarantees, or pledges between the company and its parent holding company or affiliates.

Where the insurance activities are performed either directly or through an underwriting subsidiary, perform the following procedures:

3180.0.6 INSPECTION PROCEDURES

Where the insurance underwriting activities are performed through an underwriting subsidiary, perform the following procedures:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6. (Generally, records are maintained on the statutory accounting basis and are more easily tied to the financial statements in the annual report to the state insurance department).
2. Review minutes of the board of directors meetings.
3. Review the quality and liquidity of the subsidiary company's investments in CDs, stocks, bonds, or other marketable securities.
1. Review copies of any reinsurance and/or service agreements executed with other insurance companies.
2. Review the latest annual report submitted to the state insurance department.
3. Review the latest report of examination prepared by the state insurance department.
4. Check calculation of premium charges by a random sample of policies for adherence to the state rate structure.
5. Obtain copies of insurance policies issued to customers to determine that the types of insurance coverage and terms offered are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3180.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Permissible underwriting activities	12 U.S.C. 1843(c)(A)–(G)	225.28(b)(11)	4–050.1

Nonpermissibility of mortgage guarantee insurance				1974 FRB 727
Underwriting of joint credit life insurance			4–337	39 Federal Register 7493 1974 FRB 138

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Courier activities are permissible for bank holding companies if the items being transported by the courier are themselves related to bank operations. Examples of such items are drafts, money orders, travelers' checks, commercial papers, written instruments, and data processing material. Currency and bearer-type negotiable instruments which require more than normal security measures may not be transported by the company.

If the courier company operates under the exemptive provision of section 4(c)(8) of the Bank Holding Company Act, the following restrictions are placed on its operations to ensure competition:

1. The company must be a separate, independent corporate entity.
2. The company must be profit-oriented and not subsidized by the holding company system.
3. Services of the company must be performed on a specific-fee basis with direct payment from the customer. Payment may not be made indirectly such as through maintenance by the customer of deposit balances at an affiliated bank.
4. Upon request, the company must furnish comparable services at comparable rates to firms which compete with banking or data processing subsidiaries of its parent company, unless compliance with the request would be beyond the practical capacity of the company.

The last restriction was intended to prevent use of bank-affiliated courier services for the purpose of gaining an advantage over competitors to whom courier services were not otherwise available.

3190.0.1 INSPECTION OBJECTIVES

1. To determine if the company is operating in compliance with applicable laws and regulations, and ensure that corrective action will be taken, if appropriate.

2. To determine if courier services are provided to competing institutions upon their request if courier services are not otherwise available.

3190.0.2 INSPECTION PROCEDURES

1. Determine whether the company makes known to its customers its minimum rate schedule for services and its general pricing policies.
2. Determine whether the company maintains for a period of two years or more the records of each request for service which it has denied to firms competing with the banking and data processing subsidiaries of its parent company. The reasons for the denial must also be recorded and maintained for a like period.
3. Review income statements of the company to ascertain whether the company is operating profitably, without a subsidy in any manner from any entity within the holding company system. Any operating losses sustained over an extended period of time are inconsistent with continued authority to engage in courier services.
4. Determine whether the materials transported by the company are restricted to those which would normally be exchanged among banks and banking institutions, including audit and accounting media of a banking or financial nature, and other business records or documents used in processing such media.

3190.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Courier activities of bank holding companies		225.28(b)(10)		1973 <i>Fed. Reg.</i> 32136 1975 <i>Fed. Reg.</i> 36309
Conditions of entry into courier activities		225.129	4-180	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

On February 26, 1974, the Board amended Regulation Y to permit bank holding companies to engage in the activity of providing bank management consulting services to nonaffiliated commercial banks. The advisee institution must be a “bank” as that term is defined by section 2(c) of the BHC Act or an operations subsidiary of such an institution (see 12 C.F.R. 250.141). Effective April 20, 1982, the Board expanded this activity by permitting holding companies to provide management consulting advice to nonbank depository institutions. When expanding the activity to include management consulting advice to nonbank depository institutions, the Board indicated that the advisory services provided to nonbank institutions should generally be the services that were then being provided to banks.

Effective April 21, 1997, management consulting was expanded in Regulation Y to allow bank holding companies to provide management consulting services regarding financial, economic, accounting, or audit matters to any company. In addition, bank holding companies are permitted to derive up to 30 percent of their management consulting revenue from management consulting services that are provided to any customer on any matter. The Board continues to view “management consulting” as including, but not limited to, providing analysis or advice as to a firm’s—

1. purchasing operations, such as inventory control, sources of supply, and cost minimization subject to constraints;
2. production operations, such as quality control, work measurement, product methods, scheduling shifts, time and motion studies, and safety standards;
3. market operations, such as market testing, advertising programs, market development, packaging, and brand development;
4. planning operations, such as demand and cost projections, plant location, program planning, corporate acquisitions and mergers, and determination of long-term and short-term goals;
5. personnel operations, such as recruitment, training, incentive programs, employee compensation, and management-personnel relations;
6. internal operations, such as taxes, corporate organization, budgeting systems, budgeting control, evaluation of data processing systems, and efficiency evaluations; and

7. research operations, such as product development, basic research, and product design and innovation.

By interpretation, the Board previously determined that it considers bank management consulting advice to include, but not be limited to, advice concerning (1) bank operations, systems, and procedures; (2) computer operations and mechanization; (3) implementation of electronic funds transfer systems; (4) site planning and evaluation; (5) bank mergers and the establishment of new branches; (6) operation and management of a trust department; (7) international banking and foreign-exchange transactions; (8) purchasing policies and practices; (9) cost analysis, capital adequacy, and planning; (10) auditing; (11) accounting procedures; (12) tax planning; (13) investment advice as authorized in section 225.28(b)(6) of Regulation Y; (14) credit policies and administration, including credit documentation, evaluation, and debt collection; (15) product development, including specialized lending provisions; (16) marketing operations, including research, market development, and advertising programs; (17) personnel operations including recruiting, training, evaluation, and compensation; and (18) security measures and procedures. Providing management consulting advice on compliance with laws and regulations may be accomplished only when these activities are incidental to a primary consulting activity and when such advice would not constitute the rendering of legal advice.

In general, those consulting services which correspondent banks traditionally have provided to their respondents (both bank and nonbank depository institutions) are considered to be included within the scope of this regulation as permissible services to be provided by nonbank holding company subsidiaries to nonaffiliated bank and nonbank depository institutions.

3200.0.1 MANAGEMENT CONSULTING LIMITATIONS

Recognizing the potential for conflict-of-interest situations, such as the possibility for anticompetitive cooperative arrangements, improper use of confidential information, and similar abuses which this activity could entail, the Board incorporated in Regulation Y a few restrictions on a

bank holding company. With regard to affiliation status, neither the bank holding company nor any of its subsidiaries may own or control directly or indirectly more than 5 percent of the voting securities in the client institution. The prohibition would not apply when the shares were acquired in satisfaction of a debt previously contracted or to shares acquired in a fiduciary capacity without sole discretionary voting authority. A bank holding company may offer consulting advice to a client institution whose shares it holds in a fiduciary capacity with sole discretionary voting rights if said holding company does not hold more than 5 percent of the voting shares of that institution. Bank holding companies are permitted to have common management officials with the client institution to which they provide management consulting services if such interlocks would be permissible under exceptions found in the Board's Regulation L (Management Official Interlocks) that apply to such institutions in need of management or operating expertise (12 C.F.R. 212.4(b)).

Management consulting services may not be provided to a client on a daily or continuing basis except where necessary to instruct the client on how to perform the services for itself. The Board has informed bank holding companies that their management consulting subsidiaries should refrain from entering relationships on a daily or continuing basis even when the client institution may be experiencing financial or managerial difficulties. Particular caution should be exercised when a bank holding company contemplates the subsequent acquisition of the client institution. However, when a bank holding company is attempting to acquire a troubled depository institution, limited management consulting services may be offered via an on-premises bank holding company employee. Nevertheless, the representative should not have the authority to lend or make personnel decisions. Failure to heed these guidelines not only would cause the bank holding company to exceed the permissible bounds of the activity, but also could cause it to acquire control of the client institution that might constitute an acquisition of a subsidiary within the meaning of section 3(a) of the BHC Act. Section 225.31(d)(2)(i) of Regulation Y indicates that a rebuttable presumption of control shall exist when a company enters into an agreement, such as a management contract, with a bank or other company pursuant to which the first company or any of its subsidiaries exercises significant influence over the

general management or overall operations of the bank or other companies. Reserve Bank personnel are encouraged to contact the Board's applications section to discuss the restrictions on this activity whenever a BHC proposes to have its personnel assist a troubled or problem institution.

When evaluating a BHC's application to engage in management consulting, it is important to note whether the applicant bank holding company has exhibited the necessary expertise in the operation of its own subsidiaries—and whether this qualifies it to offer advice to others.

3200.0.2 INSPECTION OBJECTIVES

1. To verify that the bank holding company is performing only those types of management consulting services at those locations for which it received prior regulatory approval.
2. To verify that the advice being provided is within the scope of the approval and consistent with the activities of the interpretation (12 C.F.R. 225.131) and section 225.28(b)(9) of Regulation Y.
3. To determine that the bank holding company does not own or control, directly or indirectly, securities of its client depository institutions except for shares acquired as the result of a default on a debt previously contracted or shares held in a fiduciary capacity (within certain limits), provided the holding company does not have sole discretionary authority to vote more than 5 percent of the client's shares (see 12 C.F.R. 225.131).
4. To determine that the bank holding company does not control the activities of a client institution by virtue of nonexempt interlocking directors.
5. To determine that services rendered to the client institutions are not being provided on a daily or continuing basis.
6. To determine that disclosure is made to each client of (1) the names of all depository institutions which are affiliates of the consulting company and (2) the names of all existing client institutions located in the same county (or counties) or Standard Metropolitan Statistical Area(s) (SMSA) as the client institution.

3200.0.3 INSPECTION PROCEDURES

A thorough review of pertinent records, contracts, lists of clients, and documentation representing the services being provided to clients should be undertaken to determine that services

are being provided to the appropriate customer base and within the scope of the Board's approval. Further, the examiner should ascertain the existence of procedures to inform each potential client of the names of all depository and client institutions which are affiliates of the consulting company and of the names of all existing clients located in the same market area as the prospective client. The basis for any fee structure should be determined to ascertain that the advice is being rendered on an explicit fee basis, such as an hourly or daily rate. Such fees should not be affected by factors not directly related to the service, such as balances maintained by the client at any subsidiary depository institution of the bank holding company. The extent of the consultant company's involvement in the day-to-day affairs and operation of the client should also be reviewed.

The absence of parent company control, direct or indirect, over the clients of the management consulting subsidiary should be established. The examiner should compare listings of directors and principal officers of the bank holding company, its various affiliates, and the clients with due regard to exempt interlocks. The examiner should determine the extent of ownership or control by the bank holding company and its affiliates of any equity securities in its clients by requesting a listing of all shares owned in outside organizations. Overall conclusions including recommendations concerning the operation, apparent violations, and any possible control of client institutions and conflicts of interest should be discussed with parent company management and detailed in the inspection report.

Within Regulation Y (section 225.28(b)(9)(ii)), management consulting and counseling activities include employee benefits consulting services. Employee benefits consulting services include providing consulting services to employee benefit, compensation, and insurance plans (including their design); assisting in their implementation; providing administrative services thereto; and also developing employee communication programs for such plans. A bank holding company may derive up to 30 percent of its management consulting revenue from management consulting services that are provided to any customer on any matter.

The initial Board orders that were issued to permit employee benefit consulting services are summarized here as historical examples of the nonbanking activity. Commitments made in those Board orders should not be relied upon. Refer only to the provisions within the current Regulation Y, as cited above.

3202.0.1 BOARD ORDERS INVOLVING EMPLOYEE BENEFITS CONSULTING

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and Regulation Y to acquire 100 percent of the voting shares of a company that provides a full range of services involving employee benefits plans. The services are divided into four basic types of activities:

1. *Plan design.* Designing employee benefit plans, including determining actuarial funding levels and cost estimates.
2. *Plan implementation.* Providing assistance in implementing plans, including assistance in the preparation of plan documents and in the implementation of employee benefit administration systems.
3. *Administrative services.* Providing administrative services with respect to plans, including recordkeeping services, calculating and certifying employment reports and government filings pursuant to ERISA, and providing information to a client's legal counsel in labor relations and negotiations.
4. *Employee communications.* Developing employee communication programs with respect to plans for the benefit of the client.

The applicant contended that all of the proposed activities were included in trust company

or financial or investment advisory service activities permissible under Regulation Y. Although certain employee benefits consulting activities as conducted by the company being acquired, particularly activities involving plan administration, are conducted by trust companies or trust departments of banks in their capacities as trustees or custodians of employee benefits plans and investment managers of plan assets, it was not apparent that the *complete range* of employee benefits consulting services were generally conducted by trust companies or authorized by the Board as permissible trust company activities under Regulation Y.

The Board believed that employee benefits consulting was essentially a financial planning activity involving preparing and conveying financial data to a client, which it had previously determined to be closely related to banking and permissible under Regulation Y in the areas of investment advisory services, data processing services, and courier services. The record did not indicate, however, that employee benefits consulting is wholly encompassed within *any or all* of those activities. The Board, therefore, did not agree with the applicant that *all* of the proposed activities were currently authorized for bank holding companies under existing provisions of Regulation Y.

A review of the four basic types of activities revealed that many of the proposed employee benefits consulting activities either were already specifically engaged in by banks and trust companies, or were functionally related to activities in which banks and trust companies were regularly engaged. The Board recognized, however, that the actuarial aspect of the employee benefit consulting activities is not generally included in trust company or bank activities. Such activities are limited in scope and purpose in that they are conducted primarily as a means to ensure adequate funding of defined benefits plans. In this case, they were performed solely as a means for the applicant to provide a full range of benefits-planning activities for its clients. The acquired company's actuarial services would not be conducted as an independent activity, but only as a necessary and integrally related component of employee benefits consulting.¹

1. As part of its acquisition, the bank holding company proposed to assist firms in IRS audits of plans; inform clients of developments in employee benefit programs through news-

In *Association of Data Processing Organizations, Inc. v. Board of Governors*, 745 F.2d 277 (D.C. Cir. 1984), the court of appeals held that the Board may permit those activities that are “a part of” the overall permissible activity where, as here, “in both market contemplation and technological reality, the service is a unitary one.” Based on this ruling, the Board concluded

that the applicant’s proposed activities are permissible as closely related to banking, and were approved on June 19, 1985. (1985 FRB 656)

Another Board order permitting the provision of employee benefits consulting services, which is slightly different from the order cited above, is found in 1986 FRB 337. Also see 1986 FRB 729 and 1987 FRB 158 and 681.

letters and other correspondence and through participation in seminars, public programs, and other forums; and engage in professional actuarial activities and other activities incidental to the actuarial profession. The activities are generally related to the type of actuarial activities performed for purposes of engaging in employee benefits consulting and that would not generate any significant income. Such activities were, therefore, permissible as incidental to the bank holding company’s approved activities. The applicant also proposed to provide expert actuarial opinions of a general nature for purposes such as divorce actions and personal injury litigation. The Board believed that such activities were beyond the scope of incidental activities and were not permissible.

Career counseling services may be provided to—

1. a financial organization¹ and individuals currently employed by, or recently displaced from, a financial organization;
2. individuals who are seeking employment at a financial organization; and
3. individuals who are currently employed in or who seek positions in the finance, accounting, and audit departments of any company.

The initial Board order that was issued to permit the provision of career counseling services is summarized below as a historical example on the origination of this nonbanking activity. Commitments made in the Board order should not be relied upon. See the current provisions of Regulation Y (section 225.28(b)(9)(iii)) for that purpose.

3204.0.1 CAREER COUNSELING— INITIAL BOARD ORDER

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and the Board's Regulation Y to provide career counseling services to unaffiliated parties through its wholly owned nonbank subsidiary. The applicant proposed to expand its employee benefits consulting services to include career counseling activities. The nonbank subsidiary currently provides these services to the applicant and its affiliates under section 4(c)(1)(C) of the BHC Act. It plans to expand the provision of these services nationwide to unaffiliated companies and individuals in a wide array of industries. The services would provide assistance to individuals who are employed and seeking advancement in their careers and to unemployed individuals who are seeking new employment. The nonbank subsidiary plans to provide these services directly to companies and advise these companies on effective methods of providing career counseling services to their employees.

The nonbank subsidiary will advise unaffiliated organizations on the advantages of including career counseling services as part of a comprehensive employee benefits plan. It will assist

these organizations in establishing their own facilities to implement career counseling services for their current or former employees. If the organization does not want to operate its own counseling facility, the nonbank subsidiary will provide the services directly to the organization's current or former employees at the nonbank subsidiary's career assistance center.

The proposed career counseling services include (1) assessing an individual's education, prior business experience, salary history, interests, and skills to aid in finding employment or evaluating opportunities for career development; (2) assisting in the preparation of résumés and cover letters; (3) contacting employers regarding employment opportunities and making this information available to clients; (4) conducting general workshops on the financial aspects of unemployment, current economic trends, the process of finding a job, and alternative career options; and (5) providing individual counseling on setting and obtaining employment goals.

The issue presented to the Board was whether the proposed activities are closely related to banking. The Board had not previously determined whether providing career counseling services to unaffiliated parties is closely related to banking under section 4 of the BHC Act and permissible for bank holding companies. The Board viewed the applicant's proposal in four parts: (1) career counseling services for financial organizations (that is, banks, bank holding companies and their subsidiaries, thrift institutions, and thrift holding companies and their subsidiaries) and employees of financial organizations; (2) career counseling services for individuals who are unemployed or employed outside the banking industry and who seek employment at banks and other financial institutions; (3) career counseling for individuals seeking financial positions (such as chief financial officer, cash management positions, and accounting and auditing personnel); and (4) career counseling services generally for any individual seeking any type of employment at any type of company.

The Board determined that career counseling services are closely related to banking when they are provided for (1) financial organizations and individuals currently employed at, or recently displaced from, a financial organization; (2) individuals who seek employment at a financial organization; and (3) individuals who

1. Financial organization means insured depository institution holding companies and their subsidiaries, other than nonbanking affiliates of diversified savings and loan holding companies that engage in activities not permissible under section 4 (c)(8) of the BHC Act.

are currently employed in, or who seek, financially related positions at any company. The Board concluded that the record does not presently support a finding that general career counseling services are otherwise closely related to banking.²

The applicant will provide career counseling services on a fee basis with no guarantee of

employment. The Board approved the order on November 8, 1993. As a condition to its approval, the applicant must comply with all commitments made in connection with the application, as well as with other conditions stated within Regulation Y and the Board's order. (1994 FRB 51)

2. When providing career counseling for an individual within one of the three proposed categories, the applicant was permitted to provide limited career counseling services regarding positions outside of these categories as "incidental" to the proposed career counseling services. However, the applicant is not permitted to hold itself out as a provider of general career counseling services for individuals seeking career opportunities outside the banking or financial industries. Regulation Y and judicial decisions construe "incidental activities" as activities that must be necessary to the provision of a closely related activity in order to be considered incidental. (See 12 C.F.R. 225.21(a)(2) and *National Courier Association v. Board of Governors*, 516 F.2d 1229, 1240-41 (D.C. Cir. 1975).)

Section 4(c)(8) of the BHC Act (Money Orders, Savings Bonds, and Travelers' Checks) Section 3210.0

The Board has included in Regulation Y (see section 225.28(b)(13)) the authority to issue and sell at retail money orders and similar consumer-type payment instruments; the sale of U.S. savings bonds; and the issuance and sale of travelers' checks. Previously, the Board, through various orders, had authorized over time various nonbanking activities in this regard. Initially, it permitted by order and then the Board had included in the list of permissible activities the sale and issuance at retail of money orders having a face value of not more than \$1,000, the sale of U.S. savings bonds, and the issuance and sale of travelers' checks. In its original order, effective February 26, 1979, the Board did not include the issuance of travelers' checks. However, after overwhelmingly favorable responses to its proposal to include the issuance of travelers' checks to the list of permissible activities, the Board included this activity effective December 21, 1981. As part of the Board's regulatory review of Regulation Y, and its subsequent overhaul, which was finalized and made effective February 4, 1984, the *issuance* of money orders was listed as a permissible activity. On March 16, 1984, the Board, by order, increased the face value of the payment instruments that the bank holding company could issue to \$10,000, if the bank holding company agreed to meet certain weekly reporting requirements (1984 FRB 364). Also, by order dated December 16, 1985, the Board allowed the sale of official checks with no maximum limitation as long as the proceeds of checks in excess of \$10,000 were deposited in a demand account and the bank holding company made weekly reports of these checks as well as money orders that had a face value of up to \$10,000 (1986 FRB 148). The Board later authorized the issuance and selling of variably denominated payment instruments without limitation as to face value. (See 1993 FRB 42.) As part of the comprehensive revision of Regulation Y, effective April 21, 1997, the Board removed the limitation of the face amount of payment instruments. (See section 225.28(b)(13) of Regulation Y.)

3210.0.1 INSPECTION OBJECTIVES

1. To determine that the scope of the activity is within the parameters established by the Board.
2. To determine if there is any loss exposure due to the lack of systems and controls.

3210.0.2 INSPECTION PROCEDURES

In determining whether a significant degree of risk exposure to the BHC exists, the examiner should address the following questions to management, when considered appropriate:

1. Are there written agreements between the bank and its parent concerning the obligations of each for the sale of money orders and U.S. savings bonds and for the issuance and sale of travelers' checks? Do the agreements provide information on the fees, reimbursable expenses, sharing of overhead expenses, and taxes?
2. Who prints the travelers' checks and money orders?
3. Is the printer bonded or covered by insurance?
4. Is the newly printed inventory of travelers' checks and money orders received in dual custody?
5. If check inventory sent to outlets is on a consignment basis, does the consignee acknowledge receipt on a "trust receipt"?
6. Does the consignment "inventory invoice" describe, in complete detail, the number of checks, serial numbers, and denominations?
7. How are inventories and sales monitored at the outlet level?
8. What are the maximum dollar shipments for the day, per outlet and per package?
9. Does the subsidiary bank maintain the settlement account?
10. What procedures are in effect to establish the checks that have been sold?
11. What are the remittance requirements for the agents for checks sold?
12. If losses and redemptions exceed proceeds from sales, who makes up the deficiency?
13. Does the parent invest the settlement account's float, generated by the excess of proceeds received over checks redeemed, in long-term investments?
14. If a nonbank subsidiary acts as agent on behalf of its parent, what fee is paid by the parent other than commissions on the sale of checks?
15. Is the subsidiary reimbursed for its expenses?
16. What has been the history of losses?
17. How long are losses carried in suspense accounts before being charged off?
18. Does the subsidiary bank maintain compensating balances in financial institutions as

an inducement for the financial institutions to carry the holding company's travelers' checks? If so, does the parent compensate

the bank for lost income?

19. What internal audit procedures are in place? Discuss frequency, scope, and follow-up.

3210.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Adding activity to permissible list (excluding issuance of travelers' checks)		225.28(b)(13)		1979 FRB 265
Adding the issuance of travelers' checks to permissible list		225.28(b)(13)		1981 FRB 912
Increased face value or payment instruments to \$10,000, if weekly reports provided				1984 FRB 364
Sale of official checks with no maximum amount, if checks in excess of \$10,000 deposited in demand deposit account, if weekly reports of checks made as well as money orders with face value up to \$10,000				1984 FRB 148
Sale of official checks with no maximum limitation provided the proceeds of checks in excess of \$10,000 were deposited in a demand account and that weekly reports of the official checks were made as well as the total value of official checks with face values exceeding \$10,000				1986 FRB 148
Issuing and selling drafts and wire transfers in foreign currencies				1988 FRB 252
Issuing and selling variably denominated payment instruments without limitation as to face value				1993 FRB 42
Removal of the limitation on the face amount of payment instruments		225.28(b)(13)		1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

As noted in section 3210.0, the Board has authorized the issuance and sale of various payment instruments. This section provides brief historical summaries of the initial Board orders that led to the incorporation of the activity into the Regulation Y “laundry list.” Provisions within the Board orders, including commitments and any regulatory references, should not be relied upon as provisions that are currently authorized. For the current regulatory authorization, see section 225.28(b)(13) of Regulation Y, effective April 1997.

3210.1.1 ISSUING CONSUMER-TYPE PAYMENT INSTRUMENTS HAVING A FACE VALUE OF NOT MORE THAN \$10,000

A bank holding company applied for the Board’s approval under section 4(c)(8) of the BHC Act and section 225.23 of the Board’s Regulation Y to engage de novo in the issuance and sale of variably denominated payment instruments with a maximum face value of \$10,000. The instruments would be sold in U.S. dollars and foreign currency by the holding company’s subsidiaries and unaffiliated financial institutions and would consist of domestic and international money orders and official checks. They would also be used for certain internal transactions, such as payroll. The Board had recently amended Regulation Y to include on the list of permissible nonbanking activities the issuance or sale of money orders and other similar consumer-type instruments with a face value not exceeding \$1,000. The Board concluded that an increase in the denomination of such instruments would not affect their fundamental nature.

As a condition to its approval, the Board required the bank holding company to file with the Board weekly reports of daily data on the activity. The issuance of such instruments with a face value of more than \$1,000 could have an adverse effect on the bank holding company’s reserve base. Because reserve requirements serve as an essential monetary policy tool, the Board was concerned that the proposal might result in adverse effects resulting from an erosion of reservable deposits within the banking system (1984 FRB 364).

3210.1.2 ISSUING AND SELLING OFFICIAL CHECKS WITH NO MAXIMUM FACE VALUE

Effective December 16, 1985, the Board approved by order a bank holding company’s application to sell official checks with no maximum limitation on the face value, so long as the proceeds of checks in excess of \$10,000 were deposited in a demand account at its subsidiary until the respective payment instrument was paid. To address the Board’s monetary policy concerns about the activity potentially causing a significant reduction in the reserve base or resulting in other adverse effects on the conduct of monetary policy, the bank holding company agreed to make weekly reports of all outstanding instruments (including money orders and official checks) with face values of up to \$10,000, and also the aggregate value of all official checks with face values exceeding \$10,000 (1986 FRB 148).

3210.1.3 ISSUING AND SELLING DRAFTS AND WIRE TRANSFERS PAYABLE IN FOREIGN CURRENCIES

A foreign bank subject to the BHC Act applied for the Board’s approval under section 4(c)(8) of the act and section 225.23(a)(3) of Regulation Y to engage de novo through a wholly owned subsidiary in the issuance and sale of foreign drafts and wire transfers with unlimited face amounts that are payable in foreign currencies. The applicant proposed to conduct these activities through the subsidiary as well as through a nationwide network of unaffiliated selling agents, including commercial banks, thrift institutions, and others.

The Board previously determined that the issuance and sale of money orders and similar payment instruments with a maximum face value of \$1,000 is closely related to banking. (See former section 12 C.F.R. 225.25(b)(12).)¹ The Board also approved by order a limited number of applications to engage in the issuance and sale of (1) payment instruments with a \$10,000 maximum face amount (see 1987 FRB 727) and

1. Effective April 21, 1997, the \$1,000 limit was eliminated. The revised Regulation Y (see section 225.28(b)(13)) authorizes the issuance of payment instruments of any amount.

(2) payment instruments with unlimited face amounts, subject to certain operational and reporting requirements (see 1986 FRB 148).

In considering the previous applications, the Board expressed concern that the issuance of payment instruments in denominations larger than \$1,000² would have an adverse effect on the reserve base because such instruments are not subject to the transaction reserve account requirements of the Board's Regulation D. The Board noted that because reserve requirements serve as an essential monetary policy tool, the conduct of monetary policy could be adversely affected by the erosion of reservable deposits in the banking system.

To address the concerns expressed in previous Board orders, the applicant committed that the proceeds of all sales of foreign-currency-denominated instruments will be held in demand deposit accounts at U.S. commercial banks. Deposits stemming from the sale of instruments with denominations of \$10,000 or less are to be swept daily into nonreservable instruments. The total proceeds of the sale of any payment instruments with denominations greater than \$10,000 will be deposited in a demand deposit account at a U.S. depository institution, to be used to purchase foreign currency for each particular payment instrument at the time of the transaction. The Board determined that these commitments and other procedures outlined in the order adequately addressed its concerns about the potential adverse effects on the reserve base. The Board approved the application on February 3, 1988, subject to the continued evaluation of its potential for adverse effects on the conduct of monetary policy (1988 FRB 252).

3210.1.4 ISSUING AND SELLING VARIABLY DENOMINATED PAYMENT INSTRUMENTS WITHOUT LIMITATION AS TO FACE VALUE

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act

to engage both directly and indirectly through a bank holding company nonbank subsidiary in the issuance and sale of variably denominated payment instruments without limitation as to face value and without the reporting and reservable deposit requirement previously imposed by the Board on issuers of such instruments.

The Board previously determined by regulation that the issuance and sale of money orders and other similar consumer-type payment instruments with a face value not exceeding \$1,000³ is an activity that is closely related to banking and is therefore permissible for bank holding companies (see former section 225.25(b)(12) of Regulation Y (12 C.F.R. 225.25(b)(12))).

Effective December 22, 1992, the Board amended Regulation D to impose reserve requirements on teller's checks. The Board's notice amending Regulation D stated that bank holding companies that had received prior approval under section 4(c)(8) of the BHC Act to issue and sell variably denominated payment instruments—subject to the demand deposit requirement, reporting requirement, or limits on the denomination of payment instruments—could request relief by letter from those conditions. The Board believes that the adverse effect of erosion of the reserve base is addressed in the Regulation D revisions, and special reporting and demand deposit requirements previously imposed by the Board in connection with approvals to engage in the issuance and sale of variably denominated payment instruments in amounts over \$10,000 are no longer needed. As a result, the Board determined not to impose those requirements on the applicant and to grant the applicant's request for relief from the reporting requirement to which it was subject. The Board approved the application on November 12, 1992, subject to the Regulation D effective date of December 22, 1992, and the conditions and commitments stated in the order (1993 FRB 42).

2. See footnote 1.

3. See footnote 1.

Section 4(c)(8) of the BHC Act (Arranging Commercial Real Estate Equity Financing) Section 3220.0

Effective September 1, 1982, the Board approved an application of a bank holding company to engage in, through a nonbank subsidiary, the activity of arranging equity financing for certain types of income-producing properties (1982 FRB 647). The Board limited the activity by requiring that the holding company act only as an intermediary between developers and investors to arrange financing, and imposed certain other conditions to prevent the holding company from engaging in real estate development or syndication. At that time, however, the Board did not expand the Regulation Y list of permissible activities for bank holding companies to include this activity.

In February 1984, the Board added the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y (section 225.28(b)(2)(ii)). Regulation Y incorporated the limitations placed on the activity by the Board's 1982 order, which is discussed below.

Equity financing involves arranging for the financing of commercial or industrial income-producing real estate through the transfer of the title, control, and risk of the project from the owner or developer to one or more investors. In performing the equity-financing activity for commercial or industrial income-producing real estate, consultations should be made with the owner or developer to determine the nature, objectives, and financing arrangements for the property or project. The project's concept, architectural design, building layout, suitability for its purpose and prospects, traffic flow, as well as competing projects, source(s) of customers, nature of the market, projected rentals and income flows, timetables for completion, and the avail-

ability of construction and long-term financing for the property, have to be carefully reviewed. Financing alternatives, including equity financing, should be predetermined.

The Board has found that the particular expertise and analysis required to provide equity financing for large commercial or industrial income-producing properties is functionally and operationally similar to the analysis and expertise that is required when a bank provides traditional mortgage financing services for such properties. This finding is supported by the fact that equity financing can be viewed as an economic substitute for long-term mortgage financing. The Board's view is that equity financing, subject to the limitations described below, bears a functional relationship to investment advisory services that are traditionally and lawfully performed by commercial banks with respect to commercial and industrial real estate.

The Board therefore, in 1984, approved adding the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y. On April 21, 1997, the comprehensive revision of Regulation Y removed certain restrictions from this nonbanking activity. The activity currently consists of acting as an intermediary for the financing of commercial or industrial income-producing real estate by arranging for the transfer of title, control, and risk of such a real estate project to one or more investors, if the bank holding company and its affiliates do not have an interest in, or participate in, managing or developing a real estate project for which it arranges equity financing, and do not promote or sponsor the development of the property.

4(c)(8)—Agency Transaction Services for Customer Investments (Securities Brokerage) Section 3230.0

3230.0.1 OVERVIEW OF SECURITIES BROKERAGE AS A NONBANKING ACTIVITY

In addition to providing a full panoply of financial services to their customers, banks and bank holding companies seek “off-balance-sheet” or non-asset-building sources of revenue. Securities brokerage is one type of endeavor perceived to have growth and profit potential. The main reasons for this are easy market entry, low start-up costs, and maximum use of a branch system and customer base.

After the deregulation of brokerage commissions in 1975, certain brokers began to compete for securities business by drastically reducing their commissions. In order to reduce operating expenses, yet still remain profitable at reduced commission rates, these firms ceased investment research and offered their customers a reduced level of service by “unbundling” brokerage services and offering only the execution of securities transactions. Brokers who offer this reduced level of service have come to be known as “discount brokers.”

The Board, in 1983, added “securities brokerage” to the list of permissible activities for bank holding companies shortly after it approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., as discussed below. In 1984, the U.S. Supreme Court sustained the Board’s approval order and ruled that it is not a violation of the Glass-Steagall Act for banks and bank-affiliated brokers to buy and sell securities as agent for customers (*SIA v. Board of Governors*, 104 S. Ct. 3003). For additional historical information regarding the expansion of securities brokerage nonbank activities by Board order or by incorporation into Regulation Y, see sections 3230.1 through 3230.3.

Before April 21, 1997, Regulation Y differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities). Regulation Y no longer distinguishes between discount and full-service brokerage activities.

Regulation Y currently authorizes securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or in combination with investment advisory services and incidental activities (including such related activities as securities credit, custodial services, individual retirement accounts, and cash-management ser-

vices), if the services are restricted to buying and selling securities solely as agent for the account of customers and do not include securities underwriting or dealing. In addition to the information and examiner guidance provided in this section, see the American Institute of Certified Public Accountants’ *Audit and Accounting Guide—Brokers and Dealers in Securities*.¹ The guide includes detailed information about the securities industry, broker-dealer functions, activities and operations, books and records, accounting and auditing standards and considerations, and other topics such as internal controls and regulatory considerations.

3230.0.2 INITIAL BOARD ORDER APPROVAL FOR SECURITIES BROKERAGE

On January 7, 1983, the Board approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., which engaged in retail discount securities brokerage, securities credit lending, and certain incidental activities (1983 FRB 105). None of the proposed activities was among those the Board had previously designated in Regulation Y as being closely related to banking.

In its order approving the application, the Board found that the brokerage and securities credit activities were closely related to banking for purposes of section 4(c)(8) of the Bank Holding Company Act (“BHC Act”). That decision was based on the fact that many banks provide various types of securities brokerage services as an accommodation to customers and as an agent for trusts and other accounts managed by banks.

Banks also administer employee stock purchases, dividend reinvestment, and automatic investment service plans, which involve the periodic purchase of a particular security or securities from a fixed list of securities, on behalf of the customer. Banks often execute orders involving securities not listed on an exchange by dealing directly with dealers making a market in a particular security or with other third parties. In performing these services,

1. Issued as of April 1, 1997.

banks exercise the same type of discretion and judgment with respect to the best method of execution as brokers do with respect to similar types of orders. Further, national banks are expressly authorized by statute to purchase and sell securities without recourse, solely upon the order, and for the account of, customers (12 U.S.C. 24 (Seventh)).

The Board, in summary, noted that banks in fact had generally provided securities brokerage to some extent. The company that was acquired, pursuant to the January 1983 order, provided several other services incidental to its discount brokerage activities.

3230.0.2.1 Margin Lending

Historically, banks have had a significant amount outstanding in loans to borrowers for the purpose of purchasing or carrying securities. The extension of such credit secured by stock and other collateral, or margin lending, has long been an important bank activity. The Board, therefore, ruled that this activity was closely related to banking and incidental to the securities brokerage activities of the company being acquired.

3230.0.2.2 Maintenance of Customer Securities Accounts

Charles Schwab & Co. offered various services to its brokerage customers. These services included individual retirement accounts for which an unaffiliated savings and loan association served as a trustee; a “sweep” arrangement, pursuant to which idle customer balances exceeding a certain minimum were automatically invested in an unaffiliated money market mutual fund; the payment of interest on net free balances awaiting investment; and a specially named account which combined the payment of interest on free credit balances with customer access to such balances through a debit card and checking account offered under an arrangement with an unaffiliated commercial bank. Increasingly, these types of services were being offered by other brokerage firms. The Board found that each of these services was identical, or functionally and operationally equivalent to, services generally offered by banks to customers directly or through bank trust departments. Based on that finding, the Board found that the provision of those

accounts was closely related to banking as well as an incidental activity in connection with securities brokerage and margin lending activities.

3230.0.2.3 Custodial Services

The brokerage firm also provided various types of securities custodial services, involving the safekeeping of customers’ securities, accounting for dividends or interest received on such securities, and other ancillary services. Banks generally offer securities custodial services in connection with their trust departments and other securities transaction services. Furthermore, in extending margin credit, a lender is required to maintain custody of the securities pledged to the lender as collateral to secure the loan. Accordingly, the Board found that the provision of securities custodial services was closely related to banking and that it was a necessary incident to permissible margin lending activities.

3230.0.3 MARGIN CREDIT ACTIVITIES AND SECURITIES BROKERAGE

When securities brokerage was added to the permissible activities within Regulation Y, it was contemplated that a bank holding company, or its nonbank subsidiary performing the permitted securities brokerage activities, would be required to register as a broker-dealer with the Securities and Exchange Commission and that its margin credit activities would therefore be subject to the Board’s Regulation T. Regulation T governs securities credit by broker-dealers (12 C.F.R. 220).

3230.0.4 FINAL RULE ADOPTION—ACTIVITY INITIALLY ADDED TO REGULATION Y

On August 10, 1983, the Board adopted a final rule deeming securities brokerage and margin lending “closely related” to banking, consistent with the Glass-Steagall Act, and are, therefore, generally permissible for bank holding companies. To clarify that services incidental to brokerage services are permissible, the Board did include a list of permissible incidental services. The list included services such as offering custodial services, furnishing individual retirement accounts, and cash-management services, provided that the securities brokerage services are restricted to buying and selling securities solely

as agent for the account of customers and do not include securities underwriting.

As for cash-management services, such services are intended to include customer- account-related functions, such as paying interest on net free balances awaiting investment, providing arrangements under which free credit balances are automatically invested in money market mutual funds, and establishing arrangements under which access to such balances is provided by debit card or checking accounts.

The list of incidental activities in the regulation is not intended to be exhaustive. The Board believes that to compete effectively with other brokers, bank holding companies should have the flexibility to provide a full range of customer-account and custodial services, provided such services meet the test for permissible incidental activities under section 4(c)(8) of the BHC Act and are consistent with the Glass-Steagall Act.

As previously noted, Regulation Y, effective April 21, 1997, permits securities brokerage without distinguishing between discount and full-service brokerage activities. The previous regulatory requirement for certain disclosures has been eliminated. Those disclosure requirements are in an interagency policy statement that governs the sale of securities and other nondeposit investment products on bank premises (see sections 2010.6.1.3.1 and 2010.6.2.9), as well as in SEC rules. Similar disclosure requirements are required by the Board's policy statement that governs a bank holding company's sale of shares of mutual funds and other investment companies that it advises (see section 225.125 of Regulation Y).

3230.0.5 MARKET ENTRY INTO SECURITIES BROKERAGE

There are three general methods of market entry available to bank holding companies or nonbank subsidiaries of bank holding companies wishing to offer securities brokerage services: (1) become associated with a brokerage firm, (2) purchase an existing firm, or (3) establish their own brokerage operations. The most common mode is broker association, which is less costly and the most rapid form of entry. The following broker relationships are presently established:

1. *Introducing broker.* The first level of involvement occurs when a BHC or a nonbank subsidiary of a BHC serves as an "introducing broker" in effecting securities transactions

by accepting the customers' orders and transmitting the orders to the executing broker.² Order tickets and records of original entry are prepared by the BHC or nonbank subsidiary. In this situation, the executing broker generally produces customer confirmations and account statements. These documents often prominently display the BHC or the bank holding company's nonbank subsidiary's name and logo. The executing broker, the bank holding company, and/or its nonbank subsidiaries may offer safekeeping services and margin credit.

2. *Omnibus account.* A higher level of bank holding company nonbank subsidiary involvement occurs when the broker "carries" customer accounts by accepting and transmitting orders for execution, producing the customer confirmation, and maintaining all customer records. When carrying customers' accounts, the bank holding company's nonbank subsidiary may maintain a single customer account, called an omnibus account, with the executing broker. Safekeeping and margin credit services may be offered.
3. *Separately incorporated broker-dealer subsidiary affiliate.* The highest level of involvement occurs when a bank holding company organizes or acquires a separately incorporated broker-dealer subsidiary or affiliate, which transacts business like any other broker-dealer. This would include its own customer lists, both retail and wholesale; possible exchange membership; and executing and clearing its own transaction.

3230.0.6 PURPOSE OF INSPECTION OF SECURITIES BROKERAGE ACTIVITIES

The purpose of the inspection is to evaluate any potential liability due to wrongful or negligent performance of responsibilities, to assess the level of management expertise, and to determine the degree of compliance with legal and policy parameters necessary to protect investors.

2. There is a lower level of involvement wherein the BHC or nonbank subsidiary is responsible for making the brokerage services available to customers by advertising the distributing customer account applications. Account acceptances are generally made by the unaffiliated broker who will receive orders directly from customers.

3230.0.7 INSPECTION OBJECTIVES

1. To determine the scope and nature of services provided.
2. To evaluate operations, audits, and controls.
3. To review the sufficiency of administrative policies and procedures.
4. To determine the level of responsibility.
5. To appraise the quality of management and staff.
6. To ascertain earnings, volume of business, and prospects.
7. To review compliance with applicable laws, regulations, and policies.

3230.0.8 SCOPE OF INSPECTION

The scope of inspection will vary depending on the nature of the brokerage operation. In defining the scope of inspection, it is first necessary to determine the extent of activities performed and the corporate structure. Any bank holding company subsidiary (that is not a bank), which functions as a securities broker, is required to register as a broker-dealer with the Securities and Exchange Commission (SEC).³

In developing the scope of inspection, it is emphasized that Reserve Bank examiners can rely on the applicable self-regulatory organization's examination with respect to investor protection, compliance with SEC and SRO rules, and Regulation T. The self-regulatory organizations do not furnish an examination report, but instead furnish a registered broker-dealer with a letter pertaining to examination findings. Hence, the scope of inspection for a registered broker-dealer will commence with a review of a self-regulatory organization's most recent letter dealing with its examination of brokerage activities. A broker-dealer belonging to more than one self-regulatory organization will be examined only once in each examination cycle. Serious violations that could endanger a banking organi-

3. A broker-dealer registered with the SEC (registered broker-dealer) is subject to SEC recordkeeping and confirmation rules, fair practice rules, professional qualification rules for individuals associated with securities firms, and the uniform net capital rule. Registered broker-dealers are also required to pay for insurance coverage on customers' assets by the Securities Investor Protection Corporation (SIPC) and are required to be members and subject to the rules of the National Association of Securities Dealers, Inc. (NASD), or other self-regulatory organizations, such as the New York Stock Exchange. These self-regulatory organizations (SROs) also test for broker compliance with Regulation T (12 C.F.R. 220).

zation (for example, fraudulent activities that could subject the organization to losses or lawsuits) or significant violations that have not yet been corrected, should be noted in the bank holding company inspection report. Reserve Bank staff are responsible for evaluating all other aspects of securities brokerage activities.

The actual scope of this portion of the inspection will range from a brief visit for a limited service "arranger" relationship to extensive review for an omnibus relationship or registered broker-dealer.

3230.0.9 MATERIALS REQUIRED FOR INSPECTION

When commencing the securities brokerage portion of a bank holding company or its nonbank subsidiary inspection, the following material should be obtained:

1. contractual agreement with the executing and/or clearing broker
2. recent activity report (for at least six months)
3. income and expense reports
4. written policies and procedures regarding—
 - a. order processing,
 - b. settlements,
 - c. account reconciliations,
 - d. audit coverage, and
 - e. trust department relationship
5. account application forms
6. customer disclosure documents
7. organization chart
8. fee schedule
9. internal and external audit reports
10. a copy of the contingency plan for continuance in emergencies
11. the most recent SRO letter pertaining to the last brokerage examination

3230.0.10 INSPECTION PROCEDURES

If applicable, the following areas should be covered during the inspection.

3230.0.10.1 Organization and Management

Review carefully the contractual agreement with the executing and/or clearing broker and list all duties and obligations of the respective parties. Determine that the agreement contains an indemnification clause insulating against broker error. Once the review is completed, the exam-

iner can identify the type of relationship and plan the scope of the inspection.

Review the organization chart and match responsibilities and operational functions to the appropriate section. Evaluate management and staff based upon their education, experience, performance, and the profitability and efficiency of operations and any other relevant factors.

3230.0.10.2 Operations

A securities brokerage operation is organized along functional lines including—

1. execution,
2. settlement,
3. delivery,
4. custody,
5. recordkeeping, and
6. audits and controls.

Before review, prepare a flow chart of the operation to quickly overview the operational areas and to locate control points and identify potential weaknesses.

3230.0.10.2.1 Execution

This area processes client orders. The orders may be received by telephone at the nonbank subsidiary or directly by the executing broker. When the nonbank subsidiary accepts customer orders, they can be transmitted by direct wire to the executing broker. Completed transactions initiated by the nonbank subsidiary are confirmed back to the nonbank subsidiary, which in turn sends a confirmation to the client. Examiners should determine that proper safeguards are in place to ensure valid orders are received, pending orders are controlled, and completed orders are reported for customer notification and record update. The examiner should also determine that the following are in place:

1. use of code numbers, names, or other verification devices when accepting orders
2. maintenance and reconciliation of a trade log (orders received) and execution report (orders completed)
3. taping of telephone orders
4. confirmation of completed orders are confirmed to clients in a timely fashion
5. preparation and transmittal of input media for record update

3230.0.10.2.2 Settlement

This area receives payments and proceeds, collects dividends and interest, and, in some instances, effects margin calls on broker instruction. Settlements are effected in two stages:

1. *Broker vs. customer.* Before settlement date, the customer must send cash or securities to the broker as requested in the broker's customer confirmation. Cash or securities are required to effect payment against delivery or delivery against payment in accordance with industry securities settlement procedures.
2. *Broker vs. broker.* When physical delivery of securities is required, it is generally done on a firm-to-firm basis or to a firm's safekeeping agent. Major equity securities, and an ever-increasing number of debt securities, are eligible for net settlement and securities immobilization with depositories. Usually, a net settlement account is used for cash and securities transactions; these accounts should be reconciled daily. The settlement process should include a procedure which verifies execution price and fees.

3230.0.10.2.3 Delivery

Securities are delivered to the executing broker and purchased securities to clients. The examiner should determine that safeguards provide adequate control over certificates in process. Proper fail-to-deliver/receive and completed transaction records should be maintained.

The securities broker that accepts customer orders generally is exposed to *delivery risk* by customers. Basically, customers can take advantage of the broker by placing an order to buy securities when the customer has no funds available to purchase securities or by placing an order to sell securities which are not owned by the customer. Either type of transaction is permissible in a *margin account*, provided that the customer has the resources available to properly margin the transaction. If the customer does not have a margin account, the broker should not purchase a security for the customer unless (1) there are sufficient funds in the customer's account or (2) the customer represents and the broker ascertains that the customer will promptly make full cash payment for the security before selling it, and that the customer does not contemplate selling it before making payment.

Alternatively, the broker should not sell a security for a customer unless (1) the security is held in the customer's account, or (2) the broker accepts in good faith the customer's statement that the security is owned by the customer and that it will be promptly deposited into the account.

By not executing a purchase or sale until the customer has deposited cash or securities, customer-default risks can be avoided on cash transactions. However, for competitive reasons, many brokers would not wish to place such stringent restrictions upon their customers—especially with respect to the purchase of securities. Lack of proper account supervision can lead to the fraudulent customer practice of “free riding,” wherein the customer will buy securities in anticipation of a price rise. Before settlement date, the customer will sell the securities to take the profits. If the market price of the securities declines, the customer will dishonor the trade, and thus attempt to leave the broker holding the depreciated securities. Securities brokerage procedures should be designed to look for generally abusive practices by customers.

3230.0.10.2.4 Recordkeeping

Any records which must be prepared by the broker under inspection are subject to the Securities and Exchange Commission's recordkeeping and confirmation rules 17a-3 and 17a-4. Compliance with those recordkeeping rules will be verified by stock exchange or NASD examiners during their routine compliance inspections.

3230.0.10.2.5 Audits and Controls

Complete the “Securities Brokerage/Internal Controls Checklist” to determine whether operations are satisfactorily controlled and audited by the bank holding company's or nonbank subsidiary's audit staff. All significant administrative and operational aspects should be covered. Management should receive reports of audit findings and respond in writing as to actions taken.

3230.0.10.3 Conflicts of Interest

Determine that policies have been effectively implemented covering relationships with affil-

ated trust departments, self-dealing, fee-splitting or rebate arrangements, and officer/employee transactions.

3230.0.10.3.1 Relationship with Affiliated Trust Departments

Questions may arise concerning the permissibility of a securities broker's executing securities transactions for an affiliated trust department. In general, the receipt of commission income for securities brokerage transactions entered into on behalf of a trust account (in addition to the fee received for account administration) raises conflict-of-interest considerations to which traditional prohibitions of fiduciary law are directed. When a securities broker affiliate is used, the trust institution may be considered to share indirectly in the commission income of the affiliate even when there is no direct remittance of the fee to the bank. The staff letter at 3—447.11 of the Federal Reserve Regulatory Service provides guidance in determining whether and in what circumstances use of affiliated discount brokerage services may or may not be permissible. If questionable trust department use of affiliated broker services is disclosed, appropriate trust examiner(s) should be notified.

3230.0.10.4 Earnings, Volume Trends, and Prospects

Determine the present and future impact that the securities brokerage activities may have on the bank holding company and its subsidiaries. If possible, a separate profit center should be established, thus providing a useful management tool which facilitates analysis of current profitability, business volume, fixed and variable costs, and degree of goal actualization. Periodic review of these factors will enable management to direct available resources, aid in the budget process, and provide a basis for business planning. Prospects for profitable growth should be assessed by noting changes in aggregate account levels and trade activity. The local competitive environment should be gauged and market-share information noted. In considering these factors, the examiner should attempt to determine what level of activity must be maintained or attained in order for the securities brokerage function to break even. Present a summary statement expressing an overall view on the current state and future viability of the operation.

3230.0.10.5 Compliance

The examiner should determine whether any additional state regulations must be complied with. Also determine that staff is aware of and complying with applicable regulations and laws, which may be outside the scope of an examination conducted by a self-regulatory organization.

ness. Any material exceptions should be noted with management’s responses under an appropriate caption within the open section. Matters of importance should be brought forward to the Examiner’s Comments and Matters Requiring Special Board Attention page. In addition, any other significant problems, detrimental practices, or potential liabilities which could have a negative impact on the organization should be commented upon.

3230.0.10.6 Presentation of Findings

The Scope of Inspection in the report should note that securities brokerage activities were reviewed. It should be noted that in order to avoid duplication of examination procedures, the inspection did not focus upon securities laws compliance (as verified by the NASD, Inc., or stock-exchange examiners), but instead focused upon financial and safety-and-soundness considerations. Appropriate nonbank subsidiary pages should be completed. Present a summary comment in the confidential section reflecting an overall appraisal of the operation. The self-regulatory organization responsible for examining the securities brokerage operation should be identified. Identify also the associated broker, if any, with whom the organization conducts busi-

3230.0.11 EXAMINATION CHECKLISTS

Two checklists are provided for use by the examiner to aid in evaluating securities brokerage activities:

1. Securities Brokerage Inspections
2. Securities Brokerage/Internal Controls

All questions are not applicable for each brokerage subsidiary. The nature and scope of brokerage activities determine the applicability of specific questions. The term “banking organization” refers to a bank holding company and any of its nonbank subsidiaries.

3230.0.11.1 Securities Brokerage Inspection Checklist

	<i>Yes</i>	<i>No</i>
1. Is a contractual agreement between the banking organization and the executing and/or clearing broker on file?	_____	_____*
2. Does the agreement indemnify the banking organization against broker error?	_____	_____*
3. Does the agreement clearly define respective responsibilities of the banking organization and broker?	_____	_____*
4. Was the agreement reviewed by the banking organization’s counsel?	_____	_____*
5. Was the agreement approved by the board of directors? If not, by whom? _____	_____	_____*
6. Are written procedures covering brokerage activities in effect?	_____	_____*

*Response may require report comment.

	<i>Yes</i>	<i>No</i>
7. Have job descriptions been prepared?	_____	_____*
8. Have specific policies been developed regarding—		
• relationships with affiliated bank trust depts?	_____	_____*
• conflicts of interest?	_____	_____*
• investment advice?	_____	_____*
9. Are investment advice or research services being offered?	_____*	_____
10. Are income and expense records separately maintained?	_____	_____*
11. Are brokerage activities included in the audit program?	_____	_____*
12. Are customer orders placed with banking organization personnel?	_____	_____
If so, is customer authorization on file?	_____	_____*
Are telephone conversations tape recorded?	_____	_____*
Are transaction records maintained by traders?	_____	_____*
13. How are payments effected? (check one)		
direct charge to customer account	_____	
payment through the mail	_____	
other _____		
14. What is the timeframe of payment?		
prior to execution	_____	
upon verbal notification of execution	_____	
upon customer's receipt of confirmation	_____	
after settlement date	_____*	
15. What is the frequency of settlement-account reconcilements?		
daily	_____	
biweekly	_____	
weekly	_____	
other	_____*	

*Response may require report comment

	<i>Yes</i>	<i>No</i>
16. Does an affiliated trust department use the discount brokerage service? If yes, what type account? _____ discretionary trust _____** discretionary agency _____** custody _____ employee benefit _____**	_____	_____*
17. Is sufficient insurance coverage in effect? Describe types and limits. _____ _____	_____	_____*
18. Does a review of records confirm that the broker functions solely as an agent, i.e., does not engage in underwriting or taking positions for its own account?	_____	_____*
19. Do monitoring and internal reporting procedures adequately track profitability and operating impact for management consideration?	_____	_____*

*Response may require report comment.

**If available documentation reveals that affiliated trust departments use brokerage services to execute transactions for this type of account, the appropriate federal regulator of trust activities should be notified.

3230.0.11.2 Securities Brokerage/Internal Control Checklist

The following questions should be answered, to the extent applicable, in reviewing a securities brokerage operation. Few brokers will perform all of the activities discussed below.

	<i>Yes</i>	<i>No</i>
1. Do internal audit procedures include the securities brokerage function?	_____	_____*
2. Has the banking organization adopted procedures for the periodic review of insurance coverage relating to securities brokerage activities (e.g., errors and omissions, fidelity bonding, and securities in transit)?	_____	_____*
3. Has the banking organization adopted procedures with respect to the accounts of directors, officers, or employees or their immediate families?	_____	_____*
4. Are procedures in place to prevent internally generated credits to the securities brokerage customers' accounts from being automatically recorded as collected funds?	_____	_____*

*Response may require report comment.

	<i>Yes</i>	<i>No</i>
5. Are procedures in place to ensure that acceptance of a relatively large order will not be effected unless the order taker verifies that the customer placing the order has internal authorization to engage in large trades?	_____	_____*
6. Has the banking organization adopted written procedures prohibiting employees from furnishing investment advice?	_____	_____*
7. Are customer telephone orders tape recorded?	_____	_____*
8. Are tape recordings of telephone orders reviewed periodically to verify that employees have <i>not</i> made securities recommendations or furnished investment advice?	_____	_____*
9. Are persons responsible for taking and transmitting orders precluded from preparing accounting entries?	_____	_____*
10. Is there adequate separation of duties between persons responsible for making initial accounting entries and those responsible for making subsequent adjusting entries to prevent a concealment of theft or fraud?	_____	_____*
11. Does the securities brokerage function monitor and reconcile safekeeping, clearing, payment, and income expense accounts on a regular basis?	_____	_____*
12. Has management developed a contingency plan to ensure continued brokerage operations of the securities brokerage operation in the event of fire, flood, power failure, or some other unforeseen event?	_____	_____*
13. With respect to termination of brokerage accounts, does the securities brokerage operation have procedures in place to prevent an account from being closed while an open securities order is outstanding?	_____	_____*
14. Does the credit-approval process require a credit decision to be made by someone who routinely makes credit decisions—as opposed to a manager of a securities brokerage operation?	_____	_____*
15. If securities received from customers are registered in the name of a third party, are procedures in place to ensure that such securities are accepted only upon satisfactory proof of ownership?	_____	_____*
16. Are procedures in place to ensure that customers delivering securities registered in a “street name” have title to such securities (i.e., they are not lost or stolen securities)?	_____	_____*
17. Is only a limited number of responsible employees authorized to execute or guarantee security assignments?	_____	_____*
18. Is the use of facsimile signature devices adequately controlled?	_____	_____*

*Response may require report comment.

	<i>Yes</i>	<i>No</i>
19. Are procedures in place to control cash, securities, and documents pertaining to securities shipped for “delivery against payment”?	_____	_____*
20. Are adequate physical controls maintained over securities on hand (e.g., restricted access to the “cage area”)?	_____	_____*
21. Are detail records pertaining to securities in transfer and those pledged as collateral to borrowings agreed periodically (at least quarterly) with the securities record?	_____	_____*
22. Are security positions (and related general-ledger amounts) in suspense accounts investigated and resolved on a timely basis?	_____	_____*
23. Are fails to receive and fails to deliver periodically reviewed and reconciled?	_____	_____*

*Response may require report comment.

3230.0.12 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Board's authority for rulemaking and jurisdiction over BHCs	1843(c)(8), 1844(b)

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

This section serves as a prelude to the securities brokerage sections that follow. Sections 3230.1 through 3230.3 provide brief historical summaries of Board decisions on securities brokerage; these authorizations are now incorporated into Regulation Y for this activity. The summaries provide the reader with some historical perspective as to how and why the current provisions of Regulation Y evolved. The conditions and commitments within these orders may no longer apply to the current provisions of Regulation Y. Therefore, reference must be made to Regulation Y, section 225.28(b)(7)(i).

Before the 1997 revisions of the Board's Regulation Y (12 C.F.R. 225), the Board's rules differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities). The revisions to Regulation Y that became effective in April 1997 permit securities brokerage without distinguishing between discount and full-service brokerage activities.

Another major change for securities brokerage activities concerns the types of disclosures required of bank holding companies. Before the 1997 revisions, bank holding companies providing full-service brokerage services were required to make certain disclosures to customers regarding the uninsured nature of securities and were not permitted to disclose confidential custo-

mer information without the customer's consent. Effective in April 1997, these disclosure requirements were eliminated. The disclosure requirements—along with a number of other requirements that specifically address the potential for customer confusion, training requirements, suitability requirements, and other matters—are already contained in an inter-agency policy statement that governs the sale of securities and other nondeposit investment products on bank premises, as well as in rules adopted by the SEC. In addition, similar disclosure requirements are required by the Board's policy statement governing the sale by bank holding companies of shares of mutual funds and other investment companies that the bank holding company advises.

Banking organizations and their affiliates, in general, are becoming more effective in implementing the regulatory disclosure requirements. Customers are also becoming increasingly aware that such investment products purchased at banking organizations and their affiliates are not federally insured. Moreover, the Board and the SEC have adequate supervisory authority to ensure that bank holding companies comply with the applicable regulatory disclosure requirements. To the extent that disclosures to customers are appropriate in areas not covered by the regulatory policy statements or SEC regulations, the Board will consider whether to develop supervisory guidance.

4(c)(8) of the BHC Act—Securities Brokerage in Combination with Investment Advisory Services

Section 3230.1

Two bank holding companies jointly applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to form a de novo subsidiary that would engage in the following nonbanking activities:

1. providing portfolio investment advice to "institutional customers"
2. providing securities execution (brokerage) services, related securities credit activities pursuant to the Board's Regulation T, and incidental activities
3. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies to institutional customers
4. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to investment companies registered under that act

Separate fees are to be charged for the advisory services and the securities brokerage services. The company would also provide incidental services such as custodial and cash-management services and acting as a registered investment adviser. The services are to be provided throughout the United States. The providing of advisory services to retail clients was not authorized by the Board. The applicant committed to create a "Chinese Wall" between the affiliated bank and the securities affiliate.

The Board determined that the activities would not violate Glass-Steagall Act prohibitions. Board approval was conditioned with the requirement that the standards of care and conduct applica-

ble to fiduciaries would be observed. The applicant would not allow the exchange of confidential information between the de novo subsidiary and its affiliates. The applicant further committed that employees of the de novo subsidiary would not be given customer lists and other confidential information obtained by its affiliates in connection with commercial banking operations. Transmission of advisory research and recommendations to the commercial lending department of any of the bank holding company's affiliates was not permitted.

The proposal represented the combination of activities, previously determined to be closely related to banking, in such a way that the functional nature and scope of the combined activities conducted would not be altered. By Board order, the applicants' application was approved on June 13, 1986 (see 1986 FRB 584), subject to the conditions stated therein. Other orders were approved by the Board on August 5, 1987 (1987 FRB 810), and October 1, 1987 (1987 FRB 930), which also authorized a bank holding company to engage in combined investment advisory and securities brokerage activities. In this order, the Board lowered the threshold for defining an "institutional investor" from \$5 million to \$1 million.

The Board, effective September 10, 1992, added this nonbanking activity to those activities that are permissible by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y, subject to the disclosure requirements, restrictions on exchanging confidential customer information, and other limitations stated therein.

4(c)(8)—Securities Brokerage with Discretionary Investment Management and Investment Advisory Services Section 3230.2

A bank holding company applied to the Board to expand the authority of its subsidiary to engage in offering investment advisory services for “institutional customers” and its affiliates¹ in conjunction with its previously approved brokerage services. The Board previously approved by order (1986 FRB 584) an application for a different bank holding company to offer the combination of investment advice and securities execution services for institutional customers.

The proposed activities in this order (1987 FRB 810) are similar except that the subsidiary would additionally exercise limited investment discretion at a customer’s specific request. Under this plan, the subsidiary would offer as a service, within defined parameters established by the client, discretion in buying and selling securities on behalf of the client.

Such investment discretion would be exercised only at the request of a client; the subsidiary does not plan to market or solicit managed accounts. Each client will receive confirmation of each transaction, as well as monthly statements which would indicate in detail the terms of each transaction executed on its behalf. Each client would always be aware of the scope of the subsidiary’s activity for its account. The subsidiary would receive a single fee for the combined activities of providing investment advice and exercising limited investment discretion.

The application was approved on August 5, 1987, subject to the commitments made by the applicant and the conditions (whether explic-

itly stated or incorporated by reference) in the order.

The Board approved another order on October 1, 1987 (1987 FRB 930), similar to the August 5, 1987, order, except that (1) the applicant proposed to lower the test for institutional customers from the \$5 million threshold to \$1 million; (2) the applicant’s wholly owned brokerage subsidiary would share customer lists with its affiliates, but not confidential information obtained from the customer; and (3) the brokerage subsidiary would have officer and director interlocks with the parent bank holding company, but not with its bank affiliates. In the Board’s view, these modifications did not alter the underlying rationale of its earlier decision.

The Board approved another order on August 10, 1988 (1988 FRB 700). The principal difference between the August 5, 1987, order and this proposal was the provision of such combined services to *retail* as well as *institutional* customers. The provision of services to retail customers does not include discretionary investment management. To further ensure the separation of the BHC and its bank affiliates and to avoid potential conflicts of interests, the applicant made several commitments, as detailed within the order.

The Board, effective September 10, 1992, added the providing of discretionary investment management to the nonbanking activities that are permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y.

1. The provision of such services by the subsidiary to other affiliates is a permissible servicing activity under section 225.22(a) of Regulation Y.

4(c)(8) of the BHC Act—Offering Full Securities Brokerage Services for Bank-Ineligible Securities

Section 3230.3

A bank holding company (applicant) applied for the Board's permission for its subsidiary to provide investment advisory and brokerage services on a combined basis ("full-service brokerage") to institutional and retail customers and to engage, to a limited extent, in underwriting and dealing in one- to four-family mortgage-related securities and consumer receivable-related securities (herein referred to as "ineligible securities"). The applicant committed to conduct its ineligible securities underwriting and dealing activities subject to the revenue test and the prudential limitations established by the Board in 1987 FRB 473, except for a market-share limitation which the Board decided not to require for this BHC.

The Board determined previously that full-service brokerage for both institutional and retail customers is closely related and a proper incident to banking under section 4(c)(8) of the BHC Act and does not violate the Glass-Steagall Act (1988 FRB 700 and 1986 FRB 584). This BHC's proposal differs from prior cases in that the subsidiary will provide full-service brokerage to retail customers for ineligible securities that it may hold as principal. The BHC has committed that the subsidiary will provide full and appropriate disclosure of its interest in the transaction as required by the securities laws, the National Association of Securities Dealers, and fiduciary principles.

The Board had previously authorized an underwriting subsidiary to provide full-service brokerage with respect to ineligible securities that it holds as principal, *but only to institutional customers* (1988 FRB 695). Applicant made the

same commitments regarding disclosures as found in 1988 FRB 695. The BHC committed further that its subsidiary would prominently disclose in writing to each customer, at the commencement of the relationship, that it is not a bank; that it is separate from any affiliated bank; and that the securities sold, offered, or recommended by the subsidiary are not deposits, are not insured by the FDIC, are not guaranteed by an affiliated bank, and are not otherwise an obligation of an affiliated bank, unless such is in fact the case. The Board emphasized that confirmations sent to customers will state whether the subsidiary is acting as agent or principal with respect to a security. The Board concluded that such disclosure commitments would be adequate. It recognized that in performing the full-service brokerage activity, the underwriting subsidiary would be operating under a more extensive framework of prudential limitations than would be the case if the full-service brokerage activity were conducted by a bank, a subsidiary of a bank, or by another holding company subsidiary. Based on the commitments made, the Board decided on March 14, 1989, to approve the proposed activities (see 1989 FRB 396) subject to all the terms and conditions found in 1987 FRB 473, except for the market-share limitation.

Effective September 10, 1992, the Board added this nonbanking activity to the activities permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y and subject to the Board's disclosure and other requirements and the limitations on exchanging confidential information, as stated therein.

This section discusses and provides a historical reference of previous Board orders that initially authorized, by order, a bank holding company's acting as agent in the private placement of securities and engaging in riskless-principal nonbanking activities. *With the Board's incorporation of private-placement and riskless-principal activities into its adoption of changes to Regulation Y, effective April 21, 1997, the majority of the previous private-placement and riskless-principal commitments are not effective. Only those current requirements listed for private-placement and riskless-principal activities in section 225.28(b)(7) of Regulation Y (the laundry list of permissible nonbanking activities) should be used by the examiner in conducting the supervision and inspection of bank holding companies and their subsidiaries.*

3230.4.1 ENGAGING IN COMMERCIAL-PAPER PLACEMENT ACTIVITIES TO A LIMITED EXTENT

A bank holding company (the applicant) applied pursuant to section 4(c)(8) of the Bank Holding Company Act and section 225.23(a) of the Board's Regulation Y to act as an agent and advisor to issuers of commercial paper in connection with the placement of commercial paper with institutional purchasers. The commercial-paper placement activity, as proposed, is to be conducted from a wholly owned commercial finance subsidiary (the company) of the applicant's direct subsidiary.

The Board concluded that the proposed commercial-paper placement activity was so functionally and operationally similar to the role of a bank that arranges a loan participation or syndication as to be a proper incident thereto and that banking organizations are particularly well suited to perform the commercial-paper placement function. The Board found that the proposal, as limited by the applicant, was consistent with section 20 of the Glass-Steagall Act, and could reasonably be expected to result in public benefits that would outweigh possible adverse effects. The Board found, further, that the applicant could conduct the proposed activities to the extent and in the manner described in the order. The Board's approval (1987 FRB 138) extended only to the activities conducted within the limitations proposed by the applicant for company and the BHC's subsidiary banks and other subsidiaries. The placement of commercial paper in any manner other than as

described within the limitations and conditions of the order would not be within the scope of the Board's approval. The Board also required that no lending affiliate of the company would disclose to the company any nonpublic customer information concerning an evaluation of the financial condition of an issuer whose paper is placed by the company or of any other customer of the company, except as expressly required by securities law or regulation.

On May 25, 1988, the Board approved an order (1988 FRB 500) for a bank holding company to engage de novo, through a subsidiary, in acting as an agent and advisor to issuers of commercial paper in connection with the placement of commercial paper with institutional customers, as well as to engage in certain other securities and financial advisory activities. The applicant proposed to place commercial paper in accordance with all the terms and conditions of the above order (1987 FRB 138), except one. The applicant did not propose any quantitative limitations on its placement activity. The Board concluded that the proposed commercial-paper placement did not constitute underwriting or distributing under the Glass-Steagall Act and that the quantitative limitations on the activity were not necessary to ensure compliance with that act. (See section 3230.4.2 below, in which a subsidiary of a bank holding company was authorized to privately place all types of debt and equity securities.)

3230.4.2 ACTING AS AGENT IN THE PRIVATE PLACEMENT OF ALL TYPES OF SECURITIES AND ACTING AS RISKLESS PRINCIPAL

A bank holding company (the applicant) applied for the Board's approval to transfer the private-placement business of its commercial bank subsidiary to its designated nonbanking subsidiary for securities underwriting and dealing. The subsidiary would act as agent in the private placement of all types of securities, including the providing of related advisory services, and buy and sell all types of securities on the order of investors as a riskless principal.

Because the section 20 subsidiary would be affiliated through common ownership with a member bank, it may not be "principally

engaged” in the “issue, flotation, underwriting, public sale, or distribution” of securities within the meaning of section 20 of the Glass-Steagall Act. In an earlier decision (1989 FRB 751), the Board determined that a subsidiary is not engaged principally in section 20 activities if revenues from underwriting and dealing in securities that banks are not authorized to underwrite and deal in directly (bank-ineligible securities) do not exceed 10 percent of the subsidiary’s gross revenues (25 percent, effective March 6, 1997). The applicant contended that the proposed private-placement and riskless-principal activities are not the kind of securities activities described in section 20 and, thus, should not be subject to the revenue limit on bank-ineligible securities activities.

The private-placement market involves the placement of new issues of securities with a limited number of sophisticated purchasers in a nonpublic offering. In private-placement transactions, a financial intermediary acts solely as agent of the issuer in finding purchasers. The intermediary does not purchase the securities and then try to resell them.

Privately placed securities are *not* subject to the registration requirements of the Securities Act of 1933. Such securities are only offered to financially sophisticated institutions and individuals,¹ not to the public. The applicant stated that all of the individuals with whom the securities would be placed will qualify as “accredited investors” under SEC rules. The Board concluded that the subsidiary’s private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities for the purposes of section 20, and that the revenues from the proposed activities should not be subject to the 10 percent revenue limitation (25 percent, effective March 6, 1997) on bank-ineligible securities activities.

The Board noted that other limitations on the activity should ensure that securities would not be offered to the public. First, the applicant agreed that the subsidiary would not make any general solicitation or advertisement to the public regarding the placement of particular securities. Second, the minimum denomination of

securities to be placed would be \$100,000. Third, the applicant agreed that the subsidiary would not privately place securities that are registered under the Securities Act of 1933 and that the subsidiary would be compelled to honor all provisions of that act, particularly those that limit the scope of private placements to nonpublic transactions. Fourth, the subsidiary agreed not to privately place as agent the securities of investment companies which are sponsored or advised by the applicant or its subsidiaries. Fifth, the subsidiary will not purchase or repurchase for its own account the securities being placed or will not inventory unsold portions of such securities. Sixth, the applicant further agreed to consult with its Federal Reserve Bank staff before transferring its private-placement activities from the subsidiary to any other nonbank subsidiary of the applicant to ensure that the transfer did not evade any of the firewall provisions committed to.

3230.4.3 INCORPORATION OF PRIVATE-PLACEMENT NONBANKING ACTIVITIES INTO REGULATION Y

The Board has added the activity of acting as agent in the private placement of securities to the laundry list of nonbanking activities (see 12 C.F.R. 225.28(b)(7)(ii)). Regulation Y adopts the definition of private-placement activities that is used by the SEC and the federal securities laws. In taking this action, the Board removed all but one restriction on private placement. The remaining restriction prohibits a bank holding company from purchasing for its own account the securities being placed or holding in inventory unsold portions of issues of these securities. This restriction prevents a bank holding company from classifying its securities underwriting activities, which are governed by the Glass-Steagall Act and the Board’s section 20 decisions, as private-placement activities.

3230.4.4 RISKLESS PRINCIPAL

“Riskless principal” is a broker-dealer that, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a simultaneous sale to (or purchase from) the customer.

1. The subsidiary would not only place securities with institutional customers but with individuals whose net worth (or joint net worth with a spouse) exceeds \$1 million. Such placement activities with individuals would not, in the Board’s opinion, result in a public offering.

3230.4.4.1 Description of Riskless-Principal Transactions

When acting as a dealer, the securities firm maintains an inventory of securities for its own account and buys and sells securities as principal. Riskless-principal transactions are usually undertaken as an alternative method of executing orders by customers to buy or sell securities on an agency basis. In this situation, when a customer places an order to purchase securities that the broker-dealer does not maintain in its inventory, the firm must purchase the securities from a third party. At this point, the broker-dealer has the option of acting either as the agent for the customer or a riskless principal in making the purchase. If the decision is made to act as a riskless principal, the broker-dealer will purchase the securities from a third-party dealer at the dealer's "inside price" (confirming the transaction for its customer) and then, acting as principal, resell them to the customer, adding a markup over cost. If the broker-dealer does not complete the purchase of the securities ordered by the customer, it is not obligated to provide the securities.

3230.4.4.2 Underwriting and Riskless Principal

In riskless-principal transactions, the subsidiary would execute orders by an investor and would not act on behalf of an issuer of new securities. The subsidiary would not be involved in making any public offering of securities as agent for the issuer. Thus, these activities would not constitute underwriting for Glass-Steagall purposes.

3230.4.4.3 Summary of Board Action on Acting as Agent in Private Placement and as Riskless Principal in Buying and Selling Securities

The Board concluded that the securities underwriting and dealing of the subsidiary's riskless-principal activity did not constitute an underwriting of securities. The riskless-principal activity would not be a public sale or underwriting of securities and would not be viewed as a bank-ineligible securities activity for purposes of the current 25 percent revenue test. As a condition for the approval of the riskless-principal activity, the Board required the subsidiary to maintain specific records that would clearly identify such transactions so that examiners will be able to trace the resulting revenue.

The riskless-principal activity was found to be closely related to banking. The Board further concluded that the placement activity differed only slightly in scope from those approved previously and that the operational limitations agreed to by the applicant would ensure that the subsidiary would not become involved in the public offering of any securities. The Board approved the application on October 30, 1989 (1989 FRB 829). (See also 1997 FRB 146; 1996 FRB 350, 748; 1995 FRB 49, 880, 1133; 1994 FRB 554, 1014; 1993 FRB 1166; 1992 FRB 294, 335, 552, 868; 1991 FRB 61; and 1990 FRB 26, 79, 545, 567, 568 (footnote 7), 653, 659, 663, 667, 672, 674, 766, 857, 864.)

3230.4.4.4 1996 Changes to the Underwriting Conditions for Riskless-Principal Activities

In connection with a bank holding company proposal considered by the Board on June 10, 1996, the Board reviewed the continued appropriateness of applying the underwriting conditions to the conduct of riskless-principal activities. In that case, the Board determined, based on its experience in monitoring and examining the conduct of riskless-principal activities by bank holding companies, that the underwriting conditions were not necessary to address identifiable adverse effects. Accordingly, the Board permitted the bank holding company to engage in riskless-principal transactions through a nonbank subsidiary without conducting this activity in accordance with the underwriting conditions (See 1996 FRB 748). The Board noted that riskless-principal transactions are essentially equivalent to securities brokerage transactions and, therefore, must be conducted in compliance with federal securities laws. The Board concluded that the definitional limitations (see section 225.28(b)(7)(ii) of Regulation Y) would be all that is needed to purchase (or sell) securities as a riskless principal. The conditions are designed to ensure that bank holding companies do not avoid the Glass-Steagall Act by classifying underwriting and dealing activities as riskless-principal activities. In the June 10 order, the bank holding company agreed that, if riskless-principal services were provided in combination with its advisory services, it would provide its customers with the disclosures established by the Board for full-service brokerage activities of bank holding companies. With respect

to its decision, the Board decided to grant identical relief to other bank holding companies that had been previously approved to conduct riskless-principal nonbanking activities.

3230.4.4.5 Incorporation of Riskless-Principal Transactions into Regulation Y

As part of the Board's February 19, 1997, adoption of the final amendments to Regulation Y, it retained the requirement that riskless-principal transactions be conducted in the secondary market. It further determined to eliminate all but two restrictions with respect to riskless-principal transactions. A bank holding company may thus buy and sell in the secondary market all types of securities on the order of customers as a riskless principal, to the extent of engaging in a transaction in which the company, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a contemporaneous sale to (or

purchase from) the customer. This does not include—

1. selling bank-ineligible securities at the order of a customer that is the issuer of the securities, or selling in any transaction in which the bank holding company has a contractual agreement to place the securities as agent of the issuer; or

2. acting as riskless principal in any transaction involving a bank-ineligible security for which the bank holding company or any of its affiliates acts as an underwriter (during the period of the underwriting or for 30 days thereafter) or dealer. A bank holding company or its affiliates may not enter quotes for specific bank-ineligible securities in any dealer quotation system in connection with the bank holding company's riskless-principal transactions, except that the company or its affiliate may enter bid or ask quotations, or publish "offering wanted" or "bid wanted" notices on trading systems other than NASDAQ or an exchange, if the company or its affiliate does not enter price quotations on different sides of the market for a particular security for any two-day period. (See 12 C.F.R. 225.28(b)(7)(ii).)

A BHC applied for the Board's approval, pursuant to section 4(c)(8) and 225.23(a) of the Board's Regulation Y, to acquire, through a securities brokerage subsidiary, a 49 percent interest in a joint venture partnership. The applicant was a one-bank holding company formed over a bankers' bank. The shareholders comprised several hundred banks. The joint venture partnership (the company) proposed to engage in the activity of acting as a municipal securities brokers' broker.¹ This consisted of providing municipal securities brokerage services to other registered securities brokers and dealers, including dealer banks. The company would act as an undis-

closed agent in the purchase and sale of municipal securities, including revenue bonds, for the account of its customers.

The applicant's proposal involved the purchase and sale of municipal securities as agent only and did not include dealing or otherwise taking a position in such securities. The activity fell within the third-party securities activities permitted for member banks under section 16 of the Glass-Steagall Act (12 U.S.C. 24), which allows banks to purchase and sell securities "without recourse, solely upon the order, and for the account of, customers." National banks had been permitted to engage in the activity of acting as municipal securities brokers' brokers.

The Board found the activity to be functionally similar to the retail securities brokerage activities performed by banks for their customers as permitted under section 16 of the Glass-Steagall Act. The Board thus concluded that the activity was closely related to banking. The Board's approval of the order was based on several commitments made by the applicant and the other joint venturer. The Board approved the application by order on June 26, 1985 (1985 FRB 651).

1. Rule 15c3-1(a)(8)(ii) implementing section 15(c)(3) of the Securities and Exchange Act of 1934 defines a municipal securities brokers' broker as a "municipal securities broker or dealer who acts exclusively as an undisclosed agent in the purchase or sale of municipal securities for a registered broker dealer or registered municipal securities dealer" who has "no retail customers" and "maintains no municipal securities in its proprietary or other accounts." Municipal securities brokers' brokers are subject to the federal securities laws applicable to securities brokers and are governed by the rules of the Municipal Securities Rulemaking Board.

Section 4(c)(8) of the BHC Act (Acting as a Conduit in Securities Borrowing and Lending) Section 3230.6

A foreign bank holding company (the applicant), and its wholly owned subsidiary (the company), a commercial banking organization located in New York state, applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y for prior approval to engage de novo on a domestic and international basis, through the company, in the following activities:

1. providing investment advisory services and financial advisory services, including advice regarding mergers, acquisitions, and capital-raising proposals by institutional customers, pursuant to section 225.28(b) of Regulation Y
2. providing securities brokerage services on an individual basis as well as in combination with investment advisory services ("full-service brokerage"), including exercising limited investment discretion on behalf of institutional customers
3. purchasing and selling all types of securities on the order of institutional and retail customers as a "riskless principal"
4. engaging in securities credit activities under section 225.28(b)(6) of Regulation Y, including acting as a "conduit" or "intermediary" in securities borrowing and lending

The Board previously determined by regulation that engaging in the above-listed nonbanking activities (1) and (2) is closely related to banking under section 4(c)(8) of the BHC Act (see section 225.28(b)(6) and (7) of the Board's Regulation Y). The Board previously determined by order that, subject to certain prudential limitations, the proposed riskless-principal activities (item 3) are so closely related to banking as to be a proper incident thereto within the meaning of section 4(c)(8) of the BHC Act. The applicant has committed that the company will conduct its riskless-principal activities using the same methods and procedures and subject to the same prudential limitations established by the Board in its orders that are found at 1989 FRB 829 and 1990 FRB 26.

Banks and BHCs are permitted to borrow and lend securities held in their own portfolios (see the FFIEC's 1985 Supervisory Policy Statement on Securities Lending, *Federal Reserve Regulatory Service* 3-1579.5). In this case, the applicant proposed that the company borrow and lend the securities of noncustomer third parties. The company would seek out counterparties to securities borrowing and lending transactions

and would assume much the same risk in these transactions as if it was borrowing or lending its own securities or its customers' securities. In this capacity, it would act as a "conduit" or "intermediary" in securities borrowing and lending. The company would supply—upon the request of another broker-dealer who is unable to obtain securities needed to satisfy customer or investment or operational needs—securities not available in the company's accounts or customer accounts by seeking out third-party noncustomer lenders. In addition to locating the securities, the company proposes to coordinate, on behalf of the borrower and lender, the exchange of securities and collateral that is necessary to the transaction.¹

The Board, in its review of this application, believed that banks generally perform services that are operationally or functionally similar to the proposed conduit services. The proposed conduit activity was believed to be similar to the securities borrowing and lending activities that banks conduct. National and state banks are permitted to lend securities from their own portfolio, and with the customer's consent, from the accounts of customers, and banks regularly borrow securities to meet their needs and the needs of customers. The fact that a third party is substituted in place of a trust or other customer of a bank would not change significantly the way in which the securities lending activity would be conducted. The same steps and procedures that would be necessary to effectuate the loan of a customer's securities would be followed in loaning the securities of a noncustomer third party.

The risk associated with the proposed activity is the same risk that a bank would incur in managing the lending of securities from its own portfolio or the portfolio of a customer. The risk to the company, in acting as a conduit, is limited to ensuring that the collateral posted by the

1. The company agreed to coordinate this exchange through accounts established at a specifically named, privately held national clearinghouse for the settlement of transactions in corporate and municipal securities. Once the company had located the desired securities, the securities would be transferred to an account maintained by it at the clearinghouse and simultaneously delivered to an account of the borrower, also at that clearinghouse. At the same time, the borrower would be required to post collateral, which the company would receive into its clearinghouse account and simultaneously deliver to an account maintained by the lender at the clearinghouse.

borrower continuously reflects the market value of the securities loaned. The company committed to mark this collateral to market on a daily basis and to make calls for supplemental collateral where necessary.² The company also represented that it would not provide any indemnification to noncustomer third-party lenders of securities.

The Board determined, for the above reasons, that the proposed conduit activity is closely related to banking for the purposes of section 4(c)(8) of the BHC Act and approved the order on October 9, 1992 (1992 FRB 955).

The Board's approval was subject to the following specified conditions:

1. To minimize risk, the company is to act as a conduit only when the potential borrower and lender are matched before the transaction. In addition, it will take various measures to minimize operational risks,

2. If the price of the borrowed securities increases, the borrower is required under the Board's Regulation T to provide additional collateral to the company. The company, in turn, through transactions at the clearinghouse, will pass the collateral to the initial lender of the securities. If the borrower is unable to satisfy this requirement, the company is to have the contractual right to terminate the borrowing transaction by purchasing the securities in the open market and delivering them to the lender, who will then be obligated to return the borrower's collateral to the company. Because the borrowed securities will be marked to market daily by the company, the maximum exposure to the company in directly or indirectly borrowing or lending securities is one day's change in the price of the borrowed securities.

including conducting its conduit activities in accordance with the collateral requirements imposed on the borrowers by the Board's Regulation T.³ A conduit transaction will commence only when a broker-dealer approaches the company and needs to borrow securities. Securities will not be borrowed in anticipation of a transaction.

2. At the end of each day, the company will mark to market the collateral posted by the borrower in all transactions in which it loaned securities or acted as an intermediary for a lender. As proposed, the company would establish credit lines for potential borrowers and lenders.⁴

3. The applicant committed that the company will conduct its conduit activities in compliance with the FFIEC Supervisory Policy Statement on Securities Lending (*Federal Reserve Regulatory Service 3-1579.5*).

3. The applicant committed that the Board's Regulation T—which requires that all securities borrowing and lending transactions be collateralized by at least 100 percent of the value of the securities as computed on a daily basis—shall be the company's minimum guideline for posting collateral, and that the company will require many transactions to be collateralized in excess of 100 percent of the value of securities marked to market.

4. These credit policies are to include a review of all lenders and borrowers and the establishment of a credit committee that will determine limits on the credit exposure of any single borrower. The applicant proposed that the company would transact its business only with a select group of well-capitalized broker-dealers that will not be brokerage customers of the company.

4(c)(8)—Underwriting and Dealing in U.S. Obligations, Municipal Securities, and Money Market Instruments

Section 3240.0

The Board has authorized bank holding company subsidiaries to engage in investment or trading transactions as principal to underwrite and deal in certain securities and money market instruments that are eligible for bank underwriting and dealing by state member banks. Basically, the Board has subjected dealer subsidiaries to the same restrictions that govern underwriting and dealing by state member banks pursuant to 12 U.S.C. 24 and 335; permissible activities include underwriting and dealing in obligations of the United States; general obligations of states and their political subdivisions; “type II” securities as defined in 12 C.F.R. 1, including, in part, municipal revenue obligations for housing, university, or dormitory purposes; and banker’s acceptances and certificates of deposit. In addition, such dealer subsidiaries are subject to the applicable capital restrictions (10 percent of the lead bank’s capital and surplus) on dealing in type II securities in 12 C.F.R. 1.7. These underwriting and dealing activities were added to the permissible activities section of Regulation Y, effective February 6, 1984. Furthermore, dealer subsidiaries are permitted to furnish investment advice with respect to these bank-eligible securities.

The Board has authorized bank-affiliated securities dealers to underwrite, deal in, or privately place “type III” securities in separately capitalized nonbank subsidiaries subject to prudential limitations and restrictions to preclude such subsidiaries from being principally engaged in the underwriting and distribution of securities (commonly referred to as “section 20 subsidiaries”). (See section 2185.0.) In addition, the Board has authorized section 20 subsidiaries and brokerage subsidiaries to privately place any type of debt or equity security.

3240.0.1 HISTORY OF BOARD APPROVALS OF UNDERWRITING AND DEALING IN GOVERNMENT OBLIGATIONS AND MONEY MARKET INSTRUMENTS

On February 27, 1978, the Board approved an application to engage de novo in underwriting and dealing activities then being conducted by the bank holding company’s only subsidiary bank. Thus, the formation of the subsidiary transferred these operations from the bank to the nonbank subsidiary. The activity included the underwriting and dealing in obligations of the United States and general obligations of vari-

ous states and of political subdivisions. The Board determined that this activity is closely related to banking. The Board also approved, on February 27, 1978, another application of a bank holding company that would permit it to retain shares in a firm engaged in U.S. government securities underwriting activities.

On March 20, 1979, the Board approved an application of a bank holding company to acquire a company that would engage de novo in the activities of underwriting and dealing in certain government and municipal securities and in providing portfolio investment advice to individuals, associations, corporations, state and local governments, and financial institutions (“non-bank entities”) and to unaffiliated commercial banks. The Board determined that the proposed activities were closely related to banking.

On March 2, 1982, the Board approved an application of a bank holding company to form an incorporated securities company subsidiary that would engage de novo in the activities of soliciting, underwriting, dealing in, purchasing, and selling obligations of the United States, general obligations of various states, and money market instruments such as banker’s acceptances and certificates of deposit. The Board regarded the government securities activities that the bank holding company proposed to engage in as substantially the same as the activities that the Board had approved in previous orders. Insofar as its proposal to deal in banker’s acceptances, certificates of deposit, and other money market instruments that state member banks may from time to time be authorized to underwrite and deal in (such instruments are not regarded as “securities” subject to the prohibitions in sections 16 and 21 of the Glass-Steagall Act), the Board regarded such activities as closely related to banking because banks engage in such functions. The Board’s approval of the bank holding company’s application was subjected to the same restrictions and prudent limitations as if the activity were conducted in the affiliate’s lead bank. For example, the nonbank subsidiary could not underwrite, deal in, or hold type II securities of any issuer in amounts that would not be permitted if such activities were conducted by the subsidiary national bank, nor would it be permitted to sell securities to trust accounts of affiliated banks, except as permitted by regulations of the Comptroller of the Currency. Type II securities can consist of certain

types of public housing and dormitory bonds of states and municipalities. The amount of such securities, of a single issue held by the bank, may not exceed 10 percent of the bank's capital and surplus (12 U.S.C. 24 (Seventh) and (12 C.F.R. 1.3(d)). The Board further ruled that any purchase of securities from the bank holding company's nonbank subsidiary by any of the bank holding company's subsidiary banks at other than current market values would constitute an unsafe or unsound practice.

3240.0.2 ADDING THE ACTIVITY TO REGULATION Y

Effective February 6, 1984, the underwriting and dealing in U.S. government obligations and certain money market instruments was added to the list of permissible activities of Regulation Y. The regulation, which was amended in 1997, continues to place the same limitations as would be applicable if the activity was performed by the bank holding company's subsidiary member banks or its subsidiary nonmember banks as if they were member banks. (See Section 225.28(b)(8)(i) of Regulation Y.)

3240.0.3 REGULATION OF DEALER ACTIVITIES

While municipal securities dealers and dealers in government/agency securities are required to register as broker-dealers pursuant to the Securities Exchange Act of 1934, there are at present no registration requirements for firms that deal only in money market instruments. Regardless of whether a bank holding company subsidiary is registered as a broker-dealer with the Securities and Exchange Commission, Federal Reserve System examiners will conduct inspections to determine whether the subsidiary is in compliance with the provisions of Regulation Y or any specific conditions in a bank holding company order pertaining to the organization under inspection. In addition, examiners will need to focus on financial, managerial, and safety-and-soundness considerations in any bank holding company dealer subsidiary. In the event a firm is a registered broker-dealer subject to examination by the National Association of Securities Dealers (NASD), the inspection should be designed to prevent duplication of effort, relying on work performed by NASD examiners

to the greatest extent possible, yet still evaluate the factors discussed above that are relevant for either registered or unregistered dealers.

Effective May 20, 1985, the Federal Reserve Bank of New York adopted a *Capital Adequacy Guideline for U.S. Government Securities Dealers*. The Federal Reserve Bank of New York recommends that U.S. government securities dealers that are not subject to federal oversight agree to comply voluntarily with the capital adequacy guideline. Hence, it is expected that any government securities dealer subject to System inspection will comply with the Securities and Exchange Commission's Uniform Net Capital Rule (17 C.F.R. 240.15c3-1).

3240.0.4 DEALER ACTIVITIES

A firm operates as a dealer when it underwrites or deals in securities or money market instruments. Those activities are usually distinguished as separate activities from normal investment activities. If the firm holds itself out to other dealers or investors as a dealer or engages in a repetitive pattern of short-term purchases and sales, the firm may be engaged in dealer activities, regardless of its stated investment activities.

As noted previously, when the Board added to the Regulation Y list of permissible activities the activities of underwriting and dealing in U.S. government securities, certain money market instruments, and municipal securities, the Board added a restriction that such nonbank activities be subject to the same restrictions as securities and money market instrument activities of member banks. Accordingly, the following discussion focuses upon *permissible securities activities of all member banks*.

3240.0.5 GOVERNMENT AND MUNICIPAL SECURITIES

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 U.S.C. 24). That authority is restricted by limitations on percentage holding of classes of securities as found in 12 C.F.R. 1.3. That regulation allows banks to deal in, underwrite, purchase, and sell type I securities without limit and type II securities limited to 10 percent of its capital and unimpaired surplus. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. (See the nontrading securities section of the *Commercial Bank*

Examination Manual for further information on type I, II, and III securities.)

There are three major types of securities transactions in which banks are involved. First, the bank may buy and sell securities on behalf of a customer. Those are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. Second, as a dealer, the bank buys and sells securities for its own account. That is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction. The third type of securities transaction frequently executed by banks is a contemporaneous “riskless-principal trade.” The dealer buys and sells qualified securities as a principal, with the purchase and sale originating almost simultaneously. Exposure to market risks is limited by the brief period of actual ownership, and profits result from dealer-initiated markup, the difference between the purchase and sale prices.

Dealers’ securities transactions involve customers and other securities dealers. The word “customer,” as used in this section, means an investor. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes. The following subsections include general descriptions of significant areas of permissible trading and underwriting activities.

3240.0.6 U.S. GOVERNMENT SECURITIES TRADING

U.S. government security trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. The size of a transaction, the dealer efforts extended, and the nature of the security are common factors that affect the markup differential. Markups on government securities generally range between one and four thirty-seconds of a point. Long maturity issues may have higher markups.

The market risk inherent in U.S. government trading portfolios should be controlled by policy. Standards should be established to limit the total securities inventory and the amount of securities with similar yield or maturity characteristics. Limits imposed by policy should include commitments to purchase new governments on a when-issued basis.

Payments for and deliveries of U.S. government and most agency securities are settled on

the business day following the trade. Government dealers and customers can negotiate same-day or delayed settlement for special situations, but the industry recognizes standard settlement as occurring on the trade date plus one business day.

3240.0.6.1 “When-Issued” Trading

A significant source of risk to dealers involves “when-issued” (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security issuance and payment date. The Dealer Surveillance Staff at the Federal Reserve Bank of New York began to require WI position reports from primary government securities dealers and request voluntary WI reports from certain other government securities dealers in 1984. At the time the reporting requirements were adopted, a senior official stated, “The opportunity to trade with several dealers simultaneously without making payment could result in trading losses which exceed a participant’s ability to settle.” In essence, the fact that settlement date can extend to almost two weeks—as opposed to the ordinary next-day settlement—presents an opportunity for firms to engage in a large volume of trading without drawing on the firm’s ability to purchase securities or effect delivery against short positions. Hence, there is increased credit risk in such transactions. Consequently, the dealer’s trading position limits should include WI limits to protect against the increased credit risk associated with WI trading.

3240.0.6.2 Due Bills

A “due bill” is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and, alternatively, due bills received should be considered as lending transactions.

Registered broker-dealers are subject to the SEC’s rule 15c3-3 (17 C.F.R. 240.15c3-3), “Customer Protection—Reserves and Custody of Securities.” Basically, this rule states the principle that a broker-dealer needs to safeguard customer assets and cannot use such assets to

fund its own business activities. While this rule is not directly applicable to unregistered U.S. government securities or money market instrument dealers, the principle is transferable. Dealers should not issue due bills as a means of obtaining operating funds or where the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe the collateral, if any, securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

3240.0.6.3 Clearance

Securities clearance services for the bulk of U.S. government and federal-agency security transactions are provided by the Federal Reserve as part of its telegraphic securities transfer system. The various Federal Reserve Banks will wire transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve's systems also are used to facilitate security borrowings, loans, and pledges. Hence, the securities firm will need to use the services of a clearing bank.

3240.0.6.4 Short Sales

Another area of U.S. government security activity involves short-sale transactions. A short sale is the sale and delivery of a security that the seller does not own. It is accomplished by borrowing the security for delivery. The borrowed security is collateralized by an appropriate amount of a similar security. Short sales are conducted to accommodate customer orders, to obtain funds by leveraging existing assets, to hedge the market risk of other assets, or with the expectation that the market price of the sold security will decline sufficiently to allow the bank to complete the transaction by purchasing an equivalent security at a later date and a lower price.

3240.0.6.5 Arbitrage

Arbitrage is the coordinated purchase and sale of two securities or of a security and a futures or options contract in which there is a relative market imbalance. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage opportunities take many forms and can exist whenever segments of the securities markets are subject to a yield variance.

Exposure on arbitrage and/or short sales should be closely monitored for compliance with predetermined objectives. Risk should be controlled by point-spread limits coordinated with stop-loss buy provisions or sell provisions and by guidelines on the length of time a short position can remain uncovered.

3240.0.7 MONEY MARKET TRADING

Aside from short-term securities, banks customarily trade a substantial volume of other money market instruments such as banker's acceptances. It should be noted that the Supreme Court has opined that commercial paper is a Glass-Steagall security.

3240.0.7.1 Banker's Acceptances

Banker's acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year.

3240.0.7.2 Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of \$100,000 to \$1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities often longer.

Money market instruments trade with the same-day or one-day settlement. Publicly quoted yields or dollar prices are usually based on round lot trades of \$1 million, except for com-

mercial paper, which trades in round lots of \$250,000. Odd-lot prices may vary, but because of the large dollar volume of most trades, the percentage spread between the acquisition cost and sale price is characteristically modest.

Management should attempt to minimize market risk by establishing a maximum holding limit for each class of money market instrument. Policy guidelines also should establish concentration limits for money market instruments issued by a single obligor. Such limits should include commitments.

A sound money market trading policy recognizes the need for a qualitative analysis of the issuers of instruments. Credit approvals should be obtained before trading in CDs and acceptances, and reviews should be conducted on a regular schedule.

Banks dealing in money market instruments are subject to a number of legal restrictions. The sale of federal funds by a member bank to a bank affiliate is limited under section 23A (12 U.S.C. 371(c)) and subject to the restrictions of section 23B of the Federal Reserve Act (12 U.S.C. 371(c-1)). The acquisition, as principal, of a certificate of deposit issued by an affiliate bank also is subject to section 23A limitations and section 23B restrictions. These restrictions do not apply to transactions between bank subsidiaries that are 80 percent or more commonly owned by a bank holding company. These transactions must be conducted on terms that are consistent with safe and sound banking practices.

3240.0.8 REPURCHASE AGREEMENTS AND SECURITIES LENDING

The overwhelming majority of a government security dealer's inventory is financed by repurchase agreements. In addition, many dealers operate a "matched book" repo operation whereby they finance the acquisition or carrying of securities by customers through reverse repurchase agreements and contemporaneously obtain funding for such transactions through the sale of the same or similar securities under a repurchase agreement. In addition, securities dealers often lend or borrow specific issues to effect delivery against short positions or because of failure to receive securities required to be delivered. For prudential guidelines that have been issued to financial institutions in connection with repurchase agreements and securities lending, see the FFIEC supervisory policy statements at sections 2140.0 and 2150.0,

which have been adopted by the Federal Reserve Board.

Firms enter into "reverse repos" to finance the U.S. government securities inventory of other dealers or mortgage bankers who have originated pools of mortgages to back federal housing agency securities. Repos are sold to customers in lieu of certificates of deposit. Customers find them attractive because interest can be paid on repos having maturities of less than seven days and because customer funds are collateralized by the security underlying the repurchase transaction.

The rate of interest received and paid is generally dictated by prevailing market rates. Profits are based on a modest positive spread between interest earned and interest paid. A dealer may attempt to improve that modest profit by increasing the volume of such transactions, using the proceeds to finance or pyramid the acquisition of reverse repos or securities to be used in additional repo arrangements.

A common dealer strategy is to vary resale and repurchase maturities in anticipation of interest-rate movements. If an upward rate trend is expected, the dealer will attempt to lock in a cheaper source of funds at the current low rate by negotiating longer maturities for repos and shorter maturities for reverse repos. Conversely, if interest rates are expected to decline, the dealer attempts to negotiate longer-maturity reverse repos to ensure continuing higher earnings, while negotiating shorter-maturity repos to take advantage of cheaper future sources of funds. Care should be taken to limit exposure by instituting policy guidelines that—

1. limit the aggregate amounts of reverse repo and repo positions,
2. specify acceptable amounts of funds for unmatched or extended maturity transactions,
3. determine maximum time gaps for unmatched maturity transactions and minimally acceptable interest-rate spreads for various maturity agreements, and
4. follow the prudential guidelines in the FFIEC's policy statement on repurchase agreements and securities lending. (See sections 2140.0 and 2150.0.)

3240.0.9 POLICY SUMMARY

The legal responsibilities of directors require that they ensure that dealer activities are conducted on a sound and legal basis that can only

be accomplished if the directors endorse a written trading policy that addresses each area of market and legal risk. Written policy guidelines should be distributed to each individual engaged in trading activities.

3240.0.10 SCOPE OF THE INSPECTION

The scope of inspection will vary depending on the types of securities or money market instrument underwriting, dealing, and brokerage activities conducted by the subsidiary. Examiners may encounter situations in which a securities subsidiary is an SEC-registered broker-dealer because the subsidiary also executes transactions in municipal securities.

Registered broker-dealers are required to become members of the NASD or some other “self-regulatory organization.” To avoid unnecessary regulatory overlap, examiners can rely on the NASD’s compliance examination with respect to investor protection, including compliance with rules of the SEC, NASD, and Municipal Securities Rulemaking Board (MSRB), and the Board’s Regulation T governing securities credit (if applicable). Consequently, in commencing such an inspection, examiners should begin by requesting and reviewing the NASD’s most recent examination letter to the broker-dealer and serious violations that could endanger the banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits). Significant violations that have not yet been corrected should be noted in the bank holding company report.

Federal Reserve examiners retain responsibility for inspecting certain areas of registered broker-dealer operations regardless of whether the NASD reviews them. Specifically, System examiners should still evaluate management, financial results, and safety-and-soundness considerations, including internal controls. In addition, examiners still need to verify that registered broker-dealer subsidiaries comply with the provisions of Regulation Y, section 225.28(b)(8)(i), or specific Board orders pertaining to the firm under inspection. Finally, the examiner should be prepared to review in-depth any activities or money market instruments that are not securities that might not have been reviewed by the NASD because the activities are outside their scope of examination.

3240.0.11 INSPECTION OBJECTIVES

1. To determine if the policies, practices, procedures, and internal controls regarding dealer activities are adequate.
2. To determine if officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit-compliance functions.
5. To determine compliance with applicable laws and regulations, including 12 C.F.R. 225.28(b)(8)(i).
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

3240.0.12 INSPECTION PROCEDURES

1. Review the adequacy of the dealer’s internal controls. (See section 3240.0.13.)
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the inspection.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal and External Audits,” and determine if corrections have been accomplished.
4. Obtain a copy of the latest letter received from the self-regulatory organization responsible (if applicable) for examining broker-dealer activities of this subsidiary.
5. Request that the firm provide the following schedules:
 - a. aged schedule of securities that have been acquired as a result of underwriting activities
 - b. aged schedule of trading-account securities and money market instruments held for trading or arbitrage purposes, which should reflect commitments to purchase and sell securities and all joint-account interests
 - c. schedule of short-sale transactions
 - d. aged schedule of due bills
 - e. list of bonds borrowed
 - f. aged schedule of “fails” to receive or deliver securities on unsettled contracts

- g. schedule of approved securities borrowers and approved limits
- h. schedule of loaned securities
- i. schedule detailing account names and/or account numbers of the—
 - affiliated banks' permanent portfolio accounts;
 - personal accounts maintained at the firm by its employees;
 - accounts of brokers or other dealers; and
 - personal accounts of employees of other brokers, dealers, or municipal securities dealers
- j. list of all joint accounts entered into since the last examination
- k. list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid
- l. list of all financial advisory relationships
- 6. Compare balances of appropriate schedules to the general ledger and review reconciling items for reasonableness.
- 7. Determine the extent and effectiveness of trading-policy supervision by—
 - a. reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee,
 - b. determining that proper authorization for the trading officer or committee has been made,
 - c. ascertaining the limitations or restrictions on delegated authorities,
 - d. evaluating the sufficiency of analytical data used in the most recent board or committee trading-department review,
 - e. reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law, and
 - f. reaching a conclusion about the effectiveness of director supervision of the trading policy. Prepare a memo for the examiner assigned "Duties and Responsibilities of Directors" stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)
- 8. Ascertain the general character of underwriting and direct-placement activities and ascertain the effectiveness of department management by reviewing underwriter files and ledgers, committee reports, and offering statements to determine—
 - a. the significance of underwriting activities and direct placements of securities as reflected by the volume of sales and profit or loss on operations (compare current data to comparable prior periods);
 - b. whether there is a recognizable pattern in—
 - the extent of analysis of material information relating to the ability of the issuer to service the obligation,
 - rated quality of offerings,
 - point spread of profit margin for unrated issues,
 - geographic distribution of issuers, and
 - syndicate participants, and
 - c. the volume of outstanding bids. Compare current data to comparable prior periods.
- 9. Determine the general character of trading-account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets, and position records for various categories of trading activity and determining—
 - a. the significance of present sales volume compared to comparable prior periods and departmental budgets;
 - b. whether the firm's objectives are compatible with the volume of trading activity;
 - c. significant inventory positions taken since the prior examination and determining if—
 - the quality and maturity of the inventory position was compatible with prudent practices, and
 - the size of the position was within prescribed limits and compatible with a sound trading strategy
 - d. the exposure on offsetting repurchase transactions by—
 - reviewing the maturities of offsetting "repo" and "reverse repo" agreements to ascertain the existence, duration, amounts, and strategy used to manage unmatched maturity "gaps" and extended (over 30 days) maturities;
 - reviewing records since the last inspection to determine the aggregate amounts of—
 - matched repurchase transactions and
 - "reverse repo" financing extended to one or related firms(s); and
 - performing credit analyses of significant concentrations with any single or related entities.

10. Determine the extent of risk inherent in trading-account securities which have been in inventory in excess of 30 days.
 - a. Determine the dollar volume in extended holdings.
 - b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
 - c. Determine the current market value for individual issues which show an internal valuation markdown of 10 percent or more.
 - d. Perform credit analyses on the issuers of nonrated holdings identified as significant positions.
 - e. Perform credit analyses on those issues with valuation writedowns considered significant relative to the scope of trading operations.
 - f. Discuss plans for disposal of slow-moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.
11. Using an appropriate technique, select issues from the schedule of trading-account inventory. Test valuation procedures by—
 - a. reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed;
 - b. comparing dealer-prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date “bid” prices); and
 - c. investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine—
 - a. the degree of speculation reflected by basis-point spreads,
 - b. present exposure shown by computing the cost to cover short sales, and
 - c. if transactions are reversed in a reasonable period of time.
13. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items (fail to receive securities and fail to deliver securities) that are a week or more beyond settlement date and determine—
 - a. the amount of extended fails,
 - b. the planned disposition of extended fails,
 - c. if the control system allows a timely, productive follow-up on unresolved fails,
 - d. the reasons for cancellations, and
 - e. the planned disposition of securities that have been inventoried before the recognition of a fail or a cancellation.
14. Determine compliance with applicable laws, rulings, and regulations by performing the following:
 - a. *12 C.F.R. 1.3—eligible securities.*
 - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the affiliated lead bank’s capital and unimpaired surplus are type I securities.
 - Determine that the total par value of type II investments does not exceed 10 percent of the affiliated lead bank’s capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
 - Elicit management’s comments and review underwriting records on direct placement of type II securities and determine if the broker-dealer is dealing or engaging in impermissible direct placement of type III securities.
 - b. *Sections 23A and 23B of the Federal Reserve Act (12 U.S.C. 371(c) and 375)—preferential treatment.* Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, including securities-clearance services, involving affiliates, insiders, or their interests are on terms less favorable to the bank than those transactions involving unrelated parties.
15. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by—
 - a. reviewing transactions, including U.S. government tender-offer subscription files, involving employees and directors of dealer or other banks, and determining if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans,
 - b. reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an additional markup and that gains were not recognized a second time,
 - c. reviewing securities position records and customer ledgers with respect to large-volume repetitive purchase and sales transactions and—

- independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties, and
 - investigating the purchase of large blocks of securities from dealer firms just prior to month-end and their subsequent resale to the same firm just after the beginning of the next month
- d. reviewing customer-complaint files and determining the reasons for such complaints.
16. Discuss with an appropriate officer and prepare report comments concerning—
 - a. the soundness of trading objectives, policies, and practices;
 - b. the degree of legal and market risk assumed by trading operations;
 - c. the effectiveness of analytical, reporting, and control systems;
 - d. violations of law;
 - e. internal control deficiencies;
 - f. apparent or potential conflicts of interest; and
 - g. other matters of significance.
 17. Reach a conclusion regarding the quality of department management and state your conclusions on the appropriate inspection report pages.
 18. Update workpapers with any information that will facilitate future inspections.

3240.0.13 REVIEW OF INTERNAL CONTROLS

As a part of carrying out the inspection procedures for this activity, the examiner is expected to review the dealer's system of internal controls. The examiner should concentrate the internal controls review on the policies, practices, and procedures of the firm.

The system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. *Items marked with asterisks require substantiation by observation or testing.*

3240.0.13.1 Securities Underwriting Trading Policies

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that—
 - a. outline objectives?
 - b. establish limits and/or guidelines for the following:
 - price markups?
 - quality of issues?
 - maturity of issues?
 - inventory positions (including when-issued (WI) positions)?
 - amounts of unrealized loss on inventory positions?
 - length of time an issue will be carried in inventory?
 - amounts of individual trades or underwriter interests?
 - acceptability of brokers and syndicate partners?

- c. recognize possible conflicts of interest and establish appropriate procedures regarding—
 - deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
 - deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
 - transfers made between trading-account inventory and affiliated investment portfolio(s)?
 - the affiliated bank's trust department acting as trustee, paying agent, and transfer agent for issues which have an underwriting relationship with the trading department?
 - d. state procedures for periodic, monthly or quarterly, valuation of trading inventories to market value?
 - e. state procedures for periodic independent verification of valuations of the trading inventories?
 - f. outline methods of internal review and reporting by department supervisors and internal auditors to ensure compliance with established policy?
 - g. identify permissible types of securities?
2. Are the underwriting/trading policies reviewed at least quarterly by the board of directors to determine their adequacy in light of changing conditions?
 3. Is there a periodic review by the board to ensure that the underwriting/trading department is in compliance with its policies?

3240.0.13.2 Offsetting Resale and Repurchase Transactions

1. Has the board of directors, consistent with its duties and responsibilities, adopted written

offsetting repurchase transaction policies that—

- a. limit the aggregate amount of offsetting repurchase transactions?
 - b. limit the amounts in unmatched or extended (over 30 days) maturity transactions?
 - c. determine maximum time gaps for unmatched maturity transactions?
 - d. determine minimally acceptable interest-rate spreads for various maturity transactions?
 - e. determine the maximum amount of funds to be extended to any single or related firms through “reverse repo” transactions involving unsold (through forward sales) securities?
 - f. require firms involved in reverse repo transactions to submit corporate resolutions stating the names and limits of individuals who are authorized to commit the firm?
 - g. require submission of current financial information by firms involved in reverse repo transactions?
 - h. provide for periodic credit reviews and approvals for firms involved in reverse repo transactions?
 - i. specify types of acceptable offsetting repurchase transaction collateral?
 - j. require receipt of assurance letters that unregulated securities dealers comply with the Federal Reserve Bank of New York’s “Capital Adequacy Guideline for U.S. Government Securities Dealers?”
2. Are written collateral-control procedures designed so that—
- a. collateral assignment forms are used?
 - b. collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner, and are registered securities registered in the dealer or dealer’s nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse repo transactions?
 - c. funds are not disbursed until reverse repo collateral is delivered into the physical custody of the dealer or an independent safekeeping agent?
 - d. funds are only advanced against predetermined collateral margins or discounts?
 - e. collateral margins or discounts are predicated upon the following:
 - the type of security pledged as collateral?

- maturity of collateral?
 - historic and anticipated price volatility of the collateral?
 - creditworthiness of the counterparty?
 - maturity of the reverse repo agreements?
 - accrued interest?
- f. maintenance agreements are required to support predetermined collateral margin or discount by daily mark to market of repurchase agreement securities?
 - g. maintenance agreements are structured to allow for obtaining additional securities or cash calls in the event of collateral price declines?
 - h. collateral market value is frequently checked to determine compliance with margin and maintenance requirements?

3240.0.13.3 Custody and Movement of Securities

- *1. Are the dealer’s procedures such that persons do not have sole custody of securities in that—
 - a. they do not have sole physical access to securities?
 - b. they do not prepare disposal documents that are not also approved by authorized persons?
 - c. for the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
 - d. no person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?
2. Are securities physically safeguarded to prevent loss, unauthorized disposal, or use?
 - a. Are negotiable securities kept under dual control?
 - b. Are securities counted frequently on a surprise basis and reconciled to the securities record? Are the results of such counts reported to management?
 - c. Does the dealer periodically test for compliance with provisions of its insurance policies regarding custody of securities?
 - d. For securities in the custody of others—
 - are custody statements agreed periodically to position ledgers, and any differences followed up to a conclusion?

- are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
 - are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?
3. Are trading-account securities segregated from other dealer-owned securities or securities held in safekeeping for customers?
 - *4. Is access to the trading-securities vault restricted to authorized employees?
 5. Do withdrawal authorizations require countersignature to indicate security count verifications?
 6. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?
 7. Are prenumbered forms used to control securities trades, movements, and payments?
 8. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?
 9. Do alterations to forms governing the trade, movement, and payment of securities require—
 - *a. signature of the authorizing party?
 - b. use of a change-of-instruction form?
 10. With respect to negotiability of registered securities—
 - a. are securities kept in non-negotiable form whenever possible?
 - b. are all securities received and not immediately delivered transferred to the name of the dealer or its nominee and kept in non-negotiable form whenever possible?
 - c. are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

3240.0.13.4 Purchase and Sales Transactions

1. Are all transactions promptly confirmed in writing to the actual customers or dealers?
2. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including

approval by a designated responsible employee)? Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?

3. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated? Are comparisons approved by a designated individual?

3240.0.13.5 Customer and Dealer Accounts

1. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
2. Are letters mailed to customers requesting confirmation of changes of address?
3. Are separate customer-account ledgers maintained for—
 - a. employees?
 - b. affiliates?
 - c. affiliated bank's trust accounts?
4. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?

3240.0.13.6 Other

1. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?
2. Are subsidiary records reconciled, at least monthly, to the appropriate general-ledger accounts, and are reconciling items adequately investigated by persons who do not also have sole custody of securities?
3. Are fails to receive and deliver under a separate general-ledger control?
 - a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?
 - b. Are periodic aging schedules prepared?
 - c. Are stale fail items confirmed and followed up to a conclusion?
 - d. Are stale items valued periodically, and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?
4. With respect to securities loaned and borrowed positions—

- a. are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
- b. are positions confirmed periodically?
- c. are all policies and procedures in conformance with the FFIEC policy on securities lending contained section 2140.0?

4(c)(8)—Agency Transactional Services (Futures Commission Merchants and Futures Brokerage) Section 3250.0

A futures commission merchant (FCM) is an entity referred to in the Commodity Exchange Act to denote a registered firm that is in the business of soliciting or accepting orders, as broker, for the purchase or sale of any exchange-traded futures contract and options thereon. For the purposes of this examiner guidance, the term “FCM activities” is used in a broad context and refers to all futures brokerage activities, operations, and their associated risks that are subject to the Federal Reserve System’s supervision (see SR-97-33). In connection with these activities, banking organizations may hold customer funds, assets, or property and may be members of futures exchanges and their associated clearinghouses. They may also offer related advisory services as registered commodity trading advisers (CTAs). The guidance addresses the expanding scope of futures activities conducted by different types of banking organizations worldwide, and implements supervisory initiatives to effect more risk-focused and burden-sensitive approaches to the supervision of FCM activities. The guidance is designed to assist examiners in assessing how well a consolidated financial organization manages one or more discrete futures brokerage operations, as well as in making a broader assessment of the organization’s overall risk management.

The guidance pertains to FCM subsidiaries of bank holding companies (BHCs), but it is also applicable to FCM subsidiaries of state member banks, Edge Act corporations, and foreign banking organizations. It addresses the broader scope of permissible futures brokerage activities articulated within Regulation Y,¹ and by exten-

sion in Regulation K, and focuses on the adequacy of management and the management processes used to control the credit, market, liquidity, reputation, and operations risks entailed in these activities, including brokerage, clearing, funds management, and advisory services.

The guidance takes a global line-of-business supervisory approach to the inspection of FCM activities rather than the traditional full-scope inspections of individual FCM subsidiaries, many of which are primarily supervised by functional regulators. Reviews and reports of functional regulators should be used to the fullest extent when planning and conducting inspections of FCM activities of bank holding companies and other banking organizations to avoid duplication and minimize supervisory burdens. However, in conducting an inspection of various aspects of an FCM’s activities, a review of various functions, derived from a sample of the organization’s FCM subsidiaries, may be necessary and appropriate to determine the extent of the risks these operations pose to the banking organization and to determine whether management of those risks is satisfactory. The examiner should pay particular attention to activities conducted in FCM subsidiaries that have not been subject to a regular inspection by their functional regulator and to FCM activities of foreign affiliates in which there is uncertainty concerning the level of local supervision.

BHC subsidiaries, banks (generally through operating subsidiaries), Edge Act corporations, and foreign banking organizations (FBOs) operating in the United States may operate futures brokerage and clearing services involving a myriad of financial and nonfinancial futures contracts and options on futures. These activities can involve futures exchanges and clearinghouses throughout the world. In general, most organizations conduct these activities as FCMs.

The Federal Reserve has a supervisory interest in ensuring that the banking organizations subject to its oversight conduct their futures brokerage activities in a safe and sound manner consistent with Regulations Y and K (including any terms and conditions in Board orders for a particular organization). Accordingly, a review of futures brokerage activities is an important

1. The Board broadened the scope of permissible FCM nonbanking activities for a bank holding company with the revision of Regulation Y, effective April 21, 1997. For example, the following activities are permissible:

- Derivative contracts can be executed and cleared on a broad range of nonfinancial commodities.
- Derivative contracts can be cleared without simultaneously providing execution services. Likewise, execution services can be provided without also providing clearing services.
- Foreign-exchange transactional services can be provided in the same FCM subsidiary that provides advice regarding foreign exchange.
- Bank holding companies can engage in FCM activities through a section 20 subsidiary.
- An FCM nonbanking subsidiary can trade for its own account.
- An FCM nonbanking subsidiary may act on exchange-traded futures contracts and on options on futures contracts based on a financial or nonfinancial commodity.
- A bank holding company may combine FCM activities and incidental activities. For example, FCM activities may be combined with futures-related financing to customers, such

as financing to cover margin obligations (note: such financing may be prohibited by some exchanges).

element for inspections of BHCs, examinations of state member banks, and reviews of FBO operations. The following guidance on evaluating the futures brokerage activities of bank holding company subsidiaries, branches and agencies of foreign banks operating in the United States, or any operating subsidiaries of state member banks provides a list of procedures that may be used to tailor the scope of an inspection of these activities.

3250.0.1 SCOPE OF GUIDANCE

Examiners are to use a risk-based inspection approach to evaluating FCM activities—including brokerage, clearing, funds management, and advisory activities. Significant emphasis should be placed on evaluating the adequacy of management and the management processes used to control the credit, market, liquidity, legal, reputation, and operations risks entailed in these operations. Both the adequacy of risk management and the quantitative level of risk exposures should be assessed as appropriate to the scope of the FCM's activities. The objectives of a particular inspection should dictate the FCM activities to be reviewed and set the scope of the inspection.

Examiners are to use a functional-regulatory approach to minimize duplicative inspection and supervisory burdens. Reviews and reports of functional regulators should be used to their fullest extent. However, absent recent oversight inspection, or if an examiner believes that particular facts and circumstances at the banking organization or in the marketplace deem it necessary, a review of operations that would normally be assessed by the appropriate commodities regulator may be appropriate (such as a review of front- or back-office operations).

When futures brokerage occurs in more than one domestic or foreign affiliate, examiners should assess the adequacy of the management of the futures brokerage activities of the consolidated financial organization to ensure that the parent organization recognizes and effectively manages the risks posed by its various futures brokerage subsidiaries. Accordingly, in reviewing futures brokerage operations, examiners should identify all bank holding company, bank operating, or FBO subsidiaries that engage in FCM activities and the scope of those activities. Not all subsidiaries may need to be reviewed to assess the risk management of the consolidated

organization. Selection of the particular FCM subsidiaries to be reviewed should be based on an assessment of the risks posed by their activities to the consolidated organization.

This guidance primarily addresses the assessment of activities associated with futures brokerage operations. Any proprietary trading that occurs at an FCM should be assessed in connection with the review of proprietary trading activities of the consolidated financial organization, using the appropriate guidance in the Federal Reserve's *Trading and Capital-Markets Activities Manual*. Similarly, when a review of futures advisory activities is planned, examiners should refer to investment, financial, and futures advisory inspection guidance in this manual (sections 3130.0 and 3130.4) and the *Trust Examination Manual* as appropriate.

3250.0.2 EVALUATION OF FCM RISK MANAGEMENT

Consistent with existing Federal Reserve policies, examiners should evaluate the risk-management practices of FCM operations and ensure that this evaluation is incorporated appropriately in the rating of risk management under the bank (CAMELS), BHC (BOPEC), and FBO (ROCA) rating systems. Accordingly, examiners should place primary consideration on findings related to the adequacy of (1) board and senior management oversight; (2) policies, procedures, and limits used to control risks; (3) systems for measuring, monitoring, and reporting risk; and (4) internal controls and audit programs.

3250.0.2.1 Board and Senior Management Oversight

The board of directors has the ultimate responsibility for the level of risks taken by the organization. Accordingly, the board, a designated subcommittee of the board, or a high level of senior management should approve overall business strategies and significant policies that govern risk-taking in the organization's FCM activities. In particular, the board or a committee thereof should approve policies that identify authorized activities and managerial oversight, and articulate risk tolerances and exposure limits of FCM activities. The board should also actively monitor the performance and risk profile of its FCM activities. Directors and senior management should periodically review information that is sufficiently detailed and timely to allow them to understand and assess the various risks involved in these activities. In addition, the board or a

delegated committee should periodically reevaluate the business strategies and major risk-management policies and procedures, emphasizing the organization's financial objectives and risk tolerances.

The FCM's senior management is responsible for ensuring that policies and procedures for conducting FCM activities on both a long-range and day-to-day basis are adequate. Senior management or a designated subcommittee of the board should review and approve these policies and procedures annually. The consistency of these policies with parent company limits or other directions pertaining to the FCM's activities should be confirmed. Management must also maintain (1) clear lines of authority and responsibility for managing operations and the risks involved, (2) appropriate limits on risk-taking, (3) adequate systems and standards for measuring and tracking risk exposures and measuring financial performance, (4) effective internal controls, and (5) a comprehensive risk-reporting and risk-management review process. To provide adequate oversight, management should fully understand the risk profile of FCM activities. Examiners should review reports given to senior management and evaluate whether they consist of good summary information and sufficient detail that will enable management to assess and manage the FCM's risk. As part of its oversight responsibilities, senior management should periodically review the organization's risk-management procedures to ensure that they remain appropriate and sound.

Management should also ensure that activities are conducted by competent staff whose technical knowledge and experience are consistent with the nature and scope of the organization's activities. There should be sufficient depth in staff resources to manage these activities if key personnel are not available. Management should also ensure that back-office and financial-control resources are sufficient to effectively manage and control risks. Functions for measuring, monitoring, and controlling risk should have clearly defined duties. There should be adequate separation of duties in key elements of the risk-management process to avoid potential conflicts of interest. The nature and scope of these safeguards should be in accordance with the scope of the FCM's activities.

3250.0.2.2 Policies, Procedures, and Limits

FCMs should maintain written policies and procedures that clearly outline their approach for

managing futures brokerage and related activities. Such policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and general willingness to take risk. Policies, procedures, and limits should address the relevant credit, market, liquidity, reputation, and operations risks in light of the scope and complexity of the FCM's activities. Policies and procedures should establish a logical framework for limiting the various risks involved in an FCM's activities and should clearly delineate lines of responsibility and authority over these activities. They should also address the approval of new product lines, strategies, and other activities; conflicts of interest including transactions by employees; and compliance with all applicable legal requirements. Procedures should incorporate and implement the parent company's relevant policies and should be consistent with applicable statutes, Federal Reserve Board regulations, interpretations, Board orders, and supervisory policies and guidance.

A sound system of integrated limits and risk-taking guidelines is an essential component of the risk-management process. Such a system should set boundaries for organizational risk-taking and ensure that positions that exceed certain predetermined levels receive prompt management attention, so they can be either reduced or prudently addressed.

3250.0.2.3 Risk Measurement, Monitoring, and Reporting

An FCM's system for measuring the credit, market, liquidity, and other risks involved in its activities should be as comprehensive and accurate as practicable and should be commensurate with the nature of its activities. Risk exposures should be aggregated across customers, products, and activities to the fullest extent possible. Examiners should evaluate whether the risk measures and the risk-measurement process are sufficiently robust to accurately reflect the different types of risks facing the organization. Clear standards for measuring risk exposures and financial performance should be established. The standards should provide a common framework for limiting and monitoring risks and should be understood by all relevant personnel.

An accurate, informative, and timely management information system is essential to the prudent operation of an FCM. Accordingly, the

examiner's assessment of the quality of the management information system is an important factor in the overall evaluation of the risk-management process. Appropriate mechanisms should exist for reporting risk exposures and the financial performance of the FCM to its board and parent company, as well as for internal management purposes. FCMs must establish management reporting policies to apprise their boards of directors and senior management of material developments, the adequacy of risk management, operating and financial performance, and material deficiencies identified during reviews by regulators and by internal or external audits. The FCM should also provide reports to the parent company (or in the case of foreign-owned FCMs, to its U.S. parent organization, if any) of financial performance; adherence to risk parameters and other limits and controls established by the parent for the FCM; and any material developments, including findings of material deficiencies by regulators. Examiners should determine the adequacy of an FCM's monitoring and reporting of its risk exposure and financial performance to appropriate levels of senior management and to the board of directors.

3250.0.2.4 Internal Controls

An FCM's internal control structure is critical to its safe and sound functioning in general and to its risk-management system, in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and appropriate separation of duties—such as trading, custodial, and back-office—is one of management's more important responsibilities. Appropriately segregating duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice, possibly leading to serious losses or otherwise compromising the financial integrity of the FCM.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and organizational policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the entity's board of

directors or its designated committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management's responses to them. In addition, communication channels should exist that will allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee (for example, a board audit committee).

3250.0.3 FUTURES EXCHANGES, CLEARINGHOUSES, AND FCMs

Futures exchanges provide auction markets for standardized futures and options on futures contracts. In the United States and most other countries, futures exchanges and FCMs are regulated by a governmental agency. Futures exchanges are membership organizations and impose financial and other regulatory requirements on members, particularly those that do business for customers as brokers. In the United States and most other countries, futures exchanges also have quasi-governmental (self-regulatory) responsibilities to monitor trading and prevent fraud, with the authority to discipline or sanction members that violate exchange rules. FCMs may be members of the exchange on which they effect customers' trades. When they are not members, FCMs must use other firms who are exchange members to execute customer trades.²

Each futures exchange has an affiliated clearinghouse responsible for clearing and settling trades on the exchange and for managing associated risks. When a clearinghouse accepts transaction information from its clearing members, it generally guarantees the performance of the transaction to each member and becomes the counterparty to the trade (that is, the buyer to every seller and the seller to every buyer). Daily cash settlements are paid or collected by clearing members through the clearinghouse. The cash transfers represent the difference between the original trade price and the daily official closing settlement price for each commodity futures contract. The two members settle their sides of the transaction with the clearinghouse,

2. A firm or trading company that maintains only a proprietary business may become a member of an exchange without registering as an FCM.

usually by closing out the position before delivery of the futures contract or the expiration of the option on the futures contract.

An exchange member that wishes to clear or settle transactions for itself, customers, other FCMs, or commodity professionals (locals or market makers) may become a member of the affiliated clearinghouse (clearing member) if it is able to meet the clearinghouse's financial-eligibility requirements. In general, these requirements are more stringent than those required for exchange membership. For example, a clearing member usually is required to maintain a specified amount of net capital in excess of the regulatory required minimum and to make a guaranty deposit as part of the financial safeguards of the clearinghouse. The size of the deposit is related to the scale of the clearing member's activity. If it is not a member of the clearinghouse for the exchange on which a contract is executed, an FCM must arrange for another FCM that is a clearing member to clear and settle its transactions.³

Margin requirements are an important risk-management tool for maintaining the financial integrity of clearinghouses and their affiliated exchanges. Clearinghouses require that their members post initial margin (performance bond) on a new position to cover potential credit exposures borne by the clearinghouse. The clearing firm, in turn, requires its customers to post margin. At the end of each day, and on some exchanges on an intraday basis, all positions are marked to the market. Clearing members with positions that have declined in value pay the amount of the decline in cash to the clearinghouse, which then pays the clearing members holding positions that have increased in value on that day. This process of transferring gains and losses among clearing-member firms, known as collecting variation margin, is intended to periodically eliminate credit-risk exposure from the clearinghouse.⁴ In volatile markets, a clearinghouse may call for additional variation margin during the trading day, sometimes with only

one hour's notice, and failure to meet a variation (or initial) margin call is treated as a default to the clearinghouse.

Some clearinghouses also require that their members be prepared to pay loss-sharing assessments to cover losses sustained by the clearinghouse in meeting the settlement obligations of a clearing member that has defaulted on its (or its customers') obligations. Such assessments arise when losses exceed the resources of defaulting members, the guaranty fund, and other surplus funds of the clearinghouse. Each clearinghouse has its own unique loss-sharing rules.⁵ At least one U.S. and one foreign exchange have unlimited loss-sharing requirements. Most U.S. clearinghouses relate loss-sharing requirements to the size of a member's business at the clearinghouse. Given the potential drain on a banking organization's financial resources, the exposure to loss-sharing agreements should be a significant consideration in the decision to become a clearing member. A parent bank holding company may not provide a guarantee or become liable to an exchange or clearing association other than for trades conducted by the subsidiary for its own account or for the account of any affiliate. (See section 225.28(b)(6)(iv) of Regulation Y.)

3250.0.4 COMMODITY EXCHANGE ACT, COMMODITY FUTURES TRADING COMMISSION, AND SELF-REGULATORY ORGANIZATIONS

In the United States, the primary regulator of exchange-traded futures activities is the Commodity Futures Trading Commission (CFTC), which was created by and derives its authority from the Commodity Exchange Act (CEA). The CFTC has adopted registration,⁶ financial responsibility, antifraud, disclosure, and other rules for FCMs and CTAs, and has general enforcement authority over commodities firms and professionals that buy or sell exchange-traded futures contracts.

3. The nonmember FCM opens an account, usually on an omnibus basis, with the clearing-member FCM. Separate omnibus accounts have to be maintained for customer and non-customer or proprietary trading activity. If the FCM does not carry customer accounts by holding customer funds and maintaining account records, the clearing member will carry the customer's account on a fully disclosed basis and issue confirmations, account statements, and margin calls directly to the customer on behalf of the introducing FCM. In such cases, the introducing FCM operates as an introducing broker (IB) and could have registered with the Commodity Futures Trading Commission as such.

4. Some foreign exchanges do not allow the withdrawal of unrealized profits as mark-to-market variation.

5. Clearinghouses usually (1) retain the right to use assets owned by clearing members, but under the control of the clearinghouse (for example, proprietary margin); (2) require additional contributions of funds or assets or require the member to purchase additional shares of the clearinghouse; or (3) perfect a claim against the member for its share of the loss.

6. Many FCMs also are SEC-registered as broker-dealers and are subject to SEC and CFTC financial-responsibility rules.

The futures exchanges, in addition to providing a marketplace for futures contracts, are deemed to be self-regulatory organizations (SROs) under the CEA. For example, a number of SROs have adopted detailed uniform practice rules for FCMs, including “know your customer” recordkeeping rules and other formal customer-disclosure requirements. The National Futures Association (NFA) also is an SRO, although it does not sponsor a futures exchange or other marketplace. The NFA has adopted sales-practice rules applicable to members who do business with customers. All FCMs that wish to accept orders and hold customer funds and assets must be members of the NFA.

The CEA and rules of the CFTC require the SROs to establish and maintain enforcement and surveillance programs for their markets and to oversee the financial responsibility of their members.⁷ The CFTC has approved an arrangement under which a designated SRO (DSRO) is responsible for performing on-site audits and reviewing periodic reports of a member FCM that is a member of more than one futures exchange. The NFA is the DSRO for FCMs that are not members of any futures exchange.

Oversight of FCMs is accomplished through annual audits by the DSRO and the filing of periodic financial statements and early warning reports by FCMs, in compliance with CFTC and SRO rules. In summary, this oversight encompasses the following three elements:

1. *Full-scope audits at least once every other year of each FCM that carries customer accounts.* Audit procedures conform to a Uniform Audit Guide developed jointly by the SROs. The full-scope audit focuses on the firm’s net capital computations, segregation of customer funds and property, financial reporting, recordkeeping, and operations.⁸ The audit also reviews sales practices (including customer records, disclosures,

7. CFTC Rule 1.51, contract market program for enforcement, requires that SROs monitor market activity and trading practices in their respective markets, perform on-site examinations (audits) of members’ books and records, review periodic financial reports filed by members, and bring disciplinary and corrective actions against members for violations of the CEA and CFTC and SRO rules.

8. If an FCM is also a broker-dealer, the DSRO is not required to examine the FCM for compliance with net capital requirements if the DSRO confers with the broker-dealer’s examining authority at least annually to determine that the FCM is in compliance with the broker-dealer’s net capital requirements and receives the DSRO copies of all examinations.

advertisements, and customer complaints) and the adequacy of employee supervision. The audit’s scope should reflect the FCM’s prior compliance history as well as the examiner’s on-site evaluation of the firm’s internal controls. During the off-year, the DSROs perform limited-scope audits of member FCMs. This audit is limited to financial matters such as a review of the FCM’s net capital computations, segregation of customer funds, and its books and records.

2. *FCM quarterly financial reporting requirements.* FCMs are required to file quarterly financial statements (form 1-FR-FCM) with their DSROs. The fourth-quarter statement must be filed as of the close of the FCM’s fiscal year and must be certified by an independent public accountant. The filings generally include statements regarding changes in ownership equity, current financial condition, changes in liabilities subordinated to claims of general creditors, computation of minimum net capital, segregation requirements and funds segregated for customers, secured amounts and funds held in separate accounts, and any other material information relevant to the firm’s financial condition. The certified year-end financial report also must contain statements of income and cash flows.
3. *Early warning reports.* FCMs are required to notify the CFTC and the SROs when certain financial weaknesses are experienced.⁹ For example, if an FCM’s net capital falls to a specified warning level, it must file a written notice within five business days and file monthly financial reports (form 1-FR-FCM) until its net capital meets or exceeds the warning level for a full three months. If an FCM’s net capital falls below the minimum required, it must cease doing business and give telegraphic notice to the CFTC and any commodities or securities SRO of which it is a member. Similar notices must be given by a clearing organization or carrying FCM when it determines that a position of an FCM must be liquidated for failure to meet a margin call or other required deposit.

3250.0.5 FEDERAL RESERVE REGULATION OF FCMs AND CTAs

Bank holding companies are permitted, under Regulation Y (section 225.28(b)(7)(iv)), to engage

9. CFTC Rule 1.12 requires the maintenance of minimum financial requirements by FCMs and introducing brokers. These requirements are similar to those applicable to broker-dealers under SEC rules.

in FCM and CTA activities on both domestic and foreign futures exchanges through separately incorporated nonbank subsidiaries. As a general matter, the nonbank subsidiaries of bank holding companies (and some foreign banks) provide services to unaffiliated customers in the United States under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and to unaffiliated customers outside the United States under Regulation K.¹⁰ Banks and the operating subsidiaries of banks usually provide futures-related services to unaffiliated parties in the United States under the general powers of the bank and to unaffiliated parties outside the United States under Regulation K. These various subsidiaries may provide services to affiliates under section 4(c)(1)(C) of the BHC Act.

Regulation Y permits a bank holding company subsidiary that acts as an FCM to engage in other activities in the subsidiary, including futures advisory services and trading, as well as other permissible securities and derivative activities as defined in sections 225.28(b)(6) (financial and investment advisory activities) and 225.28(b)(7) (agency transactional services for customer investments). Section 225.28(b)(7) specifically authorizes FCMs to provide agency services for unaffiliated persons in execution, clearance, or execution and clearance of any futures contract and option on a futures contract traded on an exchange in the United States and abroad. It also includes the authority to engage in other agency-type transactions (for example, riskless principal) involving a forward contract, an option, a future, an option on a future, and similar instruments. Furthermore, this section codifies the long-standing prohibition against a parent bank holding company's issuing any guarantees or otherwise becoming liable to an exchange or clearinghouse for transactions effected through an FCM, except for the proprietary trades of the FCM and those of affiliates.

A well-capitalized and well-managed bank holding company, as defined in section 225.2(r) and (s) of Regulation Y, respectively, may commence activities as an FCM or a CTA by filing a notice prescribed under section 225.23(a) of Regulation Y. Bank holding companies that are not eligible to file notices or that wish to act in a

capacity other than as an FCM or CTA, such as a commodity pool operator (CPO), must follow the specific application process for these activities. Examiners should ensure that all of these activities are conducted in accordance with the Board's approval order.

A bank holding company, bank, or FBO parent company of an FCM is expected to establish specific risk parameters and other limits and controls on the brokerage operation. These limits and controls should be designed to manage financial risk to the consolidated organization and should be consistent with its business objectives and overall willingness to assume risk.

3250.0.6 PARTICIPATION IN FOREIGN MARKETS

FCMs frequently transact business on foreign exchanges as either exchange or clearinghouse members or through third-party brokers that are members of the foreign exchange. The risks of doing business in foreign markets generally parallel those in U.S. markets; however, some unique issues of doing business on foreign futures exchanges must be addressed by the FCM and its parent company to ensure that the activity does not pose undue risks to the consolidated financial organization.

Before doing business on a foreign exchange, an FCM should understand the legal and operational differences between the foreign exchange and U.S. exchanges. For example, the FCM should know about local business practices and legal precedents that pertain to business in the foreign market. In addition, the FCM should know how the foreign exchange is regulated and how it manages risk, and should develop policies and the appropriate operational infrastructure of controls, procedures, and personnel to manage these risks. Accordingly, examiners should confirm that, in considering whether and how to participate in a foreign market, an FCM performs due diligence on relevant legal and regulatory issues, as well as on local business practices. Foreign-exchange risks should be understood and authorized by the FCM's parent company, and any limits set by the parent company or FCM management should be carefully monitored. The FCM and its parent company also should assess the regulatory and financial risks associated with exchange and clearinghouse membership in a foreign market, including an understanding of the extent to which the

10. Those nonbank subsidiaries that operate in the United States may open offices outside the United States if (1) the bank holding company's authority under Regulation Y is not limited geographically, (2) the foreign office is not a separately incorporated entity, and (3) the activities conducted by the foreign office are within the scope of the bank holding company's authority under Regulation Y. In addition, a bank holding company may operate a limited foreign-based business in the United States under Regulation K.

foreign clearinghouse monitors and controls day-to-day credit risk and its loss-sharing requirements.

3250.0.7 SPECIFIC RISKS AND THEIR RISK-MANAGEMENT CONSIDERATIONS

In general, FCMs face five basic categories of risk—credit risk, market risk, liquidity risk, reputation risk, and operations risk. The following discussions highlight specific considerations in evaluating the key elements of sound risk management as they relate to these risks. The compliance and internal controls functions provide the foundation for managing the risks of an FCM.

3250.0.7.1 Credit Risk

FCMs encounter a number of different types of credit risks. The following discussions identify some of these risks and discuss sound risk-management practices applicable to each.

3250.0.7.1.1 Customer-Credit Risk

Customer-credit risk is the potential that a customer will fail to meet its variation margin calls or its payment or delivery obligations. An FCM should establish a credit-review process for new customers that is independent of the marketing and sales function. It is not unusual for the FCM's parent company (or banking affiliate) to perform the credit evaluation and provide the necessary internal approvals for the FCM to execute and clear futures contracts for particular customers. In some situations, however, the FCM may have the authority to perform the credit review internally. Examiners should determine how customers are approved and confirm that documentation in the customer's credit files is adequate even when the approval is performed by the parent. Customer-credit files should indicate the scope of the credit review and contain approval of the customer's account and credit limits. For example, customer-credit files may contain recent financial statements, sources of liquidity, trading objectives, and any other pertinent information used to support the credit limits established for the customer. In addition,

customer-credit files should be updated periodically.

FCM procedures should describe how customer-credit exposures will be identified and controlled. For example, an FCM could monitor a customer's transactions, margin settlements, or open positions as a means of managing the customer's credit risk. Moreover, procedures should be in place to handle situations in which the customer has exceeded credit limits. These procedures should give senior managers who are independent of the sales and marketing function the authority to approve limit exceptions and require that such exceptions be documented.

3250.0.7.1.2 Customer-Financing Risk

Several exchanges, particularly in New York and overseas, allow FCMs to finance customer positions. These exchanges allow an FCM to lend initial and variation margin to customers subject to taking the capital charges under the CFTC's (or SEC's) capital rules if the charges are not repaid within three business days. In addition, some exchanges allow FCMs to finance customer deliveries, again subject to a capital charge.

An FCM providing customer-financing services should adopt financing policies and procedures that identify customer-credit standards. The financing policies should be approved by the parent company and should be consistent with the FCM's risk tolerance. In addition, an FCM should establish overall lending limits for each customer based on a credit review that is analogous to that performed by a bank with similar lending services. The process should be independent of the FCM's marketing, sales, and financing functions, but it may be performed by the FCM's banking affiliate. Examiners should determine how customer-financing decisions are made and confirm that documentation is adequate, even when an affiliate approves the financing. In addition, the FCM should review financial information on its customers periodically and adjust lending limits when appropriate.

3250.0.7.1.3 Clearing-Only Risk

FCMs often enter into agreements to clear, but not execute, trades for customers. Under a "clearing-only" arrangement, the customer gives its order directly to an executing FCM. The executing FCM then gives the executed transaction to the clearing FCM, which is responsible for accepting and settling the transaction. Cus-

tomers often prefer this arrangement because it provides the benefits of centralized clearing (recordkeeping and margin payments) with the flexibility of using a number of specialized brokers to execute transactions.

FCMs entering into clearing-only arrangements execute written give-up agreements, which are triparty contracts that set forth the responsibilities of the clearing FCM, the executing FCM, and the customer. Most FCMs use the “uniform give-up agreement” prepared by the Futures Industry Association, although some FCMs still use their own give-up contracts. The uniform give-up agreement permits a clearing FCM, upon giving prior notice to the customer and the executing FCM, to place limits or conditions on the transactions it will accept to clear or terminate the arrangement. If an executed transaction exceeds specified limits, the FCM may decline to clear the transaction unless it is acting as the qualifying or primary clearing FCM for the customer and has not given prior notice of termination.

Clearing-only arrangements can present significant credit risks for an FCM. An FCM’s risk-management policies and procedures for clearing-only activities should address the qualifications required of clearing-only customers and their volume of trading, the extent to which customer-trading activities can be monitored by the clearing-FCM at particular exchanges, and how aggregate risk will be measured and managed.

The FCM should establish trading limits for each of its clearing-only customers and have procedures in place to monitor their intraday trading exposures. The FCM should take appropriate action to limit its liability either by reviewing and approving a limit exception or by rejecting the trade if a clearing-only customer has exceeded acceptable trading limits. Examiners should confirm that the FCM formally advises (usually in the give-up agreement) its customers and their executing FCMs of the trading parameters established for the customer. Examiners should also confirm that the FCM personnel responsible for accepting or rejecting an executed trade for clearance have sufficient current information to determine whether the trade is consistent with the customer’s trading limits. Prudent give-up agreements (or other relevant documents such as the customer account agreement) should permit the FCM to adjust the customer’s transaction limits when appropriate in light of market conditions or changes in the customer’s financial condition.

Some FCMs act as the primary clearing firm (also referred to as the sponsoring or qualifying

firm) for customers.¹¹ A primary clearing firm guarantees to the clearinghouse that it will accept and clear all trades submitted by the customer or executing FCM, even if the trade is outside the agreed-on limits. Because an FCM is obligated to accept and clear all trades submitted by its primary clearing customers, the FCM must be able to monitor its customers’ trading activities on an intraday basis for compliance with agreed-on trading limits. Monitoring is especially important during times of market stress. The FCM should be ready and able to take immediate steps to address any unacceptable risks that arise, for example, by contacting the customer to obtain additional margin or other assurances, approving a limit exception, taking steps to liquidate open customer positions, or giving appropriate notice of termination of the clearing arrangement to enable the FCM to reject future transactions.

Intraday monitoring techniques will vary depending on the technology available at the particular exchange. A number of the larger, more automated U.S. exchanges have developed technologies that permit multiple intraday collection, matching, and reporting of trades—although the frequency of such reconciliations varies. On exchanges that are less automated, the primary clearing FCM must develop procedures for monitoring clearing-only risks. For example, the FCM could maintain a significant physical presence on the trading floor to monitor customer trading activities and promote more frequent collection (and tallying) of trade information from clearing-only customers. The resources necessary for such monitoring obviously will depend on the physical layout of the exchange—the size of the trading floor and the number of trading pits, the floor population and daily trading volumes, and the level of familiarity the FCM has with the trading practices and objectives of its primary clearing customers. The FCM should be able to increase its floor presence in times of market stress.

3250.0.7.1.4 Carrying-Broker Risk

An FCM may enter into an agreement with another FCM to execute and clear transactions

11. Primary clearing customers include institutions and individuals, as well as other nonclearing futures professionals (locals or floor traders), who execute their own trades on the exchange and other nonclearing FCMs that execute trades for unaffiliated customers.

on behalf of the first FCM (typically, when the first FCM is not an exchange or clearing member of an exchange). In such cases, the FCM seeking another or carrying FCM to execute its transactions should have procedures for reviewing the creditworthiness of the carrying FCM. If the FCM reasonably expects that the carrying FCM will use yet another FCM to clear its transactions (for example, if the carrying FCM enters into its own carrying-broker relationship with another firm for purposes of executing or clearing transactions on another exchange), the first FCM should try to obtain an indemnification from the carrying FCM for any losses incurred on these transactions.¹² When carrying transactions occur on a foreign exchange, an FCM should know about the legal ramifications of the carrying relationship under the rules of the exchange and the laws of the host country. Moreover, it may be appropriate for an FCM to reach an agreement with its customers that addresses liabilities relative to transactions effected on a non-U.S. exchange by a carrying broker.

3250.0.7.1.5 Executing-FCM Risk

When an FCM uses an unaffiliated FCM to execute customer transactions under a give-up arrangement, the clearing firm that sponsors the executing FCM guarantees its performance. Therefore, the first FCM should review the subcontracting risk of its executing FCMs and their sponsoring clearing firms. However, unlike the clearing risk inherent in a carrying-broker relationship, the subcontracting risk for an FCM using an executing FCM is limited to transaction risk (execution errors). An FCM's management should approve each executing broker it uses, considering the broker's reputation for obtaining timely executions and the financial condition of its sponsoring clearing firm.

3250.0.7.1.6 Pit-Broker Risk

Usually, FCMs will subcontract the execution of their orders to unaffiliated pit brokers who accept

and execute transactions for numerous FCMs during the trading day. The risk associated with using a pit broker is similar to that of using an executing broker: the risk is limited to the broker's performance in completing the transaction. If the pit broker fails, then the primary clearing firm is responsible for completing the transaction. Therefore, an FCM should approve each pit broker it uses, considering the pit broker's reputation for obtaining timely executions and the resources of its sponsoring clearing firm.

3250.0.7.1.7 Clearinghouse Risk

Clearinghouse risk is the potential that a clearinghouse will require a member to meet loss-sharing assessments caused by another clearing member's failure. Before authorizing membership in an exchange or clearinghouse, an FCM's board of directors and its parent company must fully understand the initial and ongoing regulatory and financial requirements for members. The FCM's board of directors should approve membership in a clearinghouse only after a thorough consideration of the financial condition, settlement and default procedures, and loss-sharing requirements of the clearinghouse.

Particularly when it is considering membership in a foreign exchange or clearinghouse, an FCM's board should examine any regulatory and legal precedents related to how the exchange, clearinghouse, or host country views loss-sharing arrangements. As in the United States, some foreign clearinghouses have unlimited loss-sharing requirements, and some have "limited" requirements that are set at very high percentages. However, the loss-sharing provisions of some of the foreign clearinghouses have not yet been applied, which means that there are no legal and regulatory precedents for applying the stated requirements. In addition, the board should be apprised of any differences in how foreign accounts are viewed, for example, whether customer funds are considered separate from those of the FCM, whether the relationship between an FCM and its customer is viewed as an agency rather than a principal relationship, and whether there are material differences in the way futures activities are regulated.

The board also should be apprised of any material changes in the financial condition of every clearinghouse of which the FCM is a member. Senior management should monitor the financial condition of its clearinghouses as part of its risk-management function.

12. The CFTC takes the position that an FCM is responsible to its customers for losses arising from the failure of the performance of a carrying broker. The industry disagrees with this position, and the issue has not been resolved by the courts.

3250.0.7.1.8 *Guarantees*

FCM parent companies often are asked to provide assurances to customers and clearinghouses that warrant the FCM's performance. These arrangements may take the form of formal guarantees or less formal letters of comfort.

Under Regulation Y (section 225.28(b)(7)(iv)(B)), a bank holding company may not provide a guarantee to a clearinghouse for the performance of the FCM's customer obligations. A bank holding company may provide a letter of comfort or other agreement to the FCM's customers that states the parent (or affiliate) will reimburse the customers' funds on deposit with the FCM if they are lost as a result of the FCM's failure or default. Customers may seek this assurance to avoid losses that could arise from credit exposure created by another customer of the FCM, since the clearinghouse may use some or all of the FCM's customer-segregated funds in the event of a default by the FCM stemming from a failing customer's obligations.¹³ Examiners should note any permissible guarantees for purposes of the consolidated report of the parent bank holding company, as they are relevant to calculating the consolidated risk-based capital of the bank holding company.

3250.0.7.2 *Market Risk*

When an FCM acts as a broker on behalf of customers, it generally is only subject to market risk if it executes customers' transactions in error. In this regard, operational problems can expose the FCM to market fluctuations in contract values. However, when an FCM engages in proprietary trading, such as market making and other position-taking, it will be directly exposed to market risk. Potential market-risk exposure should be addressed appropriately in an FCM's policies and procedures.

An FCM that engages in proprietary trading should establish market-risk and trading parameters approved by its parent company. The FCM's senior management should establish an independent risk-management function to control and monitor proprietary trading activities. Finally, the FCM should institute procedures to control potential conflicts of interest between its brokerage and proprietary trading activities.

13. The letter of comfort would protect customers whose funds were used to cover other customer losses by the clearinghouse. U.S. clearinghouses also have guarantee funds that can be used to reimburse customers at the clearinghouse's discretion.

3250.0.7.3 *Liquidity Risk*

Liquidity risk is the risk that the FCM will not be able to meet its financial commitments (end-of-day and intraday margin calls) to its clearing FCM or clearinghouse. Clearing FCMs are required to establish an account at one of the settlement banks used by the clearinghouse for its accounts and the accounts of its clearing members. In some foreign jurisdictions, the central bank fulfills this settlement function. An FCM should establish and monitor daily settlement limits for its customers and should ensure that there are back-up liquidity facilities to meet any unexpected shortfalls in same-day funds. To ensure the safety of its funds and assets, an FCM should also monitor the financial condition of the settlement bank it has chosen and should be prepared to transfer its funds and assets to another settlement bank, when necessary.

To control other types of liquidity risks, an FCM should adopt contingency plans for liquidity demands that may arise from dramatic market changes. An FCM, to the extent possible, should monitor the markets it trades in to identify undue concentrations by others that could create an illiquid market, thereby creating a risk that the FCM could not liquidate its positions. Most U.S. clearinghouses monitor concentrations and will contact an FCM that holds more than a certain percentage of the open interest in a product. In some situations, the exchange could sanction or discipline the FCM if it finds that the FCM, by holding the undue concentration, was attempting to manipulate the market. These prudential safeguards may not be in place on foreign exchanges; consequently, an FCM will have to establish procedures to monitor its liquidity risk on those exchanges.

3250.0.7.4 *Reputation Risk*

FCMs should have reporting procedures in place to ensure that any material events that harm its reputation, and the reputations of its bank affiliates, are brought to the attention of senior management; the FCM's board of directors; and, when appropriate, its parent company. Reports of potentially damaging events should be sent to senior management at the parent bank holding company, who will evaluate their effect on the FCM to determine what, if any, steps should be taken to mitigate the impact of the event on the whole organization.

3250.0.7.4.1 Commodity Trading Adviser

Acting as a commodity trading adviser (including providing discretionary investment advice to retail and institutional customers or commodity pools) may pose reputation and litigation risks to a CTA or an FCM, particularly when retail customers are involved. Accordingly, the FCM's board should adopt policies and procedures addressing compliance with CFTC and NFA sales-practice rules (including compliance with the "know your customer" recordkeeping rules).

3250.0.7.5 Operations Risk, Internal Controls, Internal Audits, and Compliance

3250.0.7.5.1 Operations Risk

Operations risk is the potential that deficiencies in information systems or internal controls will result in unexpected loss. Some specific sources of operating risk at FCMs include inadequate procedures, human error, system failure, or fraud. For FCMs, failure to assess or control operating risks accurately can be a likely source of problems. Back-office or transaction-processing operations are an important source of operations-risk exposures. In conducting reviews of back-office operations, examiners should consult the appropriate chapters of the *Trading and Capital-Markets Activities Manual* for further guidance.

Operations risk also includes potential losses from computer and communication systems that are unable to handle the volume of FCM transactions, particularly in periods of market stress. FCMs should have procedures that address the operations risks of these systems, including contingency plans to handle systems failures and back-up facilities for critical parts of risk-management, communications, and accounting systems.

When FCMs execute or clear transactions in nonfinancial commodities, they may have to take delivery of a commodity because a customer is unable or unwilling to make or take delivery on its contract. To address this situation, the FCM should have in place the procedures it will follow to terminate its position and avoid dealing in physical commodities.

3250.0.7.5.2 Internal Controls

Adequate internal controls are the first line of defense in controlling the operations risks

involved in FCM activities. Internal controls that ensure the separation of duties involving account acceptance, order receipt, execution, confirmation, margin processing, and accounting are particularly important. Internal controls should also be established to record, track, and resolve errors and discrepancies with customers and other parties.

FCMs should have approved policies that specify documentation requirements for transactions and formal procedures for saving and safeguarding important documents, consistent with legal requirements and internal policies. Relevant personnel should fully understand documentation requirements. Examiners should also consider the extent to which entities evaluate and control operations risks through internal audits, contingency planning, and other managerial and analytical techniques.

3250.0.7.6 Internal Audits and Their Review

An FCM should be subject to regular internal audits to confirm that it complies with its policies and procedures and is managed in a safe and sound manner. In addition, the internal audit function should review any significant issues raised by compliance personnel to ensure that they are resolved. Other staff within the FCM (i.e., compliance personnel) should be able to reach internal audit staff to discuss any serious concerns they might have. Internal audit reports should be forwarded to the FCM's senior management. Material findings and management's plan to resolve the audit issues should be reported to the FCM's board of directors, the parent company, and any designated board committee (for example, an audit committee). Frequently, the internal audit function is located at the parent company, and audit reports are routinely sent to senior management at the parent company and to the audit committee designated by the board of directors.

3250.0.8 INSPECTION GUIDANCE

The review of an FCM's functions should take a functional-regulatory approach, using the findings of the FCM's primary regulators as much as possible. Examiners should especially focus on the significant risks that the FCM poses to the parent company and affiliated banks. These risks should be assessed by reviewing the

adequacy of the FCM's policies and procedures, internal controls, and risk-management functions. Compliance with policies and procedures, and with any conditions on the FCM's activities imposed by regulatory authorities (including the Federal Reserve Board), should be fully reviewed.

Bank holding companies, banks, and FBOs may have more than one subsidiary that acts as an FCM in the United States or that engages in futures transactions for customers in foreign markets. To ensure that the FCM/CTA activities of a banking organization are evaluated on a consolidated basis, a cross-section of affiliated futures brokerage and advisory firms should be reviewed periodically—particularly those that present the greatest risk to the consolidated financial organization. Relevant factors to consider when identifying firms for review include (1) the volume of business; (2) whether the FCM has unaffiliated customers; (3) the number of customers; (4) whether the firm provides customer financing; (5) the number of brokers effecting transactions; (6) whether exchange or clearinghouse memberships are involved; (7) whether the FCM provides clearing-only services; and (8) the date and scope of the last review conducted by the Federal Reserve, SRO, or other regulator.

The scope of any review to be conducted depends on the size of the FCM and the scope of its activities. The draft first-day letter should provide an overview of an FCM's authorized activities and conditions, as well as a description of the actual scope of its business. Examiners should review the most recent summary of management points or other inspection results issued by the FCM's SRO or other regulator, as well as any correspondence between the FCM and any federal agency or SRO. If examiners have any questions about the findings of an SRO's or a regulator's results, they should contact the organization to determine whether the matter is material and relevant to the current inspection. The status of any matters left open after the SRO's or regulator's review should also be inquired about.

An important factor in determining the scope of the inspection is whether the FCM has unaffiliated customers or conducts transactions solely for affiliates. Other factors include whether (1) the FCM is a clearing member of an exchange, particularly of a non-U.S. exchange; (2) it acts as a carrying broker on behalf of other FCMs; (3) it has omnibus accounts with other brokers in markets in which it is not a member (U.S. or foreign); (4) it provides advisory or portfolio management services, including discretionary accounts, or has been authorized to act as a

commodity pool operator (CPO); (5) it provides clearing services to locals or market-makers; and (6) it provides financing services to customers.¹⁴

Examiners are not expected to routinely perform a front- or back-office inspection unless (1) the FCM's primary regulator found material deficiencies in either office during its most recent examination or (2) if front- or back-office operations have not been examined by the primary regulator within the last two years. However, examiners may still choose to review a small sample of accounts and transactions to confirm that appropriate controls are in place. In addition, net capital computations of U.S. FCMs do not need to be reviewed; they are reviewed by the FCM's DSRO, and the FCM is subject to reporting requirements if capital falls below warning levels. Examiners should perform a front- and back-office review of the FCM's operations outside of the United States.¹⁵

Review of audit function. Examiners may rely on well-documented internal audit reports and workpapers to verify the adequacy of risk management at the FCM. Examiners should review the internal audit reports and workpapers to determine the adequacy of their scope and thoroughness in complying with FCM policies and procedures. If an examiner finds that an internal audit adequately documents the FCM's compliance with a policy or procedure pertaining to the management of the various risk assessments required by the current inspection, that fact should be documented in the workpapers, and inspection procedures should be completed in any area not adequately addressed by the internal audit report. Examiners should periodically spot check areas covered by internal audits to ensure the ongoing integrity of the audit process. Finally, examiners should ensure that internal auditors have adequate training to evaluate

14. If the FCM engages in proprietary trading for its own account, particularly for purposes other than hedging (market making or position taking), or if the FCM acts as an intermediary in any over-the-counter futures or other derivative activities, the examiner should advise the examiner in charge of the inspection so that the firm's proprietary trading can be evaluated in connection with similar activities of the consolidated financial organization.

15. The inspection procedures for reviewing front- and back-office operations may be found in sections 2050.3 and 2060.3, respectively, of the *Trading and Capital-Markets Activities Manual*.

the FCM's compliance with its policies and procedures and with applicable laws and regulations (both inside and, if applicable, outside the United States).

If an examiner has determined that it is not necessary to perform a routine back-office review, he or she should confirm that the FCM has addressed operations risks in its policies and procedures. Examiners also should review the internal controls of an FCM to ensure that the firm is operated safely and soundly according to industry standards and that it complies with any Board regulations or conditions placed on the FCM's activities. Examiners should be alert to any "red flags" that might indicate inadequate internal controls. An FCM must be organized so that its sales, operations, and compliance functions are separate and managed independently. If an FCM engages in proprietary trading, examiners should confirm that the firm has procedures that protect against conflicts of interest in the handling of customer orders (examples of these conflicts of interest include front-running or ex-pit transactions). To make an overall assessment of the FCM's future business, the results of any review should be consolidated with the results of reviews by other FCMs inspected during this cycle.

3250.0.9 INSPECTION OBJECTIVES

1. To identify the potential and extent of various risks associated with the FCM's activities, including credit, market, liquidity, and reputation risks.
2. To evaluate the adequacy of the audit function and review significant findings, the method of follow-up, and management's response to correct any deficiencies.
3. To assess the adequacy of the risk-management function at the FCM.
4. To assess the adequacy of and compliance with the FCM's policies and procedures and the adequacy of the internal control function.
5. To evaluate and determine the FCM's level of compliance with relevant statutes, Board regulations, interpretations, orders, and policies.
6. To assess the adequacy of risk management of affiliated FCMs on a consolidated basis.

3250.0.10 INSPECTION PROCEDURES

3250.0.10.1 Structural Organization and Activity Analysis

3250.0.10.1.1 General

1. Identify all bank holding company subsidiaries that engage in FCM- or CTA-type activities in the United States or abroad or identify U.S. FCM/CTA subsidiaries of FBOs. Determine which firms should be inspected to provide a global view of the adequacy of management of these activities on a consolidated basis, based on the scope of activities and the degree of supervision by other regulators. Complete applicable procedures below for firms selected for inspection.
2. Review first-day-letter documents, notices filed under Regulation Y, Board orders and letters authorizing activities, previous inspection reports and workpapers, previous audit reports by futures regulators (CFTC, DSRO, National Futures Association, foreign futures regulator) and correspondence exchanged with those regulatory entities, and reports by internal or external auditors or consultants.
3. Note the scope of the FCM's activities, including—
 - a. execution and clearing;
 - b. execution only for affiliates and third parties;
 - c. clearing-only for affiliates, third parties, professional floor traders (locals);
 - d. pit brokerage;
 - e. advisory;
 - f. discretionary portfolio management;
 - g. commodities or commodity pool operator (in FCM or in affiliate);
 - h. margin financing;
 - i. proprietary trading;
 - j. exchange market maker or specialist;
 - k. types of instruments (for example, financial, agricultural, precious metals, petroleum);
 - l. contract markets where business is directed;
 - m. other derivatives products (should be identified, for example, interest-rate swaps and related derivative contracts, foreign-exchange derivative contracts, foreign government securities, other);
 - n. other futures-related activities, including off-exchange transactions;
 - o. riskless-principal transactions; and
 - p. registered broker-dealers.
4. Note exchange and clearinghouse memberships here and abroad, noting any financial commitments and any guarantees by the FCM

- or its parent¹⁶ to the exchange or clearinghouse with respect to proprietary, affiliate, or customer transactions.
5. Note any new lines of business or activities occurring at the FCM or any changes to exchange and clearing memberships since the last inspection.
 6. Note the percentage of business conducted for—
 - a. affiliate banks,
 - b. nonbank affiliates,
 - c. customers (note the breakdown between institutional and retail customers and if there is any guarantee or letter of comfort to customers in which the parent company provides that it will reimburse customers for loss as a result of the FCM's failure or other default),
 - d. proprietary accounts (hedging, position-taking), and
 - e. professional floor traders (locals, market makers).

3250.0.10.1.2 Audit Program

Determine the quality of the internal audit program. Assess the scope, frequency, and quality of the audit program for the FCM and related activities. Consider spot checking areas covered by internal audits.

1. Review the most recent audit report, noting any exceptions and their resolution.
2. Determine whether internal auditors have adequate training to evaluate the FCM's compliance with its policies and procedures and with applicable laws and regulations.
3. Verify that audit findings have been communicated to senior management and material findings have been reported to the FCM's board of directors and parent company.
4. Identify any areas covered by these procedures that are not adequately addressed by the internal audit report.
5. Identify areas of the internal audit report that should be verified as part of the current inspection.

3250.0.10.1.3 Operational Activities

Determine the scope of review that is appropriate to activities and allocate examiner resources,

¹⁶ The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

considering the adequacy of internal audit workpapers.

1. Complete the appropriate front- and/or back-office inspection procedures when—
 - a. front- and back-office operations have not been examined by the DSRO within the last two years,
 - b. material deficiencies in front- or back-office operations were found by the DSRO during the most recent audit, or
 - c. the primary regulator for the FCM is not a U.S. entity.
2. Advise the examiner in charge of the inspection of the parent company if the FCM engages in proprietary trading or over-the-counter futures or derivatives business as principal or agent.

3250.0.10.2 Board and Senior Management Oversight

1. Review the background and experience of the FCM's board of directors and senior management, noting prior banking and futures brokerage experience.
2. Determine if the board of directors of the FCM has approved written policies summarizing the firm's activities listed below, and addressing oversight by the board or a board-designated committee:
 - a. the risk appropriate for the FCM, including credit, market, liquidity, operation, reputation, and legal risk (see SR-95-51)
 - b. the monitoring of compliance with risk parameters
 - c. the exchange and clearinghouse memberships
 - d. the internal audit function
3. Determine if senior management of the FCM has adopted procedures implementing the board's policies for—
 - a. approval of new-product lines and other activities;
 - b. transactions with affiliates;
 - c. transactions by employees;
 - d. compliance with applicable regulations and policies and procedures;
 - e. management information reports;
 - f. the separation of sales, operations, back-office, and compliance functions; and
 - g. reports to the FCM boards of directors on material findings of the complaint or audit

- functions and on material deficiencies identified during the course of regulatory audits or inspections.
4. Determine that policies and procedures are periodically reviewed by the board of directors or senior management, as appropriate, and ensure that they comply with existing regulatory and supervisory standards and address all of the FCM's activities.
 5. Review management information reporting systems and determine whether the board of directors of the parent company (or a designated committee of the parent's board) is apprised of—
 - a. material developments at the FCM,
 - b. the financial position of the firm including significant credit exposures,
 - c. the adequacy of risk management,
 - d. material findings of the audit or compliance functions, and
 - e. material deficiencies identified during the course of regulatory reviews or inspections.
 6. Review the FCM's strategic plan.
 - a. Assess whether there are material inconsistencies between the stated plans and the FCM's stated risk tolerances.
 - b. Verify that the strategic plan is reviewed and periodically updated.
- risks associated with the volume of transactions executed or cleared for the customer.
5. Evaluate the adequacy of credit-risk-management policies. Determine if they—
 - a. establish and require adequately documented credit limits for each customer that reflect their respective financial strengths, liquidity, trading objectives, and potential market risk associated with the products traded;
 - b. require periodic updates of such credit limits in light of changes in the financial condition of each customer and market conditions; and
 - c. do not permit the FCM to waive important broker safeguards, such as the right to liquidate customer positions upon default or late payment of margin.
 6. Consider verifying the above information by sampling customer-credit files.
 7. Verify that up-to-date customer-credit files are maintained on site or are available for review during the inspection. If the customer-credit approval was performed by the parent company or an affiliate bank, verify that the FCM's files contain information indicating the scope of the credit review, the approval, and credit limits.
 8. Review notifications and approval of limit exceptions for compliance with FCM procedures.
 9. Determine whether the FCM has adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (for example, when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions).
 10. Evaluate the adequacy of risk management of customer-financing activities.
 11. Determine that the credit-review process is independent from the marketing, sales, and financing function.
 - a. Verify that the FCM has policies that identify customer-credit standards and that it establishes overall lending limits for each customer.
 - b. Assess the adequacy of the credit-review process and documentation, even when credit review is performed by an affiliate.
 12. Review the instances when the FCM has lent margin to customers on an unsecured basis. If the FCM does not engage in margin financing as a business line, verify that extensions are short-term and within the operational threshold set for the customer.

3250.0.10.3 Risk Management

3250.0.10.3.1 *Credit Risk*

1. Review credit-risk policies and procedures.
 - a. Verify the independence of credit-review approval from the limit-exceptions approval.
 - b. Verify that the procedures designate a senior officer with the responsibility to monitor and approve limit-exception approvals.
2. Determine whether the FCM has authority to open customer accounts without parent company approval.
3. Review the customer base (affiliates, third parties) for credit quality in terms of affiliation and business activity (affiliates, corporate, retail, managed funds, floor traders, etc.).
4. Evaluate the process for customer-credit review and approval. Determine whether the customer-credit review identifies credit

3250.0.10.3.2 Clearing-Only Risk

1. Determine whether each clearing arrangement is in writing and that it—
 - a. identifies the customer and executing brokers, and defines and adequately documents the respective rights and obligations of each party;
 - b. establishes overall limits and trading parameters for the customer that are based on the customer’s creditworthiness and trading objectives; and
 - c. permits transaction limits to be adjusted to accommodate market conditions or changes in the customer’s financial condition.
2. When the FCM has entered into a clearing-only agreement with a customer, verify that it has reviewed the creditworthiness of each executing broker or its qualifying clearing firm identified in the agreement.
3. If the FCM acts as the primary clearing firm for locals or other customers, confirm that the firm has adopted procedures for monitoring and controlling exposure. Note whether the firm monitors customer positions throughout the trading day and how this monitoring is accomplished.

3250.0.10.3.3 Carrying Brokers, Executing Brokers, and Pit Brokers

1. If the FCM uses other brokers to execute and/or clear transactions, either on an omnibus or a fully disclosed basis, determine that it has adequately reviewed the creditworthiness and approved the use of the other brokers. If the FCM uses nonaffiliated executing brokers, confirm that it also has considered the reputation of the broker’s primary clearing firm. If the other broker is likely to use another broker, determine whether the broker has given the FCM an indemnification against any loss that results from the performance or failure of the other broker.
2. If the FCM uses other brokers to execute or clear transactions in non-U.S. markets, determine whether senior management understands the legal risks pertinent to doing business in those markets and has adopted policies for managing those risks.
3. When the FCM uses third-party “pit brokers” to execute transactions, verify that the FCM has reviewed and approved each broker after considering the reputation of the pit broker’s primary clearing firm.

3250.0.10.3.4 Exchange and Clearinghouse Membership

1. Verify that the FCM completes a due-diligence study of each exchange and clearinghouse before applying for membership in the organization.
 - a. Determine whether board minutes approving membership demonstrate a thorough understanding of the loss-assessment provisions and other obligations of membership for each exchange and clearinghouse, as well as a general understanding of the regulatory scheme.
 - b. Determine whether, in approving membership in a non-U.S. exchange or clearinghouse, the board’s minutes indicate a discussion of the regulatory environment and any relevant credit, liquidity, and legal risks associated with doing business in the particular jurisdiction. The minutes should also reflect discussion of any material differences from U.S. precedent in how foreign accounts are viewed, for example, whether customer funds held in an omnibus account are considered separate (segregated) from those of the FCM or whether the relationship between the FCM and its customers is viewed as an agency or principal relationship in the host country.
2. Verify that the FCM has apprised its parent company of the results of its study of the exchange or clearinghouse and that it has written authorization by senior management of its parent company to apply for membership.
3. Verify that the FCM monitors the financial condition of each exchange and clearing organization for which it is a member.
4. Review all guarantees, letters of comfort, or other forms of potential contingent liability. Verify that the parent company has not provided a guarantee to the clearinghouse for the performance of the FCM’s customer obligations.¹⁷ Note any guarantees against the parent losses incurred from the failure of an FCM and advise the examiner in charge of the parent company’s inspection, who can confirm that guarantees are included in the

17. The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

bank holding company's calculation of consolidated risk-based capital.

3250.0.10.3.5 *Market Risk*

1. If an FCM engages in proprietary trading, determine whether policies and procedures are in place to control potential conflicts of interest between its brokerage business and trading activities.
2. When an FCM plans to enter (or has entered into) a foreign market, determine if the FCM performed due-diligence reviews of relevant legal and regulatory issues, as well as on local business practices.

3250.0.10.3.6 *Liquidity Risk*

1. Verify that the FCM has established and monitors daily settlement limits for each customer to ensure that liquidity is sufficient to meet clearinghouse obligations.
2. Determine whether the FCM has established back-up liquidity facilities to meet unexpected shortfalls.
3. Verify that the FCM monitors by product the amount of open interest (concentrations) that it holds at each exchange, either directly or indirectly through other brokers. If positions are held on foreign exchanges and concentrations are not monitored, verify that the FCM is able to monitor its positions and manage its potential liquidity risks arising from that market.
4. Review liquidity contingency plans for dealing with dramatic market changes.

3250.0.10.3.7 *Reputation Risk*

1. Review management information reporting systems and determine whether—
 - a. the FCM is able to assess the extent of any material exposure to legal or reputation risk arising from its activities, and
 - b. the parent company receives sufficient information from the FCM to assess the extent of any material exposure to litigation or reputation risk arising from the FCM's activities.
2. If the FCM provides investment advice to customers or commodity pools, determine whether it has procedures designed to mini-

mize the risks associated with advisory activities. Such procedures might address the delivery of risk disclosures to customers, the types of transactions and trading strategies that could be recommended or effected for retail customers, compliance with the "know your customer" recordkeeping and other sales practice rules of the SROs, and conformance to any trading objectives established by the customer or fund.

3. If the FCM acts as a CPO, verify that it has obtained prior Board approval and is in compliance with any conditions in the Board order.

3250.0.10.4 *Operations, Internal Controls, and Compliance*

1. Determine the extent to which operating risk is evaluated and controlled through the use of internal audits, contingency planning, and other managerial and analytical techniques.
2. Review the most recent summary of management points or similar document and also respective correspondence issued by the FCM's DSRO or other primary futures regulator. Discuss any criticism with FCM management and confirm that corrective action has been taken.
3. Consider reviewing a small sample of accounts and transactions to confirm that appropriate controls are used and that the FCM has incorporated operations risks into its policies and procedures.
4. Review the organizational structure and reporting lines within the FCM and verify separation of sales, trading, operations, compliance, and audit functions.
5. Determine that the FCM's policies and procedures address the booking of transactions by affiliates and employees and other potential conflicts of interest.
6. If the FCM is authorized to act as a CPO, review the most recent NFA or other primary futures regulator's audit, including any informal findings by examiners. Discuss any criticism with the FCM management and confirm that corrective action has been taken.
7. If the FCM executes and clears nonfinancial futures, verify that the FCM has procedures to avoid taking physical possession of the nonfinancial product when effecting "exchange for physical transactions" for customers.

8. When the FCM takes physical delivery of commodities due to failure or unwillingness of a customer to make or take delivery of its contracts, determine whether the FCM has and follows procedures to close out its position. Note if the FCM frequently takes delivery of physical commodities.
9. Assess the adequacy of customer-complaint review by reviewing the complaint file and how complaints are resolved. Note if the FCM receives repeat or multiple complaints involving one or more of its activities or employees.
10. Determine whether the FCM has developed contingency plans that describe actions to be taken in times of market disruptions and

whether such plans address management responsibilities, including communications with its parent bank holding company, liquidity, the effect on customer-credit quality, and communications with customers.

3250.0.10.5 Conclusions

1. Prepare inspection findings and draw conclusions as to the adequacy of the FCM’s risk-management, compliance, operations, internal controls, and audit functions.
2. Present findings to FCM management and submit inspection findings to the examiner in charge of the parent company inspection.

3250.0.11 FCM Supplemental Checklist Questionnaire

	<i>Yes</i>	<i>No</i>
3250.0.11.1 General Questions		
1. Is the FCM a separately incorporated subsidiary of the bank holding company as required by Regulation Y, 12 C.F.R. 225.28(b)(6)(iv)?	_____	_____
2. Has the parent bank holding company provided a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by a subsidiary for its own account or for the account of any affiliate (prohibited by Regulation Y (see 12 C.F.R. 225.28(b)(6)(iv)))?	_____	_____
3. How long has the FCM been in operation? _____ yrs.		
4. Approximately how many customers does the FCM have? _____		
5. What degree of market participation does the FCM have (mark (x) for the highest level of involvement)?		
a. _____ FCM, nonmember of futures exchange. Must execute trades through exchange members and is subject to NFA rules.		
b. _____ Exchange member. Holds membership on one or more futures exchanges entitling FCM to execute trades on the exchange(s) and subjecting FCM to the rules of exchange(s).		
c. _____ Clearinghouse member. Holds membership in an exchange’s clearinghouse as well as exchange membership, thus enabling FCM to execute and clear its own transactions. Such FCM is subject to exchange and clearinghouse rules.		
6. If FCM is an exchange member, on which exchange(s) (domestic and foreign) does the FCM have membership(s)?		

	<i>Yes</i>	<i>No</i>
7. If FCM is a clearing member, list below the clearinghouse(s) of which it is a member. _____ _____ _____		
8. Does the FCM periodically make an adjusted net capital computation to verify that it maintains capitalization fully adequate to meet its own commitments and those of its customers, including affiliates? (NOTE: Under the CFTC's net capital computations, there have been no capital requirements for "hedge" transactions by FCM affiliate banks. It may be necessary to request that an adjusted net capital computation be made to determine the amount of adjusted net capital required when affiliate trades are treated as third-party transactions.)	_____	_____
9. Does a review of the FCM's correspondence from its designated self-regulatory organization reveal that the FCM meets CFTC requirements with respect to capital rules, segregation of customer assets, and risk disclosure?	_____	_____
10. If an FCM will receive services from an affiliate (e.g., the lead bank assesses FCM customer-credit risk or monitors customer positions and margin accounts), have the FCM and affiliate entered into a formal service agreement on an explicit fee basis?	_____	_____

3250.0.11.2 Management

1. Does the FCM's management have expertise and previous experience as a broker, dealer, or participant in cash, futures, or forward markets related to those in which the FCM executes transactions?	_____	_____
2. Does the FCM's management have prior banking experience?	_____	_____
3. Does it appear that management has the expertise necessary to evaluate the viability of various hedging strategies?	_____	_____
4. Does it appear that FCM management has the ability to recognize imprudent or unsafe customer activity that could endanger the FCM?	_____	_____
5. Does the board of directors have written policies that summarize the firm's activities and its oversight function (certain functions may be designated to a board audit or other committee) with respect to—		
a. risk appropriate for the FCM?	_____	_____
b. compliance monitoring and risk parameters?	_____	_____

3250.0.11.3 Controls of Risk Exposure with Customers

1. Does the FCM have a system for assessing and periodically re-evaluating customer-credit risk?	_____	_____
--	-------	-------

	<i>Yes</i>	<i>No</i>
2. Does the FCM take customer-credit risk into consideration and establish for each customer—	_____	_____
a. position limits for each contract the customer wishes to trade?	_____	_____
b. an aggregate position limit for outstanding contracts held by each customer?	_____	_____
3. Does the FCM have a system for monitoring customer positions to ensure positions are within the limits imposed by the FCM?	_____	_____
4. Does the FCM have an adequate system in place to monitor its overall risk exposure, primarily customer-default risk, on a daily basis?	_____	_____
5. Do customer agreements and internal procedures enable the FCM to—		
a. limit the types of trades a customer engages in?	_____	_____
b. refuse, when appropriate, to execute any trades except those resulting in liquidation of existing positions?	_____	_____

3250.0.11.4 Margin Requirements

1. Does the FCM have a system for daily monitoring of margin accounts to ensure that margin calls are promptly issued and satisfied?	_____	_____
2. Does the customer agreement permit and has the FCM adopted procedures for liquidating a customer's position if margin calls are not promptly satisfied?	_____	_____
3. Do customer-account agreements authorize the FCM to require higher initial and variation margin levels than those set by the exchanges?	_____	_____
4. Does the FCM have a system in place for obtaining higher customer margins in instances when the FCM determines—		
a. a customer's futures position or deteriorating financial condition necessitates a greater amount of margin to protect the FCM?	_____	_____
b. volatile market conditions justify higher levels of margin than those required by an exchange?	_____	_____

3250.0.11.5 Credit Risk

1. Is the credit-review approval independent from the limit-exceptions approval?	_____	_____
2. Does a senior officer monitor and approve limit-exception approvals?	_____	_____
3. Does the customer-credit review identify credit risks associated with the volume of transactions executed or cleared for the customer?	_____	_____
4. Is adequate documentation required and maintained of credit limits for each customer that reflect customers' respective financial strengths and liquidity, trading objectives, and the potential market risk associated with the products traded?	_____	_____
5. Has the FCM adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (e.g., when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions)?	_____	_____
6. Is the credit-review process independent from the marketing/sales function and the financing function?	_____	_____

	<i>Yes</i>	<i>No</i>
3250.0.11.6 Clearing-Only Risk		
1. Is each arrangement in writing and does it—		
a. identify the customer, executing brokers, and define and adequately document the respective rights and obligations of each party?	_____	_____
b. establish overall limits and trading parameters for the customer that are based on the customer's creditworthiness and trading objectives?	_____	_____
c. permit transaction limits to be adjusted to accommodate market conditions or changes in the customer's financial condition?	_____	_____
2. Has the FCM or its qualifying clearing firm verified that it has reviewed the creditworthiness of each executing broker?	_____	_____
3. If the FCM acts as the primary clearing firm for locals or other customers, has the firm adopted procedures for monitoring and controlling exposure throughout the trading day?	_____	_____
3250.0.11.7 Carrying Brokers, Executing Brokers, and Pit Brokers		
1. If the FCM uses other brokers to execute and/or clear transactions, either on an omnibus or fully disclosed basis, has it adequately reviewed the creditworthiness and approved the use of the other brokers?	_____	_____
2. Has the FCM been given an indemnification against any loss that results from the performance or failure of the other broker?	_____	_____
3. If the FCM uses nonaffiliated executing brokers, has it considered the reputation of the broker's primary clearing firm?	_____	_____
3250.0.11.8 Exchange and Clearinghouse Membership		
1. Does the FCM complete a due-diligence study of each exchange and clearinghouse before applying for membership in such organization?	_____	_____
2. Do the board minutes approving such memberships demonstrate a thorough understanding of the loss-assessment provisions and other obligations of membership for each exchange and clearinghouse, as well as a general understanding of the regulatory scheme?	_____	_____
3. In approving membership in a non-U.S. exchange or clearinghouse, do the board minutes evidence a discussion of the regulatory environment and any relevant credit, liquidity, and legal risks associated with doing business in a particular jurisdiction?	_____	_____
4. Does the FCM monitor the financial condition of each exchange and clearing organization for which it is a member?	_____	_____
3250.0.11.9 Market Risk		
1. If an FCM engages in proprietary trading, are policies and procedures in place to control potential conflicts of interest between its brokerage business and trading activities?	_____	_____
2. If an FCM has entered or plans to enter a foreign market, has the FCM performed due-diligence reviews of relevant legal and regulatory issues, as well as on local business practices?	_____	_____

	<i>Yes</i>	<i>No</i>
3250.0.11.10 Liquidity Risk		
1. Has the FCM established and does it monitor daily settlement limits for each customer to ensure liquidity sufficient to meet clearinghouse obligations?	_____	_____
2. Has the FCM established back-up liquidity facilities to meet unexpected shortfalls?	_____	_____
3. Does the FCM monitor the amount of open interest (concentrations) by product that it holds, directly or indirectly, at each exchange?	_____	_____
3250.0.11.11 Reputation Risk		
1. Is the FCM able to assess the extent of any material exposure to legal or reputation risk arising from its activities?	_____	_____
2. Does the parent company receive sufficient information from the FCM's information systems to assess the extent of any material exposure to litigation or reputation risk arising from the FCM's activities?	_____	_____
3. If the FCM provides investment advice to customers or commodity pools, does it have procedures designed to minimize the risks associated with advisory activities?	_____	_____
4. If the FCM acts as a CPO, has it obtained prior Board approval and is it in compliance with any conditions in the Board order?	_____	_____
3250.0.11.12 Internal Controls		
1. Does the FCM have written procedures pertaining to the following:		
a. the types of futures and options on futures contracts which the FCM will execute?	_____	_____
b. individuals authorized to effect transactions and sign contracts and confirmations?	_____	_____
c. the firms or individuals with whom FCM employees may conduct business?	_____	_____
2. Does the FCM obtain written authorization from customers specifying the individuals who are authorized to execute trades on behalf of the customers?	_____	_____
3. Does the FCM have written procedures governing—		
a. the solicitation and acceptance of customers?	_____	_____
b. the execution of purchases and sales?	_____	_____
c. processing transactions?	_____	_____
d. accounting for transactions?	_____	_____
e. clearing of transactions?	_____	_____
f. safekeeping of customer margin deposits or securities deposited as margin?	_____	_____
4. Does the FCM have written contracts with all firms or individuals who may conduct business on behalf of the FCM?	_____	_____
5. Does the FCM have proper segregation of duties to ensure that individuals involved in executing transactions are not able to make accounting entries?	_____	_____
6. Does the FCM have a numbered and controlled system of order tickets and confirmations to prevent unauthorized trading and to verify the accuracy of records and enable reconciliation throughout the system?	_____	_____

	<i>Yes</i>	<i>No</i>
7. Does the FCM have procedures to time stamp receipt of all orders at least to the nearest minute and execute all orders strictly in chronological sequence (to the extent consistent with the customers' specifications)?	_____	_____
8. Does the FCM have a system for routing incoming confirmations to an operating unit separate from the unit that executes transactions?	_____	_____
9. Does the FCM have a system for comparing internal and external confirmations to ensure that the FCM will not accept or deliver securities and/or margin payments without proper authorization and documentation?	_____	_____
10. Does the FCM have procedures to ensure that someone outside the trading unit is responsible for resolution of trades in which incoming and outgoing confirmations do not match?	_____	_____
11. With respect to transactions cleared by others, are procedures in place for verifying and agreeing clearing FCM open position and margin deposit reports?	_____	_____
12. Does the FCM review daily outstanding contracts, customer positions, and margin balances?	_____	_____
13. Does FCM management regularly review all adjustments affecting futures positions or income recognition to verify that such adjustments were proper and approved?	_____	_____
14. Are subsidiary ledgers regularly reconciled to the general ledger?	_____	_____
15. Has the FCM adopted written supervisory procedures for supervising brokers and others to ensure that they follow written policies and procedures?	_____	_____
16. Are there written procedures containing criteria for selecting and training competent personnel?	_____	_____
17. Does the FCM have a comprehensive reporting system for providing management with all the information necessary to effectively manage the FCM's operations?	_____	_____
18. Are procedures in place to ensure that any futures advisory services (investment advice) furnished—		
a. reflect the views of persons authorized to supervise advisory activities?	_____	_____
b. are authorized under Regulation Y or by Board order?	_____	_____
19. Is there a formal and comprehensive internal audit program pertaining to FCM activities?	_____	_____

4(c)(8)—Agency Transactional Services (Futures Commission Merchant Board Orders) Section 3251.0

This section serves as a prelude to the futures commission merchant activities (FCM) that are provided as examples of previous Board FCM decisions. Sections 3251.0.1 through 3251.0.13 provide brief historical summaries of Board decisions that may have led to the authorizations that have been incorporated into the April 1997 revision of Regulation Y for this activity. The summaries provide the reader with some historical perspective as to how and why the current provisions of Regulation Y evolved for FCMs. Certain conditions and commitments within these orders may no longer apply to the current provisions of Regulation Y. Therefore, reference must be made to the current Regulation Y, section 225.28(b)(7)(iv).

3251.0.1 FCM BROKERAGE OF FUTURES CONTRACTS ON A MUNICIPAL BOND INDEX

A bank holding company applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to engage de novo, through a wholly owned subsidiary located in the state of New York, to execute and clear futures contracts on a municipal bond index. The applicant also proposed to offer futures advisory services for a separate fee or as an integrated package of services to futures commission merchant customers through the subsidiary.

The Board had previously approved by regulation the activity of executing and clearing futures contracts on bullion, foreign exchange, U.S. government securities, and money market instruments, primarily on the basis that banks may hold and deal in the underlying cash items. The proposed futures contract on a municipal bond index was based on an index of general obligation bonds selected by the *The Bond Buyer*. The Bond Buyer Municipal Index is composed of 50 tax-exempt municipal revenue and general obligation bonds chosen on the basis of criteria that favor recently issued and actively traded bonds. The index is intended to be an accurate indicator of trends and changes in the municipal bond market. The offering of futures contracts based on the bond index (broad spectrum of municipal securities) could provide FCM customers with a more effective tool for hedging against the price risk associated with a portfolio of municipal bonds than any of the existing interest-rate futures contracts.

Banks are permitted to hold and deal in general obligation bonds, and they are active participants in the cash markets for those bonds. Based on these facts, the Board determined that the applicant's proposal was substantially similar to proposals to broker other financial futures previously approved by the Board, and was thus closely related to banking.

With regard to the proposed advisory activities, the Board had previously approved by order the provision of advisory services relating to approved FCM activities (1984 FRB 780). The applicant proposed to provide advisory services either for a separate fee or as an integral package of services to FCM customers. The services would include written or oral presentations on the historical relationship between the cash and futures markets, a demonstration of examples of financial futures uses for hedging, and assistance in structuring a hedging strategy. The applicant would provide these services only to major corporations and other financial institutions.

Based on all the facts provided, the Board concluded that—

1. the proposed activities by the applicant could reasonably be expected to produce benefits to the public;
2. the proposed FCM activities would entail risks or conflicts of interests different than those considered and addressed by the Board in its approvals of other FCM activities; and
3. the balance of the public-interest factors was favorable.

The Board noted, however, that trading of the futures contract involved in the application had not been approved by the Commodity Futures Trading Commission (CFTC). It therefore conditioned its December 21, 1984, approval of the application on the CFTC's approval of the contract (1985 FRB 111).

3251.0.2 FCM BROKERAGE OF CERTAIN FUTURES CONTRACTS ON STOCK INDEXES INCLUDING OPTIONS

A bank holding company applied, under section 4(c)(8) of the BHC Act and section 225.21(a) of Regulation Y, to engage, de novo through its

wholly owned futures corporation, in executing and clearing, on major commodity exchanges, futures contracts on stock indexes and options on such futures contracts. The subsidiary would execute and clear—

1. the Standard & Poor's 100 Stock Price Index futures contract;
2. the Standard & Poor's 500 Stock Price Index futures contract (S&P 500);
3. options on the S&P 500, all of which are traded on the Index and Option Division of the Chicago Mercantile Exchange;
4. the Major Market Index futures contract, currently traded on the Chicago Board of Trade; and
5. the FT-SE 100 Equity Index futures contract, currently traded on the London International Financed Futures Exchange.

The execution and clearance of stock index futures and options traded on major commodity exchanges appeared to be functionally and operationally similar to securities brokerage, permitted for bank holding companies under section 225.28(b)(6)(i) of Regulation Y. Like municipal bond index futures (an activity proposed by an applicant which was previously approved by Board order), these futures contracts are settled in cash and are designed to allow customers to hedge the market risk associated with holding financial assets, in this instance, corporate equity securities. The equities represented by the listed indexes were chosen on the basis of criteria that favor a combination of securities that would accurately reflect fluctuations in the stock market.

The Board approved the application on February 4, 1985, based on the above analysis and on the fact that national banks have been permitted to execute and clear stock index futures, and options thereon, for the account of customers, through their FCM operations subsidiaries (1985 FRB 251). It also took into consideration the fact that trust departments of banks have begun to use stock index futures contracts and options on such contracts to hedge the market risk facing diversified stock portfolios.

3251.0.3 LIMITED FCM CLEARING-ONLY AND EXECUTING-ONLY TRADES

A bank holding company (the applicant) applied

for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to engage de novo in various FCM activities. The activities were to be conducted through its wholly owned FCM subsidiary (the company). The FCM activities consisted of—

1. executing and clearing, executing without clearing, and clearing without executing, as agent for institutional customers, the futures contracts and options on futures contracts listed in appendix A of the order;
2. executing and clearing as agent for institutional customers, through omnibus trading accounts with unaffiliated FCMs, the futures contracts and options on futures contracts listed in appendix B of the order; and
3. providing related investment advisory services.

The applicant proposed to conduct the activities throughout the United States.

The applicant requested authority to conduct, through the company, both execution and clearing activities on the Chicago Mercantile Exchange (CME) and the Chicago Board of Trade (CBOT). The company also planned to conduct FCM activities through omnibus customer trading accounts established in its own name with clearing members of the exchanges on which the company would not be a member.¹

The applicant also sought authority for the company to clear trades on the CME and the CBOT that had been executed by unaffiliated brokers pursuant to "give-up agreements." Under the applicant's proposal, the company would not be the primary clearing member for any nonclearing member on the CBOT and would not qualify any nonclearing member on the CME. The company also planned to execute trades that would be given up for clearance, at the customer's request, to an unaffiliated FCM.

The Board had previously determined, by regulation and order, that acting as an FCM in executing and clearing all of the proposed financial futures contracts and options on futures contracts, and providing investment advisory services with respect to such contracts, are activities closely related to banking under sec-

1. An omnibus account is an arrangement between a member clearing firm of an exchange and a nonmember FCM that seeks to conduct business on that exchange. Using this arrangement, the member clearing firm executes and clears transactions for the nonmember FCM and its customers. The omnibus account reflects all positions of the FCM's customers but is divided into separate segments for each customer for the purposes of calculating margin requirements, reporting current holdings, and other matters.

tion 4(c)(8) of the BHC Act with two exceptions.² See section 225.28(b)(7)(iv) and (b)(6)(iv) of Regulation Y and the Board orders found at 1992 FRB 953, 1991 FRB 64, 1990 FRB 881, and 1990 FRB 554.

On January 9, 1991, the Board denied a bank holding company's application to engage, through a nonbanking subsidiary, in clearing-only activities related to securities options and other financial instruments. The applicant in that case had proposed that its subsidiary primarily clear, but not execute, trades for professional floor traders (primarily market makers and specialists) trading for their own accounts on major securities and commodities exchanges. (See section 3700.12 and 1991 FRB 189.)

In the 1991 case, the Board was concerned that, by not engaging in both the execution and clearance of a trade, the nonbanking subsidiary could not decline transactions that posed unacceptable risk. It would have been obligated to settle each trade entered into by one of its customers, even if the customer did not have the financial resources to honor the obligation. No mechanism existed by which the nonbanking subsidiary could contemporaneously monitor the intra-day trading activities of the floor traders, its primary customers. The Board decided that the proposed nonbanking activity exposed the parent bank holding company to substantial credit risk. This decision was based on (1) the subsidiary's inability to monitor and control the risks to be undertaken and (2) the fact that clearing agents had to guarantee the financial performance of their customers to the clearing-houses of the exchanges on which they operate. The public-benefit considerations therefore precluded approval of that application under section 4(c)(8) of the BHC Act.

The applicant's proposal differed from the 1991 case in several respects. Under the proposal, the company would not serve as the primary or qualifying clearing firm for any unaffiliated customers. Also, the company would clear only those trades that it executed, or that other executing brokers executed and the company accepted for clearance pursuant to a customer's give-up agreement. The executing brokers would be independent from the customers and would

have the opportunity to evaluate the trade before it was executed.

All of the company's clearing-only activities would be conducted pursuant to give-up agreements. Under these give-up agreements and other customer agreements, the company would have the right to refuse to accept for clearance any customer trade that it deemed unsuitable. The refusal could stem, for example, from consideration of market conditions or the customer's financial situation or objectives. Also, the applicant represented that it would be able to restrict the number and types of positions to be held by a customer as it deemed reasonable. The company could then refuse to accept trades that posed unacceptable risks.

The company established a framework for limiting risk from the clearing-only activities. It would review the creditworthiness of each potential customer and, based on the review, approve or reject the customer and establish appropriate limits concerning trading, margin, credit, and exposure limits. The company had controls in place to monitor the intra-day trading activities and risk exposure of its customers.

The Board determined that the credit and other risk considerations associated with the proposed clearing-only activities on the CME and CBOT were consistent with previous approvals. The decision was based on (1) the framework for limiting risk from clearing-only activities, (2) the commitments made by the applicant, and (3) the other facts of record. After reviewing other required considerations, the Board approved the application on May 6, 1993 (1993 FRB 723). Approval was subject to the commitments made by the applicant and the terms and conditions set forth in the order as well as in other Board orders related to the proposed activities.

3251.0.4 FCM CLEARING TRANSACTIONS BY PREAPPROVED EXECUTION GROUPS

A foreign banking organization (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a) of Regulation Y to engage de novo in clearing trades of sophisticated institutional investors relating to contracts on futures and options on futures. Trades would be cleared through the applicant's majority-owned clearing subsidiary (the com-

2. The two exceptions are the Deutsche Aktienindex 30 Stock Index futures and the German Government Bond Index futures contracts traded on the Deutsche Terminborse GmbH. These two contracts had been approved as FCM activities pursuant to Regulation K. The Board also noted that these contracts served the same functions as the futures contracts for which FCM activities had previously been approved under section 4(c)(8) of the BHC Act.

pany) on the Chicago Mercantile Exchange (CME) and the Board of Trade of the City of Chicago (CBOT) and executed by nonaffiliated floor brokers.

In particular, the applicant proposed to accept for clearance customer orders that are executed by preapproved execution groups pursuant to “give-up agreements.”³ The applicant expected that the company would initially provide only limited execution services. The company would not be the primary clearing firm for any non-clearing member of the CBOT, and would not qualify any nonclearing member of the CME.

The applicant also sought approval to engage in other FCM and data processing and transmission activities. The applicant committed that the company would conduct these activities according to the provisions and subject to the limitations of Regulation Y (section 225.28(b)(7)(iv) and (b)(14)).⁴ The company also planned to engage in certain other activities that the applicant maintained were incidental to its FCM services. These activities included the management of institutional-customer funds under its control. The incidental activities would also include providing to institutional customers, on request, general advice about (1) sources of information, (2) the selection and arrangement of an appropriate execution group, (3) the availability of computer software relating to futures and options on futures, (4) order-placement alternatives, and (5) cost-reduction methods in the use of futures and options on futures for hedging purposes. The company committed that it would not provide investment advice relating to futures and options on futures or on any other matter not authorized by the order.

The Board previously denied a proposal in which a nonbanking subsidiary of a BHC would have cleared, but not executed, trades for professional floor traders (primarily market makers and specialists) trading for their own account on

major securities and commodity exchanges. (See 1991 FRB 189 and section 3700.12.) In that order, the Board was concerned that, by not engaging in both the execution and clearance of a trade, the FCM nonbanking subsidiary could not decline transactions that posed unacceptable risk. It would have been obligated to settle each trade entered into by one of its customers, even if the customer did not have the financial resources to honor the obligation. No mechanism existed by which the FCM nonbanking subsidiary could contemporaneously monitor the intra-day trading activities of the floor traders, its primary customers. The Board decided that the proposed nonbanking activity exposed the parent bank holding company to substantial credit risk. This decision was based on (1) the FCM’s inability to monitor and control the risks to be undertaken and (2) the fact that the clearing agents had to guarantee the financial performance of their customers to the clearinghouses of the exchanges on which they operate. The public-benefit considerations therefore precluded approval of that application under section 4(c)(8) of the BHC Act.

The applicant’s proposal differed from the above-mentioned denied application in various respects. In the applicant’s case, the company would not serve as the primary or qualifying clearing firm for any broker that executes its clearing-only trades or for any nonaffiliated customer. The company would clear only trades that it executes, or that other executing brokers execute and the company accepts for clearance pursuant to the customer’s give-up agreement.

The applicant represented that, under the give-up agreements, the company would have the contractual right to refuse a customer’s trade that exceeded established trading limits that were documented in the give-up agreement for that particular customer. The company would have a period of time within which it could determine if the executed trade was properly authorized according to established limits, and could decide to reject the trade.

The company’s customer base would consist of sophisticated institutional investors. The company would review the creditworthiness and other characteristics of each potential customer. Based on that review, it would approve or reject the customer and establish appropriate trading, credit, margin, and exposure limits for the customer. It would accept for clearance only trades that had been executed by preapproved execution groups trading on the CBOT and CME. Company would approve an execution group only if the floor brokers, and their primary or qualifying clearing firms, satisfied the com-

3. Under a give-up agreement, the executing floor broker (or give-in broker), pursuant to a customer’s instructions, gives up an executed order for clearance to a clearing member other than the executing broker’s primary clearing member (or qualifying member). Such agreements are used primarily to allow institutional customers to select a broker who has superior expertise and execution skills with respect to specific contracts or types of orders, while maintaining their accounts and positions with a clearing firm in which they have financial confidence.

4. Company would not trade for its own account except (1) to hedge a cash position in the related financial instrument or (2) to offset or liquidate a clearing error arising in the normal course of business.

pany's financial, managerial, and operational standards.

The Board decided that the credit and the other risk considerations associated with the proposed nonbanking activities were consistent with requirements for approval. The decision was based on (1) the framework described in the order; (2) the fact that the company would not be the primary or qualifying clearing firm for any broker that executed the company's clearing-only trades, or for any nonaffiliated customer; (3) the other contractual and operational distinctions noted between this proposal and the previous denied application (1991 FRB 189); and (4) the other facts of record.

The Board noted that it had recently approved applications by two bank-affiliated FCMs to engage in clearing-only activities, also on the CBOT and the CME (1993 FRB 723 and 1993 FRB 728). For a brief summary of the initial order, see section 3251.0.3.

The Board approved the application on August 2, 1993 (1993 FRB 961). The approval was subject to the facts of record, all the commitments made by the applicant, and the limitations and conditions stated in the order.

3251.0.5 FCM—EXECUTING AND CLEARING, AND CLEARING WITHOUT EXECUTING, FUTURES AND OPTIONS ON FUTURES ON NONFINANCIAL COMMODITIES

A bank holding company (the applicant, a BHC within the meaning of the BHC Act) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.3 of the Board's Regulation Y to act, through a wholly owned subsidiary (the company), as a futures commission merchant (FCM) for unaffiliated customers in executing and clearing, and clearing without executing, futures and options on futures on *nonfinancial commodities*. Initially, the applicant proposed to conduct these activities in futures and options on futures on heating oil, crude oil, corn, wheat, soybeans, cattle, and hogs. The applicant must give at least 20 days' written notice to the Federal Reserve before it engages in FCM activities with respect to additional contracts linked to other physical commodities, unless other contracts are approved for any other bank holding company under the BHC Act.

The company is engaged in executing and clearing on major commodities exchanges futures and options on futures on financial commodities and certain broad-based and widely traded

stock and bond indices.⁵ The company proposed to engage in its proposed activities on the CBOT, CME, and New York Mercantile Exchange (NYMEX).

The company *will not* trade in the proposed derivative instruments for its own account. However, when a customer defaults on a contract after the termination of futures trading and the company is required to make or take delivery of the underlying commodity, or when it exercises its right to liquidate a customer's account, the company is permitted to take the necessary actions to mitigate its damages. These actions include acting for its own account in retendering or redelivering the commodity, entering into an exchange-for-physical transaction, or entering into an offsetting transaction in the cash market, provided these and other appropriate actions are taken as soon as practicable.

The company will limit its proposed services only to institutional customers and will not provide such services to retain brokerage customers, locals, or market makers. Approximately 10 percent of its business will be conducted on behalf of managed commodity funds (regulated by the Commodity Futures Trading Commission (CFTC) and the National Futures Commission). None of the managed funds would be owned, sponsored, advised by, or otherwise affiliated with the applicant. The company will not act as a commodity trading advisor,⁶ or otherwise provide investment advice on the proposed instruments.

The Board had not previously approved the execution and clearance by bank holding companies of futures and options on futures on nonfinancial commodities. The Board's approval had been limited to acting as an FCM in the execution and clearance on major commodities exchanges of futures and options on futures on a variety of financial commodities, such as gold

5. See 1985 FRB 970. The company already engages in FCM activities on the Chicago Mercantile Exchange (CME), Chicago Board of Trade (CBOT), Commodity Exchange, London International Financial Futures and Options Exchange, Marche a Terme International de France, and Singapore International Monetary Exchange.

6. As defined in the Commodities Exchange Act, a commodity trading advisor includes, with certain exceptions, "any person who, for compensation or profit, engages in the business of advising others, either directly or through publications or writings, as to the value of commodities or as to the advisability of trading in any commodity for future delivery on or subject to the rules of any contract market, or who for compensation or profit, and as part of the regular business, issues or promulgates analyses or reports concerning commodities." (7 U.S.C. 2)

and silver bullion and coins, foreign exchange, government securities, certificates of deposit and money market instruments that banks may buy and sell for their own accounts, and stock and bond indices.⁷

3251.0.5.1 BHC's Execution and Clearance of Futures and Options on Futures on Nonfinancial Commodities

National banks engage in a broad range of FCM activities involving all types of exchange-traded futures and option contracts consisting of financial and nonfinancial commodities for the accounts of customers, and for their own accounts, for hedging purposes. The Office of the Comptroller of the Currency (OCC) reasoned that the clearing process for any futures contract or option on a futures contract involves essentially an extension of credit because, upon receiving an executed order from a customer, the clearing broker supplies its own credit in an order on behalf of the customer and then sends the order to the exchange clearing organization for settlement. The OCC also determined that the execution, clearance, and advisory services provided by an FCM to its customers are essentially the same whether or not the underlying commodities are financial or nonfinancial.

Some national banks act as an FCM in the execution and clearance of futures and options on futures on a broad array of financial and nonfinancial commodities. The state of New York Banking Department has also permitted several New York-chartered banks to engage, to a limited extent, in FCM activities involving derivative instruments on nonfinancial commodities.

The Board has previously authorized bank holding companies to conduct FCM activities involving numerous instruments based on financial commodities. The Board determined that acting as an FCM in connection with contracts involving nonfinancial commodities is opera-

tionally and functionally similar to conducting FCM activities with respect to derivative contracts involving financial commodities. In both instances, the FCM monitors customer credit risk and trading exposure; assesses and collects initial and maintenance margins from customers; and brokers, executes, and clears trades.

Acting as an FCM for derivative instruments involves functions, skills, risks, and expertise that are substantially similar to those associated with the execution and clearance of financial futures and option contracts that the Board previously approved. The mechanics of executing and clearing trades are operationally the same whether the commodity underlying the exchange-traded derivative instrument is financial or nonfinancial. The rules and regulations of the CFTC, as well as the rules, procedures, practices, capital requirements, and safeguards of the various commodities exchanges, govern both the execution and clearance of nonfinancial futures and options and the execution and clearance of financial futures and options.

In 1991, the Board permitted bank holding companies to provide investment advice on trading futures contracts and options on futures contracts in nonfinancial commodities, such as agricultural and energy commodities. (See 1991 FRB 126.) It concluded that (1) providing investment advice on investing in futures and options on nonfinancial commodities appeared to be the functional equivalent of providing advice on futures and options on futures on financial commodities and (2) exchange-traded futures and options on futures involving nonfinancial commodities were essentially financial instruments.

The Board concluded, based on an analysis of the range of FCM activities currently existing in banking (as summarized above and cited in the order), that the activity of acting as an FCM in the execution and clearance of futures and options on futures on nonfinancial commodities, as proposed by the applicant, is an activity that is closely related to banking for the purposes of the BHC Act.

3251.0.5.2 FCM's Execution and Clearance of Futures and Options on Futures on Nonfinancial Commodities

The Board noted that both the company and the commodities exchanges on which the proposed FCM activities would be conducted are subject to regulatory oversight by the CFTC. The company's trading and clearance activities would also be subject to regulation and review by the CFTC and the commodities exchanges. The

7. See section 225.28(b)(7)(iv) of Regulation Y (12 C.F.R. 225). See also 1985 FRB 251, 1985 FRB 111, 1977 FRB 951, and 38 *Federal Register* 27,552 (1973). The applicant's proposed clearing without execution activities were approved in 1993 (FRB 723–728). The company proposed to conduct its clearing-only activities subject to the same conditions and limitations set forth in these Board orders, including the use of the "give-up agreement" by and among the company, its customers, and the nonaffiliated executing FCM that allows the company to refuse to clear trades that exceed specified risk parameters.

applicant committed to conduct the proposed activities subject to the same rules and procedures the Board imposed on FCM activities in derivatives of financial commodities, including prohibitions on extending credit to customers for the purpose of meeting margin requirements. The applicant committed to take several further steps in the event that one of the company's customers has an open position in a contract after futures trading is ceased, and the customer is not willing or is unable to make or take delivery. Based on the commitments made by the applicant for conducting the proposed activities, the limitations on the activities cited in the order, and all the facts on record, the Board approved the application on September 28, 1993, subject to all the terms and conditions set forth in the order and the noted Board regulations and orders that relate to the proposed activities. (See 1993 FRB 1049.)

3251.0.6 FCM AND RELATED ADVISORY SERVICES FOR OPTIONS ON EUROTOP 100 INDEX FUTURES AND THE ONE-MONTH CANADIAN BANKER'S ACCEPTANCE FUTURES

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to act as an FCM for and provide advisory services to nonaffiliated persons, in connection with the purchase and sale of futures and options on futures contracts that are based on bonds or other debt instruments; certain commodities; or stock, bond, or commodity indices. The applicant proposed contracts that were not previously considered by the Federal Reserve System: options on Eurotop 100 Index futures, to be traded on the Commodity Exchange, Inc. (Eurotop contracts), and the one-month Canadian Banker's Acceptance Futures, to be traded on the Montreal Exchange (banker's acceptance futures). These contracts are based on a financial instrument or a broad-based financial index and are comparable to contracts previously considered by the Federal Reserve System. They have essentially the same terms and serve the same functions as futures and options contracts for which FCM and related advisory services have been approved by the Board under section 4(c)(8) of the BHC Act. The Board concluded that the skills necessary to engage in providing FCM and futures advisory services are the same

as those used to provide such services with regard to previously approved contracts. The Board thus approved the applicant's provision of these FCM and related advisory services for these contracts by the company, concluding that the activity is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. (See 1995 FRB 188–189.)

3251.0.7 FCM TRADING FOR ITS OWN ACCOUNT IN FUTURES, OPTIONS, AND OPTIONS ON FUTURES CONTRACTS BASED ON CERTIFICATES OF DEPOSIT OR OTHER MONEY MARKET INSTRUMENTS

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to trade as an FCM in all futures, options, and options on futures contracts based on certificates of deposit or other money market instruments that are permissible investments for national banks. The Board had previously authorized company to trade for its own account, for purposes other than hedging, in futures, options, and options on futures contracts based on U.S. government securities that are permissible investments for national banks and in similar contracts based on certain money market instruments. (See 1991 FRB 759.) In that order, the Board noted that trading in these contracts would require a market judgment on interest rates. It was noted that banks, through their core lending and funding activities, had developed expertise in judging interest-rate and price movements. For those reasons, and because that proposal would not authorize company to trade in derivative contracts based on securities or instruments that a state member bank could not purchase for its own account, the Board determined the trading activity to be closely related to banking under section 4(c)(8) of the BHC Act.

The Board concluded that its reasoning in the 1991 order could be applied currently to this expanded 1994 proposal. The Board noted that the Office of the Comptroller of the Currency had determined that trading in futures and options contracts based on bank-eligible securities or instruments is an activity that is within the

legally authorized powers of national banks (OCC Interpretive Letter No. 494 (December 20, 1989)). The Board thus concluded that the proposed trading activity is conducted by banks and is so operationally and functionally similar to activities conducted by banks that banks are particularly well-equipped to engage in the activity. It therefore concluded that trading for one's own account, for purposes other than hedging, in futures, options, and options on futures contracts based on certificates of deposit or other money market instruments that are permissible investments for national banks is an activity that is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. (See 1995 FRB 190.)

3251.0.8 FCM ENGAGING IN COMMODITY AND INDEX SWAP TRANSACTIONS AS AN ORIGINATOR, PRINCIPAL, AGENT, BROKER, OR ADVISOR

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to engage in FCM activities and in acting as an originator, principal, agent, broker, or advisor with respect to swaps and swap-derivative products and over-the-counter option transactions based on certain commodities; stock, bond, or commodity indices; or a hybrid of interest rates and these commodities or indices (commodity and index swap transactions).⁸ Except for certain advisory services, the Board had not determined whether these proposed activities are closely related to banking under section 4(c)(8) of the BHC Act. The Board had determined, by order or regulation, that acting as an originator, principal, broker, agent, or advisor with respect to interest-rate and currency swaps and swap-derivative products relating thereto (financial swap transactions) are activities closely related to banking and are thus permissible for bank holding companies. (See Regulation Y, section 225.28(b)(6) and 1993 FRB 345.)

The applicant anticipates that the section 20 subsidiary's swap transactions will be based on a variety of stock and bond indices, similar to those previously approved in connection with proposed FCM activities (or to a specially tailored basket of securities selected by the parties) (index transactions), or they could be based on precious metals and energy products or related commodity indices (commodity transactions). They also could include hybrid transactions that are based on a combination of interest rates and such indices or commodities.

Commodity and index swap transactions are operationally, structurally, and functionally similar to financial swap transactions. Both types of swaps involve privately negotiated financial transactions. The parties involved in the transaction agree to exchange specified payment streams over a specific period of time, based on a predetermined formula. For an interest-rate swap, the basic structure is an exchange between two counterparties of the payment streams that arise out of different interest payment obligations, calculated on the basis of an agreed-upon notional principal amount. With the commodity or index swap transaction, the parties exchange payment streams based on a notional principal amount and the prices of certain commodities or the value of or returns on certain securities or indices of securities, or on a combination of these and other measures such as interest rates. For both types of swap transactions, the parties enter into these contracts to meet various common investment objectives, including taking positions in the market for the underlying assets for investment purposes, limiting one's exposure to market uncertainties and future price fluctuations, and preserving principal while participating in the potential returns of a particular financial market or economic sector. Since a swap transaction is negotiated between parties, the economic terms of the transaction (including the duration of the contract; notional principal amount; method of calculating and frequency of payments; and underlying assets, rates, or indices upon which the payments are to be determined) can be individually tailored to meet specific financial goals and risk sensitivities of the counterparty.

National banks have been authorized by the OCC to engage in activities that involve matched and unmatched commodity and index swap transactions (including related swap-derivative products and over-the-counter options). The New York State Banking Department also approved these activities for state-chartered banks under its jurisdiction. In addition, the Board permits

8. The proposed activities are subject to the same commitments relating to interest-rate and currency swap transactions and related swap-derivative products. (See 1993 FRB 345.)

state member banks to enter into perfectly matched commodity and index swap transactions, provided the transactions are consistent with their state charters. Further, the Federal Reserve Bank of New York, acting under delegated authority, has approved proposals by state member banks to engage in such activities on an unmatched basis. (See 12 C.F.R. 208.128.)

For the foregoing reasons and based on the facts of record, the Board determined that engaging in commodity and index swap transactions is an activity conducted by banks. The Board also considered the similarities between these transactions and the financial swap transactions noted above, as well as the fact that banks and other intermediaries play a similar role in financial swap transactions and commodity and index swap transactions. It was noted that all of these contracts represent forms of financial intermediation that banks have historically engaged in. Based on all the facts on record, the Board concluded that these proposed activities are closely related to banking under section 4(c)(8) of the BHC Act.

As noted previously, the company also proposes to provide advisory, agency, and brokerage services with respect to commodity and index swap transactions. The Board believes that the authority of banks to conduct these activities could be implicit in or incidental to their authority to engage in the transactions as principal. In its analysis, the Board noted that banks can develop a familiarity and expertise as to the structure and economic effects of these transactions, which should well equip them to provide the intended advisory, agency, and brokerage services. National banks have been expressly authorized to provide advisory, execution, and other services with respect to exchange-traded futures and options on futures contracts based on financial and nonfinancial commodities. (See OCC Interpretive Letter No. 494.) The exchange-traded transactions are used for purposes similar to the over-the-counter transactions for which the applicant proposes that the company render advisory, agency, and brokerage services. The pricing bases for, economic effects of, and risk presented by the two types of transactions are also similar in important respects.

Based on the facts on record, the Board determined that the proposed advisory, agency, and brokerage services are activities conducted by banks or are operationally and functionally similar to such activities. Thus, they are closely related to banking under section 4(c)(8) of the BHC Act. (See 1995 FRB 190–191.)

3251.0.9 FCM TRADING IN FUTURES, OPTIONS, AND OPTIONS ON FUTURES CONTRACTS BASED ON COMMODITIES OR ON STOCK, BOND, OR COMMODITY INDICES FOR ITS OWN ACCOUNT

A foreign bank (the applicant) subject to the provisions of the BHC Act applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y for its section 20 subsidiary (the company) to engage in *trading for its own account* for purposes other than hedging in futures, options, and options on futures contracts based on certain commodities or on stock, bond, or commodity indices—transactions that have not been expressly authorized for banks. The instruments to be traded are generally the same as those previously approved by the Board in considering FCM and futures advisory activities of bank holding company subsidiaries, such as crude oil futures, Standard & Poor's 500 Stock Price Index futures, and municipal bond index futures. (See 1993 FRB 1,049 and 1994 FRB 151 and also SR-93-27 (refer to Appendix A).) The applicant proposes to engage in FCM activities and go beyond furnishing those FCM and related advisory services and seeks the Board's permission for the company to trade these instruments for its own account. Such activities include arbitrage operations, market making for customer-accommodation purposes, and proprietary trading (taking positions for investment purposes), as well as hedging transactions.

The proposed activities could consist of exchange-traded instruments that could be based on commodities such as crude oil, providing for delivery of the underlying commodity upon expiration of the contract. The applicant confirmed that it does not intend to take delivery of such commodities but plans to take several actions to avoid delivery of commodities other than precious metals. These actions include closing positions in expiring contracts during trading periods and engaging in exchange-for-physical transactions after trading closes. The Board stipulated, as a condition of approval, that the applicant could not take delivery of the commodities, except in unusual circumstances. Whenever delivery is taken, the applicant is required to notify the Federal Reserve System and divest itself of the commodity promptly. The Board views the contracts as financial instruments, despite the possibility that trading

in such contracts can result in the delivery and ownership of commodities that banking organizations are generally not permitted to hold. The Board also noted, with respect to the proposed exchange-traded transactions that are based on an index of securities or commodities, that (1) the transactions would be settled in cash and (2) they would not provide for the delivery of the underlying securities or commodities.

The Board had not previously approved this trading activity, with respect to the instruments proposed, for bank holding companies or their subsidiaries under section 4(c)(8) of the BHC Act. The Board has, however, authorized acting as an FCM and providing advisory services with respect to the instruments to be traded. The Board also approved similar trading with respect to instruments based on U.S. government securities and money market instruments. (See 1991 FRB 759.) With respect to section 20 nonbank subsidiaries, the Board has recognized the utility of trading in these instruments to hedge market exposure resulting from other trading activities, indicating that these bank holding company subsidiaries may engage in such risk-management transactions as a necessary incident to their underwriting and dealing activities. (See 1994 FRB 449.) No federal bank regulatory authority had expressly permitted banks to trade in the proposed instruments for their own accounts for purposes other than hedging.

The Board believes that the proposed trading activities are closely related to banking. It noted that banks engage in activities with respect to the instruments in question that are similar to or related to the proposed trading activities and that they engage in trading activities for the same purposes with respect to similar instruments, including exchange-traded contracts based on bank-eligible securities and instruments and over-the-counter transactions based on commodities and various indices.

The Board further noted that banking organizations have substantial experience with exchange-traded derivative transactions based on commodities or on commodity or securities indices. It also noted important similarities between the proposed instruments and transactions that have been authorized for banks for nonhedging purposes. Moreover, the Board believes that the risks inherent in the proposed trading activities are similar to those that are experienced by banks that engage in swaps and other permissible transactions; hence, the proposed transactions require analytical skills; risk-

management policies, procedures, and techniques; and computer and operations systems similar to those used by banks for engaging in those permissible transactions. Based on this reasoning, the Board determined the proposed activity to be closely related to banking under section 4(c)(8) of the BHC Act. The Board's December 23, 1994, approval is subject to all the facts of record, all the commitments made in connection with the application, and the conditions cited in the order. (See 1995 FRB 185.) These include adhering to future supervisory or examination policies and guidance issued by the Board for a banking organization's derivatives business, including policies or guidance with respect to customer transactions, trading and marketing practices and policies, and related systems and controls.

3251.0.10 APPENDIX A— PREVIOUS PRIOR-APPROVAL REQUIREMENTS FOR BANK HOLDING COMPANIES PROPOSING TO ENGAGE IN FCM ACTIVITIES

In May 1993, the Board reduced the prior-approval requirements for bank holding companies proposing to engage in certain futures commission merchant (FCM) activities. (See SR-93-27.) First, the Board delegated to Reserve Banks its authority to approve proposals by bank holding companies to act as an FCM in executing and clearing any futures contract on a financial commodity or stock or bond index that the Board has previously approved, on any Board-approved exchange. The Board also delegated to Reserve Banks its authority to approve proposals by bank holding companies to act as an FCM or commodity trading advisor in providing investment advisory services for previously approved financial instruments.

In addition, the Board modified and, in certain cases, eliminated the prior-approval requirement for bank holding companies seeking to act as an FCM for additional financial instruments or to act as an FCM on additional exchanges in which the bank holding company already has Federal Reserve System approval to engage generally in FCM activities. Any bank holding company that had previously received approval to act as an FCM under either Board order or the former sections 225.25(b)(18) and (b)(19) of Regulation Y could act as an FCM subject to certain limitations and conditions. These requirements were replaced by the April 1997 Regulation Y revision at section 225.28(b)(7)(iv).

3251.0.10.1 Interpretation of Appendix A—Prior-Approval Requirements for BHCs and Edge Corporations Proposing to Engage in FCM Activities Abroad

The streamlined procedures for approving applications to engage in FCM activities (SR-93-27), with respect to any new instrument that has not previously been reviewed and approved by the Board, are also applicable to submissions required to engage in FCM activities on exchanges located outside the United States under section 211.5(d)(17) of Regulation K. As stated in the regulation, no application is required for engaging in FCM activities overseas on exchanges and with respect to financial instruments that the Board has previously approved, unless the activities are conducted in accordance with the standards set forth in section 225.28(b)(7)(iv). Prior approval must be obtained when an exchange requires members to guarantee or otherwise contract to cover losses suffered by other members (“mutual” exchanges). Acting as an FCM on a mutual exchange requires prior Board approval under section 211.5(d)(17)(ii) regardless of whether the exchange has been previously approved by the Board.

As with FCM procedures under Regulation Y, a bank holding company or other investor (as defined in Regulation K) may submit a notice to expand its FCM activities outside the United States according to the procedures in SR-93-27. Such notifications are processed in a similar manner, and the investor is informed that an application under Regulation K is required if an instrument not previously approved by the Board does not clearly meet the criteria set out in SR-93-27 or if financial or other considerations warrant further consideration. In addition, an application under Regulation K is required for any proposal to conduct FCM activities on an exchange that has not previously been approved by the Board. (See SR-95-14, March 1995.)

3251.0.11 PROVIDING DISCRETIONARY PORTFOLIO MANAGEMENT SERVICES ON FUTURES AND OPTIONS ON FUTURES ON FINANCIAL COMMODITIES

A foreign bank (the applicant), a bank holding company within the meaning of the BHC Act, applied under section 4(c)(8) of the act to engage through company in providing discretionary portfolio management services with respect to

exchange-traded futures and options on futures on financial commodities.⁹ The provision of discretionary portfolio management services, with respect to futures and options on futures on financial commodities, had not been previously considered by the Board as to whether it is closely related to banking under section 4(c)(8) of the act.

In providing discretionary management services, company would manage customers’ accounts and purchase and sell in its sole discretion exchange-traded futures and options on futures on financial commodities for such accounts. Company would provide discretionary management services in combination with providing futures commission merchant (FCM) transactional services and would only provide such services to institutional customers.¹⁰ Company would not act as a counterparty on customer transactions or trade these instruments for its own account. In addition, company would not purchase or sell over-the-counter contracts for accounts over which it exercises discretion.

The Board has permitted bank holding company FCMs and commodity trading advisors to provide investment advice with respect to futures and options on futures on financial and nonfinancial commodities. (See Regulation Y, section 225.28(b)(6) and 1994 FRB 151.) The bank holding company argued that discretionary management is a normal manner of providing investment advice to institutional customers. Indeed, the Board permits bank holding companies to act as discretionary portfolio managers as part of providing investment advisory and full-service brokerage services with respect to securities. (See Regulation Y, section 225.28(b)(6) and (b)(7)(i).) In addition, the Office of the Comptroller of the Currency permits national banks to engage in discretionary funds management with respect to futures and options on futures.¹¹

The applicant also indicated that company would provide the proposed futures-related dis-

9. The bank holding company also proposed to engage in a variety of data processing, securities, futures, and foreign-exchange-related activities through company and another subsidiary. The Board previously has determined by order or regulation that these activities are closely related to banking. The bank holding company committed to conduct these activities in accordance with the conditions established by the Board in Regulation Y and prior orders.

10. Company would provide these services to commodity pools but would not become a commodity pool operator.

11. See OCC Interpretive Letter No. 494 (December 20, 1989).

cretionary portfolio management services in accordance with the limitations and conditions that would be imposed if company were providing portfolio management services in the securities context. In this regard, the applicant committed that company would only provide the proposed discretionary portfolio management services to institutional customers and only at the request of such customers.

The applicant also indicated that it would have a fiduciary relationship with all customers to whom it provides the proposed discretionary management services and has committed that company would comply with applicable law, including fiduciary principles. As one method of meeting its fiduciary obligations, the bank holding company committed that company would obtain the consent of customers before engaging, as principal or agent, in a transaction in which any affiliate of company acts as principal in futures or options on futures transactions on the customer's behalf. Company and its affiliates also agreed not to share any confidential information concerning their respective customers without the consent of the customer. In addition, the applicant stated that company would exercise its discretionary management authority only in purchasing and selling exchange-traded instruments. Therefore, concerns surrounding over-the-counter instruments, such as the potential for abuses due to the lack of price transparency, were not presented by the proposal.

For these reasons, the Board concluded that providing discretionary portfolio management services with respect to futures and options on futures on financial commodities is closely related to banking and a proper incident to banking for purposes of section 4(c)(8). The application was approved by the Board on February 9, 1995. (See 1995 FRB 386.)

3251.0.12 FCM EXECUTION, CLEARANCE, AND ADVISORY SERVICES FOR CONTRACTS ON FINANCIAL AND NONFINANCIAL COMMODITIES FOR NONINSTITUTIONAL CUSTOMERS

A foreign banking organization (the notificant) subject to the provisions of the Bank Holding Company Act (BHC Act) provided notice under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its proposal

that its indirect U.S. subsidiary (the indirect subsidiary)¹² acquire certain assets and assume certain liabilities of a company.¹³ The notificant would engage indirectly in FCM execution, clearance, and advisory activities with respect to futures and options on futures on financial and nonfinancial commodities¹⁴ and in buying and selling foreign exchange in the spot, forward, and over-the-counter options markets on the order of investors as riskless principal.¹⁵ The Board had previously determined by order and regulation that the above proposed activities are closely related to banking within the meaning of section 4 of the BHC Act.¹⁶

3251.0.12.1 Providing FCM Services to Certain Sophisticated Noninstitutional Customers

First, the notificant proposed that the indirect subsidiary would provide FCM execution, clearance, and advisory services with respect to contracts on both financial and nonfinancial commodities to persons that do not qualify as institutional customers but who trade futures and options on futures solely to hedge risks arising from their business activities (noninstitutional commercial hedger customers), such as farmers. The Board has limited bank holding companies to providing nonfinancial-commodities-related FCM services only to institutional customers. Similarly, with respect to contracts on financial commodities, the Board

12. The indirect subsidiary is wholly owned by the notificant. The indirect subsidiary engages in various futures commission merchant, foreign-exchange, and securities-related activities. See 1994 FRB 646 and 649.

13. The acquired firm was a clearing member of certain financial and nonfinancial commodities exchanges. The FBO stated that the indirect subsidiary would become a clearing member of those exchanges. In addition, that subsidiary would provide FCM services with respect to two exchange-traded contracts that had not previously been approved by the Board (Heating Oil Crack Spread Options and Gasoline Crack Spread Options) and would purchase and sell through the use of omnibus account arrangements certain futures and options on futures on nonfinancial commodities traded on two other exchanges.

14. These activities include providing execution-only and clearing-only services to customers. See 1993 FRB 723 and 1994 FRB 151.

15. The indirect subsidiary would provide the proposed riskless-principal services only to institutional customers, except that it would provide such services to certain noninstitutional customers when they direct it to convert funds from one currency to another to trade futures and options on futures contracts. Foreign-exchange-related advisory services would not be provided to these noninstitutional customers.

16. See 12 C.F.R. 225.28(b)(7)(iv) and 225.28(b)(6) and 1990 FRB 649 (1990).

has not permitted bank holding companies to provide execution-only or clearing-only services to noninstitutional customers and only permits bank holding companies to provide advisory services to financially sophisticated customers that have significant dealings in the underlying commodities.¹⁷

The indirect subsidiary's noninstitutional commercial hedger customers would be engaged or would be affiliated with a commercial enterprise that is engaged in producing, manufacturing, processing, or merchandising products or in providing services that are related to the commodities underlying the futures and options on futures contracts in which the customers would trade. The noninstitutional commercial hedger-customers would not be engaged in executing their own trades on the floor of any commodities exchanges. The notificant stated that the indirect subsidiary would require noninstitutional commercial hedger customers to state in writing that they would only engage in "bona fide hedging transactions," as defined by the Commodity Futures Trading Commission (CFTC).¹⁸ In addition, an initial credit-review process will be established to determine whether a noninstitutional commercial hedger customer's proposed hedging activities are appropriate in light of the customer's net worth and business activities. The indirect subsidiary will not permit noninstitutional commercial hedger customers to trade in any commodities other than those that the customer would trade to hedge risks from its commercial activities, and it would establish a system to detect any unauthorized trading activities.

By limiting transactional services and advice to areas in which the customer has special expertise, the proposed limitations address the concern that the customer would rely unduly on the bank holding company's advice or that the customer would be unable to detect conflicts of interest or advice that is motivated by the bank holding company's self-interest. Moreover, the notificant will abide by all the other limitations designed to more specifically address the potential risks that may result from provid-

17. See 1993 FRB 1049 and 12 C.F.R. 225.25(b)(19) (contracts on financial commodities). These limitations address concerns that, in futures transactions, unsophisticated customers may place undue reliance on investment advice received from a banking organization and may not be able to detect investment advice that is motivated by the advisor's self-interest. Similarly, in cases involving clearing-only transactions, the limitation helps address the added risk to the bank holding company that results from its more limited ability to review and reject trades that have been executed through another FCM.

18. See 17 C.F.R. 1.3(z).

ing clearing-only and execution-only services to these customers.

3251.0.12.2 Foreign-Exchange Activities

Second, in connection with the proposal that the indirect subsidiary will buy and sell foreign exchange on the order of customers as riskless principal, the notificant proposed that the indirect subsidiary be permitted to purchase and sell foreign exchange for its own account for limited purposes while also providing foreign-exchange-related execution and advisory services.¹⁹ In several limited circumstances, the Board has permitted a bank holding company to provide foreign-exchange-related transactional and advisory services in a subsidiary that purchases and sells foreign exchange for its own account.²⁰ For example, the Board has permitted bank holding companies to provide foreign-exchange-related advice and transactional services through a subsidiary engaged in purchasing and selling foreign exchange for its own account to hedge positions in permissible interest-rate or currency-swap transactions or to hedge risks arising from the permissible securities underwriting and dealing activities of the subsidiary.²¹

The indirect subsidiary will take positions in foreign exchange only as a means to hedge financial-statement translations of income for its foreign parent and as necessary for the payment of invoices denominated in foreign currencies. It would not enter into a foreign-exchange transaction for its own account with a customer if the customer is receiving foreign-exchange services relating to such transaction from this subsidiary. The notificant committed that the indirect subsidiary will observe the standards of care and conduct applicable to fiduciaries with respect to its foreign-exchange-related advisory activities and will provide foreign-exchange-related execution and advisory services only to institu-

19. The indirect subsidiary currently provides foreign-exchange-related execution and advisory services to its customers. In permitting bank holding companies to provide foreign-exchange execution and advisory services on a combined basis, the Board has relied on the representation that the subsidiary providing the foreign-exchange-related services would not purchase or sell foreign exchange for its own account.

20. The Board also previously has noted that in conducting foreign-exchange operations, commercial banks combine the functions of giving advice, executing transactions, and taking positions in foreign exchange.

21. See 1994 FRB 157 and 1993 FRB 892.

tional customers. The notificant also committed that the indirect subsidiary's personnel engaged in purchasing and selling foreign exchange for its own account will not have access to information about the foreign-exchange trading activities of customers and that customer representatives will not have access to information about the foreign-exchange activities of personnel engaged in purchasing and selling foreign exchange for the indirect subsidiary's own account.²²

3251.0.12.3 Board's Decision on the Proposed FCM Activities

Based on the foregoing and all the facts of record, the Board approved the notification subject to all the terms and conditions set forth in the order and in the above-noted Board regulations and orders that relate to these activities. The Board's determination is subject to all the terms and conditions set forth in the Board's Regulation Y, including those in sections 225.7 and 225.23(b). The Board's decision is specifically conditioned on compliance with all the commitments made. The notice was approved on July 14, 1995 (see 1995 FRB 880).

3251.0.13 FCM SERVING AS A PRIMARY CLEARING FIRM FOR A LIMITED NUMBER OF FLOOR TRADERS AND BROKERAGE SERVICES FOR FORWARD CONTRACTS ON FINANCIAL AND NONFINANCIAL COMMODITIES

A foreign banking organization and its parent holding companies (the notifiants), bank holding companies within the meaning of the Bank Holding Company Act, requested the Board's

approval under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to acquire all the voting securities of a company (the company) and thereby engage in a wide range of nonbanking activities, including securities- and derivatives-related activities. The company and its principal subsidiary (the subcompany) engage worldwide in a wide range of investment advisory, securities underwriting, and futures-related activities. The notifiants proposed to merge the subcompany and the company into the notifiants' existing nonbank section 20 company (the section 20 company). The section 20 company would continue as a registered broker-dealer with the Securities and Exchange Commission under the Securities Exchange Act of 1934 and as a member of the National Association of Securities Dealers. The section 20 company would also become registered as a futures commission merchant (FCM) and a commodity trading advisor (CTA).²³

The notifiants proposed to engage in a variety of FCM-related activities the Board previously had determined, by regulation or order, were so closely related to banking as to be proper incidents thereto within the meaning of section 4(c)(8) of the BHC Act. The proposed activities included engaging in execution-only, clearing-only, and omnibus account activities with respect to futures and options on futures based on financial and nonfinancial commodities, and providing discretionary portfolio management services with respect to futures and options on futures on financial and nonfinancial commodities.²⁴ (See 1997 FRB 138–142.) The section 20 company committed to providing these futures-related execution-only, clearing-only, and discretionary portfolio management services only to institutional customers and certain sophisticated noninstitutional commercial hedger customers.²⁵

3251.0.13.1 Primary Clearing Firm for a Limited Number of Professional Floor Traders

The notifiants also proposed that the section 20

22. To address potential conflicts of interest in connection with providing the proposed foreign-exchange riskless-principal services, the notificant committed that the indirect subsidiary will disclose to each customer that receives advice relating to over-the-counter transactions in the foreign-exchange market that it may have an interest as a counterparty principal in the course of action ultimately chosen by the customer. Also, in any case in which the indirect subsidiary has an interest in a specific over-the-counter foreign-exchange transaction as counterparty principal, it will advise its customer of that fact before recommending participation in that transaction.

23. The subcompany was already registered as an FCM and CTA.

24. The notifiants committed that the section 20 company would provide these services in accordance with the limitations previously established by the Board. See 1993 FRB 723, 1993 FRB 1049, and 1994 FRB 151.

25. The notifiants stated that all noninstitutional commercial hedger customers would meet the requirements previously reviewed by the Board. See 1995 FRB 880.

company provide clearing-only services to, and serve as the primary clearing firm for, certain professional floor traders on two exchanges with respect to the futures contracts and options on futures contracts traded on such exchanges.²⁶ The Board previously has determined that providing clearing services with respect to exchange-traded securities, options, futures, and options on futures contracts is closely related to banking within the meaning of section 4(c)(8) of the BHC Act. In 1991, however, the Board denied an application by the notificants to engage de novo in providing the proposed services to an unlimited number of market makers and other professional floor traders dealing for their own accounts.²⁷

In the 1991 order, the Board recognized that a company serving as the primary clearing firm for professional floor traders may be exposed to significant financial risks because the company generally would not have the ability to reject an executed trade presented to it for clearance, even when the company believes the trade presents unacceptable risks in light of market conditions or the traders' financial position. The Board also noted that, at the time of the 1991 application, the applicants lacked appropriate operational systems to track and manage the intraday risks arising from the trading activities of the floor traders. This lack of a mechanism to monitor intraday trading activities presented the possibility that a professional floor trader could incur substantial losses through the trading of options or futures contracts, which the applicants would be obligated to clear and guarantee, before the applicants could act to mitigate their credit-risk exposure.

It was noted that since 1991, the Board and bank holding companies have gained substantial experience with the conduct, methods, procedures, and regulation of clearing-only activities. Also, since 1991, the Board had authorized bank holding companies to provide clearing-only services with respect to futures contracts and options on futures contracts for customers other than professional floor traders, subject to certain con-

ditions designed to ensure that the bank holding companies have the ability to manage the attendant financial risks.²⁸

The Board concluded that the facts of record indicated that the subcompany had and the section 20 company would have sufficient risk-management policies, procedures, and systems to permit the notificants and the section 20 company to adequately monitor and control the risks, including the intraday risks, associated with the section 20 company's proposal to serve as the primary clearing firm for a limited number of professional floor traders on the two exchanges. Specifically, the section 20 company would use the subcompany's established trading, credit, margin, and exposure limits for each professional floor trader for which the section 20 company serves as the primary clearing firm. Adherence to these limits is monitored on an intraday basis by experienced personnel who are physically present on the floor of the two exchanges. These personnel visually monitor the trading activities of floor traders on the exchanges and review trades submitted by the floor traders for clearance.²⁹ If an employee of the section 20 company determines that a floor trader is exceeding the limits it has established, or is otherwise engaged in questionable trading activities, the employee would have the ability

28. In particular, the bank holding companies agreed to provide the clearing-only services pursuant to "give-up" agreements, which provide the bank holding companies with the right to refuse to accept for clearance any customer trade that the bank holding company deems unsuitable in light of market conditions or the customer's financial situation or objective. In addition, the bank holding companies agreed to establish procedures to monitor the intraday trading activities and risk exposure of their clearing-only customers.

29. The Board recognizes that trades on the two relevant exchanges are not electronically submitted to the clearing firm or the exchange. Instead, trading cards for each trade are submitted by each professional floor trader to its clearing firm, which enters the trade into the exchange's clearing system. Both exchanges require that the subcompany collect the trading cards from each floor trader at least once during each half-hour period, thereby providing the subcompany personnel with an opportunity to review the intraday trading activities of floor traders. The rules of one exchange also require that the subcompany enter all collected trades into the exchange's on-line clearing system within 45 minutes of the end of the half-hour period during which the trades were collected. That exchange's on-line clearing system also permits the subcompany to monitor the trading activities of floor traders, both individually and in the aggregate, on an intraday basis, and allows the subcompany to identify any potentially unmatched trades. Although the other exchange does not operate an on-line clearing system, the subcompany personnel maintain tally sheets that are updated every 30 minutes and reflect all trades submitted by each professional floor trader throughout the day.

26. A primary clearing firm is obligated to accept and clear all trades submitted by a professional floor trader, even if the trade was initially presented to, and rejected by, another clearing firm. Once a primary clearing firm clears a trade for a professional floor trader, the firm becomes obligated to settle the trade in the event of a default by the professional floor trader. The company served as the primary clearing firm for professional floor traders on the two exchanges. The notificants requested authority for the section 20 company to act as the primary clearing firm for up to 20 professional floor traders on one exchange and 40 professional floor traders on the other.

27. See 1991 FRB 189.

to limit or halt the floor trader's activities, require the floor trader to post additional margin, partially or entirely liquidate the floor trader's positions, or immediately revoke the floor traders membership on the exchange.³⁰ The notificants' operations managers on the two exchanges also would personally guarantee the section 20 company against any losses that it may incur from serving as the primary clearing firm for floor traders on the exchanges, thereby providing such personnel with an incentive to closely monitor the trading activities of the floor traders. The notificants also stated that the section 20 company would install an on-line risk-management system that would provide its personnel with intraday data on the trading activities of the professional floor traders, and the ability to analyze its exposure to such trading activities on an intraday basis.

The Board noted that the type of risk-management systems necessary to appropriately manage the risks arising from a particular activity necessarily depends on the scope and nature of the proposed activity. In this regard, the Board noted that the section 20 company proposed to serve as the primary clearing firm for only a limited number of professional floor traders on two exchanges. These exchanges have relatively small trading areas and volumes, which permit personnel on the floors of the exchanges to monitor trading activity. The Board noted that the Federal Reserve Bank had conducted an on-site operational and managerial infrastructure review used by the subcompany to monitor and control the financial risks associated with its primary clearing activities on the two exchanges. Based on that review and other facts of record, the Board concluded that the subcompany had the managerial and operational resources and systems to adequately monitor and control the financial risks arising from its role as primary clearing firm on the two exchanges.

The Board also noted that approval of the proposal could reasonably be expected to produce public benefits. Specifically, the Board noted that the subcompany served as the primary clearing firm for a significant percentage of the professional floor traders on the two exchanges and that the notificants' proposal would permit the section 20 company to con-

tinue providing primary clearing services to such professional floor traders.

In light of all the facts of record, including the limited nature of the section 20 company's proposed clearing-only activities for professional floor traders, the commitments provided by the notificants, and the operational and managerial systems that the section 20 company will have in place to monitor and control the risks arising from the proposed activities, the Board concluded that the credit and other risk considerations associated with the proposed clearing-only activities for professional floor traders on the two exchanges are consistent with approval of this notice and that, therefore, the proposed activity is a proper incident to banking within the meaning of section 4(c)(8) of the BHC Act.

3251.0.13.2 Brokerage Services with Respect to Forward Contracts Based on Certain Financial and Nonfinancial Commodities

The notificants also proposed that the section 20 company act as broker with respect to forward contracts based on certain financial and nonfinancial commodities. In this capacity, the company would assist customers in arranging forward contracts with third parties pursuant to which the customers would make (or receive) delivery of financial and nonfinancial commodities on a future date.³¹ The section 20 company would act as a broker only with respect to forward contracts that are based on those financial and nonfinancial commodities that also serve as the basis for an exchange-traded futures contract.³² The Board recognized that banking regulators had not expressly permitted banks to engage in the proposed activity.

Bank holding companies are permitted to act as a broker in the execution and clearance of futures contracts and options on futures contracts based on financial and nonfinancial commodities.³³ As noted above, the forward contracts that the section 20 company proposed to broker would be based on the same financial and nonfinancial commodities that underlie futures contracts that bank holding companies

30. The subcompany's risk-management personnel also electronically receive trade information from the two exchanges up to four times a day. Reports based on such data are prepared by risk-management personnel and reviewed daily.

31. Because the section 20 company will act only as a broker, the section 20 company will not itself be required to take physical delivery of the nonfinancial commodities underlying the forward contracts that it arranges under any circumstances.

32. Exchange-traded futures contracts may be based on a wide variety of commodities, including precious metals, oil, cocoa, or wool.

33. See 1993 FRB 1049.

are permitted to broker as an FCM. Bank holding companies also are permitted to broker forward contracts on foreign exchanges and arrange swap transactions that are based on nonfinancial commodities or indices of nonfinancial commodities.³⁴ Accordingly, based on these and other facts of record, the Board concluded that acting as a broker for forward contracts based on those financial and nonfinancial commodities

that underlie an exchange-traded futures contract is a permissible activity for bank holding companies under section 4(c)(8) of the BHC Act.

3251.0.13.3 Conclusion

Based on all the facts of record, the Board approved the notice subject to all the terms and conditions discussed in the order and in the section 20 orders, as modified by the modification orders. (See 1997 FRB 138.)

34. See 1995 FRB 185.

Section 4(c)(8) of the BHC Act—Agency Transactional Services for Customer Investments (Other Transactional Services) Section 3255.0

With the adoption of the April 1997 revision to Regulation Y, the Board authorized certain types of other transactional services in section 225.28(b)(7)(v). Bank holding companies can provide to customers as *agent* transactional services with respect to swaps and similar transactions—

1. any transaction that is described in section 225.28(b)(8) of the regulation;
2. any transaction that is permissible for a state member bank; and
3. any other transaction involving a forward contract, option, futures, option on a futures or similar contract (whether traded on an exchange or not) relating to a commodity that is traded on an exchange.

Under this provision of the current rule, a bank holding company can provide transactional services for customers involving any derivative or foreign-exchange transaction that the bank holding company is permitted to conduct for its own account (item 1 above). A bank holding company may also act as a broker with respect to forward contracts based on a financial or nonfinancial commodity that also serves as the basis for an exchange-traded futures contract. This permits a bank holding company to act as agent in a forward contract that involves the same commodities and assessment of risk that underlie the permissible FCM activities of bank holding companies. This authority is not extended to forward contracts for the delayed sale of commercial products (such as automobiles, consumer products, etc.) or real estate.

Before the incorporation of the above transactions into the authority of Regulation Y, such activities had been previously approved individually by Board order. This section provides, as historical examples, summaries of such activities that were previously approved by Board order. Such orders led to the incorporation of the nonbanking activity into the April 1997 Regulation Y “laundry list.” The reader of these examples should only consider the current provisions for “other transactional services” as found in section 225.28(b)(7)(v) of Regulation Y. There should be no reliance on previous Board order commitments, supervisory policies, and interpretations that relate to this nonbanking activity that were in existence before April 21, 1997, unless such provisions remain. Certain former provisions or commitments may no longer be applicable.

3255.0.1 BROKERING OPTIONS ON SECURITIES ISSUED OR GUARANTEED BY THE U.S. GOVERNMENT AND ITS AGENCIES AND OPTIONS ON U.S. AND FOREIGN MONEY-MARKET INSTRUMENTS

A bank holding company applied for the Board’s approval under section 4(c)(8) and section 225.21(a) of the Board’s Regulation Y to engage *de novo*, through a wholly owned indirect subsidiary, in certain futures commission merchant and broker-dealer activities. One of the activities proposed for Board approval consisted of engaging in brokerage activities with respect to options on certain physicals, that is, securities issued or guaranteed by the U.S. government and its agencies and U.S. and foreign money-market instruments. The Board concluded that an option on a physical appears to serve the same function as other instruments in that it offers the investor a means to hedge portfolio risk. The Board had previously approved applications to engage in discount securities brokerage for retail customers with respect to corporate securities, and had added discount securities brokerage to the list of permissible nonbanking activities for bank holding companies generally. As a broker for options on physicals, it was stated that the indirect subsidiary would act solely as agent on behalf of nonaffiliated persons for the purchase and sale of options.¹ The services performed by a broker of options on the proposed securities appeared to be similar to those of other brokers. The Board thus concluded on December 8, 1983, that the proposal was closely related to banking (1984 FRB 238).

3255.0.2 BROKERING OPTIONS IN FOREIGN CURRENCY ON EXCHANGES REGULATED BY THE SEC

A BHC applied for the Board’s approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board’s Regulation Y to engage

1. A broker of options on U.S. government and agency securities and options on money market instruments is a securities broker under the securities laws.

de novo, through a wholly owned subsidiary, in executing and clearing options in foreign currency. The Board referenced its approval to a previous order regarding the brokering of options on certain financial physicals (see subsection 3255.0.1 above). The Board concluded that its rationale for this prior action was equally applicable to the brokerage of options in foreign exchange. The Board noted that the applicant had been active in the cash and forward markets for foreign currency and had the expertise to provide the proposed services to customers. The Board concluded on March 19, 1984, that, in the manner proposed, the applicant's proposal to broker options in foreign currency was closely related to banking (1984 FRB 368).

In considering the potential for adverse effects, the Board took into account and relied on the regulatory framework established pursuant to law by the SEC for the trading of options. In addition, the Board noted that the applicant would not trade any of the options involved for its own account.

3255.0.3 EXECUTING AND CLEARING CFTC-REGULATED OPTIONS ON BULLION AND FOREIGN EXCHANGE ON AUTHORIZED COMMODITY EXCHANGES

A BHC applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y to engage de novo through its wholly owned subsidiary in executing and clearing options. As part of that

request, the BHC requested the Board to approve the executing and clearing of CFTC-regulated options on bullion and foreign exchange on authorized commodity exchanges. In making a determination that the activity was closely related to banking, the Board noted—

1. that it previously determined the brokering of futures and options on futures in bullion and foreign exchange to be a permissible nonbanking activity under the former section 225.25(b)(18) of Regulation Y (currently section 225.28(b)(7)(iv));
2. that options on physicals serve essentially the same function as futures and options on futures; and
3. that the brokering of options on certain physicals, that is, U.S. government securities, money market instruments, and options on foreign currency regulated by the SEC, is closely related to banking (1984 FRB 368, see subsection 3255.0.2, above).

The Board determined that the proposed CFTC-regulated options on physicals are functionally and operationally comparable devices for hedging investment-portfolio risk. The Board also determined that the applicant's proposal was substantially similar to proposals to engage in options activities previously approved by the Board. It noted that the applicant had been active in the cash and forward markets for bullion and foreign currency and that it possessed the expertise to provide the proposed services to customers. The Board therefore concluded the activity to be closely related to banking and approved the application on June 5, 1984, in the manner proposed (1984 FRB 591).

Section 4(c)(8) of the BHC Act—Investment Transactions as Principal

Section 3260.0

Under Regulation Y, a bank holding company may engage in—

1. underwriting and dealing in government obligations and money market instruments (see section 3260.0.1),
2. investing and trading activities as principal, and
3. buying and selling bullion and related activities.

A bank holding company may engage or trade as principal in the following:

1. foreign exchange
2. forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on an exchange or not, based on any rate, price, financial asset¹ or nonfinancial asset, or group of assets, other than a bank-ineligible security,² if—
 - a. the underlying asset is a permissible investment for state member banks,
 - b. the derivative contract requires cash settlement, or
 - c. the derivative contract allows for assignment, termination, or offset prior to delivery or expiration and the bank holding company makes every reasonable effort to avoid delivery
3. forward contracts, options,³ futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on an index of a rate, a price, or the value of any financial asset, nonfinancial asset, or group of assets, if the contract requires cash settlement

The above three alternative conditions do *not* apply to derivative contracts based on an index, but they do apply to all other contracts.

1. A bank holding company is also authorized to buy, sell, and store gold, silver, copper, platinum, and palladium bullion, coins, bars, and rounds, and any other metal approved by the Board.

2. A bank-ineligible security is any security that a state member bank is not permitted to underwrite or deal in under 12 U.S.C. 24 and 335.

3. This does not include acting as a dealer in options based on indexes of bank-ineligible securities when the options are traded on securities exchanges. These options are securities for purposes of the federal securities laws and bank-ineligible securities for purposes of section 20 of the Glass-Steagall Act (12 U.S.C. 377). Also not included is acting as a dealer in any other instrument that is a bank-ineligible security for purposes of section 20. Bank holding companies, when authorized, may deal in these instruments in accordance with the Board's orders on dealing in bank-ineligible securities.

Following the adoption of the April 1997 revised Regulation Y, a bank holding company can continue to trade in foreign exchange and bank-eligible securities. Bank holding companies, however, are no longer required to have a separate subsidiary to provide advice to customers when engaging in trading activities as principal.

Bank holding companies are broadly permitted to invest as principal in derivatives on financial and nonfinancial commodities. A bank holding company may invest or trade as principal in a derivatives contract on a financial or nonfinancial commodity or an index or commodities, so long as any one of three conditions are met:

1. The underlying asset is a permissible investment for state member banks.
2. The derivative contract requires cash settlement.
3. The derivative contract allows for assignment, termination, or offset before expiration, and the bank holding company makes every reasonable effort to avoid delivery.

A bank holding company may trade as principal a derivatives contract on an index of rates, prices, or the value of any financial or nonfinancial asset or group of assets, so long as the contract requires cash settlement. This does not include acting as a dealer in options based on indexes of bank-ineligible securities when the options are traded on securities exchanges.

Bank holding companies continue to acquire companies engaged in, or engage through an existing subsidiary in, derivatives trading and investment activities that would be beyond the scope of investment or trading activities encompassed within the bank-servicing exemption.⁴ Regulation Y includes proprietary trading activities to clarify the permissibility of this activity as a separate business activity.

A bank holding company may engage in buying and selling bullion and related activities. This consists of buying and storing bars, rounds, bullion, and coins of gold, silver, platinum, palladium, copper, and any other metal approved by the Board for the company's own account and the account of others, and providing incidental services such as arranging for the storage, safe custody, assaying, and shipment.

4. For example, *Swiss Bank Corporation*, 1995 FRB 185.

Before the incorporation of these transactions into the authority of Regulation Y, certain of these activities had been approved individually by Board order. This section provides, as historical examples, summaries of such activities that were previously approved by Board order. Such orders may have led to the incorporation of the nonbanking activity into the April 1997 Regulation Y “laundry list.” The reader of these examples should only consider the current regulatory provisions as currently found in section 225.28(b)(8) of Regulation Y. Only minimum reliance should be placed on previous Board order commitments, supervisory policies, and interpretations that relate to this nonbanking activity that were in existence before April 21, 1997, unless such provisions remain currently. Certain former provisions or commitments may no longer be applicable.

3260.0.1 UNDERWRITING AND DEALING IN GOVERNMENT OBLIGATIONS AND MONEY MARKET INSTRUMENTS

A bank holding company may engage in underwriting and dealing in obligations of the United States, general obligations of states and their political subdivisions, and other obligations that state member banks of the Federal Reserve System may be authorized to underwrite and deal in under 12 U.S.C. 24 and 355. This includes banker’s acceptances and certificates of deposit, under the same limitations as would be applicable if the activity were performed by the bank holding company’s subsidiary member banks or its subsidiary nonmember banks as if they were member banks. See Regulation Y, section 225.28(b)(8)(i) and section 3240.0.

3260.0.2 FOREIGN EXCHANGE

A bank holding company may engage as principal in foreign exchange. See Regulation Y, section 225.28(b)(8)(ii)(A).

3260.0.3 ENGAGING AS PRINCIPAL IN BANK-ELIGIBLE DERIVATIVES INVOLVING FINANCIAL ASSETS AND NONFINANCIAL ASSETS OR GROUPS OF ASSETS

A bank holding company may engage as principal

in forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on any rate, price, financial asset, nonfinancial asset, or group of assets, other than a bank-ineligible security. A financial asset includes gold, silver, platinum, palladium, copper, or any other metal approved by the Board. See Regulation Y, section 225.28(b)(8)(ii)(B).

3260.0.3.1 Trading for a Company’s Own Account in Futures, Options, and Options on Futures Based on U.S. Government Securities and Certain Money Market Instruments

A foreign bank, subject to the provisions of the BHC Act, applied to the Board under section 4(c)(8) and section 225.23 of the Board’s Regulation Y to engage through a wholly owned subsidiary in trading activities for its own account. The trading included futures, options, and options on futures based on U.S. government securities that are permissible investments for national banks (bank-eligible securities) and certain money market instruments.⁵

The Board had previously determined that BHCs could purchase derivative instruments based on government securities for the purpose of reducing interest-rate exposure (see 12 C.F.R. 225.142, Statement of Policy Concerning Bank Holding Companies Engaging in Futures, Forward, and Option Contracts on U.S. Government and Agency Securities and Money Market Instruments). Previously, the Board approved applications to trade in derivative instruments based on foreign exchange for the company’s own account for other than hedging purposes (see 1989 FRB 217). Section 225.28(b)(7)(iv) and 225.28(b)(6)(iv) of Regulation Y details a BHC’s ability to act as futures commission merchant and to offer advice with regard to futures and options on futures on bank-eligible securities, respectively.

The purchasing and selling of derivative instruments which represent the right to purchase and sell bank-eligible securities is considered by the Board to be closely related to banking.⁶ The experience gained by banks in dealing

5. See 1991 FRB 759 for a listing of the derivative instruments to be traded, which are listed in appendix A. The subsidiary would hedge its positions in these instruments with the instruments listed in appendix B of the order.

6. The applicant was not authorized to purchase derivative instruments based on securities or instruments that a state member bank may not purchase for its own account.

with the securities underlying these instruments would equip the banks to trade in instruments based on these securities. In addition, the derivative instruments based on money market instruments require a market judgment on interest rates. Banks have developed an expertise in such judgments through their lending and funding activities. The Board thus concluded on July 12, 1991, the activity of trading for a company's own account in derivative instruments based on bank-eligible securities and certain money market instruments to be closely related to banking (see 1991 FRB 759).

3260.0.3.2 Dealing as a Registered Options Trader on Foreign-Exchange Options

A foreign bank subject to the BHC Act applied under section 4(c)(8) of the act to deal, through its wholly owned U.S. subsidiary, as a registered options trader (trader) on foreign-exchange options. As a trader, the subsidiary would act as dealer and market maker in such options to assist in the maintenance of a "fair and orderly" market on the designated exchange. A trader deals for its own account in order to maintain a "fair and orderly" market in certain options when a lack of price continuity or temporary disparity exists on options for which the trader

makes a market. The subsidiary would be obliged to make a market in the proposed foreign-currency options, or bid and offer, for all traders who approach it on the designated exchange. The subsidiary would not be obliged in any way as to the price and quantity it bids and offers. A trader is permitted to “leave the floor,” that is, not trade, if it meets minimum trading levels each quarter.

The Board previously recognized that foreign-exchange activities have traditionally been conducted at banks and are permissible activities under the BHC Act.⁷ The Board noted that the Office of the Comptroller of the Currency authorized national banks to deal in foreign-currency options as a trader on a securities exchange. It also noted that through bank participation in the interbank market for foreign-currency options, banks developed experience in dealing, market making, and risk management, which are deemed essential elements of the activities proposed. For these reasons and the facts presented in the BHC’s application, the Board approved the non-banking activity as being closely related to banking. The application was approved by the Board on July 30, 1990 (1990 FRB 776).

3260.0.3.3 Acting as a Specialist in Options on Foreign Exchange

A foreign bank subject to the BHC Act applied for the Board’s approval under section 4(c)(8) of the act (12 U.S.C. 1843(c)(8)) and section 225.21(a) of the Board’s Regulation Y (12 C.F.R. 225.21(a)) for its wholly owned subsidiary (the company) to act as the sole specialist in deutsche mark options on a specified exchange (the exchange). As a specialist, the subsidiary would act as a dealer and market maker in these options for the purpose of assisting in the maintenance of a fair and orderly market on the exchange.

The Board found the activity of engaging as a specialist in foreign-currency options on the exchange to be closely related to banking for purposes of section 4(c)(8) of the BHC Act. Banks provide services that are operationally similar to the activities proposed. The Board deemed banking organizations to be particularly well equipped to provide the proposed activities. The Board believes that banks possess substantial experience in dealing in foreign exchange and related services that are similar to the functions involved in the BHC’s proposed specialist activity. Foreign-exchange activities were noted

as having been traditionally conducted by banks which are major participants in all aspects of the foreign-exchange markets. Banks act as market makers in various currencies. Banks trade for their own account as well as for their customers in virtually all foreign-exchange markets and instruments, including trading in foreign-currency options on regulated exchanges, as proposed by this BHC applicant.

The Board believes the financial risk in this case to be sufficiently minimized since (1) the rules of the exchange allow the specialist to set the price and quantity that it will buy and sell in order to limit its risk in an adverse or volatile market; (2) the specialist is prohibited from speculating; and (3) the BHC has committed not to write unhedged options, having developed substantial experience with hedging from its existing foreign-currency and options business. The company will be a registered broker-dealer with the Securities and Exchange Commission (SEC) and will thus be subject to the SEC’s net capital rule. The Board expects that the company will maintain capital adequate to support its activity and to cover reasonable expenses and losses at all times.

The Board considered its earlier decision (1986 FRB 141) to deny a proposal to act as a specialist in French franc options on the exchange, summarized in section 3700.8. The Board believes that the facts and circumstances in this case were different in several significant respects from the current situation. The current proposal did not raise the issues relating to potential conflicts of interest and risk raised by the earlier decision (1986 FRB 141). The markets for deutsche marks and deutsche mark options are more liquid than they were for French francs at that time. Further, the market for foreign-currency options has broadened significantly on the exchange and the involvement of commercial banks in that market has become more widespread. The Board approved the BHC’s application by order on June 22, 1989 (see 1989 FRB 580).

3260.0.3.4 Acting as a Dealer, Broker with Respect to Interest-Rate and Currency Swaps and Related Transactions

A bank holding company applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a) of the Board’s Regulation Y for its wholly owned subsidiary to engage de novo in—

7. See 1989 FRB 217, 308, and 580.

1. intermediating in the international swap markets by acting as originator and principal in interest-rate swap and currency-swap transactions;
2. acting as an originator and principal with respect to certain risk-management products such as caps, floors, and collars, as well as options on swaps, caps, floors, and collars (“swap-derivative products”);
3. acting as a broker or agent with respect to the foregoing transactions and instruments; and
4. acting as an advisor to institutional customers regarding financial strategies involving interest-rate and currency swaps and swap-derivative products.

The Board has permitted bank holding companies under section 4(c)(8) of the act to provide advice in connection with interest-rate and currency swaps, interest-rate caps, and similar transactions (see 1987 FRB 59 and 1989 FRB 308).⁸ However, the Board had not previously

approved the remaining activities proposed under section 4(c)(8) of the act. The Board determined that the remaining activities proposed are closely related to banking for the reasons summarized below.

Intermediating in the International Swap Market; Acting as an Originator and Principal with Respect to Certain Risk-Management Products—Caps, Floors, Collars, and Options on Swaps, Caps, Floors, and Collars

1. Banks, in particular, the money-center banks, do conduct the proposed intermediation activities within the international swap market.
2. Banks have participated in the swap markets for several years as end-users, entering into swaps and purchasing swap-derivative products in order to hedge other business risks or to match assets and liabilities.

Acting as a Broker or Agent with Respect to These Transactions and Instruments

1. Banks provide services that are operationally similar to the proposed activities.
2. The Board had previously determined that acting as a broker with respect to foreign-exchange forward transactions is closely related to banking since banks have historically engaged in the provision of assistance with respect to foreign exchange. (See 1983 FRB 221). Currency swaps are very similar to foreign-exchange forward transactions. The primary difference is the exchange of interest rates in connection with currency swaps. Interest-rate swaps are similar to currency swaps in that they involve agreements to exchange different payment streams that arise out of a prescribed principal amount. Similarly, caps, floors, and collars involve agreements to pay an amount by reference to a prescribed interest rate.

The Board approved the application on June 26, 1989 (see 1989 FRB 582), subject to the commitments included in the order to minimize the potential risk (that is, credit, price, basis, portfolio, and operations risk) and the possible conflicts of interest.

3260.0.3.5 Currency Swaps for Hedging the BHC’s Own Position in Foreign Currency

A foreign bank, subject to section 4 of the BHC Act, applied for the Board’s permission to acquire,

⁸ Swap terminology:

Interest-rate swap. An exchange between two counterparties of different payment streams arising out of fixed-rate and floating-rate payment obligations. The exchange is made using the same currency and is calculated by reference to a mutually agreed-upon “notional” principal amount.

Currency swap. An exchange between two counterparties of a fixed-rate interest obligation in one currency for a fixed-rate interest obligation in another currency. Currency swaps may involve an initial physical exchange of principal at an agreed-upon current exchange rate or an exchange of interest payments in different currencies on an agreed-upon notional amount with no actual transfer of principal. In either case, there will be periodic exchange of fixed-rate interest payments over the course of the swap. Upon maturity, there would be a re-exchange of the original principal amounts.

Cap. An agreement under which one party purchases from the other a promise to pay, at predetermined future times, the excess, if any, of a specified floating interest rate over a fixed per annum rate. Caps may be sold separately or packaged with an interest-rate swap.

Floor. An agreement under which one party purchases a promise by another to pay the amount, if any, by which a specified floating interest rate is lower than a fixed per annum rate at specified times during the life of the agreement. Floors may be sold separately or packaged with an interest-rate swap.

Collar. The simultaneous sale of a cap and purchase of a floor, or purchase of a cap and sale of a floor.

Agent or broker in swap market. An agent or broker in the swap market locates, for a fee, a suitable counterparty for a party seeking to enter into a swap agreement.

Intermediary in swap market. A party that is willing to step between the two parties of a swap agreement and act as a principal counterparty with each of the other participants, thus taking on the credit risk of each of the participants. Upon entering into a swap with one counterparty, the intermediary enters into an equivalent and offsetting swap with another counterparty.

through its wholly owned subsidiary, all the shares of a company located in New York, N.Y. The acquired company would engage in several nonbanking activities. One of the activities, not previously approved by the Board for BHCs, consisted of entering into currency-swap transactions for hedging the BHC's own position in foreign currency. The Board previously found that banks engage in this activity and thus concluded that the activity is closely related to banking.⁹ In conducting this activity, the applicant is to use the same policies, quantitative limitations, and internal controls and audit programs applicable to its trading in futures, options, and options on futures and similar contracts used for hedging, including the guidelines in the Board's policy statement.¹⁰ The application was approved on August 15, 1990 (1990 FRB 860).

3260.0.3.6 Dealing in Gold, Silver, Platinum, and Palladium Bullion and Coins

On September 27, 1973, the Board approved a foreign banking organization's request to acquire 30 percent of the voting shares of a domestic company engaged in the trading and arbitrage of gold and silver bullion on various exchanges and in the open market. The subsidiary is enabled to participate in the domestic gold bullion market under 12 U.S.C. 24 (para. 7), which specifically authorized national banks to deal in bullion.

The Board found that buying and selling gold and silver bullion and silver coin, dealing in exchange and silver futures, and arbitraging gold and silver in markets throughout the world are activities closely related to banking or managing or controlling banks. Thus, in approving the application, the Board maintained its basic position that it will benefit the public to allow foreign banks to engage in U.S. activities on a nondiscriminatory basis. (See 1973 FRB 775.)

In another case, a BHC applied for the Board's permission to engage in certain activities related to dealing in gold and silver bullion. The activities consisted of (1) buying and selling gold and silver bullion, bars, rounds, and bullion coins for its own account and the account of others; (2) financing the production, refining, and fabri-

cation of gold and silver, including lending and borrowing gold and silver in connection with such financing; (3) arbitraging gold and silver in markets throughout the world; and (4) providing various incidental services for customers, such as arranging for the safe custody, assaying, and shipment of gold and silver.¹¹

The Board determined previously that many of the proposed activities are permissible for BHCs. A BHC may engage in the purchase and sale of gold and silver for its own account and for the account of others.¹² The Board believed the assaying and arranging for transport to be part of this activity.¹³ Financing activities for the production and fabrication of gold and silver are permissible activities. (See section 225.28(b)(1) of Regulation Y—Extending credit and servicing loans.) The Board approved the application by order on November 24, 1986 (1987 FRB 61). (See SR-87-7.)

In a subsequent case, a foreign banking organization presented its application to the Board, pursuant to section 4(c)(8) of the BHC Act, requesting permission to engage in the activity, through its wholly owned subsidiary, of purchasing and selling platinum coins issued by the Canadian and Australian governments as legal tender. The subsidiary would acquire the platinum coins issued by the Canadian and Australian governments solely for the purpose of effecting distribution. It would maintain an inventory of the coins. However, it would not purchase the coins for investment or speculation for its own account or offer its customers investment advice regarding their purchase and sale. It would enter into forward contracts with its customers. In considering the BHC's application, the Board noted that the Office of the Comptroller of the Currency had authorized national banks to purchase and sell platinum coins and that the proposed activities were operationally and functionally similar to purchasing and sell-

11. The applicant further notified the Board of its intention to purchase and sell for its own account options, futures, and options on futures on gold and silver bullion. The applicant committed to take positions in these investments only as a means of hedging its position in the underlying commodity, that is, gold and silver. The activity was thus permissible under section 4(c)(1)(C) of the BHC Act, which allows BHCs to furnish services to or perform services for such BHCs or its banking subsidiaries.

12. See 1986 FRB 345, 1986 FRB 146, 1985 FRB 467, and 1981 FRB 635.

13. The Board allowed another BHC to provide storage facilities, weighing, coin-counting, and transportation services for bullion and coin. (See 38 *Federal Register* 27,552 (1973).)

9. See 1989 FRB 582.

10. Statement of Policy Concerning Bank Holding Companies Engaging in Futures, Forward and Options Contracts on U.S. Government and Agency Securities and Money Market Instruments. See 12 C.F.R. 225.142 (establishing guidelines for trading in forward, futures, and option contracts on financial instruments).

ing gold and silver coins. The Board found the purchasing and selling of platinum coins that function as legal tender to be closely related to banking. The related application was approved on June 25, 1990 (1990 FRB 681).

In a more recent case, a foreign bank subject to the provisions of the act applied for the Board's permission under section 4(c)(8) of the act and section 225.23 of Regulation Y for its section 20 subsidiary to trade platinum coin and bullion for its own account. The Office of the Comptroller of the Currency has determined that a national bank may engage in this activity. (See OCC Interpretive Letter No. 553, May 2, 1991, relying, in part, on the fact that several countries had recently introduced platinum coins.) The Board had not previously determined that this activity was closely related to banking under section 4(c)(8) of the act. As stated previously, it had determined that the purchase and sale of platinum coins that function as legal tender is an activity that is closely related to banking. (See 1994 FRB 346 and 1990 FRB 681.) The Board had also approved as a non-banking activity, under Regulation K, trading in platinum by bank holding company subsidiaries located abroad (1994 FRB 177 and 1990 FRB 552). On the basis of these decisions, the Board concluded that the proposed activity is closely related to banking. (See 1995 FRB 190.)

With respect to palladium, a bank holding company applied for the Board's approval under

section 4(c)(8) of the act and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through a wholly owned asset-management subsidiary that will be established to serve as the general partner of limited partnerships (the partnerships) for investing in a wide variety of commodities and exchange-traded and over-the-counter instruments, including trading in precious metals. The partnerships would trade and invest in coin and bullion consisting of such precious metals as palladium, platinum, gold, and silver.

The Board has previously determined that it is closely related to banking under the act for bank holding companies to trade in all the instruments and commodities it proposed for the partnerships, except palladium.¹⁴ Banks currently are permitted to engage in palladium trading.¹⁵ Therefore, the Board concluded that trading palladium coin and bullion is closely related to banking within the meaning of section 4(c)(8) of the act.

14. See 12 C.F.R. 225.28(b)(6)(iv), 1987 FRB 61 (trading gold and silver bullion and coin), and 1995 FRB 190 (trading platinum coin and bullion for a BHC's own account).

15. See OCC Interpretive Letters Nos. 683 (1995) and 553 (1991).

Effective December 31, 1980, the Board amended section 225.28(b) of Regulation Y (12 C.F.R. 225.28(b)(2)(i)) to include the performance of real estate appraisals in the list of activities permissible for bank holding companies to engage in. The Board concluded that banks perform real estate appraisals either in connection with extensions of credit involving real estate lending or as a discrete activity. In addition, such an appraisal activity calls upon the necessary skills and resources often possessed by banking organizations. The Board thus determined that the activity of performing appraisals of real estate is closely related to banking and that its performance by bank holding companies will yield net benefits to the public.

In addition to authorizing the appraisals of real estate as a nonbanking activity, the Board has previously determined by order that the appraisal of certain types of personal property, both tangible and intangible, is closely related to banking (1985 FRB 118). Providing personal property appraisals was added to the list of permissible nonbanking activities in Regulation Y. It was combined with the already approved activity of providing real estate appraisals (12 C.F.R. 225.28(b)(2)(i)). The action was approved by the Board on October 31, 1986, effective December 15, 1986, without any conditions. In permitting bank holding companies to engage in the activity of providing valuations of companies, the Board noted that the commercial lending and trust departments of banks commonly make valuations of a broad range of tangible and intangible property, including the securities of closely held companies. Providing valuations of companies necessarily involves the appraisal of various types of intangible personal property, such as securities of closely held corporations, as well as any tangible personal property that a company might possess.

Banks currently engage in the appraisal of personal property through their trust departments. Trust departments value private business interests for their own trust accounts and other types of personal property in a customer's estate for probate and tax purposes. Banks engage in property appraisal activities in connection with secured lending activities and routinely appraise property which they take as collateral on loans, including perishable commodities, durable goods, computer software, crops, livestock, machinery, and equipment.

Banks also engage in appraisal activities in connection with their leasing activities. With regard to leasing, banks determine the residual

value of leased property, such as vehicles and equipment, in order to establish the terms of a lease. Some money-center banks have appraised aircraft and locomotives, in connection with their leasing or lending transactions. Finally, banks may become involved in personal property appraising when they appraise real property, since certain types of real property, such as factories or apartment buildings, contain fixtures or other personal property that must be evaluated separately to determine the value of the real property.

3270.0.1 SCOPE OF INSPECTION

As noted within the subsequent inspection procedures, a sampling of real estate and personal property appraisals is to be reviewed to determine whether the appraised value of the property is reasonable and the documentation supports the appraisal.

Regulatory appraisal standards for federally related transactions are discussed below and must be considered in determining the scope of the inspection. The types, components, and procedures that should be used in evaluating real estate appraisals are included in section 2231.0, which contains guidelines for use by bank holding companies and subsidiaries for real estate appraisal and evaluation programs. Personal property appraisal involves estimating or determining the value of property other than real property.

3270.0.2 APPRAISAL STANDARDS FOR FEDERALLY RELATED TRANSACTIONS

The Board approved, on June 27, 1990, Appraisal Standards for Federally Related Transactions¹ that represent amendments to Regulation H (12 C.F.R. 208) and Regulation Y (12 C.F.R. 225) that are designed to protect federal financial and public policy interests in real estate transactions requiring the services of an appraiser. The regulations are intended to supplement the Board's appraisal guidelines currently in effect. Section

1. "Federally related transaction" refers to any real estate-related financial transaction entered into on or after August 9, 1990, that (1) the Board or any regulated institution engages in or contracts for and (2) requires the services of an independent appraiser.

208.50 of Regulation H refers to the appraisal standards for federally related transactions entered into by state member banks. The appraisal standards for federally related transactions are found in subpart G, section 225 of Regulation Y. The amendments were the result of implementing provisions of title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) regarding real estate appraisals. The Regulation Y amendments identify which transactions require an appraiser (section 225.63),² set forth minimum standards for performing appraisals (section 225.64), and distinguish those appraisals requiring the services of a state-certified appraiser from those requiring a state-licensed appraiser (section 225.63). The effective dates are August 9, 1990, for the appraisal standards and July 1, 1991, for the appraiser certification and licensing requirements. Other provisions address appraiser independence (section 225.65), professional association membership, and competency.

3270.0.3 APPRAISER'S QUALIFICATIONS

With respect to an institution's selection of appraisers, examiners need to consider the following:

1. The professional certification, license, or other recognition of the competence of the appraiser. For real estate appraisals, the appraiser must have the proper state certification or license required by section 225.63 of Regulation Y. Examiners should also consider the September 1992 Guidelines for Real Estate Appraisal and Evaluation Programs. For personal property appraisals, the appraiser's qualifications might be evidenced by certification from a nationally recognized personal property appraisal organization or they may be supported by license or other recognition of the competence of the appraiser.

² The Appraisal Standards for Federally Related Transactions that are found in Regulation Y were amended, effective December 28, 1998, to exclude from the Board's appraisal requirements transactions involving the underwriting of or dealing in mortgage-backed securities. The amendment permits bank holding company subsidiaries engaged in the underwriting of and dealing in securities (so-called section 20 subsidiaries) to underwrite and deal in mortgage-backed securities without demonstrating that the loans underlying the securities are supported by appraisals that meet the Board's appraisal requirements.

2. The reputation and standing of the specialist in the view of his peers and others familiar with the person's capability of performance.
3. The relationship, if any, of the appraiser to the bank holding company in order to determine independence and objectivity.
4. The appraiser's documented accomplishments (for example, the appraiser's personal "qualifications statement" or job history resume).
5. Whether the appraiser's experience and knowledge or expertise relates to the property appraised.
6. Whether the appraiser meets continuing education requirements for licensing or certification. Membership or the absence of membership in any particular appraisal organization should not be accepted as prima facie evidence of an appraiser's qualifications.

3270.0.4 KEY COMPONENTS OF A PERSONAL PROPERTY APPRAISAL REPORT

When reviewing personal property appraisals, the appraisal should describe the following:

1. the kind of value being determined, such as fair market value, liquidation value, replacement/reproduction value, etc.
2. the property being valued
3. the detailed procedures used to estimate the values, such as—
 - a. analysis of comparable sales,
 - b. estimation and analysis of income, and
 - c. the appraised values as of a specific date
4. the name of the individual who made the appraisal and who is responsible for its validity and objectivity (to the person receiving the appraisal, to third parties, and to the public)
5. the personal qualifications data of the appraiser

3270.0.5 APPRAISAL OF CONSTRUCTION AND CONSTRUCTION ANALYSIS SERVICES

The activity of providing construction analysis services, including appraisal of construction projects at various stages of development and disbursement of construction loan funds in accordance with the terms of the loan agreement, is included within the permissible activities of real estate appraising and loan servicing.

3270.0.6 INSPECTION OBJECTIVES

1. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
2. To determine whether the company has formal written policies and procedures. For real estate appraisals, the policies and procedures should be consistent with the Guidelines for Real Estate Appraisal and evaluation programs in section 2231.0.
3. To determine if there is compliance with the appraisal standards for federally related transactions detailed in the Board's Regulations H and Y.
4. To determine whether the appraisals were performed on an independent basis.
5. To determine whether the individuals performing the appraisals are qualified and that the appraisals are reasonable.
6. To determine whether the appraisals are current, complete, and reasonably accurate.
7. To determine if real estate appraisals are performed by state-licensed or state-certified appraisers.

- and determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiaries.
2. Review the company's policies and procedures to determine that the following are present:
 - a. Adequate minutes are prepared of the board and board committee meetings.
 - b. Professional liability insurance and blanket bond coverage, if appropriate, are in place and the coverage appears sufficient.
 - c. Only qualified individuals are authorized to perform appraisals.
 3. Review a sampling of the real estate and personal property appraisals to determine how a value is derived and whether this value is adequately substantiated.
 4. For the appraisals reviewed in procedure 3, determine the reason for each appraisal. If it is for the purpose of valuing collateral for a loan extended by or to a bank affiliate, does the value appear realistic in relation to the loan amount?
 5. Check for compliance with section 106(b) of the 1970 Amendments of the BHC Act (prohibition against tie-in arrangements). (See section 3500.0.)

3270.0.7 INSPECTION PROCEDURES

1. Review the company's financial statements

3270.0.8 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Real estate appraisal activity approval		225.28(b)(2)(i)		1980 FRB 962 and 984 1997 FRB 275
Acquisition of a nonbanking subsidiary that performs valuations of companies and of large blocks of stock for a variety of purposes				1985 FRB 118
Personal property appraisal activity approval		225.28(b)(2)(i)		1986 FRB 833 1997 FRB 275
Appraisal standards for federally related transactions		225 subpart G, 225.61– 225.67	4–053	1990 FRB 639 1999 FRB 50

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(8) of the BHC Act (Check-Guaranty and Check-Verification Services) Section 3320.0

The activities of check-guaranty and check-verification services permit bank holding companies to authorize the acceptance by subscribing merchants of certain personal checks tendered by the merchant's customers in exchange for goods and services, and to purchase validly authorized checks from merchants in the event the checks are subsequently dishonored.

The Board determined, previously, that check-guaranty services were closely related to banking, and had approved applications by bank holding companies on a case-by-case basis to engage in the activity (1979 FRB 263 and 1981 FRB 740). See also 1999 FRB 582, 1996 FRB 348 (fraud-detection services), 1994 FRB 1107, and 1995 FRB 492 (ATM network services).

The Board noted the potential for unfair competition or conflicts of interest with respect to the authorization of checks not drawn on affiliated banks. To minimize this possibility, the Board has maintained a condition in Regulation Y, noted in previous orders, stating that the check guarantor cannot discriminate against checks drawn on unaffiliated banks.

3320.0.1 INSPECTION OBJECTIVES

1. To determine the extent of exposure to guaranteed bad-check losses.
2. To determine whether management is qualified and effective in controlling losses.
3. To determine whether administrative and operating procedures and check-guaranty and check-verification transactions are processed in accordance with established Board or Board committee authorization policies and procedures, including adequate internal control procedures.
4. To determine whether recordkeeping and data processing are adequate and current to avoid losses resulting from outdated or inaccurate information.

5. To determine whether any significant contingent liabilities exist.
6. To determine whether the financial condition of the nonbanking subsidiary will have an adverse influence on the financial condition of the consolidated corporation.

3320.0.2 INSPECTION PROCEDURES

1. Review financial statements to determine the financial condition of the company and past and current operating trends. Test the accuracy of those records against the financial statements for each material asset, liability, and equity account.
2. Review the minutes of the board of directors and executive committees and correspondence exchanged with the company's legal counsel.
3. Review authorization records for check-guaranty and check-verification services for adequacy to determine whether check clearance is verified and whether the company has an accurate record of its contingent liability for guaranteed checks.
4. Review collection records to determine whether follow-up procedures on purchased guaranteed bad checks are adequate and whether they evidence timely collection contacts and successful recoveries.
5. Determine whether collection-problem checks are turned over to attorneys or collection agencies for appropriate collective or legal action on a timely basis.
6. Review the company's history of bad-check losses and the current status of uncollected bad checks, and determine whether adequate reserves have been set aside for those losses.
7. Determine whether fee calculations and billing procedures ensure accuracy and propriety.

3320.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Engage de novo through a new nonbank subsidiary in the activity of check verification				1979 FRB 263
Retail check-authorization and check-guaranty activities				1981 FRB 740 1999 FRB 582
Fraud-detection services				1996 FRB 348 (see footnote 15)
Amendment of Regulation Y adding check verification as a permissible activity		225.28(b)(2)(iii)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

The Board authorized the addition of operating a collection agency to the list of approved activities. A collection-agency subsidiary seeks to collect payment on the overdue bills of debtors, charging the party submitting the claim a flat dollar amount or a specified percentage commission contingent on the amount collected. The Board determined that operating a collection agency is closely related to banking as banks engage in debt-collection activities for loans they originate and service, including overdue credit-card accounts.

The Board recognized the potential for unfair competition and conflicts of interest through the operation of a collection agency. Accordingly, the Board established the following conditions on operating a collection agency:

1. The collection agency shall not obtain the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies
2. The collection agency shall not provide preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.

3330.0.1 INSPECTION OBJECTIVES

1. To determine whether the collection agency is obtaining the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies.
2. To determine whether the collection agency provides preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.
3. To determine what effect the activity has on the parent company, its subsidiaries, and the overall consolidated organization, and whether the company or activity evidences a going concern.
4. To determine whether the company has formal written policies and operating and internal control procedures to successfully administer the activity.
5. To determine the extent of management expertise, experience, and involvement with the administration of the activity.
6. To determine the extent of compliance with laws, regulations, and interpretations associated with the activity, including the Fair Credit Reporting Act, Fair Debt Collection

Practices Act, and Right to Financial Privacy Act.

7. To determine whether the company administers formal training programs which include proper operating and compliance methods.
8. To determine whether any significant contingent liabilities exist and whether those liabilities resulted from the failure of the bank holding company or its nonbanking subsidiary to fulfill its responsibilities as an agent for its customers.

3330.0.2 INSPECTION PROCEDURES

1. Review financial statements to determine the financial condition of the company and past and current operating trends. Test the accuracy of the financial statements against the company's financial records and other supportive corroborating evidence.
2. Review the minutes of the board of directors and executive committees, and correspondence exchanged with the company's legal counsel with regard to possible contingency losses.
3. Review collection records for adequacy, and determine whether the amount of payments received is independently verified.
4. Review collection records—tickler files—to determine whether follow-up procedures on acquired accounts are adequate and whether they evidence timely collection contacts and successful recovery rates.
5. Determine whether appropriate legal action is used and authorized by customers on a timely basis.
6. Determine whether fee calculations and billing procedures ensure accuracy and propriety.
7. Review parent company and subsidiary administrative and operating policies, and determine whether the collection agency is prohibited from obtaining the names of customers of competing collection agencies from an affiliated depository institution that maintains trust accounts for those agencies.
8. Review customer lists and billings and any prioritized collection schedules, and determine whether the collection agency is providing any preferential treatment to an affiliate or a customer of such affiliate seeking collection of an outstanding debt.

3330.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Amendment of Regulation Y adding collection-agency services as a permissible activity		225.28(b)(2)(iv)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

A bank holding company that engages in the activity of operating a credit bureau gathers, stores, and disseminates factual information relating to the identity and paying habits of consumers. Credit bureaus then provide this information for a fee to credit grantors, such as retailers, banks, and finance companies, to enable the institutions to arrive at prudent credit-granting decisions. The Board concluded that the activity is closely related to banking as banks maintain credit files and analyze credit information as part of their consumer-lending function.

The Board recognized that possible adverse effects could result from a potential conflict of interest when a bank holding company performs credit bureau activities. For example, under the Fair Credit Reporting Act, a credit bureau is required to investigate the accuracy of any item of information disputed by a consumer (15 U.S.C. 1681(i)). A bank holding company credit bureau may not conduct an impartial investigation if the disputed information originates with an affiliate. The Board thus imposed the condition that a credit bureau could not provide preferential treatment to a customer of an affiliated financial institution.

Regulation Y allows bank holding companies to engage only in consumer-credit-reporting activities rather than credit-reporting activities concerning large commercial institutions.

3340.0.1 Inspection Objectives

1. To determine whether the activity is limited to only consumer-credit-reporting activities.
2. To determine whether the bank holding company gives preferential treatment to a customer of an affiliated financial institution.
3. To determine the adequacy of internal policies and operating and internal control procedures.
4. To determine whether any significant contingent liabilities exist which arose from the failure of the holding company and its nonbanking subsidiary to fulfill their responsibilities as an agent for their customers.
5. To determine whether appropriate steps have been taken to ensure compliance with the Fair Credit Reporting Act, Equal Credit Opportunity Act, and Right to Financial Privacy Act.

6. To determine whether adequate controls exist to prevent unauthorized access into any computerized credit bureau credit files to preserve the confidentiality of the information stored for customers' use.

3340.0.2 INSPECTION PROCEDURES

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent company or its banking or nonbanking subsidiaries.
2. Review recordkeeping practices, and determine whether such management information systems are adequate to service customers and limit the risk of loss resulting from weak recordkeeping activities.
3. Review customer logs or client lists, and determine whether the activity is limited to only consumer-credit-reporting activities.
4. Review the activity and billings for a customer of an affiliated financial institution, and compare those findings to the activities and billings of other customers. Determine whether the bank holding company is giving preferential treatment to a customer(s) of an affiliated financial institution.
5. Review the company's policies and operating and internal control procedures for the activity, and determine whether they have been documented and whether they are being tested for compliance as part of the company's internal/external audits.
6. Review correspondence with legal counsel, and determine whether any significant contingent liabilities exist due to the failure of the holding company and its nonbanking subsidiary to fulfill their responsibilities as an agent for their customers.
7. Determine whether internal control procedures and compliance audits test for compliance with the Fair Credit Reporting Act, Equal Credit Opportunity Act, and Right to Financial Privacy Act.
8. Determine what steps have been taken to prevent unauthorized access to any computerized credit bureau credit files to preserve the confidentiality of the information stored for customers' use.

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Denial of a BHC's proposal to engage in providing credit ratings for large businesses				1985 FRB 118
Activity is closely related to banking and a permissible nonbanking activity for consumer-credit reporting only		225.28(b)(2)(v)		1986 FRB 833 1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 U.S.C. 1972(b)) generally prohibits a bank from tying a product or service to another product or service offered by the bank or any of its affiliates. A prohibited tie-in can occur if a bank (1) varies the consideration for a product or service (the “tied product”) from the bank or any of its affiliates, or (2) requires the customer to purchase another product or service from the bank or any of its affiliates as a condition for providing a product or service to a customer.

The intent behind section 106(b) is to affirm the principles of fair competition by eliminating the use of tie-in arrangements that suppress competition. Section 106(b) is intended to prevent banks from using their market power over certain products (specifically credit) to gain an unfair competitive advantage in other products. The restrictions of section 106(b) on banks are broader than those of the antitrust laws, as no proof of economic power in the tying-product market or anticompetitive effects in the tied-product market are required for a violation to occur. Although banks, like their nonbank competitors, were already subject to general antitrust prohibitions on tying, section 106 was enacted because Congress concluded that special restrictions were necessary given the unique role of banks in the economy.

Although the 1970 legislation amended the Bank Holding Company Act, it is applicable to all commercial banks, whether or not they are subsidiaries of holding companies. The term “company” is not used in section 106(b) but in another part of the 1970 legislation. Therefore, it is not relevant to section 106.

3500.0.1 ANTI-TYING RESTRICTIONS AND OTHER PROVISIONS

Section 106 of the BHC Act Amendments has five restrictions that are applicable to banks. These restrictions apply only when the products are separately available for purchase. The first two restrictions prohibit conditions constituting traditional tie-in arrangements; restrictions three and four prohibit reciprocal-dealing arrangements, and the fifth, with certain exceptions, prohibits an exclusive-dealing arrangement. Exempted from these prohibited conditional transactions are practices known as “traditional banking practices.”

Specifically, section 106 prohibits a bank, in any manner, from fixing or varying the consider-

ation for extending credit, leasing or selling property of any kind, or furnishing any service on the condition or requirement that the customer—

1. obtain additional credit, property, or service from the bank, other than a loan, discount, deposit, or trust service (a “traditional bank product”);
2. obtain additional credit, property, or service from the bank’s parent holding company or the parent’s other subsidiaries;
3. provide additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
4. provide additional credit, property, or service to the bank’s parent holding company or any of the parent’s other subsidiaries; or
5. not obtain other credit, property, or service from the competitors of the bank, the bank’s parent holding company, or the parent’s other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

3500.0.1.1 Section 106 Statutory Exceptions

The statutory “traditional bank product exception” of section 106 permits a bank to tie a product to a traditional bank product (a loan, discount, deposit, or trust service) offered by that bank, but not by any affiliated bank or nonbank. For example, a bank could condition the use of its messenger service on a customer’s maintaining a deposit account at the bank. Although the statutory traditional bank product exception appears to have been effective in preserving traditional relationships between a customer and bank, the statutory exception is limited in an important way. It does not extend to transactions involving products offered by affiliates. Section 106(b) provides a second statutory exception that authorizes the Board to prescribe exceptions by regulation or order when it determines that an exception will not be contrary to the purposes of this section.

Before the 1997 implementation of the revisions to Regulation Y, the tie-in provisions of section 106(b) applied to bank holding compa-

nies and their nonbank subsidiaries as though they were banks. The nonbank provisions were applied under section 4(c)(8) of the Bank Holding Company Act. A bank holding company and any nonbank subsidiary were prohibited from tying their products or services either to other products or services offered by the same company or to products or services offered by any affiliate, including a bank affiliate. With the 1997 revisions, *the tie-in prohibitions were eliminated for bank holding companies and their nonbank subsidiaries, except when electronic benefit transfer services are provided.* Bank holding companies and their nonbank subsidiaries are still subject to anti-tying restrictions with respect to electronic benefit transfer services, as set forth in section 7(i)(11) of the Food Stamp Act of 1977 (7 U.S.C. 2016(i)(11)). (See the tie-in arrangements discussion in section 3070.0.7.4.)

Section 106 prohibits not only tying arrangements, but reciprocity arrangements. Reciprocity arrangements condition the availability of, or vary the consideration of, one product on a customer's providing of another product. The statutory prohibition on reciprocity arrangements contains an exception to preserve traditional banking relationships. The exception provides that a bank may condition the availability of a product or service on the customer's providing to the bank some product or service "related to and usually provided in connection with" a loan, discount, deposit, or trust service. Like the statutory traditional bank product exception to the tying prohibition, the reciprocity prohibition does not apply to interaffiliate transactions. The 1997 Regulation Y revision extends the statutory exception for traditional banking relationships to cover such interaffiliate transactions.

3500.0.2 ANTI-TYING REGULATORY EXCEPTIONS

3500.0.2.1 Traditional Bank Product Exception

The traditional bank product exception of Regulation Y (12 C.F.R. 225.7 (b)(1)) permits a bank to extend credit, lease or sell property, provide any service, or to fix or vary its consideration on the condition that a customer obtain a traditional bank product (that is, a loan, discount, deposit, or trust service) from an affiliate of the bank. Effective in April 1997, the traditional bank

product exception was extended to affiliates' transactions. Interaffiliate arrangements are exempt to the same extent as interbank arrangements.

Section 106 and the Board's regulation also allow—

1. a section 20 affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from an affiliated bank; and
2. a section 20 affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from a nonbank affiliate.

This regulatory exception is a limited extension of the traditional bank product exception provided in section 106 and is coextensive with the statutory exception.¹

3500.0.2.2 Safe Harbor for Combined-Balance Discounts

A bank may vary the consideration for any product or package of products based on a customer's maintaining a combined minimum balance in certain products specified by the bank (eligible products) if—

1. the bank offers deposits, and all such deposits are eligible products; and
2. balances in deposits count at least as much as nondeposit products toward the minimum balance. (See Regulation Y, section 225.7 (b)(2).)

3500.0.2.3 Safe Harbor for Foreign Transactions

The Board has adopted a "safe harbor" from the anti-tying rules for transactions with corporate customers that are incorporated or otherwise organized and that have their principal place of business outside the United States. This safe harbor also applies to individuals who are citizens of a foreign country and are not resident in the United States. (See Regulation Y, section 225.7 (b)(3).) However, the safe harbor would

1. See Chairman Greenspan's August 23, 1994, letter to the Honorable John D. Dingell, Chairman, Committee on Energy and Commerce, U.S. House of Representatives. See AD-94-68, August 26, 1994, and the Board's issuance of anti-tying exceptions on December 15, 1994, and April 20, 1995.

not protect tying arrangements involving a customer that is a U.S.-incorporated division of a foreign country. Furthermore, the safe harbor would not shelter a transaction from other anti-trust laws if they were otherwise applicable.

3500.0.3 APPLICABILITY OF ANTI-TYING EXCEPTIONS TO ENTITIES OTHER THAN BANKS

The Board's anti-tying rules adopt a definition of "bank" that clarifies that any exemptions afforded to banks would generally be applicable to credit card and other limited-purpose institutions and to United States branches and agencies of foreign banks.

3500.0.4 TIE-IN ARRANGEMENTS RELATING TO NONBANK BANKS

The Competitive Equality Banking Act, effective August 10, 1987, made nonbank banks and their affiliates subject to the anti-tying provisions of section 106 of the BHC Act Amendments of 1970 and to the insider and preferential lending restrictions of section 22(h) of the Federal Reserve Act. Thus, the nonbank bank may not condition the granting of credit on the purchase of a product or service from the parent holding company, or vice versa.

3500.0.5 VOLUNTARY VERSUS INVOLUNTARY TIE-IN ARRANGEMENTS

Voluntary as well as involuntary tie-ins have been a matter of concern. The customer, hoping to enhance his or her chance for bank accommodations (especially during periods of tight money), voluntarily patronizes subsidiaries of the bank. Voluntary tie-ins are said to have "just as serious" an economic effect as coercive ones because competition would be lessened to the extent that the tied product is no longer bought entirely on its economic merit.

3500.0.6 INSPECTION OBJECTIVES

1. To determine whether the bank holding company has adequate policies and procedures to ensure the compliance of its subsidiary banks with section 106(b) of the BHC Act Amendments.

2. To evaluate transactions between a company organized as a direct subsidiary of a bank holding company and affiliated banks for their compliance with federal laws and regulations and related policy guidance.
3. To ascertain, to the extent possible, that neither voluntary nor involuntary overt tie-in arrangements are present in credits extended by any BHC subsidiary bank.

3500.0.7 INSPECTION PROCEDURES

The Federal Reserve, as part of its inspections of bank holding companies and their subsidiaries and its examinations of state member banks and their subsidiaries, has had a long-standing policy that examiners should evaluate compliance with section 106(b) and the prohibitions against tie-in arrangements. During the course of all holding company inspections, the examiners should follow the inspection instructions set forth below, focusing on a bank holding company's responsibility to oversee and safeguard against potentially illegal tie-in arrangements by its banking subsidiaries and affiliates. The examiner's review should focus on (1) the bank holding company's establishment and monitoring of the internal controls and procedures for each bank subsidiary or affiliate and on its monitoring of compliance with written policies and procedures pertaining to tie-in arrangements, (2) the training provided to management and staff who are responsible for monitoring banking subsidiaries and affiliates for compliance with anti-tying provisions, and (3) the extent to which the bank holding company oversees internal loan reviews of pertinent bank extensions of credit to borrowers whose credit facilities or services may be susceptible to improperly imposed tie-in arrangements in violation of section 106(b) or the Board's regulations.

At a minimum, during the course of all bank holding company inspections, examiners are to thoroughly evaluate the organization's monitoring and overseeing of compliance with section 106(b) and the Board's regulations by its banking subsidiaries and affiliates. Examiners should use the following inspection procedures and checklist below. In addition, before beginning an inspection of any banking organization, Reserve Bank staff should evaluate the activities of the target banking organization to determine

whether it presents an increased opportunity for a bank to illegally tie its services or credit facilities to other services or facilities. If it does, the current inspection procedures, plus the checklist, should be used to check for compliance with section 106(b) and the Board's anti-tying regulations.

Following are the inspection procedures for tie-in arrangements:

1. Review the BHC's internal controls that are intended to prevent illegal tie-ins by its banks and affiliates.
2. Review the holding company's program to monitor subsidiary banks and their affiliates' internal loan reviews. Such reviews should include the inspection of credit files for loan agreements and other documentation that place conditions or restrictions on borrowers that indicate a possible tie-in. The bank holding company should conduct or oversee internal loan reviews of files for insurance applications, particularly if an insurance subsidiary maintains a consistently high penetration rate on credits granted by bank affiliates, which could indicate the presence of voluntary or involuntary tie-in arrangements.
3. Ascertain whether the bank holding company has policies requiring the periodic review of servicing contracts between the bank and its affiliates as well as the substance of actual transactions to determine—
 - a. the capacity in which the bank and its tied affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?);
 - b. the nature of all services provided; and
 - c. billing arrangements, frequency of billing, method of computation, and basis for such fees.
4. Review the bank holding company's policy statement on the prohibition of tie-in arrangements, the adequacy of training provided to employees, and whether management and its internal auditors have periodically confirmed that there is full compliance with such internal policy.
5. Report on the Examiner's Comments and Matters Requiring Special Board Attention page any significant comments on tie-ins reviewed. (Comments would also be appropriate if controls to prevent tie-ins had not been established.)

3500.0.8 INSPECTION CHECKLIST FOR COMPLIANCE WITH THE TIE-IN ARRANGEMENT PROHIBITIONS

Provided below is a checklist of questions that has been designed to ensure an examiner's adequate, complete evaluation of a banking organization's compliance with section 106(b) of the BHC Act Amendments and the Board's anti-tying regulations during the course of Federal Reserve inspections. The checklist generally addresses written policies and procedures in this area and training and internal audit programs.

A. Written Policies and Procedures

1. Does the bank holding company have a holding-company-wide policy statement that—
 - a. states that certain tie-in arrangements are illegal and
 - b. provides specific examples of impermissible practices relevant to the product line?
2. Do the bank holding company's bank subsidiaries and affiliates have copies of the holding company's written policy statement referred to in question A.1, and has it been revised, as appropriate, to provide specific examples of impermissible practices relevant to the particular product line?
3. Is the policy statement reviewed and updated regularly to ensure that the examples accurately reflect the products and services offered by the holding company and its subsidiaries?
4. Does the policy statement contain procedures for employees to follow in the event questions arise concerning the application of the prohibitions against tie-ins?
5. If the bank holding company does not have the holding-company-wide policy statement referred to in question A.1 (and that meets the requirements in questions A.2, 3, and 4), does each of the holding company's banking subsidiaries and affiliates have its own policy statement that meets those requirements?

B. Training

1. Do the bank holding company and its bank and nonbank subsidiaries have training programs to ensure that employees are aware of the prohibitions against illegal tie-in arrangements?

2. Is participation in a training program required of new employees?
3. Is an annual compliance-review program required for employees?
4. If the inspection involves a bank that is not part of a holding company structure, does the bank meet the requirements described in questions B.1 through 3?

C. Audit Procedures

1. Do the bank holding company and its bank subsidiaries and affiliates have annual audit procedures in place to ensure compliance with the prohibitions on tie-in arrangements?
2. Do counsel or other competent experts review transactions in the appropriate areas of the bank holding company, its bank subsidiaries, and affiliates to ensure compliance with the prohibitions against tie-in arrangements?

Sections 4(c)(9) and 2(h) of the BHC Act (Nonbanking Activities of Foreign Banking Organizations) Section 3510.0

A foreign bank that operates in the United States through a branch, agency, or commercial lending company subsidiary, or that owns or controls a U.S. bank or bank holding company, must conform to the nonbanking restrictions of the BHC Act. These limits, set forth in section 4 of the BHC Act, permit a foreign bank with U.S. banking operations to engage in banking and managing or controlling banks and other subsidiaries authorized by the act (such as Edge corporations).

The BHC Act also provides exemptions that permit a foreign bank with U.S. banking operations to engage in certain nonbanking activities. As with domestic bank holding companies, pursuant to section 4(c)(8) a foreign bank may own shares of any company that the Board has determined to be so closely related to banking or managing or controlling banks as to be a proper incident thereto. A foreign bank may also qualify for additional exemptions pursuant to sections 4(c)(9) and 2(h) if the bank chiefly engages in banking activities worldwide. These latter exemptions apply only to foreign banking institutions and seek to limit the extraterritorial application of federal banking law while preserving national treatment with their domestic counterparts.

3510.0.1 REGULATION K

Regulation K implements the nonbanking restrictions by applying the limits to any foreign banking organization (FBO). An FBO is (1) any foreign bank that either operates a branch, agency, or commercial lending company subsidiary in the United States, or that controls a U.S. bank, and (2) any company that owns or controls a foreign bank described in (1). Refer to 12 C.F.R. 211.21(n) to apply these limits. Regulation K requires any FBO that engages in activities in the United States to conform those activities to the nonbanking restrictions by either limiting the activities or obtaining an exemption. Refer to 12 C.F.R. 211.23(f).

Regulation K also provides a multi-step test for determining when an FBO primarily engages in banking activities worldwide and therefore qualifies for the additional exemptions contained in sections 4(c)(9) and 2(h) of the BHC Act. This “qualifying foreign banking organization” (QFBO) test is met if, “disregarding [the FBO’s] U.S. banking business, more than half of [the FBO’s] worldwide business is banking; and more than half of its banking business

is outside the United States.” Refer to 12 C.F.R. 211.23(b).

Under the QFBO test, an FBO must satisfy at least two of the following criteria:

1. The banking assets held outside the United States must exceed total worldwide nonbanking assets;
2. Revenues derived from the business of banking outside the United States must exceed total revenues derived from its worldwide nonbanking business; or
3. Net income derived from the business of banking outside the United States must exceed total net income derived from its worldwide nonbanking business.

In addition, the FBO must meet at least two of the following criteria:

1. The banking assets held outside the United States must exceed the banking assets held in the United States;
2. Revenues derived from the business of banking outside the United States must exceed the revenues derived from the business of banking in the United States;
3. Net income derived from the business of banking outside the United States must exceed net income from the business of banking in the United States.

Regulation K provides rules on how to calculate the assets, revenues, and net income of the FBO and its foreign subsidiaries.¹ In calculating whether an FBO meets the criteria above, however, the FBO may not include assets, revenues, or net income derived directly or indirectly from a branch, agency, subsidiary bank, or other company that engages in a banking business in the United States, a U.S. territory, Puerto Rico, Guam, American Samoa, or the U.S. Virgin Islands.

Regulation K provides a broader definition of “banking” for use in the QFBO test. A QFBO may include assets, revenues, and income from any activity that a U.S. bank holding company may perform abroad pursuant to section 211.5(d) of Regulation K if the activity is conducted by the foreign bank itself or by a subsidiary of a

1. A subsidiary is any company that either (1) has 25 percent or more of its voting shares directly or indirectly owned, controlled, or held with the power to vote by a company, including a foreign bank or a foreign banking organization, or (2) is otherwise controlled or capable of being controlled by a foreign bank or foreign banking organization. Refer to 12 C.F.R. 211.21(x).

foreign bank. Thus, for example, an FBO may treat certain insurance and securities activities as banking activities for determining QFBO status. Refer to 12 C.F.R. 211.23(c)(2) and 211.5(d). This broader definition of banking applies to the QFBO test only, however. It does not define the types of permissible banking activities that a QFBO may perform in the United States.

An FBO that does not qualify, or that ceased to qualify for two consecutive years (as reported in the Annual Report of Foreign Banking Organizations, form FR Y-7), is not eligible for the exemptions afforded by sections 2(h) and 4(c)(9) of the act. An FBO that does not qualify for these exemptions may only engage in activities in the United States that are permissible for a domestic bank holding company. An FBO that no longer qualifies under the QFBO test may seek a determination of continued eligibility from the Board. Otherwise, the FBO may only continue to engage in activities begun, or retain investments acquired, before the end of the first fiscal year in which it failed to qualify. Other activities or investments must cease or be divested within three months of the filing of the second FR Y-7, which demonstrates that the foreign bank no longer qualifies for the exemptions.

3510.0.2 NONBANKING EXEMPTIONS FROM THE BHC ACT FOR QFBOS UNDER SECTIONS 4(C)(9) AND 2(H)

Sections 2(h) and 4(c)(9) of the BHC Act are exemptive provisions that seek to limit the extraterritorial impact of federal banking law. While there is considerable overlap in these two sections (e.g., only a QFBO is eligible for both kinds of exemptions), they also have significant differences (e.g., section 2(h) only exempts certain types of activities, whereas section 4(c)(9) may also exempt specific activities or investments upon Board order).

3510.0.2.1 Section 4(c)(9) of the BHC Act

Section 4(c)(9) of the BHC Act authorizes the Board to exempt the U.S. activities of a QFBO, through order or regulation, if the exemption “would not be substantially at variance with the

purposes of [the BHC Act] and would be in the public interest.” The Board has implemented this provision in Regulation K to permit a QFBO to engage directly or indirectly in any activity outside of the United States; hold the shares of any company that engages in activities in the United States that are “incidental” to foreign business; hold a *noncontrolling* interest in any chiefly foreign company that engages in any activity in the United States, if the foreign company derives more than half its assets and revenues from outside the United States; or own or control voting shares of any company acquired in good faith in a fiduciary capacity as permitted by section 4(c)(4) of the act. An FBO is *not* permitted to own more than 5 percent of the shares of a foreign company that directly or indirectly engages in underwriting, selling, or distributing securities to an extent not permitted bank holding companies. Refer to 12 C.F.R. 211.23(f)(1), (2), and (3).²

The provision that permits a QFBO to own shares of a foreign company that engages in incidental, international activities in the United States has been defined by interpretation. That is, an activity is “incidental” to a foreign company’s activities outside of the United States only if it is an activity that an Edge or agreement corporation may perform. Section 211.4 of Regulation K defines the permissible activities of an Edge or agreement corporation.³ An application to the Federal Reserve is not required before a QFBO engages in an activity that is incidental to international business under this exemption.

A QFBO may also request a specific exemption from the BHC Act under section 4(c)(9) to

2. Specifically, Regulation K permits a QFBO to (1) engage in activities of any kind outside the United States; (2) engage directly in activities in the United States that are incidental to its activities outside the United States; (3) own or control voting shares of any company that is not engaged, directly or indirectly, in any activities in the United States other than those that are incidental to the international or foreign business of such company; and (4) own or control voting shares of any company in a fiduciary capacity under circumstances that would entitle such shareholding to an exemption under section 4(c)(4) of the BHC Act if the shares were held or acquired by a bank.

3. Generally, these activities must have an international nexus and may consist of receiving deposits from foreign governments and persons; receiving deposits from other persons under certain conditions; holding or investing liquid funds in certain forms or instruments; engaging in certain credit activities or borrowing funds; receiving or collecting payments under certain conditions; performing foreign exchange activities; acting as a fiduciary, investment advisor, or broker or performing other activities related to investing under certain conditions; providing banking services for employees; and engaging in other activities with prior Board approval. Refer to 12 C.F.R. 211.4(e).

perform otherwise impermissible activities in the United States. The Board grants these requests on a case-by-case basis.

3510.0.2.2 Section 2(h) of the BHC Act

Section 2(h) of the BHC Act permits a QFBO to own or control the voting shares of a foreign company that is principally engaged in business outside of the United States and either (1) has no U.S. activities or (2) engages directly or indirectly in activities in the United States that are the same or related to the company's principal business abroad.

Section 2(h) is designed to allow a QFBO that has foreign commercial or industrial affiliates to continue to hold those affiliates even if the affiliate engages in activities in the United States that would ordinarily be prohibited by section 4 of the BHC Act. The U.S. activities must be the same kind of activity the affiliate conducts outside the United States and the foreign affiliate must be chiefly foreign, that is, it must derive more than half of its assets and revenues from outside the United States. The U.S. branches and agencies of a QFBO may not lend to an affiliate held under section 2(h) except on an arms-length basis.

A QFBO may *not* engage in financial activities in the United States on the basis of section 2(h). Regulation K provides a list of activities that are considered "financial." These activities should be referenced to Division H of the Standard Industrial Classifications (SIC) as well as to selected activities in other divisions of the SIC that are considered financial in nature.

Section 2(h) is implemented in Regulation K as follows. A QFBO may—

“own or control voting shares of a foreign company that is engaged directly or indirectly in business in the United States other than that which is incidental to its international or foreign business, subject to the following limitations:

1. More than 50 percent of the foreign company's consolidated assets shall be located, and consolidated revenues derived from, outside the United States;

2. The foreign company shall not directly underwrite, sell, or distribute, nor directly own or control more than 5 percent of the voting shares of a company that underwrites, sells, or distributes, securities in the United States except to the extent permitted bank holding companies.” Refer to 12 C.F.R. 211.23(f)(5)(ii).

Regulation K places additional restrictions on the 2(h) exemption when a QFBO owns a foreign company that is a subsidiary. Specifically, the “foreign company must be, or must control, an operating company, and its direct or indirect activities in the United States shall be subject to the following limitations:

1. The foreign company's activities in the United States shall be the same kind of activities or related to the activities engaged in directly or indirectly by the foreign company abroad as measured by the ‘establishment’ categories of the Standard Industrial Classification (SIC) (an activity in the United States shall be considered related to an activity outside the United States if it consists of supply, distribution, or sales in furtherance of the activity). Refer to 12 C.F.R. 211.23(f)(5)(iii)(A).

2. The foreign company may engage in activities in the United States that consist of banking securities, insurance or other financial operations, or types of activities permitted by regulation or order under section 4(c)(8) of the BHC Act only under regulations of the Board or with the prior approval of the Board.

a. Activities within Division H (Finance, Insurance, and Real Estate) of the SIC shall be considered banking or financial operations for this purpose, with the exception of acting as operators of nonresidential buildings (SIC 6512); operators of apartment buildings (SIC 6513); operators of dwellings other than apartment buildings (SIC 6514); operators of residential mobile home sites (SIC 6515); and operating title abstract offices (SIC 6541); and

b. The following activities shall be considered [under section 211.23(g) of Regulation K]⁴ financial activities and may be engaged in only with the approval of the Board: credit reporting services (SIC 7323); computer and data processing services (SIC 7371 to 7379); armored car services (SIC 7381); management consulting (SIC 8732, 8741, 8742, and 8748); certain rental and leasing activities (SIC 4741, 7352, 7353, 7359, 7513, 7514, 7515, and 7519); accounting, auditing, and bookkeeping services (SIC 8721); courier services (SIC 4215 and 4513); and arrangement of passenger transportation (SIC 4724, 4725, and 4729).”

4. Section 211.23(g) of Regulation K permits a foreign banking organization to request a case-by-case exemption from the nonbanking restrictions to engage in otherwise impermissible activities pursuant to section 4(c)(9) of the BHC Act.

The latter restriction in paragraph 2 above reflects the fact that section 2(h) is not the source of authority for a QFBO to engage in banking, securities, or other financial activities in the United States through a subsidiary.

The section 2(h) exemption only applies to the nonfinancial, nonbanking activities of an FBO. To preserve competitive equity, the exemption does not permit an FBO to control a foreign nonbanking company that engages in, or that holds more than 5 percent of the voting shares of another company that engages in, banking, securities, insurance, real estate, or other financial activities in the United States. These activities may be performed only with Federal Reserve approval under section 4(c)(8) or 4(c)(9) of the act. Refer to 12 C.F.R. 211.23(f)(5).

3510.0.3 GRANDFATHER RIGHTS

Section 8 of the International Banking Act (IBA) provides grandfather rights to foreign banks that operated a branch, agency, or subsidiary com-

mercial lending company at the time of enactment of the IBA.

Section 8(c) of the IBA permanently grandfathers activities engaged in directly or through an affiliate on or before July 26, 1978, or for which an application to engage in such activities had been filed on or before that date.⁵ Grandfathered nonbanking activities may not be expanded through the acquisition of any interest in or the assets of a going concern engaged in the same activities. The Board may, subject to opportunity for hearing, terminate these grandfather rights where it is necessary to prevent undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices in the United States. A foreign bank that is required to terminate its indirect grandfathered activity may retain ownership of the shares of the grandfathered company for a period of two years from the date of the Board's action.

5. The term "affiliate" means any company that controls, is controlled by, or is under common control with, the foreign bank or the parent of the foreign bank.

3510.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Foreign Banking Organizations	1841(h) 1843(c)(9) 3106	211.23(b)		

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(10) of the BHC Act (Grandfather Exemption from Section 4 for BHC's Which Are Banks) Section 3520.0

This section provides a “grandfather” exemption from the general prohibitions of section 4 for a small group of bank holding companies which are themselves banks. For such bank holding companies and their wholly-owned subsidiaries, the exemption provides for continued ownership of nonbank shares which were lawfully acquired and owned directly or indirectly prior to enactment of the Act (May 9, 1956). At the time of its enactment, this section accommodated only three bank holding companies.

It should be noted that this section, in refer-

ring to shares indirectly owned through subsidiaries, limits the exemption to “wholly-owned subsidiaries.” The reason for this limitation apparently ties to the Federal Reserve Act and other federal banking statutes which permit National and member banks to engage through wholly-owned operating subsidiaries in various bank-related activities.

It is required that the shares covered under this section have been continuously held since May 9, 1956. Such interpretation is in keeping with other sections of the Act.

Section 4(c)(11) (Authorization for BHCs to Reorganize Share Ownership Held on the Basis of Any Section 4 Exemption) Section 3530.0

Section 4(c)(11) was adopted to authorize bank holding companies to reorganize share ownership held on the basis of any section 4 exemption. Reorganization is permitted with respect to section 4(a)(2) grandfathered activities engaged in prior to June 30, 1968, retaining indefinite grandfather authority. Shares held pursuant to Board approval under section 4(c)(8) or any other section 4 exemption also come within section 4(c)(11)'s reorganization authority.

Under section 4(c)(11), a bank holding company is authorized to reorganize its share ownerships, shift its activities among its various entities and form new subsidiaries without Board approval as long as there is no change in the activities of the bank holding company system. Congress also felt it entirely appropriate for

these companies to expand their activities so long as such expansion did not produce anti-competitive or other adverse effects. Accordingly, internal expansion of the grandfathered activities was permitted but the provision was added that this section does not authorize the grandfathered companies to acquire, either directly or indirectly, any interest in or the assets of any going concern outside the holding company system (unless the acquisition is pursuant to a contract entered into before June 30, 1968). Congress reasoned that purchasing a going concern engaged in the grandfathered activities of a holding company would tend to have an anti-competitive effect in that it would reduce the number of firms competing against each other in a given activity.

Section 4(c)(12) of the BHC Act (Ten Year Exemption from Section 4 of the BHC Act) Section 3540.0

This section provided an exemption from the general prohibitions of section 4 for shares held or activities which became subject to the Act by the 1970 amendments.

Section 4(c)(12) provided not only for continued ownership of shares or performance of activities so held or performed as of December 31, 1970, but also for others permitted afterward by the Board. As stated in subparagraphs (A) and (B) of section 4(c)(12), the 10-year exemption applied if such bank holding companies: (A)(i) ceased to be bank holding companies by December 31, 1980; or (A)(ii) ceased to retain direct or indirect ownership of the nonbank shares or engage in the nonbank activities by December 31, 1980; or (B) complied with such other condition as the Board may prescribe.

A company was required to file an irrevocable declaration that it would cease to be a bank holding company by January 1, 1981, unless the Board granted it hardship exemption under sec-

tion 4(d) of the Act. Such a company could then expand its nonbanking activities *de novo* without notification to the Board and could acquire a going concern nonbank company 45 days after informing the appropriate Reserve Bank of the proposed acquisition unless notified otherwise within that time. If an irrevocable declaration was not filed, then no acquisition could have been made or activities commenced under section 4(c)(12) except with prior Board approval. These limitations did not apply to acquisitions made pursuant to a binding commitment entered into before March 23, 1971.

Few bank holding companies have claimed an exemption under section 4(c)(12). It is unlikely that many situations involving section 4(c)(12) will be encountered by inspection personnel. However, if a 4(c)(12) company has committed to cease the nonbanking activities examiners must ensure that the divestiture has occurred.

3540.0.1 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Divestitures		225.138		
Successor rights				1977 FRB 946

1. 12 U.S.C., unless specifically stated otherwise.
 2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Section 4(c)(13) of the Act governs the international activities of bank holding companies. In general, the Act authorizes the Board to permit domestic bank holding companies to invest in companies that do no business in the U.S. except what is incidental to international or foreign business. Bank holding companies may invest in the same companies as those in which Edge Corporations may invest, as set forth in section 211.5(d) of Regulation K.

In general, the Board has limited the types of activities in which a bank holding company may engage through the ownership of foreign companies to banking or financially related activities. These include all of the activities permitted under section 211.5(d) of Regulation K and section 4(c)(8) of the BHC Act including equity securities underwriting and management consulting. Also, many of the activities permitted abroad are not subject to the same limits as imposed domestically under 4(c)(8) (e.g., brokerage of all types of insurance is permitted abroad). If the investor engages only in these activities:

1. Initial investments may be made of \$25 million or 5 percent of the investor's Tier 1 capital in the case of a member bank, bank holding company, or Edge corporation engaged in banking, or 25 percent of the investor's Tier 1 capital in the case of an Edge corporation not engaged in banking.

2. Some additional investments may be made in any calendar year without prior notification or specific Board approval so long as:

- a. the total amount invested in that calendar year does not exceed 10 percent of the investor's Tier 1 capital; and

- b. the total amount invested under section 211.5(d) (including investments made pursuant to specific consent or prior notice) in that calendar year does not exceed cash dividends reinvested under paragraph 211.5(c)(1)(iii) plus 10 percent of the investor's direct and indirect historical cost in the organization. This investment authority, to the extent unexercised, may be carried forward and accumulated for up to five consecutive years. Also, any additional investment may be made in an organization in an amount equal to the cash dividends received from that organization during the preceding 12 calendar months or any investment may be made that is acquired from an affiliate at net asset value.

Larger investments, and applications to engage in activities not listed in 211.5(d), require adher-

ence to procedures outlined in section 211.5(c)(2) of Regulation K. In the case of an acquisition of a going concern, existing activities that would not otherwise be permissible for a subsidiary under section 211.5(d) cannot account for more than 5 percent of either the consolidated assets or the revenues of the acquiree.

An investor may invest directly or indirectly in a joint venture provided that, unless permitted by the Board, not more than 10 percent of the joint venturer's consolidated assets or revenues are attributable to activities that are *not listed* in 211.5(d) of Regulation K. An investor and its affiliates may make, directly and indirectly, portfolio investments in organizations engaged in activities not permissible for joint ventures, provided that:

1. The investments do not exceed 40 percent of the total equity of the organization, when combined with shares held in the organization that are held in trading or dealing accounts [under paragraph 211.5(d)(14) of Regulation K] or shares held in the organization under any other authority;

2. The investments do not exceed:

- a. 25 percent of the investor's Tier 1 capital where the investor is a bank holding company; or

- b. 100 percent of Tier 1 capital for any other investor, when combined with underwriting commitments and shares held in trading or dealing accounts under 211.5(d)(14) of Regulation K.

A member bank's direct investments are limited to:

1. Foreign banks;

2. Foreign organizations formed for the sole purpose of either holding shares of a foreign bank or performing nominee, fiduciary, or other banking services incidental to the activities of a foreign branch or foreign bank affiliate of the member bank; and;

3. Subsidiaries established pursuant to section 211.3(b)(9) of Regulation K.

The procedures involved in examining foreign subsidiaries of domestic bank holding companies are generally the same as those used in examining domestic subsidiaries engaged in similar activities. The on-site examination of such subsidiaries is, however, necessarily limited. In most cases, examiners should try to implement asset appraisal procedures by using records at the location of the U.S. parent or bank. Overseas

examinations are intended primarily to appraise the firm's internal control systems and the sufficiency of the firm's reporting to its parent company. For examination objectives and procedures for these subsidiaries, see instructions for similar section 4(c)(8) investments in this manual.

3550.0.1 INVESTMENTS BY BANK HOLDING COMPANIES, EDGE CORPORATIONS, AND MEMBER BANKS IN FOREIGN COMPANIES

Subject to the limitations within Subpart A of Part 211.5 of Regulation K (12 C.F.R. 211), the Board allows, with its specific consent, banking organizations to acquire and hold investments in foreign companies that do business in the United States subject to the following conditions:

1. The activities abroad, whether conducted directly or indirectly, must be confined to activities of a banking or financial nature and those that are necessary to carry out such activities. When engaging in those activities, the investors are to act in accordance with high standards of banking and financial prudence, having due regard for diversification of risks, suitable liquidity, and adequacy of capital; and

2. The activities are either those that the Board has determined to be usual in connection with the transaction of banking or other financial operations abroad as listed in section 211.5(d) of Regulation K, including those activities authorized with the Board's specific approval and have been determined to be usual in connection with the transaction of the business of banking or other financial operations abroad consistent with the FRA or the BHC Act;

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

In 1982 the Bank Holding Company Act of 1956 was amended by the Bank Export Services Act (BESA). The Bank Export Services Act provided an exemption to the prohibitions of Section 4 of the BHC Act for a bank holding company's investment in the shares of any company that is an export trading company. The (BESA) was designed to increase U.S. exports by encouraging investments and participation in export trading companies by bank holding companies and the specified investors.

An export trading company is a company that is exclusively engaged in activities related to international trade and, by engaging in one or more export trade services:

1. derives at least one-third of its revenues in each consecutive four-year period (excluding a two-year start up period) from the export of goods and services produced in the United States by persons other than the export trading company or its subsidiaries; and
2. derives revenues from the export, or facilitating the export, of goods or services produced in the United States and those revenues exceed revenues from the import, or facilitating the import into the United States, of goods or services produced outside the United States.

A bank holding company's direct and indirect investment in export trading companies may not exceed 5 percent of the bank holding company's consolidated capital and surplus. The total amount of extensions of credit by a bank holding company and its subsidiaries to its affiliated export trading company may not exceed 10 percent of the bank holding company's consolidated capital and surplus.

A bank holding company may not invest in an export trading company, unless the Board has been given sixty days prior written notice of the proposed investment. The Board may disapprove any proposed investment only if:

1. Such disapproval is necessary to prevent unsafe or unsound banking practices, undue concentration of resources, decreased or unfair competition, or conflicts of interest; or
2. It finds that such investment would affect the financial or managerial resources of a bank holding company to an extent that is likely to have a materially adverse effect on the safety and soundness of any subsidiary bank of such bank holding company; or
3. The bank holding company fails to furnish the information required by the Board.

An Edge Act or agreement corporation that is a subsidiary of a bank holding company may invest directly or indirectly in the aggregate up

to 5 percent (25 percent in the case of a corporation not engaged in banking) of the voting stock or other evidences of ownership in one or more export trading companies.

Sections 23A and 23B of the Federal Reserve Act applies to transactions between an export trading company and its affiliated banks. Regulation K, however, grants relief from section 23A's collateral requirements where a bank issues a letter of credit or advances funds to an affiliated export trading company solely to finance the purchase of goods for which: (1) the export trading company has a bona fide contract for the subsequent sale of the goods; and (2) the bank has a security interest in the goods or in the proceeds from their sale at least equal in value to the letter of credit or the advance. All other "covered transactions" between a bank and an affiliated export trading company should conform to sections 23A and 23B of the Federal Reserve Act.

3560.0.1 INSPECTION PROCEDURES

Export Trading Companies are generally subsidiaries of bank holding companies. Regulations applicable to them are contained in Section 211.31-4 of Regulation K. Inspections of Export Trading Companies will usually be conducted by international examiners or examiners having specialized training. Examiners conducting inspections of Export Trading Companies should be familiar with these sections as well as Section 4(c)(14) of the BHC Act.

There is no standardized inspection report form for inspections of Export Trading Companies. However, as a minimum, the report is to include the following items:

<i>Page</i>	<i>Description</i>	
—	Cover	Inspection procedures should follow the Export Trading Company Questionnaire, illustrated herein. The questionnaire will be part of a special inspection report, prepared separately, or in conjunction with, a holding company inspection.
	Name of organization Location Name of parent Location of parent Date inspection commenced Date of financial statements	
i	Table of Contents	A copy of the Export Trading Company report as well as a copy of the Export Trading Company Questionnaire will be retained and included in the workpapers for the BHC inspection. Significant findings will be incorporated into the “Examiner’s Comments” page, or the Analysis of Financial Factors page, when appropriate.

3560.0.1.1 Export Trading Company Questionnaire

	<i>Yes</i>	<i>No</i>	<i>NA</i>	<i>Comments</i>
<p>1. Is the Bank Holding Company (BHC) or banking Edge Corporation investment in the Export Trading Company (ETC) limited to 5% of its consolidated capital and surplus?</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c); Regulation K, Section 211.33(a)</p>		()		
<p>2. Is the investment in the ETC by an Edge Corporation not engaged in banking limited to 25% of its consolidated capital and surplus?</p> <p>Reference: Same as question 1.</p>		()		
<p>3. Did the BHC or Edge Corporation furnish the Federal Reserve Board through the local FRB written notice of its proposed investment in the ETC at least 60 days prior to its investment in the ETC?</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c); Regulation K, Section 211.34</p>		()		
<p>4. Do the direct and indirect outstanding credit extensions to the ETC by the investor and its subsidiaries exceed 10% of the investor's consolidated capital and surplus?</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(B); Regulation K, Section 211.33(b)</p>		()		
<p>5. If the BHC or its subsidiary has extended credit to an affiliated ETC or to any of the ETC's customers:</p>				
<p>a. are the terms of the credit any more favorable than those afforded to similar borrowers in similar circumstances;</p>		()		
<p>b. does the credit involve more than normal risk of repayment; and</p>		()		
<p>c. does the credit present any unfavorable features?</p> <p>Reference: Regulation K, Section 211.33(b)(2)</p>		()		
<p>6. If the BHC or its subsidiary has extended credit to another investor with at least 10% interest in the ETC, or to an affiliate of the investor:</p>				
<p>a. are the terms of the credit any more favorable than those afforded to similar borrowers in similar circumstances;</p>		()		

	<i>Yes</i>	<i>No</i>	<i>NA</i>	<i>Comments</i>
b. does the credit involve more than normal risk of repayment; and,	()			
c. does the credit present any unfavorable features?	()			
Reference: Same as question 5.				
7. Do covered transactions (under Sections 23A and 23B of the Federal Reserve Act) between a bank and an affiliated ETC meet the collateral requirements of Section 23A unless exempted because the bank has extended a letter of credit or advance to the affiliated ETC solely for the purchase of goods for which:		()		
a. the ETC has a bona fide sales contract; and				
b. the bank has a security interest in the goods, or in the proceeds from their sale at least equal in value to the letter of credit or advance?				
Reference: Regulation K, Section 211.33(b)(3)				
8. Has the ETC received an export trade Certificate of Review which exempts it from antitrust laws?		()		
Reference: BESA, Section 301				
9. Has the ETC Certificate holder submitted an annual report to the Secretary of Commerce as required?		()		
Reference: BESA, Section 308				
10. Is the ETC exclusively engaged in activities related to international trade?		()		
Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(F) Regulation K, Section 211.32(a)				
11. Is the ETC operated principally for the purposes of exporting goods or services produced in the U.S., or for purposes of facilitating the exportation of goods or services produced in the U.S. by unaffiliated persons by providing one or more export trade services?		()		

	<i>Yes</i>	<i>No</i>	<i>NA</i>	<i>Comments</i>
<p>The term “export trade services” includes, but is not limited to, consulting, international market research, advertising, marketing, insurance other than acting as principal, agent or broker in the sale of insurance on risks resident or located, or activities performed, in the United States, except for insurance covering transportation of cargo from any point of origin in the U.S. to point of origin in the U.S. to a point of final destination outside the U.S., product research and design, legal assistance, transportation, including trade documentation and freight forwarding, communication and processing of foreign orders to and for exporters and foreign purchasers, warehousing, foreign exchange, financing, and taking title to goods in order to facilitate U.S. exports. An ETC may engage in importing, barter, and third-party trades only if these activities further U.S. exports and only if the preponderance of ETC activities do not involve importing and the revenues from export activities exceed revenues from import activities.</p> <p>Reference: Same as question 10.</p>				
<p>12. If the ETC has expanded its activities significantly beyond those in the original notice to the Board, such as to taking title to goods, product research and design, product modification, or activities not specifically covered in the BHC Act, has the investor given a 60 day notice in advance to the Board?</p> <p>Reference: Regulation K, Section 211.34</p>				()
<p>13. If the ETC has been in operation more than six years, is more than one-third of the ETC’s revenue in the last consecutive four-year period derived from exports or facilitating exports of U.S. goods and services produced in the U.S. by persons other than the ETC or its subsidiaries?</p> <p>Revenue includes net sales revenue from the trading of goods by the ETC for its own account and gross revenue from all other activities of the ETC.</p> <p>Reference: Regulation K, Section 211.32(a)</p>				()

	<i>Yes</i>	<i>No</i>	<i>NA</i>	<i>Comments</i>
<p>14. Does the ETC engage in agricultural production, manufacturing or product modification of goods, e.g., repackaging, reassembly, or extracting by-products other than incidental product modification as necessary to conform to the requirements of foreign countries for sale of the goods in the foreign countries?</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(c)</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(c)</p>				()
<p>15. Does the ETC take title to goods for which it has received no firm purchase order or commitment?</p> <p>Reference: BESA, Section 103(a)(3)</p>				()
<p>16. What period of time do the goods on which the ETC has taken title remain in the inventory of the ETC?</p> <p>Does this activity appear unduly speculative?</p> <p>Reference: Same as question 15.</p>				()
<p>17. Do the nature and terms of sale of goods retained by the ETC appear to be in line with proper ETC business operations, i.e., not unduly speculative and related to authorized activities?</p> <p>Reference: Same as question 15.</p>				()
<p>18. If the ETC acts as a principal, agent, or broker in the sale of insurance, does such activity exclude the sale of insurance on risks or activities located or performed in the U.S.</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(F)</p>				()
<p>19. If the ETC engages in, or holds shares of a company engaged in underwriting, selling or distributing securities in the U.S., are such activities limited to the same extent as for BHC's under applicable Federal and State banking laws and regulations?</p> <p>Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(C), 12 USC, Section 1843(c)(14)(C)(i)</p>				()

	<i>Yes</i>	<i>No</i>	<i>NA</i>	<i>Comments</i>
20. Does the ETC take positions in commodities, commodity contracts, securities or foreign exchange other than as may be necessary in the course of the ETC's authorized business transactions? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(D)	()			
21. Are activities of the ETC Certificate holder in compliance with the Certificate of Review? (If not, the ETC could be subject to antitrust laws.) Reference: BESA, Section 306		()		
22. Does the ETC capital base appear to adequately support the strength of the ETC and its ability to withstand unexpected adverse developments so as not to affect the financial resources of the parent or the safety and soundness of affiliated banks? Reference: 43 <i>Federal Register</i> , 26,448(1983).		()		
23. Is there any evidence of adverse effect of the investment in the ETC on the investment in the ETC on the financial or managerial resources of the BHC or Edge Corporation investor, or on the safety and soundness of any subsidiary bank of a BHC investor? Reference: BESA, Section 203; BHC Act, Section 4(c)(14)(A)(iv)(11)	()			
24. Has the ETC's capital to asset ratio remained at all times at or above the minimum established in the original notice to the Board?		()		
25. Is the ETC in compliance with operational policies, including maximum financial leverage per transaction, as established in the original notice to the Board?		()		

() = Exception

Export Trading Company

Prepared by: _____

Bank Holding Company Investor

Date: _____

Examination Date

In addition to the nonbank activities in which a bank holding company is specifically permitted to engage in under section 225.25(b) of Regulation Y, there are other nonbank activities which the Board has approved on an individual basis (see Manual section 3000.0.3, Appendix 2). A bank holding company can submit an application to its Reserve Bank for approval to engage in, or retain or acquire shares in a company engaged in a nonbank activity which has not previously been determined as a permissible activity for a holding company. When a holding company applies for such approval, it must be of the opinion that the activity for which it is seeking approval is closely related to banking or managing or controlling banks and, assuming this test is met, that it is a proper incident thereto. If after due notice and opportunity for hearing, the Board approves the application, it does so *without* expanding the list of permissible activities under section 225.25(b) of Regulation Y (i.e., if a holding company wishes to engage in a similar type activity, it must seek Board approval).

Since the applications approved thus far are limited in number, inspection procedures established for these organizations are abbreviated.

The inspection objectives and procedures included below can be implemented for each of the activities that are summarized later on in this section.

3600.0.1 INSPECTION OBJECTIVES

To determine what financial effect these activities have on the parent and the bank subsidiaries, and if there is any degree of exposure in the activities due to a lack of appropriate audit systems and controls.

3600.0.2 INSPECTION PROCEDURES

1. Review the company's financial statements for accuracy and to determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiaries.

2. Review the company's policies, procedures, practices, internal controls and audit coverage regarding these activities to determine their adequacy, and whether they are being adhered to.

Two bank holding companies (Company A) and (Company B) had requested the Board to determine whether their planned nonbank subsidiary activities were of the kind described in Section 4(c)(8) of the BHC Act. The applications had been filed prior to the passage of the Bank Holding Company Act Amendments of 1970. The applicants proposed to expand their activities under a “pool reserve plan” to include correspondent banks. Such activities were limited to subsidiary banks.

The “pool reserve plan” was described as a method of pooling of loss reserves with respect to term loans to small businesses and the establishment of uniform credit standards in that regard. The “pool reserve plan” permitted banks to adopt a uniform and liberal credit policy in extending credit and the usual method of exchanging participations between the banks.

The General Counsel of the Board of Governors determined, on October 14, 1971, pursuant to delegated authority, that the proposed activi-

ties would be “so closely related to banking or managing or controlling banks as to be a proper incident thereto” in accordance with Section 4(c)(8) of the BHC Act, as amended by the BHC Act Amendments of 1970. The approval (1971 FRB 1037) included the following conditions that:

1. The subsidiary was to amend its charter so that the charter would authorize it to perform its functions, and make its services available to banks, but not to lenders other than banks, and to amend its proposed contracts with correspondent banks;

2. Any correspondent banks could terminate their contract with the subsidiary respecting future transactions upon 90-day prior written notice, and that;

3. The subsidiary be subject to the same limitations with the respect to the ownership of any collateral acquired in the course of the conduct of its proposed activities as were its parents, (Company A and Company B).

Permissible Activities by Board Order (Engaging in Banking Activities via Foreign Branches) Section 3600.5

3600.5.1 NEW YORK INVESTMENT COMPANY

On May 10, 1977, the Board approved an application of a foreign-owned domestic bank to form a holding company, and, at the same time, for that holding company to acquire substantially all of the voting shares of an investment company organized and operating under article XII of the New York State Banking Law (a New York investment company).

The investment company at that time was engaged in providing lending and international banking services, including letters of credit, acceptances, and other financing facilities in connection with exports and imports, international transfers of funds, and foreign-exchange services; investments and foreign-exchange transactions for its own account; leasing improved real estate and data processing equipment; and maintenance of credit balances incidental to or related to the foregoing activities. Although the holding company believed that certain of the activities of the New York investment company had already been determined by the Board to be permissible for bank holding companies, it requested approval of its application on the basis that *all* the activities that a New York investment company is permitted to engage in under New York law are closely related to banking. A New York investment company had not previously been determined by the Board to be an activity permissible for bank holding companies.

The Board noted that the structural and competitive circumstances under which a New York investment company operates are unique to New York and have served in the past as a means for foreign-bank entry into New York in cases where entry through a direct branch or agency was either unavailable or undesirable for the purposes sought. Most of the lending and banking services offered by these companies are also offered by commercial banks generally and, in this connection, compete with foreign banking organizations and domestic commercial banks and their Edge corporation subsidiaries. However, under article XII of the New York State Banking Law, a New York investment company is permitted to engage in various other activities which the Board does not consider to be closely related to banking.

Based on the foregoing, the Board's approval in this case was limited to and contingent upon the New York investment company's (1) continuing to engage principally in transactions involving international or foreign commerce,

and not accept demand deposits; (2) complying with all Board or legislatively imposed reserve and interest-rate requirements; (3) divesting of offices in another state within two years; (4) confining activities of its foreign branch to those permitted in the Board's order; and (5) not engaging in the activities of underwriting, selling, or distributing securities; buying or selling coin and bullion; or acting as a financial agent of the U.S. government or as a depository of public moneys of the United States, or in any new activity which New York investment companies by subsequent enactment may be permitted to engage in, without the prior approval of the Board. (See 1977 FRB 595.)

3600.5.2 ENGAGING IN BANKING ACTIVITIES THROUGH FOREIGN BRANCHES OF A NONBANK COMPANY

A bank holding company applied for the Board's approval to retain direct or indirect ownership of a subsidiary, "CBC," a Delaware-chartered corporation, after it established branches in Nassau and Luxembourg, to engage in certain commercial banking activities. The activities included accepting funds in U.S. dollars or foreign currency in wholesale money markets in amounts over \$100,000, making commercial loans in amounts over \$100,000, placing funds with and making loans and advances to subsidiary and affiliated organizations, engaging in foreign-exchange transactions, and other activities constituting commercial banking outside the United States. CBC held the shares of a number of nonbanking subsidiaries of the BHC pursuant to section 4(c)(1)(C) of the BHC Act, which permits a subsidiary of a bank holding company to perform services for its parent company.

The purpose of the proposal was to provide the BHC with increased flexibility in funding its domestic operations by allowing CBC to gain access to the offshore wholesale money market. The proposed foreign branches of CBC, by obtaining banking licenses, would give direct access to Eurocurrency interbank markets, and the activities of the proposed branches were expected to be viewed as an integral part of a large U.S.-headquartered entity, making the branches competitive in the offshore interbank markets.

The Board decided that the lending and banking services that the proposed branches would offer were generally offered by commercial banks, and thus are permissible activities of foreign branches of domestic banks and foreign subsidiaries of bank holding companies. The proposed activities of CBC's branches were substantially similar to activities that the Board had previously approved under section 4(c)(8) of the BHC Act for the foreign branches of the New York investment company, incorporated under article XII of the New York Banking Law (see 1977 FRB 595 and 1979 FRB 667). CBC did not propose to engage in any activity that would not be permitted for a separately incorporated foreign subsidiary of a bank holding company. The Board, therefore, ruled that the proposed activities of CBC were closely related to banking (1982 FRB 251).

CBC proposed to engage in no banking activities in the United States, stating that its only U.S. activities would consist of its indirect nonbanking activities through subsidiaries. The subsidiaries would be funded through funds raised by the proposed foreign branches. In this

connection, the BHC committed to accepting no placement of or deposits from,¹ or extending no credit to (other than a subsidiary or affiliated organization) a United States resident.² The BHC committed that the liabilities to CBC of any person, other than an affiliate, would not exceed 10 percent of the capital and surplus of CBC. The Board felt that these prudential conditions were adequate to meet any supervisory concerns to which the proposal might give rise and thus approved the application, subject to the obtaining of the necessary licensing requirements of the countries involved.

1. A placement or deposit received from a foreign branch, office, subsidiary, affiliate, or other foreign establishment ("foreign affiliate") controlled by one or more domestic corporations is not regarded as a placement or deposit received from a U.S. resident if such funds are used in its foreign branches or that of other foreign affiliates of the controlling domestic corporation(s).

2. Credit extended to a foreign affiliate, controlled by one or more domestic corporations, is not regarded as credit extended to a U.S. resident if the proceeds will be used in its foreign business or that of other foreign affiliates of the controlling domestic corporation(s).

A bank holding company (the applicant) applied under section 4(c)(8) of the Bank Holding Company Act and the Board's Regulation Y to engage de novo through a wholly owned subsidiary (the company) in privately placing limited partnership interests in a group of partnerships having a limited number of investors. The company was to serve as the investment adviser, administrator, and sole general partner of a series of seven partnerships (the partnerships) that would be sold to a number of institutional investors. The company would maintain an equity interest of approximately 1.25 percent of the total capitalization in each partnership.

The partnerships were to be engaged solely in investing in limited amounts of debt and equity securities, including interests in real estate investment equity trusts (REITs).¹ The partnerships, together with the applicant and its other subsidiaries, were not to hold more than 5 percent of any class of voting securities of any issuer, and not more than 25 percent of the total equity of any issuer.² The equity investments were to be held in accordance with section 4(c)(6) of the BHC Act and section 225.22(d)(5) of Regulation Y.

The company also proposed to privately place limited partnership interests with new sophisticated institutional investors and possibly form similar additional partnerships in the future. The company was not to privately place debt securities issued by the partnerships without prior approval from the Federal Reserve System. The applicant committed that the private placement of limited partnership interests would conform to the limitations and conditions for private placements in previous Board orders approving private-placement activities (for example, 1990 FRB 26 and 1989 FRB 829).³ Each investor was required to have an initial minimum investment of \$100,000. Investors with \$250,000 or more under management by the company, however, would be permitted to invest in any partnership

in any amount. The applicant would continue the company's practice of allowing existing investors in a partnership to add to their investment in the partnership in any amount. The application was approved on June 28, 1994 (1994 FRB 736).

Subsequently, another bank holding company (the BHC applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23 of Regulation Y to engage de novo, through a wholly owned asset-management subsidiary (AMS), in establishing and serving as the general partner of limited partnerships (the limited partnerships) that would invest in a wide variety of commodities and exchange-traded and over-the-counter instruments including those specified in the Board order. AMS would be the general partner of each partnership and would hold a nominal equity interest in each one. In this case, AMS would not provide investment advice directly to the limited partnerships, but would employ unaffiliated investment advisers to manage the investments of the limited partnerships, pursuant to parameters set by AMS. Interests in the limited partnerships would be privately placed with institutional customers by the BHC applicant's subsidiary banks.

One or more of the limited partnerships could invest a substantial portion of their assets in commodity pools, which would require the applicant to register as a commodity pool operator (CPO). The interests purchased by the limited partnerships would consist of less than 5 percent of the outstanding voting securities of any commodity pool and less than 10 percent of the total equity of any commodity pool. The applicant proposed that the limited partnerships purchase such assets with debt. It further stated that it would not permit any limited partnership that invested in distressed debt instruments to use borrowed funds to purchase or carry distressed debt instruments or to use the distressed debt instruments as collateral in acquiring other assets. The applicant also indicated that the leverage employed by the limited partnerships would include margin credit from broker-dealers, reverse repurchase agreements, and short sales.

The limited partnerships would invest in debt and equity instruments and distressed debt instruments.⁴ The applicant stated that invest-

1. The partnerships were not to invest in futures contracts or options on futures contracts on any financial or nonfinancial commodity, or knowingly invest in debt that, upon acquisition, is in default without the prior approval of the Federal Reserve System. The applicant further committed that it would not use the investments of the partnerships to obtain or exercise control over any issuer of securities owned or held by the partnerships. Also, no directors, officers, or employees of the applicant and its affiliates will serve as directors, officers, or employees of any issuer of which the applicant and its affiliates held more than 10 percent ownership of total equity.

2. The applicant committed that all subordinated debt of an issuer would be subject to this 25 percent limit.

3. See the current Regulation Y, section 225.28(b)(7)(iii), regarding private-placement services.

4. The Board had previously permitted bank holding com-

ments in debt and equity securities and distressed debt would be made in accordance with the BHC Act's limitations and those of previous Board decisions. (See 1995 FRB 1128 and section 3104.0.)

The limited partnerships, together with the applicant and its subsidiaries, would make investments not greater than 5 percent of any class of voting securities of any issuer, and not greater than 25 percent of the total equity, including the subordinated debt, of any issuer. No directors, officers, or employees of the applicant would serve as directors, officers, and employees of any issuer of which the applicant and its subsidiaries (that is, the limited partnerships) would hold more than 10 percent of the total equity. For this case, the Board required AMS to consolidate the assets and liabilities of the limited

partnerships in the financial statements of AMS for regulatory capital purposes. In addition, AMS was required to establish an appropriate risk-management structure consisting of investment and position limits for each investment adviser before engaging in the proposed activities. Compliance and trading limits would be monitored by computerized systems to be established by the applicant. The Board approved the notice on April 24, 1996, subject to all the facts of record and the commitments furnished. See 1996 FRB 569. For more recent Board orders whereby bank holding companies propose to act as a CPO and to control a private limited partnership that invested solely in permissible investments for a bank holding company, see 1999 FRB 209, 1998 FRB 852, and 1998 FRB 361.

panies to sponsor, organize, and manage closed-end investment companies and unregistered limited partnerships that invest in securities.

3600.13.1 SERVING AS AND
CONTROLLING A PRIVATE LIMITED
PARTNERSHIP AS A COMMODITY
POOL OPERATOR

A bank holding company applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through a wholly owned asset-management subsidiary (ASM) that would be established to serve as the general partner of limited partnerships (the partnerships) that would invest in a wide variety of commodities and exchange-traded and over-the-counter instruments, including interests in investment funds that invest in futures and options on futures on financial and nonfinancial commodities (commodity pools). It was indicated that the partnerships would not directly invest in futures or options on futures contracts for purposes other than hedging. The partnerships would purchase and sell derivative contracts on precious metals and financial commodities, instruments, and indices for hedging purposes. It was further stated that one of the limited partnerships may invest a substantial portion of its assets in commodity pools, which would require the ASM (the general partner) to become a registered

commodity pool operator (CPO) with the Commodity Futures Trading Commission (CFTC). As such, the ASM would register as a CPO with the CFTC, and a portion of the general partner's activities would become subject to the record-keeping, reporting, fiduciary standards, and other requirements of the Commodity Exchange Act (7 U.S.C. 2 et seq.), CFTC, and National Futures Association.

The Board previously has found that a subsidiary of a state member bank may serve as the CPO of investment funds engaged in purchasing and selling futures and options on futures on certain commodities.¹ In addition, the Board has permitted bank holding companies to trade futures and options on futures on financial and nonfinancial commodities.² For these reasons, the Board has concluded that serving as a CPO, and controlling as a CPO a private limited partnership that invests solely in investments that a bank holding company is permitted to make directly, under the circumstances of this case (1996 FRB 569) are closely related to banking. See also 1998 FRB 1075, 1998 FRB 852-854, 1998 FRB 361, and 1994 FRB 736.

1. See 1996 FRB 239.
2. See 1995 FRB 185.

3600.17.1 ENGAGING IN TITLE
INSURANCE AGENCY ACTIVITIES
PURSUANT TO REGULATION Y

A bank holding company applied under section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y to acquire all the outstanding shares of a title insurance agency. The title insurance agency is to conduct activities pursuant to exemption G of the Garn–St Germain Depository Institutions Act of 1982 (the act) and section 225.28(b)(11)(vii) of Regulation Y. Title VI of the act amended section 4(c)(8) of the BHC Act to provide that insurance agency, brokerage, and underwriting activities are not “closely related to banking” and thus are not permissible activities for bank holding companies, unless the activities are included within one of seven specific exemptions (A through G) in section 4(c)(8).

The applicant claimed that it was authorized to operate a title insurance agency under exemption G, which authorizes those bank holding companies that engaged in insurance agency activities before 1971 to engage, or control a company engaged in, insurance agency activities. The company has been engaged in the sale of insurance related to extensions of credit by its subsidiary banks since 1939.

The bank holding company applicant was one of 16 active companies with grandfather rights under exemption G.¹ Previously, the Board determined (1985 FRB 171) that those companies that had received Board approval to engage in general insurance agency activities before 1971 would be grandfathered under exemption G with respect to the sale of any type of insurance that is within the scope of general insurance agency activities—even an insurance agency activity (such as title insurance) not actually offered by the applicant bank holding company before 1971. The Board found that there is no requirement in the statute that a company qualifying for exemption G engage only in those insurance agency activities it conducted with Board approval before 1971. Thus, although the Board may not have specifically approved title insurance before 1971, provided the proposed activity is encompassed within the authorization of insurance agency activities, the activity falls within exemption G.

The Board determined selling title insurance through a title insurance agency to be permissible pursuant to exemption G and the Board's regulations. The Board approved the application on November 17, 1988 (1989 FRB 31).

1. There are currently 12 companies remaining.

3600.21.1 UNDERWRITING AND DEALING IN COMMERCIAL PAPER TO A LIMITED EXTENT

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.21(a) of the Board's Regulation Y to underwrite and deal in third-party commercial paper to a limited extent. As proposed, the activity will be conducted through a commercial finance subsidiary (company). The company is to act for issuers as an underwriter of commercial paper, purchasing commercial paper for resale to institutional investors such as banks, insurance companies, mutual funds, and nonfinancial businesses. In addition, the company may place commercial paper as agent for issuers and advise issuers on the rates and maturities of proposed issues that are likely to be accepted in the market—activities previously approved by the Board (1987 FRB 138). The activities in this order (1987 FRB 367) differ from those previously authorized (1987 FRB 138) in that the applicant will underwrite and deal in commercial paper as principal.

The Board may not approve a proposal of a member bank affiliate if upon consummation it would be “engaged principally” in the flotation, underwriting, public sale, or distribution of commercial paper (hereafter referred to as “underwriting and dealing in”) within the meaning of section 20 of the Glass-Steagall Act (12 U.S.C. 377). The Board concluded that even if placement of commercial paper were deemed to constitute an activity covered by section 20 of the Glass-Steagall Act, the commercial lending subsidiary would not be “engaged principally” in underwriting and dealing in securities. The subsidiary's activity would not be substantial under a 5 percent limit on the subsidiary's gross income from its commercial paper activities and a 5 percent limit on its market share. The company is required to restrict its commercial paper activities so it does not exceed these limits.

The Board concluded that underwriting and dealing in commercial paper is closely related to banking on the same basis as acting as placement agent and adviser to issuers in commercial paper (1987 FRB 138). Banks provide services that are operationally and functionally similar to the services of underwriting and dealing in commercial paper. Banking organizations are particularly well equipped to provide such services. In the Board's view, the underwriting and dealing activity represents a natural extension of commercial lending activities traditionally con-

ducted by banks, involving little additional risk or new conflicts of interest, and potentially yielding significant public benefits in the form of increased competition and convenience.

The Board concluded that the applicant could conduct the activities to the extent and in the manner described in the order, consistent with section 20 of the Glass-Steagall Act and section 4(c)(8) of the BHC Act. The Board's approval extended only to commercial paper underwriting, dealing, placement, and advisory activity conducted in accordance with the limitations stated in the order. (1987 FRB 367)

3600.21.2 ENGAGE IN UNDERWRITING AND DEALING, TO A LIMITED EXTENT, IN MUNICIPAL REVENUE BONDS, MORTGAGE-RELATED SECURITIES, AND COMMERCIAL PAPER¹

On April 30, 1987, the Board approved by order the applications of three bank holding companies to engage through subsidiaries in underwriting and dealing in commercial paper, one-to four-family mortgage-backed securities, and municipal revenue bonds. (For a complete description of the nonbanking activities authorized by the Board in this order, see 1987 FRB 473 and section 2185.0.1.) The subsidiaries are to be involved in underwriting and dealing in U.S. government securities as their major activity. Board approval could only occur if the affiliates would not be “principally engaged” in underwriting and dealing in “securities” under the provisions of section 20 of the Glass-Steagall Act.

A hearing was held on February 3, 1987, because of the important legal and factual issues involved. The Board reaffirmed its finding in its previous decisions (1987 FRB 138 and 367) that the applicants were not principally engaged in

1. The applicants had previously received Board approval under section 4(c)(8) of the BHC Act for the subsidiaries mentioned in the order to engage in underwriting and dealing in U.S. government and agency and state municipal securities that state member banks are authorized to underwrite and deal in under section 16 of the Glass-Steagall Act. The newly proposed underwriting and dealing activities were approved in addition to the previously approved activities.

the proposed securities activities if they limited their underwriting and dealing income from these securities to 5 percent of the total gross income of the affiliate, and if they limited their market share in each of these securities to 5 percent of the total domestic market.² The Board established a number of conditions to ensure that the underwriting activity would be consistent with safe and sound banking practices and would avoid conflicts of interest, undue concentration of resources, and other adverse effects.

The Board determined, consistent with its previous underwriting and dealing decisions in administering the Glass-Steagall Act, that a range of between 5 percent and 10 percent of gross revenue and market share is the appropriate framework for determining whether an affiliate is engaged principally in securities activities. The lower end of the range—5 percent—was the level applied at the time. The Board noted that it would review this level within a year on the basis of experience gained from operations to determine whether a higher level would be permissible. On September 21, 1989, the Board modified section 20 orders to increase from 5 percent to 10 percent the revenue limit on the amount of total revenues a section 20 subsidiary may derive from ineligible securities underwriting and dealing activities (1989 FRB 751).³

The Board's approval of the applications extends only to the activities conducted within the limitations of the order and is subject to the gross revenue limitation discussed above. Two of the applicants also proposed to underwrite

and deal in consumer-receivable-related securities (CRRs). Although the companies noted certain similarities between these securities and mortgage-related securities, the Board did not believe that the record before the Board provided a sufficient basis for it to make a formal finding (as required by the BHC Act) that underwriting and dealing in CRRs is closely related to banking and a proper incident thereto. The Board noted that the market for CRRs was relatively new and untested compared with the market for one- to four-family mortgage-related securities and municipal revenue bonds. The Board indicated that it would reconsider the matter within 60 days on the basis of more complete information to be submitted by the applicants regarding the types of assets that would be securitized, the manner in which this would be accomplished, and other matters bearing on risk.

In a subsequent order, six BHCs applied for and received the Board's conditional approval (1987 FRB 731) for the activity, but the Board stayed its order for the same period of time applicable to the stay issued by the Second Circuit Court of Appeals (see footnote 2 and section 3600.21.3). After approving the order set out in 1987 FRB 731, the Board approved several other orders that rely on this order and the limitations imposed therein. (See the following Board orders: 1987 FRB 607, 616, 618, 620, 622, 731, 738, 742, 928; 1988 FRB 133, 500, 699, 700, 706, 819; 1989 FRB 33, 190, 396, 398, 520, 645, 647; 1990 FRB 79, 158, 256, 461, 554, 568, 573, 652, 682, 756; 1991 FRB 954; 1992 FRB 338; 1993 FRB 141, 716; and 1994 FRB 249, 346.)

The major difference between the three applications decided on April 30, 1987, and the two applications previously approved by the Board (1987 FRB 138 and 367) is that the underwriting would take place in an affiliate engaged in underwriting and dealing in U.S. government securities. This arrangement raised the major legal question of whether these government securities could serve as a basis for measuring the principal activity of the affiliate. In its approval, the Board took into account the fact that the Glass-Steagall Act specifically allows member banks to underwrite U.S. government securities, and that the act intends affiliates to have a broader scope for underwriting than member banks. On that basis, the Board had previously allowed affiliates of member banks to engage in underwriting of U.S. government securities.

See section 2185.0 for inspection instructions, objectives, and procedures.

2. The U.S. Court of Appeals for the Second Circuit upheld the Board's determination that the underwriting subsidiaries would not be engaged principally in ineligible securities underwriting and dealing under the above revenue limitation; the U.S. Supreme Court declined to review that decision (*Securities Industry Association v. Board of Governors of the Federal Reserve System*, 839 F.2d 47 (2d Cir. 1988), cert. denied, 108 S.Ct. 697 (1988)). The Supreme Court also let stand the lower court's determination that the 5 percent market share limitation was not adequately supported by the facts of record, thus sustaining elimination of the market share test that had been invalidated by the U.S. Court of Appeals. Accordingly, the Board decided not to impose a market share limitation on orders approved on August 4 and 8, 1988.

3. The Board in this order also modified its section 20 orders to permit underwriting and dealing in securities of affiliates if the securities are rated by a nonaffiliated, nationally recognized rating organization or are issued or guaranteed by the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, or the Government National Mortgage Corporation, or represent interests in such obligations.

3600.21.3 ENGAGE IN LIMITED UNDERWRITING AND DEALING IN CONSUMER-RECEIVABLE-RELATED SECURITIES

Six bank holding companies applied for the Board's approval to engage in limited underwriting and dealing in consumer-receivable-related securities (CRRs). CRRs, which were first issued in 1985, consist of debt obligations that are secured by or represent an interest in a diversified pool of loans to or receivables from consumers, such as loans to individuals to finance the purchase of automobiles or personal credit card accounts.

The Board concluded that underwriting and dealing in CRRs is an activity closely related to banking on the basis that banks provide services that are operationally and functionally so similar to the services proposed that banking organizations are particularly well equipped to provide them. In accordance with section 16 of the Glass-Steagall Act, banks underwrite and deal in certain mortgage-related securities that are issued or guaranteed by the United States or by U.S. government agencies. Some of the securities represent interests in pools of mortgage loans for residential housing purposes made by banks and other financial institutions. Such securities are very similar to CRRs.

Both CRRs and bank-eligible mortgage-related securities represent interests in pools of loans made by financial institutions to individuals to finance the purchase of housing or consumer goods and services.

The techniques involved in underwriting and dealing in bank-eligible mortgage-related securities are also very similar to those that would be involved in conducting the approved activity with respect to CRRs. In each case the underwriter must perform substantially identical functions of evaluating prepayment risk, analyzing credit and cash flow from a pool of numerous individuals' loans, negotiating or bidding, and distributing and dealing.

In addition, banks now directly perform some of the functions involved in the approved activity. Banks select the consumer loans that form the pool of interests that are then sold to investors. Banks also advise issuers of CRRs and assist issuers in privately placing these securities.

Because of the similarity between securities involved in CRRs and the previously approved bank-ineligible one- to four-family mortgage-related securities nonbanking activities set forth in a previous order (1987 FRB 473), the Board required that this activity be conducted in accor-

dance with the same requirements established in that order. This includes a requirement that the securities be rated for investment quality by a nationally recognized agency.

The Board concluded, based on the reasons set forth in its previous order (1987 FRB 473), that the approved activity would not result in a violation of section 20 of the Glass-Steagall Act and is closely related and a proper incident to banking. The Board's approval of these applications is restricted to underwriting and dealing to a limited extent in securities representing an interest in or backed by a diversified pool of loans to or receivables from individuals for the purchase of consumer goods and services, and the limitations of section 225.25(b)(16) of Regulation Y. (1987 FRB 731)

3600.21.4 LIMITED UNDERWRITING AND DEALING IN DEBT AND EQUITY SECURITIES

Five bank holding companies applied for the Board's approval under section 4(c)(8) of the BHC Act for their wholly owned subsidiaries to underwrite and deal in, on a limited basis—

1. debt securities, including without limitation, sovereign debt securities, corporate debt, debt securities convertible into equity securities, and securities issued by a trust or other vehicle secured by or representing interests in debt obligations; and

2. equity securities, including without limitation, common stock, preferred stock, American Depositary Receipts, and other direct and indirect equity ownership interests in corporations and other entities.

Section 16 of the Banking Act of 1933 (the Glass-Steagall Act) prohibits a member bank from underwriting and dealing in these securities (referred to hereafter as "bank-ineligible securities"). However, as far as the Glass-Steagall Act is concerned, an affiliate of a member bank may underwrite and deal in bank-ineligible securities so long as it is not engaged principally or substantially in that activity (12 U.S.C. 377).

The applicants had previously received Board approval to underwrite and deal in U.S. government and agency securities and state and municipal securities that state member banks are specifically authorized to deal in under section 16 of the Glass-Steagall Act (referred to hereafter as "bank-eligible securities"). The Board

had also authorized the subsidiaries to underwrite and deal in commercial paper, one- to four-family mortgage-backed securities, municipal revenue bonds, and consumer-receivable-related securities—all securities that member banks may not underwrite or deal in under section 16 of the Glass-Steagall Act.⁴

To ensure that the subsidiaries would not be principally or substantially engaged in underwriting or dealing in the ineligible securities in violation of section 20 of the Glass-Steagall Act, the Board's approval was made subject to the requirement that gross revenues from those ineligible securities activities would not exceed 5 percent of the subsidiary's total gross revenues on average (moving average) over any two-year period (see 1989 FRB 192 and 196–197. The Board increased this level to 10 percent on September 5, 1989.

The subsidiaries are also subject to a framework of structural and operating limitations established to avoid the potential for conflicts of interest, unsound banking practices, unfair competition, loss of public confidence in affiliate banks, and other adverse effects from the conduct of the bank-ineligible securities underwriting and dealing activity.

The Board recognized that underwriting and dealing in securities is a natural extension of activities currently conducted by banks, involving manageable risks and potential conflicts of interest when conducted in an organizational structure that insulates these activities from banking activities supported by the federal safety net of deposit insurance and access to Federal Reserve lending. The Board has acknowledged that certain bank holding companies have an existing expertise in securities underwriting, dealing, brokerage, investment advisory activities, and broad financial skills that make them well equipped to provide the new services.

The Board's approval of each application is subject to the conditions stated in previous orders (see 1989 FRB 192; 1990 FRB 158, 455, 573, 652, 683, 756; 1991 FRB 672; 1993 FRB 133, 719; and 1994 FRB 249, 449). The conditions consist of structural and operating limitations designed to avoid conflicts of interest and potential adverse effects, and other conditions

designed to ensure safe and sound operations. The conditions include requirements, limitations, and prohibitions with regard to—

1. capital adequacy;
2. credit extensions to customers of the underwriting subsidiary;
3. maintaining the separateness of an underwriting affiliate's activity;
4. disclosures by the underwriting subsidiary;
5. marketing activities on behalf of an underwriting subsidiary;
6. investment advice by bank/thrift affiliates;
7. extensions of credit to the underwriting subsidiary and to purchasers or issuers of ineligible securities (or to major users of projects funded by industrial revenue bonds);
8. transfers of information;
9. reporting and recordkeeping requirements;
10. transfer of activities and formation of subsidiaries of an underwriting subsidiary to engage in underwriting and dealing; and
11. reciprocal arrangements and prohibitions against discriminatory treatment regarding unaffiliated securities firms.

See section 2185.0 for section 20 company inspection instructions, objectives, and procedures.

3600.21.5 ACTING AS A DEALER-MANAGER IN CONNECTION WITH CASH-TENDER AND EXCHANGE-OFFER TRANSACTIONS

In connection with a bank holding company application to underwrite and deal in, to a limited extent, all types of equity securities through its section 20 nonbanking subsidiary, an applicant also proposed to act as a dealer-manager in connection with cash-tender and exchange-offer transactions. Dealer-managers generally act as agent for tender or exchange offerors in arranging or facilitating mergers, acquisitions, and other corporate transactions. All-cash tender offers do not, of themselves, involve the issuance, public sale, or distribution of securities. The Board thus concluded that all revenues derived from the section 20 company acting as a dealer-manager in connection with such tender offers may be treated as bank-eligible revenues for purposes of determining compliance with the Board's 10 percent revenue limitation on bank-ineligible securities activities. The Board approved the application on November 24, 1993 (see 1994 FRB 49, footnote 5).

4. See the following Board orders: 1987 FRB 473, 607, 616, 618, 620, 622, 731, 738, 742, 928; 1988 FRB 133, 500, 699, 706, 819; 1989 FRB 33, 190, 396, 398, 520, 645, 647; 1990 FRB 79, 158, 256, 461, 554, 568, 573, 652, 682, 756; 1991 FRB 672; 1993 FRB 133, 719; and 1994 FRB 249, 449.

3600.21.6 UNDERWRITING “PRIVATE OWNERSHIP” INDUSTRIAL DEVELOPMENT BONDS

A bank holding company (the notificant) provided notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board’s Regulation Y (12 C.F.R. 225.23) of its proposal to engage de novo through its section 20 subsidiary (the company) in underwriting, to a limited extent, certain “private ownership” industrial development bonds. The bonds are issued for the provision of the following governmental services: water facilities, sewer facilities, solid waste disposal facilities, electric energy and gas facilities, and local district heating or cooling facilities (collectively, traditional governmental services). The notificant controls one bank subsidiary.

The company is currently engaged in limited underwriting and dealing in certain municipal revenue bonds, activities permissible under section 20 of the Glass-Steagall Act (12 U.S.C. 377).⁵ The company is a broker-dealer registered with the Securities and Exchange Commission (SEC) under the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq.) and is a member of the National Association of Securities Dealers, Inc. (NASD). Thus, the company is subject to the recordkeeping and reporting obligations, fiduciary standards, and other requirements of the Securities Exchange Act of 1934, the SEC, and the NASD. The notificant engages directly and through subsidiaries in other permissible nonbanking activities.

The Board previously determined that the activities of underwriting and dealing in municipal revenue bonds, including industrial development bonds, are so closely related to banking as to be proper incidents thereto within the meaning of section 4(c)(8) of the BHC Act.⁶ Certain bank holding companies previously requested approval to underwrite and deal in only municipal revenue bonds, as opposed to a full range of debt securities. Their requests were limited to underwriting and dealing in industrial develop-

ment bonds that are “public ownership” industrial development bonds. Public ownership industrial development bonds are those “tax-exempt bonds where the issuer, or the governmental unit on behalf of which the bonds are issued, is the sole owner for federal income tax purposes of the financed facility.”⁷

The notificant plans to engage through the company in underwriting private ownership industrial development bonds issued solely for the provision of traditional governmental services. It committed to conduct this activity subject to the same limitations and other conditions that govern underwriting and dealing in public ownership industrial development bonds.⁸

The underwriting risk and the risk analysis required to underwrite private ownership industrial development bonds issued for traditional governmental services is essentially the same as the risk and analysis related to underwriting traditional public ownership bonds. For each, the funds for the repayment of the bonds are derived from revenue generated by the financed facility, including revenue resulting from a service contract between the owner/lessor of the financed facility and a state or local government or political subdivision, pursuant to which the state or local government or political subdivision agrees to purchase the output of the facility.⁹ The notificant committed that all the private ownership bonds that the company would

7. See 1987 FRB 502. Examples of financed facilities include airports and mass-commuting facilities.

8. *Citicorp/Morgan/Bankers Trust*. All the bonds that the notificant proposed that the company underwrite would qualify as “exempt facility bonds” under the Internal Revenue Code (the code). See 26 U.S.C. 142. The types of exempt facility bonds that the company would underwrite may, subject to certain volume caps and other limitations, be tax-exempt under the code even if the proceeds of the bonds are used to finance facilities that are privately owned. See 26 U.S.C. 103, 141, 142, 146, and 147.

9. Typically, in the case of public ownership bonds, the governmental unit that issues the bonds owns the financed facility and repays the bonds from the revenue generated by the facility and this service contract. The governmental unit may also enter into a contract with a third party to operate the financed facility. In the case of the private ownership bonds that the notificant plans to underwrite, the governmental unit that issues the bonds either uses the proceeds of the bonds to acquire or construct a facility, which the governmental unit then leases to a third party, or lends the proceeds of the bonds to a third party to acquire or construct the facility. The third party agrees to make lease payments or loan repayments to the governmental unit that enable the governmental unit to pay debt service on the bonds. As security for the lease or loan agreement, the third party assigns and pledges the revenues generated by the facility and a service contract with a state or local government or political subdivision.

5. See 1993 FRB 716.

6. *Citicorp, J.P. Morgan & Co. Incorporated, and Bankers Trust New York Corporation*, 1987 FRB 473, *aff’d sub nom. Securities Industry Ass’n v. Board of Governors of the Federal Reserve System*, 839 F.2d 47 (2d Cir.), *cert. denied*, 486 U.S. 1059 (1988), as modified by order approving modifications to section 20 orders, 1989 FRB 751 (“*Citicorp/Morgan/Bankers Trust*”). See also *J.P. Morgan & Co. Incorporated, et al.*, 1989 FRB 192, *aff’d sub nom. Securities Industry Ass’n v. Board of Governors of the Federal Reserve System*, 900 F.2d 360 (D.C. Cir. 1990).

underwrite would be rated “investment quality” by a nationally recognized rating agency to the same extent as are the municipal revenue bonds that the company currently underwrites.

Considering these circumstances, the Board concluded that underwriting and dealing in private ownership bonds issued for the provision of traditional governmental services is a permis-

sible activity if conducted subject to the conditions and prudential limitations set forth in *Citicorp/Morgan/Bankers Trust* (1987 FRB 473 and 1989 FRB 751 (Modification Order)) and agreed to in 1993 FRB 716. The notification was approved on October 24, 1995 (see 1995 FRB 1116).

Permissible Activities by Board Order (Issuance & Sale of Mortgage-Backed Securities Guaranteed by GNMA) Section 3600.23

A foreign bank subject to the Bank Holding Company Act applied for the Board's approval to engage in various nonbanking activities, one being to purchase mortgage loans and to issue securities for its own account, through a wholly owned subsidiary or third party servicers, and to sell securities guaranteed by the Government National Mortgage Association (GNMA). Because National Banks are specifically authorized under the Glass-Steagall Act (12 U.S.C. 24) to issue and sell securities guaranteed by GNMA, as well as to underwrite and deal in such securities, the Board concluded that the issuance and sale of GNMA securities is closely

related to banking (1988 FRB 573). In addition, the Board determined that the statutory exemption reflects a Congressional determination that GNMA securities are not the type of securities that would lead to unsound speculation or that the public interest in the issuance and sale of GNMA securities by banks outweighs any potential harm resulting therefrom. Also, the Board previously determined that underwriting and dealing in GNMA certificates is of sufficiently low risk to be generally permissible activities for bank holding companies (12 C.F.R. 225.25(b)(16)).

A foreign bank, subject to Section 4 of the BHC Act, applied for the Board's permission to acquire, through its wholly owned subsidiary, all the shares of a company located in New York, New York. The acquired company would engage in several nonbanking activities. Two of the activities, not previously approved by the Board for BHCs, consisted of acting as a sales tax refund agent for the State of Louisiana and Cashing U.S. Dollar Payroll Checks Drawn on Unaffiliated Banks. Both activities were found to be closely related to banking subject to the facts and conditions found in the Board order and briefly discussed below. The application was approved on August 15, 1990 (1990 FRB 860).

3600.24.1 ACTING AS A SALES TAX REFUND AGENT FOR THE STATE OF LOUISIANA

The company being acquired serves as the State's exclusive sales tax refund agent for its tax-free shopping program for foreign visitors. Under the program, foreign visitors present sales invoices evidencing sales taxes paid in Louisiana to the company's office in the state. It refunds the tax in U.S. dollars to the visitor, less a handling fee. A portion of the handling fee is then remitted to

the State and local tax authorities refund to the company the amount of tax refunds advanced. The Board found the activity to be closely related to banking since banks: (1) routinely forward to taxing authorities tax receipts delivered to the bank on taxes due; (2) commonly act as fiscal agent for government authorities which involves disbursing funds on behalf of state and local governments.

3600.24.2 CASHING U.S. DOLLAR PAYROLL CHECKS DRAWN ON UNAFFILIATED BANKS

The company being acquired also cashes, and the Applicant plans to continue cashing, U.S. dollar payroll checks on a limited basis, primarily to accommodate employees in airport facilities that lack banking services, but where the company maintains offices. Since check cashing is a fundamental banking activity performed routinely by banks, and the company being acquired proposed to cash only checks drawn on unaffiliated banks, the Board found the activity to be closely related to banking. The Board stipulated, however, that the Applicant was not to use the acquired company's offices as branches of the Applicant or any affiliated bank.

A bank holding company (the notificant) requested the Board's approval, under section 4(c)(8) of the BHC Act and section 225.24(a) of Regulation Y, to acquire through its wholly owned subsidiary a cash-express company, certain assets of an exchange company, and another firm to engage in various nonbanking activities. Many of the nonbanking activities had previously been determined by the Board to be closely related to banking in Regulation Y, by order, or by interpretation. In addition to those nonbanking activities already approved, the notificant requested the Board's approval to engage in providing various governmental service activities at the offices of the cash-express company:

1. postage stamps and postage-paid envelopes
2. vehicle registration services, including the sale, distribution, and renewal of license plates and license tags for motor vehicles
3. public transportation tickets and tokens
4. notary public services

The Board noted that banks are permitted to provide customer access to the type of government services involved in the proposal, whereby the banks may be acting in an agency capacity or accomplishing the distribution of some of the services using automated teller machines (ATMs).¹ The Board thus concluded that the proposed nonbank activities are closely related to banking. Based on all the facts and commitments provided by the notificant, and the representations and conditions relied upon in reaching a decision, the Board approved the proposal on April 2, 1998 (1998 FRB 481).

1. See 12 C.F.R. 7.1010 and OCC Interpretive Letter No. 718 (March 14, 1996) (postage stamps, acting as an agent for the state in selling and renewing license plates and license tags, and public transportation tickets from ATMs). See also OCC Conditional Approval Letter No. 267 (January 12, 1988)(notary services).

Permissible Activities by Board Order (Real Estate Settlement Through a Permissible Title Insurance Agency) Section 3600.26

A BHC Applicant requested the Board's permission under section 4(c)(8) of the BHC Act to acquire all the outstanding shares of a company engaged in title insurance agency and real estate settlement activities. The Board previously determined that title insurance agency activities are permissible under section 4(c)(8)(G) of the BHC Act, for which the BHC Applicant qualifies.

The real estate settlement services consist of: (1) reviewing the status of the title in the title commitment, resolving any exceptions to the title, and reviewing the purchase agreement to identify any requirement in it in order to ensure compliance with them; (2) verifying payoffs on existing loans secured by the real estate and verifying the amount of and then calculating the pro rating of special assessments and taxes on the property; (3) obtaining an updated title insurance commitment to the date of closing, preparing the required checks, deeds, affidavits, and obtaining any authorization letters needed; (4) establishing a time and place for the closing, conducting the closing, and ensuring that all parties properly execute all appropriate documents and meet all commitments; (5) collecting and disbursing funds for the parties, holding funds in escrow pending satisfaction of certain commitments, preparing the HUD settlement statement, the deed of trust, mortgage notes, the Truth-in-Lending statement, and purchaser's affidavits; and (6) recording all of the documents required under law.

In reviewing the proposed activity, the Board noted that real estate settlement services are provided by the Applicant's bank subsidiaries in connection with their origination of mortgage loans, and banks within the Applicant's state are generally permitted to conduct real estate settlement activities. It was further noted that banks routinely prepare collateral security agreements and other documentation required to close loans in accordance with federal and state lending requirements as part of the general lending activities authorized under the Board's Regulation Y.

The Board concluded that aspects of the proposed real estate settlement activities are directly linked to permissible title insurance agency activities by BHCs. These activities can directly affect the insured risks under a title insurance policy. Title insurance agents have special experience in assessing potential title defects that can arise in real estate settlement. Title insurance agents thus have the expertise to generally engage in real estate settlements.

For these reasons, the proposed real estate settlement activities conducted through a permissible title insurance agency, were deemed by the Board to be closely related to banking for purposes of section 4(c)(8) of the BHC Act. The Board approved the application by order on October 15, 1990 (1990 FRB 1058).

A bank holding company (the applicant) applied under section 3(a)(3) and 4(c)(8) of the BHC Act to acquire another company (the company), thereby indirectly acquiring its subsidiary (the subcompany) as well as the subsidiary bank and nonbank companies of the company and the subcompany. Upon consummation of the transaction, the company and subcompany would be subject to the provisions of the BHC Act. Both companies applied for permission under section 3(a)(1) of the BHC Act to become a bank holding company.

The applicant also applied for the Board's permission to engage, through one subsidiary of the subcompany (the advisor), in providing administrative and certain other services to mutual funds, nonbanking activities that the Board has not previously considered under section 4(c)(8) of the BHC Act. The applicant also applied for the Board's permission to acquire certain other nonbanking subsidiaries of the company (as listed in appendix B of the order) to engage in making or servicing loans, providing trust services, and providing investment advisory nonbanking services pursuant to section 225.25(b)(1), (b)(3), and (b)(4) of Regulation Y.

In addition, the applicant provided notice of its intent to indirectly acquire a foreign trust company, a trust administration company, and an advisory company. The companies engage in activities that are permissible under section 211.5(d) of Regulation K.

3600.27.1 GLASS-STEAGALL ACT ISSUES IN PROVIDING ADMINISTRATIVE SERVICES

The administrative services the applicant proposed to provide through the advisor and its affiliates raised a number of issues under the Glass-Steagall Act. Under that act, a company that owns a member bank may not control "through stock ownership or in any other manner" a company that engages principally in distributing, underwriting, or issuing securities.

Because mutual funds continuously issue and redeem securities, the Board in 1972 issued an interpretation setting out its position on the Glass-Steagall Act as it governs the relationship between mutual funds and companies that own member banks (12 C.F.R. 225.125). The Board found that the Glass-Steagall Act prohibits affiliates of banks from sponsoring, organizing, or controlling mutual funds or distributing their shares.

The Board also found, however, that the Glass-Steagall Act does not prohibit all relationships between a bank holding company and a mutual fund and that it is permissible, under the BHC Act and the Glass-Steagall Act, for bank holding companies to provide investment advice to mutual funds. Also, the Board found that the Glass-Steagall Act does not prohibit bank holding companies from providing certain other services to mutual funds, such as acting as custodian, transfer agent, or registrar.¹ Banks and affiliates of banks may serve as investment advisor, transfer agent, custodian, and registrar. *They may not act as distributor to the fund.* The application raised the question whether it was consistent with the Glass-Steagall Act for an affiliate of a member bank to act as an administrator to a mutual fund.

3600.27.2 PERMISSIBILITY OF PROPOSED ADMINISTRATIVE-SERVICES ACTIVITIES

The advisor furnishes a variety of services to open-end investment companies (mutual funds) and closed-end investment companies in the United States. Because certain of the activities of the advisor and its affiliates are prohibited by the Glass-Steagall Act, the applicant has taken

1. The Board imposed a number of restrictions on the relationship between bank holding companies and mutual funds to avoid conflicts of interest and to address potential safety-and-soundness concerns. The Board's rule includes restrictions preventing a bank holding company or any of its subsidiaries from—

- acting as investment advisor to any investment company that has a name similar to the holding company or any of its subsidiary banks;
- purchasing for its own account shares of any investment company for which the holding company serves as investment advisor;
- purchasing in its sole discretion in a fiduciary capacity shares of an investment company advised by the holding company;
- extending credit to an investment company advised by the holding company as collateral for a loan used to purchase shares of the investment company.

In addition, the rule requires that, in cases in which a customer purchases or sells securities of the fund through the holding company or is advised by the holding company to purchase shares of the fund, the customer be informed in writing of the holding company's involvement with the fund, and be informed that the shares of the fund are not federally insured and are not guaranteed by, or obligations of, a bank.

steps, and has committed, to terminate the advisor's role as a sponsor of new mutual funds. The applicant also committed that it would not acquire those of the advisor's subsidiaries that engaged in the distribution of mutual fund shares. The applicant further committed that it would not be involved in the distribution of the shares of any mutual fund. The applicant represented to the Board, that, after the acquisition of the company, neither the advisor nor any of its affiliates would be obligated by any agreement to engage in any sales activities in connection with any mutual fund's shares and would not enter into any distribution agreement with any mutual fund, unless permitted to do so by a change in current law.

The advisor will not—

1. engage in the development of marketing plans except to give advice to the distributor regarding regulatory compliance;

2. engage in advertising activities with respect to the funds and will not be involved in the preparation of a fund's sales literature except to review it for the sole purpose of ensuring compliance with pertinent regulatory requirements; or

3. permit employees of the advisor to engage in sales activities at meetings or seminars (such activities would be conducted solely by the fund's distributor).

It was noted that the applicant did not propose providing administrative services to those mutual funds that are marketed and sold primarily to customers of any of the applicant's subsidiary banks.

The Board believes that it is permissible under the Glass-Steagall Act for the applicant to provide the following administrative services to mutual funds as proposed:

1. maintaining and preserving the records of the fund, including financial and corporate records;

2. computing the fund's net asset value, dividends, and performance data and financial information regarding the fund;

3. furnishing statistical and research data;

4. preparing and filing with the SEC and state securities regulators registration statements, notices, reports, and other material required to be filed under applicable laws;

5. preparing reports and other informational materials regarding the fund including proxies and other shareholder communications and reviewing prospectuses;

6. providing legal and regulatory advice to

the fund in connection with its other administrative functions;

7. providing office facilities and clerical support for the fund;

8. developing and implementing procedures for monitoring compliance with regulatory requirements and compliance with the fund's investment objectives, policies, and restrictions as established by the fund's board;

9. providing routine fund accounting services and liaison with outside auditors;

10. preparing and filing tax returns;

11. reviewing and arranging for payment of fund expenses;

12. providing communication and coordination services with regard to the fund's investment advisor, transfer agent, custodian, distributor, and other service organizations that render recordkeeping or shareholder communication services;

13. reviewing and providing advice to the distributor, the fund, and investment advisor regarding sales literature and marketing plans to ensure regulatory compliance;

14. providing the distributor's personnel with information about fund performance and administration;

15. participating in seminars, meetings, and conferences designed to present information to brokers and investment companies, but not in connection with the sale of shares of the funds to the public, concerning the operation of the funds, including administrative services provided by the bank holding company to the funds;

16. assisting existing funds in the development of additional portfolios; and

17. providing reports to the fund's board regarding fund activities.

A mutual fund administrator provides services that are essentially ministerial or clerical. The administrator does not have policy-making authority or control over the mutual fund. The policy-making functions rest with the board of directors of the mutual fund. The board of directors is responsible for the selection and review of the major contractors to the fund, including the investment advisor, and in certain circumstances the administrator.

The Investment Company Act of 1940 requires that at least 40 percent of the board of directors of a mutual fund be disinterested persons who are not affiliated with the investment advisor, with any person that the SEC has determined to have a material business or professional relationship with the fund, with any employee or officer of the fund, with any registered broker or dealer, or with any other inter-

ested or affiliated person. These unaffiliated board members must approve the fund's contracts with its investment advisor, underwriter, and often its administrator. The applicant committed that the advisor will provide administrative services only to mutual funds whose board of directors consist of a majority of disinterested persons.

In situations in which the applicant's subsidiaries serve as administrator to the mutual fund, the Board permitted one representative of the administrator to serve as a director of the fund. The applicant contended that such an interlocking director would facilitate the provision of administrative services by providing the fund with a person knowledgeable in the operation of the fund who would be in a position to advise the board of directors on administration.

The applicant proposed that a director interlock would be used only in situations in which a company unaffiliated with it serves as the investment advisor to the mutual fund. With regard to the advisor's serving as an administrator, this interlocking director would be deemed an interested person and would be excluded from those actions that must be taken by disinterested board members, such as the approval of an investment advisory contract or a contract for the administrator. The applicant committed that the advisor would serve as administrator only to mutual funds for which a majority of the board of directors are disinterested individuals. The Board believed that, in this proposed arrangement, the applicant would not control a mutual fund if one employee of the advisor or an affiliate² would serve as a director of a mutual fund to which the advisor provides administrative services.

The applicant plans, in a small number of cases, to provide mutual funds with a combination of administrative, investment advisory, and other services. The OCC has permitted national banks that serve as investment advisor to mutual funds also to provide some administrative services to those mutual funds. In addition, a number of national banks have been providing these and other services as "subadministrator" to mutual funds that are advised by the bank or an affiliate.

In the Board's opinion, permitting a bank holding company that serves as investment advisor to a mutual fund and also in essence provides ministerial or supporting functions as

administrator to that fund would not significantly increase the bank holding company's ability to control the mutual fund. In other words, the advisor would not, by virtue of becoming an administrator to a fund that it or an affiliate advises, become involved in policy-making functions of these funds to a greater extent than when it provides solely investment advisory services. The Board believes that control would continue to rest with the board of directors of the mutual fund.

With regard to providing a combination of advisory and administrative services, the applicant further committed that it would not have any director or officer interlocks with these mutual funds. It would also not have any director or officer interlocks with mutual funds to which it provides both advisory and administrative services.

In providing the combination of services, the applicant would be subject to the Board's interpretation on investment advisory activities (12 C.F.R. 225.125) and would therefore be required to conform the advisor's activities to the interpretation within two years. On this condition, and subject to the commitments made by the applicant, the Board concluded that the proposal was permissible under the Glass-Steagall Act.

3600.27.3 BOARD'S CONCLUSION ON PROVIDING ADMINISTRATIVE SERVICES

The Board found the applicant's proposed activities to be closely related to banking because (1) it had previously determined by regulation that a bank holding company could act as investment advisor to a mutual fund; (2) national banks, including national bank trust departments, provide administrative services to mutual funds; and (3) it had also permitted bank holding companies to provide certain individual financial data processing services (calculation of investment values and tax consulting) by a mutual fund administrator. The Board thus approved the application on April 21, 1993 (1993 FRB 626), based on the facts of record and all of the commitments and representations made by the applicant, and subject to the terms and conditions set forth in the order.

2. This director cannot serve as an officer, director, or employee of the applicant, its bank, or any subsidiary bank or bank holding company of the applicant.

Developing Broader Marketing Plans and Advertising and Sales Literature for Mutual Funds

Section 3600.28

A foreign banking organization (FBO), subject to the provisions of the Bank Holding Company Act, had requested the Board's approval to acquire, through a wholly owned subsidiary (the company), substantially all the assets of an asset-management partnership (the partnership). The company would be an investment adviser registered with the Securities and Exchange Commission (SEC) under the Investment Company Act of 1940. The company's acquisition of the partnership would also include a membership interest in a services firm that would provide transfer-agency services to mutual funds advised by the company (the funds).

The FBO, among other things, proposed to provide marketing support to a mutual fund by directly contacting broker-dealers, 401(k) plan providers, financial planners, insurance companies, and other financial intermediaries to recommend the funds. It would be primarily responsible for the development of marketing plans and the preparation of advertising and sales literature materials for the funds. The Board had not previously considered whether a bank holding company could provide promotional or marketing services to the extent that was proposed.

3600.28.1 CONTROL CONSIDERATIONS INVOLVING PROMOTIONAL AND MARKETING ACTIVITIES

Under the Glass-Steagall Act, a company that owns a member bank may not own or control "through stock ownership or in any other manner" a company that engages principally in distributing, underwriting, or issuing securities.¹ The Board has found that this provision prohibits affiliates of banks from sponsoring, organizing, or controlling a mutual fund. The Board previously has determined, however, that the Glass-Steagall Act does not prohibit a bank holding company from providing advisory and administrative services to a mutual fund.²

The proposed promotional and marketing activities would not, it was believed, cause the FBO to control the funds or to be involved in the underwriting and distribution of the funds' securities to the public. The proposed promotional activities involved contact only with financial intermediaries. The activities are similar to

the activities previously approved by the Board. The Board had previously permitted bank holding companies to present information about the operations of the mutual funds advised and administered by the bank holding company at meetings or seminars for brokers of mutual funds.³ In addition, the Office of the Comptroller of the Currency (OCC) had also authorized subsidiaries of national banks to provide marketing and advertising support to mutual funds in connection with their brokerage and advisory services.

As for the distribution and sales of the funds, it was proposed that an independent distributor be given that responsibility.⁴ The independent distributor would serve as the principal underwriter of the funds and would enter into sales agreements with financial intermediaries to sell shares of the funds on their behalf.⁵ Actual sales would be conducted by the independent distributor or by an independent broker-dealer for the funds.

The FBO did not propose to solicit retail customers to purchase shares in particular funds, to accept orders for the purchase of shares, or to engage in any retail sales activities. Neither the company nor any of its employees would receive transaction-based income or commissions in connection with the company's promotional or marketing activities.

The company would have primary responsibility for preparing the advertising and marketing materials. The independent distributor, however, would be responsible for placing all advertisements. The independent distributor would also have legal responsibility, under the rules of the National Association of Securities Dealers (NASD), for the form and use of all advertising and sales literature prepared by the company, and would also be responsible for filing these materials with the NASD or SEC.

For the reasons cited, the Board believed that the promotional and marketing activities pro-

3. See 1993 FRB 626 (footnote 15).

4. The FBO committed that none of its U.S. affiliates, including the company, would be obligated by any agreement to engage in any sales activities with regard to shares of the funds, nor would such affiliates enter into any distribution agreement with the funds without the prior approval of the Board.

5. The funds could enter into distribution agreements with intermediaries, but in no event could the company enter into such agreements.

1. 12 U.S.C. 221a and 377.

2. See 12 C.F.R. 225.28(b)(6) and 12 C.F.R. 225.125.

posed by the FBO would not involve the company in the underwriting or distribution of shares of the funds for the purposes of the Glass-Steagall Act.

3600.28.2 MANAGEMENT INTERLOCK CONTROL CONSIDERATIONS

The FBO also proposed that the chief executive officer serve as the chairman of the four-member board of trustees of the funds and that no more than three officers or employees of the company serve as junior-level officers of the funds. The employees would serve as assistant secretary, assistant treasurer, or assistant vice president of the funds, and would be supervised by the board of trustees or senior-level officers. These employees would have no policymaking authority at the funds and would not be responsible for, or involved in, making recommendations on policy decisions. No employee or officer of the company would serve as a senior-level officer of the funds.

The Board had previously authorized a bank holding company to have director and officer interlocks with mutual funds that the bank holding company advises or administers.⁶ The Board concluded that the proposed interlocks between the company and the funds, in this case, would not compromise the independence of the boards of trustees of the funds, compromise the independent distribution of the funds, or result in control of the funds by the FBO.

Based on the facts given, the Board concluded that the control of the funds would rest with the independent members of the boards of trustees of the funds, and that the proposed interlocks between the company and the funds would not compromise the independence of the boards of the funds or permit the FBO to control the funds. The Board concluded that the proposal was consistent with the Glass-Steagall Act. The notice was approved on June 16, 1997. See 1997 FRB 679, 1998 FRB 1075–77, 1998 FRB 852–853, and 1998 FRB 680–82.

6. See 1996 FRB 1129.

Permissible Activities by Board Order (Providing Employment Histories to Third Parties) Section 3600.29

A bank holding company gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its intention to engage de novo through its mortgage subsidiary in providing employment histories to third parties for a fee.

The employment histories to be provided by the mortgage subsidiary would include the names of past and current employers of an individual and the salary and length of employment for each position, if the individual has consented to the release of such information. The mortgage subsidiary would compile an individual's employment history from information available from state departments of employment services and other similar sources. This information would be provided for a fee to any third-party credit grantor for the purpose of assessing the creditworthiness of a prospective borrower.¹

3600.29.1 CREDIT-RELATED EMPLOYMENT HISTORIES

The mortgage subsidiary will provide employment histories to third-party credit grantors, including depository and nondepository grantors, for use in making decisions to extend credit only with the express consent of the individual involved. The bank holding company committed that the mortgage subsidiary will comply with the Fair Credit Reporting Act (15 U.S.C. 1681 et seq.) (FCRA) and all applicable state and federal laws and regulations.

In the normal course of their lending activities, banks collect and analyze employment and salary information, including names of past and current employers and salary histories. The Board previously determined that providing past credit information, which includes employment history information, to a credit grantor who is considering a borrower's application for credit is an activity that is closely related to banking and permissible for bank holding companies.² Accordingly, the Board concluded that providing employment histories to third-party credit

grantors for use in making decisions to extend credit is an activity that is closely related to banking.

3600.29.2 NON-CREDIT-RELATED EMPLOYMENT HISTORIES

The bank holding company also intends to provide employment histories to third-party depository institutions and their affiliates, including credit unions and their affiliates, for use in the regular course of their business, including the hiring of employees. The mortgage subsidiary would provide this information to such entities only with the express consent of the individual involved. Regardless of whether the customer is a third-party depository institution or other credit grantor, the activity would only involve providing employment information. The bank holding company does not plan to provide any additional service, such as analyzing an individual's creditworthiness. The bank holding company committed that its mortgage subsidiary will comply with the FCRA and all applicable state and federal laws and regulations in performing the proposed activity.

The Board had not previously determined whether providing such employment information to third parties for a fee is closely related to banking under section 4 of the BHC Act and, therefore, permissible for bank holding companies. The Board had previously permitted bank holding companies to provide employment information, including employment histories, to depository institutions and their affiliates in connection with the provision of career counseling services (see section 3600.15.1.1).³ To the extent that these organizations use the information to be provided by the mortgage subsidiary for other purposes, it will only be used in connection with the operation of their banking business.

The Board thus concluded that providing employment histories for use by depository institutions and their affiliates in the regular course of their business is an activity that is closely related to banking. For these reasons, the Board, on May 8, 1995, approved the bank holding company's notice to provide such employment information (1995 FRB 732). The

1. Credit grantors could include lessors if the leasing transaction was the functional equivalent of an extension of credit.

2. See Regulation Y, section 225.25(b)(24) (12 C.F.R. 225.25(b)(24)). The bank holding company committed that it would not promote its mortgage subsidiary as a provider of employment information to non-depository institutions for general business purposes unrelated to credit decisions.

3. See 1994 FRB 51.

approval was specifically conditioned on compliance with the commitments made in connection with the notice.

A bank holding company (the notificant) gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of its intention to acquire a title abstracting company (the company) and thereby engage in real estate title abstracting in the state of Iowa.¹ Real estate title abstracting, as proposed by the notificant, is limited to reporting factual information concerning the interests or ownership of selected real property. An abstracter obtains this information by performing a "title search" of records maintained at a local public records office to determine the ownership history of the property, including any liens, encumbrances, mortgages, or future interests affecting it. The abstracter then prepares a written report, also known as an "abstract of title," that recites the results of the title search. Because Iowa state law does not permit the sale of title insurance, real estate lenders obtain the opinion of an attorney certifying that title to a particular parcel of real property is free of defects. The abstract of title provides the factual information necessary for the attorney to determine whether a lender would have an unencumbered security interest in the property to be mortgaged.

The notificant proposes to provide real estate title abstracting services to affiliated and unaffiliated lenders in an Iowa county. The company would perform the proposed activities in connection with real estate loans made by affiliates or unaffiliated companies and, in certain cases, when no financing is provided, such as in connection with intrafamily transfers of real estate and property distributed as part of estate planning.

The notificant would not provide any insurance against title defects, guarantee any title, or provide any certification with respect to a title. The notificant would be liable for damages caused by negligence in performing a title search but would not be responsible for any defects in the title.² The equivalent of title insurance in Iowa is provided by the attorney who certifies that the title is free from defects. The Board has not previously determined that providing real estate title abstracting is closely related to banking under section 4(c)(8) of the BHC Act and, therefore, permissible for bank holding companies.

The Board believes that the proposed real estate title abstracting activities are integrally related to the provision of loans secured by real estate. A bank must be aware of any encumbrances on property that serves as collateral for a loan made by the bank. Banks in the state typically rely on an attorney's opinion, based on information in an abstract of title, to determine that they have a secured position in real estate serving as collateral. The abstract of title provides information necessary to determine the adequacy of the real estate collateral for the loan and is an integral part of secured real estate lending in Iowa. Thus, the bank has a particular need for the information in the abstract of title. Accordingly, the Board believes that the proposed activities are integrally related to the provision of secured real estate lending and, therefore, are closely related to banking.

The Office of the Comptroller of the Currency (OCC) has authorized national banks to conduct this activity.³ The OCC has concluded that the performance of a title search and the preparation of an abstract of title are necessary parts of the real estate lending process and that it would be convenient and useful under the applicable standards in the National Bank Act for national banks to be able to perform these tasks themselves.⁴

The proposed activities are not equivalent to providing title insurance—an activity that is not generally permissible under section 4(c)(8) of the BHC Act.⁵ Title insurance generally includes providing an indemnification against losses resulting from a title defect discovered after the conveyance of property. Title insurance typically protects a purchaser or lender against claims not identified by a title search or claims not specifically exempted by the title insurance policy. The notificant does not propose to certify or guarantee title and would not be liable to the purchaser or the lender for any title defects.

The Board concluded, based on all the facts of record, that the proposed activities are closely related to banking and approved the notice on

3. OCC Interpretative Letter No. 450, September 22, 1988.

4. National banks are not permitted to sell title insurance.

5. Section 4(c)(8) provides that insurance agency, brokerage, and underwriting activities are not "closely related to banking" and, thus, are not permissible activities for bank holding companies, unless the activities are included within one of seven specific exemptions (A through G) in section 4(c)(8) (12 U.S.C. 1843(c)(8)(A)–(G)).

1. Notificant would merge the company into its wholly owned leasing subsidiary.

2. Title abstracters may insure against liability for negligence by purchasing an errors and omissions policy.

June 30, 1995 (see 1995 FRB 805). Approval of the proposal was specifically conditioned on the notificant's compliance with the commitments made in connection with the notice.

The BHC Act states that a nonbank activity is impermissible unless explicitly exempt from the general prohibition of section 4. While this could cause an unlimited list of impermissible activities, the Board has compiled a list of activities which have been specifically determined to be impermissible (see Manual section 3000.0, Appendix 3).

The inspection objective is to determine whether a specific activity conducted by a bank holding company or its subsidiary is permissible for the bank holding company. The Board has ruled specific activities to be impermissible although it has stated also that certain impermissible activities may be engaged in under limited special circumstances.

In addition, a bank holding company may be entitled to grandfather privileges which are considered as either permanent (where there is no deadline for termination of an activity) or temporary, in which case the activity must have been terminated prior to December 31, 1980. A

holding company may be granted an exemption from section 4 of the Act (i.e., family, hardships, etc.) which allows it to engage in activities that would otherwise be impermissible. Because of the variety of factors which must be considered, the examiner should exercise care when determining the permissibility of an activity for a bank holding company.

The subsections of this chapter present a *selected number* of those activities which have been determined to be impermissible for bank holding companies. While an activity is permissible only after it has been determined as such by the Board, it must be remembered that in determining permissibility, the Board has in some instances (i.e., data processing services, courier services, etc.) included restrictions which would limit the overall nature or performance of the activity. Therefore, even the permissible activities may become impermissible if the actions of the bank holding company are not in accordance with the stated restrictions.

The Board of Governors has ruled that land development¹ is impermissible for bank holding companies. However, for land acquired through foreclosure, a limited amount of development may be allowed in an effort to minimize the potential loss on the project. Each case must be considered separately to determine if it warrants additional development.

The basic determination of impermissibility was established by the Board in denying a portion of the application by UB Financial Corp., Phoenix, Arizona, to retain the H. S. Pickrell Company, Phoenix, Arizona (1972 FRB 429). The order stated in part, "The Board is of the opinion that the activities of purchasing and selling of land or participating as a joint venturer in real estate development are not so

closely related to banking as to be a proper incident thereto, and that insofar as the application pertains to those activities, it should be denied."

The determination that limited development for land acquired through foreclosure is permissible is contained in a Board order dated November 1, 1973, in connection with an application by Liberty National Corporation, Oklahoma City, Oklahoma, to retain Liberty Mortgage Company, Oklahoma City, Oklahoma (1973 FRB 919), in which it is indicated that a limited amount of real estate development might be permissible if necessary to minimize losses on real estate acquired in connection with debts previously contracted.

1. The Board, by specific order, has permitted a limited incursion into this area as an accommodation to BHCs acquiring thrifts or to thrifts that qualify as "banks" and seek to form bank holding companies (1986 FRB 487, 731)

3700.2.1 PREMIUM FUNDING

Insurance premium funding, sometimes known as equity funding, is the financing of the sales of mutual fund shares and life insurance policies as a package. It should not be confused with loans made to an insured for the purpose of paying premiums on hazard insurance (insurance premium financing); in that case the lender may be named loss payee or owner of the policy and the lender has the right to submit the policy for cancellation in order to collect the amount owed. Insurance premium financing is a permissible activity pursuant to Section 225.25(b)(1) of Regulation Y (Refer to 1974 FRB 310).

The Board has determined insurance premium funding to be impermissible for bank holding companies (12 C.F.R. 225.126). This determination is based on the policies contained in sections 20, 21, and 32 of the Banking Act of 1933 (the Glass-Steagall Act Provisions) as described in the opinion of the United States Supreme Court in *Investment Company Institute v. Camp*, 401 U.S. 617 (1971).

“In the Board’s opinion, the Glass-Steagall Act provisions, as interpreted by the U.S. Supreme Court, forbid a bank holding company to sponsor, organize or control a mutual fund” (12 C.F.R. 225.125). In enacting the Glass-Steagall Act, Congress indicated that affiliations of commercial banks and securities companies give rise to a potential conflict of interest and unsound banking practices. Pursuant to section 4(c)(8) of the Act, the Board is required to consider whether the performance of a particular nonbank activity by a holding company produces benefits to the public that outweigh possible adverse effects, such as potential conflict of interest and unsound banking practices. Therefore, the potential conflict of interest and unsound banking practices arising in the affiliation of commercial banks and mutual funds precludes the Board from approving insurance premium funding as a permissible banking activity.

3700.2.2 LIFE INSURANCE UNDERWRITING

The life insurance discussed in this section is that life insurance which is not sold in connection with a credit transaction by a bank holding company or its subsidiary. The Board has ruled that this activity is impermissible for bank holding companies (12 C.F.R. 225.126). The Board developed its position during consideration of

the application of First Oklahoma Bancorporation, Inc., Oklahoma City, Oklahoma, for prior approval pursuant to section 4(c)(8) of the Act to acquire sufficient additional shares of Underwriters Life Insurance Company, Oklahoma City, Oklahoma, so as to own at least 80 per cent of the outstanding shares and thereby to engage in the activity of underwriting life insurance not sold in connection with a credit transaction by a bank holding company or a subsidiary.

In acting on the First Oklahoma application, the Board relied on an earlier decision denying an application by Transamerica Corporation, San Francisco, California, to retain its shares of Occidental Life Insurance Company of California (1957 FRB 1014). In the Transamerica case, a hearing examiner found that the life insurance underwriting activities of Occidental were not so closely related to banking to be a proper incident to managing and controlling banks. In the First Oklahoma case, the application was presented on the question of whether the activities of Underwriters Life were so closely related to banking or managing or controlling banks as to be a proper incident thereto. The Board determined in First Oklahoma, that there was no reasonable basis for the contention that the activities of Underwriters Life were permissible.

The activity of acting as an underwriter (reinsurer) for credit life and credit accident and health (disability) insurance is, however, considered a permissible activity (12 C.F.R. 225.135).

3700.2.3 SALE OF LEVEL-TERM LIFE INSURANCE

The Board has stated that the sale of level-term life insurance is not covered by section 225.25(b)(8)(ii) of Regulation Y. This position was stated in its order approving the application by Fidelity Corporation of Pennsylvania, Rosemount, Pennsylvania, to acquire Local Finance Corporation, Providence, Rhode Island, excepting those proposed activities of level-term life insurance sales (1973 FRB 472). Insurance that does not decline in coverage as the outstanding loan balance is reduced results in the insured party carrying more insurance than is necessary to cover the outstanding loan balance. Because of this position, the Board would not allow the sale of this type of insurance by the applicant and its subsidiary.

3700.2.4 UNDERWRITING REAL ESTATE MORTGAGE GUARANTEE INSURANCE

Mortgage guaranty insurance is essentially a limited guarantee of a mortgage loan. Such insurance typically covers the top 20 or 25 percent of a mortgage loan. In the event of default by the borrower, the lender acquires title to the property and then submits a claim to the insurer. The insurer then has a choice of two options: (1) take title to the property and pay the lender the unpaid principal and interest; or (2) pay the lender the 20 or 25 percent insured portion of the loan, with the lender retaining title to the property.

The Board has determined that “the underwriting of mortgage guarantee insurance is principally a credit determination, similar to those made by banks in their regular course of business” (1974 FRB 727). Therefore, this activity is considered closely related to banking for purposes of permissibility under section 4(c)(8) of the Act. However, the Board noted that the private mortgage insurance industry was relatively young and still developing with a limited, untested, operating history. In addition, the Board believed that the times were such that it was “desirable for bank holding companies generally to slow their present rate of expansion and direct their energies toward strong and efficient operations within their existing activities, rather than toward expansion into new activities” (the go-slow policy), and, therefore, concluded that it would not be appropriate to adopt the underwriting of mortgage guarantee insurance as permissible for bank holding companies.

3700.2.5 UNDERWRITING PROPERTY AND CASUALTY INSURANCE

On May 12, 1978, the Board denied NCNB Corporation’s application to retain its indirect subsidiaries, Superior Insurance Company and

Superior Claim Service, both of Florence, North Carolina. These companies engaged, respectively in the activities of underwriting property and casualty insurance related to extensions of credit by NCNB’s affiliates, in adjusting insurance claims and in appraising and valuing property in connection therewith. Neither of these activities had previously been determined by the Board to be closely related to banking. The Board concluded that the circumstances presented did not provide a reasonable basis for believing that the proposed activity was closely related to banking or managing and controlling banks (1978 FRB 506).

3700.2.6 TITLE INSURANCE

The Board issued a letter (See Board letter re Independence Bancorp, Inc., dated 3/17/86) to a bank holding company which filed an application with the Board to acquire a *de novo* title abstract company which planned to engage in, among other things, the sale of title insurance. The sale of title insurance had not been previously approved by the Board as a permissible nonbanking activity. In responding to the application, the Board determined that the proposed title insurance activities were not closely related to banking.

The Board’s discretion to decide what types of insurance activities are closely related to banking was removed by the Garn–St Germain Depository Institutions Act of 1982 (“Garn Act”), which amended section 4(c)(8) of the BHC Act. The Garn Act stated that “it is not closely related to banking or managing or controlling banks for a bank holding company to provide insurance as a principal, agent, or broker. . . .” The Garn Act lists certain specific exceptions to this general prohibition, none of which permits the sale of title insurance. The Board thus concluded that the Garn Act does not allow it the discretion to approve this type of nonbanking activity.

3700.3.1 BROKERAGE

Real estate brokerage is the negotiating of a real estate contract between a buyer and seller for which the broker receives a fee or commission and in which the broker takes no possessory interest in the subject matter of the contract. The Board has stated that this activity is considered impermissible for bank holding companies. The Board's position was expressed in its order approving an application by Boatmen's Bancshares, Inc., St. Louis, Missouri, to acquire Williams, Kurrus and Company, St. Louis, Missouri (1972 FRB 428). The Board stated that it had determined that real estate brokerage activities were not so closely related to banking or managing or controlling banks as to be a proper incident thereto. Since Boatman's had not demonstrated to the Board's satisfaction that the real estate brokerage field activities are so closely related to banking or managing or controlling banks as to be a proper incident thereto, the Board approved the Boatman's application on the condition that Boatman's terminate its real estate brokerage activities.

3700.3.2 SYNDICATION

The Board ruled that this activity is not permissible for bank holding companies. The Board's position was developed during consideration of

the application of BankAmerica Corporation, San Francisco, California, for prior Board approval to engage *de novo* under section 4(c)(8) of the Act in the activity of real estate syndication through a subsidiary, BankAmerica Realty Services, Inc., San Francisco, California. The Board concluded that the subsidiary's proposed activities of organizing, promoting, selling partnership interests, and acting as the sole general partner of real estate syndicates went beyond the functions performed by an advisory company to a real estate investment trust permissible under section 225.25(b)(4) of Regulation Y.

The Board also stated that it felt that the policies contained in sections 20 and 32 of the Banking Act of 1933 (the Glass-Steagall Act Provisions) must be considered in conjunction with section 4(c)(8) of the Act. These policies, described in the opinion of the United States Supreme Court in *Investment Company Institute v. Camp*, 401 U.S. 617 (1971), forbid a bank holding company to sponsor, organize or control an open-ended investment company (mutual fund) or a closed-end investment company primarily or frequently engaged in the issuance, sale and distribution of securities. Because the activities of real estate syndication resemble the issuance, sale and distribution of securities of a closed-end investment company, this activity is not permissible for a bank holding company (12 C.F.R. 225.125).

The Board has stated that general management consulting is not so closely related to banking or managing or controlling banks as to be a proper incident thereto. This ruling is contained in the Board's order denying the application of First Commerce Corporation, New Orleans, Louisiana, to acquire W. R. Smolkin & Associates, Inc., New Orleans, Louisiana. In its order the Board describes general management consulting as follows:

“. . . including, but not limited to, the provision of analysis or advice as to a firm's (i) purchasing operations, such as inventory control, sources of supply, and cost minimization subject to constraints; (ii) production operations, such as quality control, work measurement, product methods, scheduling shifts, time and motion studies, and safety standards; (iii) marketing operations, such as market testing, advertising programs, market development, packaging, and brand development; (iv) planning operations, such as demand and cost projections, plant location, program planning, corporate acquisitions and mergers, and determination of long-term and short-term goals; (v) personnel operations, such as recruitment, training, incentive programs, employee compensation, and management-personnel relations; (vi) internal operations, such as taxes, corporate organization, budgeting systems, budget control, data processing systems evaluation, and efficiency evaluation; or (vii) research operations, such as product development, basic research, and product design and innovation.” (1972 FRB 674) The Board denied the case and determined that the activity of providing general management consulting services could lead to

unwanted conflict of interest situations for BHCs that advised clients that were also customers of its own subsidiary banks. The Board also desired to maintain a distinct separation between banking and commerce.

In its order denying the application of Marine Midland Banks, Inc., Buffalo, New York, to acquire Carter H. Golembe Associates, Inc., Washington, D.C., the Board further defines the concept of management consulting by stating that Golembe, “. . . provides consulting services on a confidential basis to banks, bank holding companies and bankers' associations. It makes bank feasibility studies and renders advice with respect to geographic expansion, product extension, mergers and acquisitions and applications to State and federal regulatory agencies. A portion of Golembe's consulting services also relates to internal bank operations, such as marketing, trust and bank credit card operations and loan or interest rate policies. Other studies and analyses are performed upon request of individual banks. Golembe also provides advice with respect to the organization and operation of State Bankers' associations and serves as a consultant to various banking groups with respect to legislative and regulatory matters affecting the banking industry. The foregoing consulting services furnished by Golembe are considered by the Board to be but a specialized form of management consulting.” (1972 FRB 676)

Management consulting to nonaffiliated commercial banks and nonbank depository institutions has been determined by the Board to be a permissible activity for bank holding companies under section 4(c)(8) of the Act (Regulation Y, section 225.25(b)11, as amended).

The Board has ruled that this activity is impermissible for bank holding companies. However, bank holding companies may conduct property management activities for three types of property as follows:

1. Property held in a fiduciary capacity;
2. Property owned by the holding company or its subsidiary for its own bank and bank-related operations;
3. Property acquired by the holding company or its subsidiary as a result of a default on a debt previously contracted.

The Board announced on June 30, 1972, that it would not include this general activity on the list of permissible activities. Because the Board did not intend to limit any authority given by statute or regulation to a holding company or its

subsidiary concerning property management, the Board described in its order the three types of property, as shown above, for which a holding company or its subsidiary could engage in property management activities (1972 FRB 652).

In addition to the prohibition of property management activities in general, the Board has ruled that the operation of a commercial parking lot is impermissible. In its order approving the application by Multibank Financial Corporation, Boston, Massachusetts, to acquire the B. M. C. Durfee Trust Company, Fall River, Massachusetts, a commercial bank, the Board stated that operating a commercial parking lot was not considered closely related to banking and conditioned its approval on divestment of the parking lot operation (1973 FRB 679).

The Board through its rulemaking authority did not include operating a travel agency on the list of permissible activities for bank holding companies. This activity is considered not to be closely related to banking or managing or controlling banks (1976 FRB 148). The Board referenced a decision of the United States Court of Appeals for the District of Columbia, *Courier Association vs. Board*, 516 F. 2d 1229 (1975).

The Board felt the only relevant criteria for this activity was whether banks have generally provided the service. The Board noted that there were few bank-affiliated travel agencies, most of which had only been recently established. The Board concluded that operating a travel agency was not closely related to banking.

On June 1, 1978, the Comptroller of the Currency issued Banking Circular No. 108, which requested all national banks then operating travel agencies, to divest themselves of those agencies within a reasonable period of time not to exceed three years. The Comptroller's office concluded that the continued operation of a travel agency by a national bank is inappropriate and may expose the bank to a substantial risk of loss by litigation. This action by the Comptroller precludes bank holding companies from relying on section 4(c)(5) of the Act to conduct travel agencies. Thus, holding companies have no

authority to engage in travel agency activities under the Act unless grandfathered.

On April 2, 1979, the Board issued a letter, a copy of which went directly to all bank holding companies engaging in the activity of operating a travel agency pursuant to section 4(c)(5) of the Act, indicating that no bank holding companies could engage in the activity solely pursuant to section 4(c)(5) and that those engaged in such activity had to terminate the activity by December 31, 1980 (Z-8421 on office copy only).

Subsequently, a bank holding company applied to the Board to acquire a company ("Company") that engages in a variety of data processing and data transmission activities for customers. The Company's data bases that are provided to customers included a program by which customers could receive airline and hotel information and could make airline and hotel reservations. The Board determined that the receipt of such information and the ability to make airline and hotel reservations was not closely related to banking. Accordingly, the Board required, as a condition for approval of the application, the bank holding company to eliminate the travel reservation service from the roster of third party data base programs provided by Company (Refer to 1986 FRB 497).

Impermissible Activities (Providing Credit Ratings on Bonds, Preferred Stock, and Commercial Paper) Section 3700.7

As part of the Security Pacific Corporation's (bank holding company) application to acquire Duff & Phelps, Inc. (Company), which engaged in investment advisory, investment management, and financial advisory services, the Board, on December 11, 1984, denied the Applicant's request to engage in the activity of providing credit ratings on bonds, preferred stock and commercial paper. Private credit ratings were included as part of the investment research reports sold to institutional investors. The Company also provided credit ratings on a fee basis for companies that request public disclosure. As part of the public rating process, the rated company is given the opportunity to make a presentation to the Company's Credit Rating Committee.

In this situation, the Security Pacific Corporation had a vested interest in the ratings of the corporations to which it lends in the ratings of municipal bonds it underwrites, in the ratings of the commercial paper and municipal bonds for which it provides backup lines of credit, and in the ratings of fixed-income securities which it holds for trades. Numerous potential conflicts existed such as: possible inadvertent releases of confidential information obtained during the credit rating process; the advance release to the Applicant of credit ratings for companies to which the Applicant had very large loans outstanding; the potential for pressures by the Applicant on the Company to modify favorably the credit rating of one of the Applicant's major customers; and the subtle pressure on the Company's staff resulting from ownership by Applicant about companies in which the Applicant had a substantial interest. Similar conflicts could have also arisen between the Company's credit rating function and the Applicant's investment of trust assets.

The Applicant acknowledged the potential conflicts but argued that various steps could be taken to ameliorate them and bring them within a manageable framework. The Applicant there-

fore proposed a number of techniques for isolating the credit rating activities of the Company from influence by the Applicant, including the establishment of a separate corporation with a number of independent directors, a prohibition on contacts between the Applicant and the members of the Company's Credit Rating Committee, and also certain record keeping requirements for that committee.

The Board considered these positive suggestions as well as others to assure full disclosure of the relationships between the Applicant and any of the companies that would be rated by the Company as well as a prohibition on the Company rating the Applicant's securities, securities which the Applicant has underwritten, or securities for which the Applicant provided a guarantee or backup letter of credit. The Board, however, believed that the conflicts in the relationship between a major lender and a credit rating company were so pervasive that they could not be overcome through adoption of an information barrier. The employees of the Company would inevitably be aware of interests of the Applicant in firms being rated by them and, it seems reasonable to assume that this knowledge could, at times, influence their decisions.

The Board's concerns regarding conflicts of interest with respect to the credit rating activity were not based on any doubts regarding the integrity of the parties to the application, but rather were based on the Board's responsibility to assess the possible adverse effects that might be associated with an affiliation between a bank holding company and a public credit rating organization. Thus the Board was acting in furtherance of one of the general purposes of the Bank Holding Company Act, "to prevent possible future problems rather than to solve existing ones." The Board, in view of the pervasive conflicts of interest between the Applicant's existing operations and the Company's credit rating business, decided against approving the performance of public credit ratings.

Impermissible Activities (Acting as a Specialist in Foreign-Currency Options on a Securities Exchange) Section 3700.8

Currency options are a new and innovative aspect of foreign exchange. A currency option represents the contractual right (but not the obligation) to purchase or sell a predetermined amount of currency at a specific price at any time before a specific date. Currency-options advocates argue that currency options eliminate the risk of a loss due to exchange movements and give the holder a chance to profit if the currency fluctuation is favorable. They require a premium to be paid when the contract is entered into. The premiums can run from about 1.5 percent to 5 percent, depending on the expiration date and the exercise price of the option.

Currency options are traded on two types of markets: the over-the-counter, or interbank market, and on three regulated exchanges, the Chicago Mercantile Exchange (CME), the Chicago Board Options Exchange (CBOE), and the Philadelphia Exchange (PHLX). The CBOE, a securities exchange, uses multiple "market makers" instead of specialist positions; the CME, a commodities exchange, like other commodities exchanges, does not use specialist positions.

Most of the writing of currency options is currently done by banks which will customize the option, with maturity dates and currency values in excess of the standardized exchange contracts. Banks developed the over-the-counter market where they trade currency options among themselves, and banks are also the largest customers on the exchanges where they hedge the risks associated with their foreign-exchange positions.

In general, the specialist system is unique to securities exchanges, and specialists exist for the purpose of achieving certain market results. Commodity exchanges do not use the services of specialists. The rules of the Securities and Exchange Commission permit the designation of specialists to "engage in a course of dealings for . . . their . . . own account to assist in the maintenance, so far as practicable, of a fair and orderly market . . ." provided that the securities exchanges adopt the following types of rules governing specialists: minimum capital requirements, rules to suspend or remove specialists if they fail to perform their designated market functions, rules restricting dealing activities to those reasonably necessary to permit the specialist to maintain a fair and orderly market or necessary to permit him or her to act as an odd-lot dealer, provisions governing his or her brokerage activities in specialist securities, and procedures to provide for the effective and systematic surveillance of the activities of special-

ists (17 C.F.R. 240.11(b)(1)). In addition, the IRS formerly granted special tax treatment to specialists transactions.

The rules of the PHLX require that odd-lot orders must be given to the specialist. The specialist functions as a broker with respect to certain transactions that cannot be executed by floor traders immediately, for example, stop-loss orders and limit orders. All such orders are given to the specialist for execution and become part of his "book"; PHLX rules address priority of orders (customers' orders receive priority) and conflicts of interest by governing specialists' trades and those of affiliated persons and firms in "securities" in which the person is designated as specialist.

There is one specialist position for each currency option traded on the PHLX, and the primary function of a specialist is to act as market maker, as necessary, for its assigned currency option. The specialist thus undertakes all activity, including dealing for its own account, to the extent necessary, as required to maintain a fair and orderly market in options on a particular currency. In essence, the specialist makes a continuous two-sided market in the assigned currency option when market forces do not.

Although currency options are functionally equivalent to other instruments which banks regularly deal in for their own account, the applicant's proposed activities were not considered as closely related to banking. The applicant's analysis did not focus on the critical components of the proposed specialist activities, which are distinct from the foreign-exchange brokerage and dealing activities generally conducted by banks. Because the proposed specialist activities are to be carried out in the context of market making on a regulated exchange, they were significantly different from the foreign-exchange activities currently conducted by banks. When a bank engages in foreign-exchange trading, it does so to service the needs of its customers and to generate trading profits. However, unlike traditional foreign-exchange trading, bank customers are not serviced directly by a specialist. Instead, the exchange benefits from the specialist's efforts if markets are perceived to be deep and liquid. Depth and liquidity make the contracts viable and the exchange profitable, and do not directly benefit the bank's customers.

The applicant's original proposal implicitly acknowledged that banks have not traditionally

been involved with trading on stock exchanges, and thus have not generally possessed the experience and expertise in trading, hedging, and managing aggregate exposure required for the successful operation of a specialist position. The applicants originally proposed to engage in the activities through a joint venture because they lacked the requisite trading expertise to profitably undertake the activity alone. In its discussion of the management of risk exposure of the specialist, the applicants originally stated, "The choice of the appropriate hedge to start with and the monitoring over the life of the option of that hedge are specialized and difficult tasks that require expertise and experience." Conducting exchange specialist activities requires the floor-trading experience and back-office capabilities of an experienced exchange member.

As of December 1984, only one commercial bank, Bank of America, acted as a specialist in exchange-traded currency options. In Janu-

ary 1984, the Office of the Comptroller of the Currency granted permission for Bank of America to act as the specialist in PHLX-traded options on the Deutschemark through a joint venture subsidiary with Tague Securities Corporation. The Board, however, was not bound to a determination that specialist activities were closely related to banking simply because one bank engages in the activity. Bank of America apparently considered it necessary to conduct its specialist activity through a joint venture with a securities firm, which reinforced the view that the activity requires experience and expertise not generally possessed by banks.

Given the applicant's acknowledgment of the importance of floor-trading expertise and experience to the specialist function, and the substantive absence of bank involvement in such an activity, the Board concluded that the proposed activities were not closely related to banking and thus denied the applicant's request.

A bank holding company applied to acquire all the voting shares of a company (“Company”) that engages in a variety of data processing and data transmission activities for customers such as securities and commodities exchanges, brokerage firms, commercial banks, savings and loan associations, insurance companies, and investment managers. In addition to engaging in other nonbanking activities, the company designs and assembles the hardware that is used in connection with the services it provides. The Board had not previously considered whether the assembly of hardware designed for the processing and transmission of banking, financial and economic data is closely related to banking or permissible as an incidental activity.

The bank holding company stated that Company’s assembly of hardware was incidental to its provision of data processing services because such assembly was necessary to assure the availability, reliability, and quality of components used by Company, and that stock quotation firms like Company could only assure such product characteristics by the design and assem-

bly of the hardware that provides the quotation information. In support of the argument, the bank holding company asserted that competitors of Company also design and assemble the hardware that provides the Company service.

In view of the fact that finished hardware of the type provided by Company is available, and, in fact, is marketed by companies providing services similar to Company, the Board found that the continuation of Company’s design and assembly of hardware activities could not be considered “necessary” to the Company’s provision of its permissible data processing services, and thus could not be considered incidental to Company’s provision of permissible services. As a condition for approval of the bank holding company’s application to acquire all of the voting shares of Company, the Board required the bank holding company to divest of Company’s hardware assembly activities within two years of the acquisition (Refer to 1986 FRB 497).

Impermissible Activities (Armored Car Services)

Section 3700.10

In 1971 and again in 1984, the Board issued for public comment proposals to expand the activities permissible to bank holding companies under section 4(c)(8). Included in those proposals was the provision of armored car services. The proposals would have authorized bank holding companies to provide fully insured transportation of cash, securities, and valuables (primarily between commercial customers and financial institutions) and such ancillary services as coin wrapping, change delivery, mail delivery, payroll-check cashing, servicing of automatic teller machines, and leasing safes to commercial customers.

In response to both the 1971 and 1984 proposals, the Board received various comments against adding this activity to the Regulation Y list of permissible nonbanking activities, primarily from armored car operators and their trade associations. The commenters maintained that the activity is not closely related to banking but, rather, is essentially a transportation activity requiring no banking expertise.

In view of the issues raised by the comments on this activity and the minimal interest by bank holding companies, the Board decided not to add the activity to the Regulation Y list of permissible activities. However, the Board stated it would consider individual applications for this activity (1973 FRB 898); 51 *Federal Register* 39,999 (1986). The Board expressed no opinion as to whether the activity would meet the *National Courier* test and would be a proper incident to banking.

In 1988, a bank holding company (the applicant) filed an application to engage in armored car activities through a de novo nonbank subsidiary. After notice of the application was published, the Board received comments opposing the proposal and was requested to order a formal hearing. In response, the Board published an order requiring a formal public administrative hearing on the application. One issue, among others, that the Board directed to be considered was whether the proposed armored car services were “so closely related to banking or managing or controlling banks as to be a proper incident thereto” under section 4(c)(8) of the BHC Act.

An administrative hearing was held on June 16 and July 11, 1989, before an administrative law judge (ALJ). The ALJ issued a recommended decision in which he concluded that the proposed armored car activities were not “closely related to banking” and recommended that the Board deny the application. The ALJ

found that none of the *National Courier* criteria were demonstrated by the record. The ALJ’s conclusion relied on certain operational distinctions between the proposed armored car services and the services banks traditionally perform themselves.

Following receipt of exceptions to the recommended decision, the Board reviewed the entire record of the proceedings and determined that the ALJ had erred in concluding that armored car services were not “closely related to banking.” The Board concluded that, even accepting the factual findings, the slight operational distinctions cited in the recommended decision were not significant. The Board found that although there may be some distinctions between bank-provided armored car services and the proposed full-service, for-hire armored car service, the nature of the customers served and the economic basis of the services provided do not fundamentally alter the nature of the services. It was therefore clear to the Board that the services then provided by the applicant as well as other banks and bank holding companies to themselves and their customers are sufficiently “operationally and functionally similar” to the proposed service as to equip banking organizations particularly well to perform the proposed service, and hence fulfill the second *National Courier* test.

The Board also noted that bank holding companies are permitted to provide courier services for unaffiliated parties under section 225.25(b)(10) of Regulation Y. The only essential difference between the two services relates to the intrinsic value of the materials transported. The Board concluded that the services themselves were certainly functionally and operationally similar, thereby lending additional support to its favorable finding under the second *National Courier* test.

The Board also found that the third *National Courier* test was met, that the applicant had demonstrated “the dependence of banks on a specialized form of the proposed services.” The Board found that the record amply demonstrated that banks are highly dependent upon the specialized transportation services provided by armored cars, which transport cash and valuables with a high degree of security. The applicant was proposing to engage in just those specialized services; it did not propose to start a general moving or trucking service. The record

therefore supported a determination that the third *National Courier* test was also satisfied. Accordingly, the Board found, based on the record before it, that providing for-hire armored car services to the general public was an activity that is closely related to banking.

This determination, however, is only one of two steps needed for the Board to approve a nonbank activity for a bank holding company. The Board must also find that the activity is a “proper incident thereto.” On this issue, the ALJ declined to make any factual or legal determinations concerning the proper-incident test or state branching laws. However, under the Board’s rules (12 C.F.R. 262.4 (1990)), the ALJ was required to provide a recommended decision with regard to *all* unresolved issues prior to a final Board determination (12 C.F.R. 263.11). A final disposition on the application therefore was not possible at that juncture, and the Board remanded the case to the ALJ for a recommended decision on the proper-incident standard and other unresolved issues (see 1990 FRB 676).

In accordance with the Board’s remand order, a second formal hearing was held before the ALJ. Additional evidence and post-hearing briefs were submitted, including evidence on the proper-incident test, in support of this and other unresolved issues. The ALJ then issued his supplemental decision, which again recommended denial of the application. The ALJ found that, in this case, the applicant’s record failed to provide a definitive proposal on which the Board could make a determination under the proper-incident test. The ALJ found that the applicant had offered only a skeletal structure and operation plan that was fleshed out only to a limited extent at the hearings. In addition, the ALJ found the application and other facts of record to be deficient with regard to possible public benefits and adverse effects. The ALJ further determined that the record had not shown that the proposed activity, as structured, would be lawful under the branch-banking laws of the states in which the applicant proposed to operate.

Based on its review of the ALJ’s supplemental decision and the remainder of the record, the Board determined that the record failed to support a finding that the proposed armored car activities, in this particular instance, would be a “proper incident” to banking. The Board therefore adopted the ALJ’s recommendation to deny the application, but only on the narrow grounds of inconsistency of the proposal, as then struc-

tured, with section 23B of the Federal Reserve Act.

In its order, the Board stressed that the burden of proof is upon an applicant to establish that the nonbanking activity it proposes to conduct—in this case the provision of armored car services—is *not only* closely related to banking, *but also* a “proper incident thereto.” The Board’s review of the entire proceeding disclosed certain aspects of the application that appeared on its face to violate the arm’s-length transaction requirement of section FRA 23B. In the Board’s view, a proposal to engage in nonbanking activities pursuant to section 4(c)(8) will not produce net benefits to the public, as required under the public-benefit test, if it violates the kind of statutory requirement, such as section 23B, that was specifically intended to prevent unsafe or unsound banking practices when a bank affiliate engages in nonbanking activities.

The first potential violation would arise from the fact that the proposed service by the bank holding company’s nonbank subsidiary to its bank affiliate would cost more than the bank was paying for similar armored car services provided by an unaffiliated provider. The Board noted that although there may be a justification for the higher pricing structure that would meet the standards set forth in section 23B, no justification appeared in the record. The Board could therefore only conclude that the bank may not be obtaining services from the nonbank provider “on terms . . . at least as favorable to such bank . . . as those prevailing for comparable transactions with or involving other nonaffiliated companies,” as required by section 23B.

The second potential violation of section 23B arose from the absence of a “precise breakdown of the services the nonbank subsidiary will purchase from the bank holding company’s subsidiary bank and the projected cost of those services,” as called for in the Board’s prior order in this matter. The applicant provided no detailed cost figures for the wide variety of services the applicant’s banking subsidiary was to provide to the nonbank subsidiary. The bank holding company proposed to charge the bank subsidiary an “estimated” percentage (the fee was admitted to have had no “factual basis” reflected in the record) of the nonbank subsidiary’s direct operating expenses to cover all of the services provided by the bank holding company’s banking subsidiary to its nonbanking subsidiary. Under section 23B, the provision of services by a bank to an affiliate must be paid for on an arm’s-length basis. This requires, where there are no comparable transactions between a bank and a nonaffiliate, that the bank’s provision of ser-

vices to its affiliate be on terms that in good faith would be offered to, or would apply to, nonaffiliated companies. The Board found that the banking subsidiary would not in good faith have provided back-office services to an unaffiliated armored car company by charging a flat fee that had no factual basis and without determining the relationship of the fee to the actual costs of providing the services. Therefore, the

potential violations of section 23B, on their face, constrained the Board to deny the application as it was structured (see 1993 FRB 352).

The Board noted its denial did not affect the Board's prior ruling in the case that armored car services are closely related to banking, and was without prejudice to the filing of a new proposal from which a favorable proper-incident finding could be made.

Impermissible Activities (Computer Output Microfilm Service)

Section 3700.11

The authority of bank holding companies under section 225.25(b) of the Board's Regulation Y to engage in data processing activities is intended to limit those activities to providing facilities that perform banking functions, such as check collection, or other similar functions for customers that are depository or other similar insti-

tutions, such as mortgage companies. With respect to this activity, the Board issued an interpretation that authorizes bank holding companies to provide the formatting for computer output microfilm only as an output option for data otherwise permissibly processed by the holding company system (1982 FRB 552).

Impermissible Activities (Clearing Securities Options and Other Financial Instruments for the Accounts of Professional Floor Traders) Section 3700.12

A foreign banking organization subject to the BHC Act applied for the Board's approval under section 4(c)(8) to engage *de novo* through its subsidiary (Company), in the exchange and clearance of: (1) exchange traded securities options and other securities and (2) futures and options on futures that relate to financial instruments. The proposed customer base was comprised primarily of market makers and other professional floor traders dealing for their own accounts. Most of the professional traders were expected to be market makers and specialists, including individuals, small partnerships, or small corporations, that were to trade primarily on the Chicago Board of Options Exchange (CBOE).¹

Previously, the Board approved the execution and clearance of financial instruments as a permissible nonbanking activity.² Under Board precedent, the nonbanking subsidiary engaged in such services has generally serviced a broad range of retail and/or institutional customers. Under this proposal, Company was to clear trades for a specialized customer base comprised primarily of professional floor traders that executed trades for their own accounts.

Nonbanking subsidiaries of BHCs, operating in accordance with prior Board approvals, have generally performed both execution and clearance services. By performing both services, the nonbank subsidiary is able to control risk because it executes the majority of the transactions that it clears. The nonbank subsidiary can refuse to execute an order that it deems inappropriate or it can require additional funds or collateral from the customer *in advance of* and as a condition to executing the transaction.

Unlike prior Board cases, Company plans to provide primarily clearing services. As a clearing agent, it would guarantee the financial per-

formance of its customers to the clearing organization of the exchanges on which it operates.³

After the start of trading on any day, Company would be obligated to settle each trade entered into by its customers even when the customer may not have the financial resources to honor its obligation. Since the trades have already been executed by the time that they would be presented to Company by these professional floor traders, Company would be unable to decline transactions that posed unacceptable risk. On an intraday basis, professional traders, who are not employees of Company and who trade in relatively volatile instruments, could expose Company to financial risks beyond the trader's capacity to repay and beyond Company's own resources.

The applicants proposed to limit the risk exposure created by Company's activities through the establishment of risk guidelines and procedures that were intended to monitor the intraday trading activities of its floor traders. No such system had been developed for the industry for monitoring the intraday activities of floor traders on a real-time basis. Most of Company's traders would primarily operate on exchanges that used an open outcry system rather than an electronic trading system. As a result, Company may not know its real-time committed positions until the end of the trading day and therefore the possibility existed that a floor trader could exceed Company's risk limits and incur substantial losses before Company could act to mitigate its credit risk exposure. Professional floor traders generally operate with much higher levels of leverage than the average brokerage customer of a securities firm. Since most of Company's customers were to be market makers, such traders could at times take positions contrary to the market.

3. With this arrangement clearing firms may also be liable for the obligations of other members of the exchange. Generally, losses of a failed member firm are covered in the following order:

1. by the assets of the failed firm;
 2. by the excess capital of the clearing organization;
 3. by the guarantee fund of the clearing organization;
- and
4. by direct assessments made on surviving member firms.

Since member clearing firms are the ultimate source of capital for both the clearing association and the guarantee fund, the surviving firms will bear the ultimate burden of any loss.

1. Market makers on the CBOE are floor traders that perform a dealer function by trading for their own accounts, at their own risk, and for their own profit. Market makers compete with other market makers assigned to the same class of options. In contrast, floor brokers on the CBOE generally act only as an agent, executing customer and firm proprietary orders.

2. Refer to sections 225.25(b)(3) (trust companies engaging in agency activities related to the clearing of securities); 225.25(b)(15) (securities brokerage activities); 225.25(b)(18) (execution and clearance of futures and options on futures) of the Board's Regulation Y.

Such circumstances potentially expose the clearing firms to substantial losses. If the clearing firm exhausts all or most of its capital in funding the obligations of floor traders that have lost substantial amounts of money in trading, parent companies of the clearing firm may have to cover the firm's remaining contingent liabilities. Such risks may be acceptable for some nonbanking institutions currently providing these services, but they may be inappropriate for U.S. domiciled banking organizations.

The Board carefully considered the benefits of the proposal, including the Applicants entry into a concentrated market, its experience with

similar activities on foreign exchanges, and Company's proposed risk management systems. The Board concluded that the proposal, as it was currently structured (including the absence of an effective means to monitor and limit the potential credit risk exposure to the parent bank holding company) involved potential adverse effects that outweighed the potential public benefits. The Board thus determined that the balance of public interest factors that it is required to consider under section 4(c)(8) of the BHC Act were not favorable. The application was denied by the Board on January 9, 1991 (1991 FRB 189).

The analysis of financial factors should be conducted in four primary parts, namely: (1) parent only, (2) banking subsidiary(ies), (3) nonbank subsidiary(ies), and (4) consolidated organization. In view of the fact that all BHCs are not structured in the same organizational and financial manner, it is important that examiners be flexible in their approach and be judicious in their use of ratio analysis and peer group comparisons. There is no substitute for using sound judgment and creativity while performing an analysis, providing all of the pertinent information is available. The summary and conclusions should follow from the information presented in the analysis.

The analysis is intended to determine the financial strengths and weaknesses of an organization and the impact of conditions at the parent company and nonbank subsidiary which could adversely affect the condition of the banking subsidiary. As a regulatory agency, a goal of the Federal Reserve System is to safeguard and protect the soundness of commercial banks. The System oversees holding company banking and

nonbanking activities to assure the continued safety and soundness of individual banks and the industry as a whole.

The analysis of financial factors resulting from the inspection of a bank holding company is essentially a finding of facts and an expression of judgment. In conducting an appraisal of a holding company's condition, the financial analysis of the organization, based on a "building block" or "component" approach, should provide the examiner with a solid foundation from which to proceed. In order to complete the analysis it is first necessary to accumulate sufficient information concerning the parent company, bank and nonbanking subsidiary(ies) and the consolidated organization. A final analysis should not be attempted until these integral parts have been thoroughly reviewed.

The completion of the financial analysis will culminate with the preparation of a rating for the bank holding company. Manual section 4070.0, entitled "Bank Holding Company Rating System," presents the rating system in its entirety.

4010.0.1 INTRODUCTION AND SCOPE OF THE ANALYSIS

The cash flow analysis is *applicable to all bank holding companies with consolidated assets in excess of \$1 billion, those that have substantive fixed charges or debt outstanding*, as well as select others at the option of the Reserve Bank. Key parts of the analysis involve the use of:

1. A standardized “Cash Flow Statement (Parent)” page (refer to manual sections 5010.23 and 5020.13 for the illustrated pages) which includes computation of the cash earnings coverage ratios and analyses; regarding the results;
2. Earnings cash flow coverage ratios to measure the parent company’s ability:
 - a. To pay its fixed charges, including interest costs, lease expense, income taxes, retirement of long-term debt (including sinking fund provisions), and preferred stock cash dividends, and
 - b. To pay common stock cash dividends.
3. Guidelines for supervisory determination of parent company debt servicing capacity.

The cash flow statement page of the inspection report presents the cash earnings and the cash expenditures of the parent company. Within the statement are the key components to be used in the “Fixed Charge Coverage Ratio,” which measures the parent company’s ability to meet its fixed obligations, and a “Common Stock Cash Dividend Coverage Ratio” which measures the ability of the remaining, or residual, earnings to cover common stock dividends.

4010.0.2 CASH FLOW STATEMENT

The cash flow statement is an effective tool used in understanding how a particular bank holding company operates. Its primary objective is to summarize the financing and investing activities of the holding company, including the extent to which the entity has generated funds (externally and internally) during the period. The cash flow statement is related to both the income statement and the balance sheet and provides information that otherwise can be obtained only partially by interpreting each of those statements.

An analysis of past cash flow statements can supply important information regarding the uses of funds, such as internal asset growth or acquisitions, as well as data on the sources of funds used and the financing needs of management. A

projected cash flow statement will focus on the need for future funds, its applications, and the sources from which they are likely to be available.

Specifically, the analysis of the cash flow statement is necessary for a thorough understanding of a bank holding company and the nature of its operations to the extent that it provides information on such areas as:

1. Utilization of funds provided by operations;
2. Use of funds from a new debt issue or sale of stock;
3. Source of funds used for acquisitions or additional capital contributions;
4. Means of payment of a dividend in the face of an operating loss;
5. Means of debt repayment and stock redemption.

While the cash flow statement provides an overall perspective of a holding company’s utilization of available funds, it does not, by itself, indicate possible or actual difficulties the parent company may have in meeting its fixed obligations from internally generated funds. Fixed obligations or fixed charges are those recurring expenses which must be paid as they fall due, which includes interest expense, lease expense, sinking fund requirements, scheduled debt repayments and preferred dividends.

One ratio that may be used to calculate the strength of a parent company’s earnings to meet its fixed charges or obligations is the *Fixed Charge Coverage Ratio* (FCCR). The components of the ratio are included on the “Cash Flow Statement (Parent)” page. The Fixed Charge Coverage Ratio (FCCR) measures the parent company’s ability to pay for *fixed* contractual obligations if management is to *retain control of the organization*, thereby satisfying the expectation of creditors and preferred stockholders. Net income *after taxes* is used in the formula. Interest and lease expenses are already deducted to arrive at the net income figure and must be added back to obtain the earnings available to pay such charges. Interest expense is usually the largest component among all “fixed charges,” and the ability to pay this expense from earnings cash flow is critical to an assurance of continued refunding of the parent company’s debt. It measures not only the extent to which net cash operating earnings covers the debt servicing requirements of the parent company, but the capacity to pay income taxes and preferred stock

cash dividends as well, thereby meeting the expectations that creditors and preferred shareholders have for the protection of their respective interests. The need for *better than a 1:1* coverage is therefore critical.

Another important formula, required to be calculated is the *Common Stock Cash Dividend Coverage Ratio* (CSCDCR) which measures the ability of the parent company to pay common stock cash dividends. The CSCDCR will show, in turn, whether the residual cash earnings of the parent company are sufficient to pay the common stock cash dividend and, if not, the amount that must be provided from other sources of cash, such as the liquidation of assets or additional borrowings, to cover the shortfall.

Significant shortfalls in the CSCDCR are to be scrutinized in light of the Board's November 1985 Policy Statement on "Cash Dividends Not Fully Covered by Earnings." According to the statement, a bank holding company should not maintain its existing rate of cash dividends on common stock unless:

1. The holding company's net income available to common stockholders over the past year has been sufficient to fully fund the dividends; *and*

2. The prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition.

A bank holding company whose cash dividends are inconsistent with the above criteria is to give serious consideration to cutting or eliminating its dividends. The need for *at least a 1:1 coverage* is therefore critical.

The two ratios¹ are calculated as follows:

$$\text{FCCR} = \frac{\text{After tax cash income (1) + interest expense (2) + lease \& rental expense (3)}}{\text{interest expense (2) + lease \& rental expense (3) + contractual long-term debt retired (4) + preferred stock dividend payments (5)}}$$

$$\text{CSCDCR} = \frac{\text{After tax cash income (1)} - [\text{Contractual long-term debt retired (4) + preferred stock dividend payments (5)}]}{\text{Common Stock Dividend Payments (6)}}$$

Note that the Cash Flow Statement (Parent) page presents only cash items included in the parent's income and therefore the analyst can use its income figures without any need to adjust for noncash items.

Both the Fixed Charge Coverage and the Common Stock Cash Dividends Coverage ratios are considered inadequate at less than 1:1. If a holding company is generating funds which provide at least dollar-for-dollar coverage, no criticism need be made. However, the examiner should be aware that these ratios, as well as others, are merely guidelines and good judgment must prevail. A ratio of 1.02:1 may pass the test, but it is only barely adequate. No criticism may necessarily be warranted for the period covered by the 1.02:1 ratio, but it may be indicative of a deteriorating trend over the past few years. Accordingly, an appropriate comment concerning the trend may be warranted.

When reviewing these ratios, it should be kept in mind that certain components in the numerator can to some degree be altered at the discretion of management. For example, by altering the dividends paid by bank subsidiaries, the amount of funds available to the parent to cover fixed charges can be increased or decreased. For this reason, the fixed charge and funds flow ratios should be analyzed in conjunction with a review of the dividend payout ratios of the subsidiary banks. Cash flow ratios that otherwise appear adequate may be a cause for concern if the banks are paying out dividends that are too high in relation to capital or overall condition. Analysts should evaluate the bank dividend payout ratios in light of the bank's capital and financial condition. Only in this way can the analyst gain a better understanding of the quality of the parent's cash flow and its potential effect on bank subsidiaries.

Ratios of less than 1:1 coverage show that internally generated funds are not sufficient to meet a parent company's needs. In many cases, the examiner may find low coverage ratios yet all fixed charges were paid as agreed. Had they not been, the company would have incurred severe financial difficulties long before the start of the inspection. Therefore, when less than adequate ratios appear and obligations are paid

1. The numbered () items correspond to the numbered lines on the "Cash Flow Statement (Parent)" page.

on time, the examiner must determine what other source of funds was utilized to make up the shortfall and to permit the timely payment of obligations.

4010.0.3 SUPERVISORY DETERMINATION AS TO ADEQUACY OF PARENT COMPANY CASH FLOW

A supervisory determination about the adequacy of parent company cash flow, and its use as a measure of parent company debt servicing capacity, requires more information than just the results of the Fixed Charge Coverage and Common Stock Cash Dividend Coverage Ratios. The typical major parent company does not generate an earnings cash flow by conducting banking operations itself, although it nevertheless may incur a heavy external debt on behalf of its operating subsidiaries which are the generators of the actual earnings cash flow. Therefore, the parent company earnings cash flow may not be indicative of the *actual* earnings power of the entire banking organization. For example, the cash earnings of the parent company may be kept low by management to avoid State or local income tax liability and/or to increase leveraged lending volumes at the subsidiary level. Conversely, cash earnings may be forced to the parent company through imprudent levels of upstream cash dividend payments which eventually will endanger the operating subsidiaries and the parent itself.

A supervisory determination about the adequacy of parent company cash flow must take place at *two levels*: (1) by analyzing the results of the two coverage ratios using the net earnings cash flow *realized* by the parent company, and (2) by analyzing the effect that upstream cash flow to the parent company has had, and can be expected to have, on the financial condition of the bank subsidiaries and the significant non-bank subsidiaries. The latter focus should be on significant nonbank subsidiaries whose capital and dividend policies are subject to separate regulation—such as thrifts—or subsidiaries with significant external funding, whose creditors presumably monitor capital and dividend policies of the subsidiary.

4010.0.4 SPECIFIC GUIDELINES FOR DEBT SERVICING CAPACITY

The specific guidelines for debt servicing capacity are as follows:

1. The adequacy or inadequacy of parent

company cash flow, and thereby the capacity to sustain the parent company's debt, is determined ultimately from the results of the Fixed Charge and Common Stock Cash Dividend Coverage Ratios, and the related analysis of the effects of upstream cash flow on the financial condition of the key subsidiaries.

2. For those parent companies with material amounts of long-term debt, coverage ratios in excess of 1:1 will not necessarily be considered sufficient to sustain the parent company's leverage *unless*: *first*, the Tier 1 capital positions of the bank subsidiaries are considered adequate; *second*, that the bank holding company's consolidated Tier 1 capital position is considered adequate; and *third*, the parent's liquidity is judged adequate. If that is not the case, then a critical comment on the "Examiner's Comments" page should be made regarding the potentially excessive leverage of the parent, as well as that of its subsidiaries. A specific period of time should be established for the management of the bank holding company to submit a capital improvement program acceptable to the System. *Moreover*, where the capital positions, bank and consolidated, are considered adequate but the dividend payout ratios are excessive, it is indicative of a potential future debt servicing problem and should be brought to management's attention. Since the earnings level may not be sustainable, corrective action must be taken within a specified period of time.

3. For coverage ratios of less than 1:1, there is a presumption of a critical comment on the "Examiner's Comments" page of the inspection report *unless* the shortfall is prudently planned,² insignificant in amount and/or the trend of earnings cash flow and dividend policies clearly point toward a return to sufficient parent company earnings cash flow coverage.

a. In circumstances where the Tier 1 capital position of *any bank subsidiary* is considered inadequate, a written program of corrective action should be required, including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

b. In circumstances where the Tier 1 *consolidated* capital position of the holding company is considered inadequate, a written pro-

2. A planned cash flow shortfall might typically occur when the parent elects to reduce (or not increase) dividends from subsidiaries because it anticipated an excess cash or liquid asset position from certain *external sources* (i.e., stock or debt issuance, dividend reinvestment plans, or tax refunds) sufficient to cover the deficiency.

gram of corrective action should be required, including the steps necessary to reestablish positive earnings cash flow coverage at the parent company.

c. In circumstances where the Tier 1 capital position of *each bank subsidiary* and the consolidated Tier 1 capital position of the bank holding company is considered adequate, but there is a developed trend of inadequate earnings cash flow coverage at the parent company level or excessive dividend payouts from the subsidiaries, a written program of corrective action should be required to reestablish and maintain a positive earnings cash flow at the parent company.

4010.0.5 SOURCES OF FUNDS TO MAKE UP SHORTFALLS

Basically, there are three source categories, other than current earnings, that could be used to make up any deficit: (1) liquidation of assets, (2) proceeds from a stock offering, or (3) borrowed funds. These sources must be thoroughly analyzed to determine the extent they were and could still be utilized. It must be kept in mind that the use of these sources cannot permanently eliminate a shortfall in the flow of funds from current operations. These alternative sources only alleviate temporarily the effects of a shortfall. Nevertheless, a deficit could have been intentionally allowed to occur because the holding company knew of funds coming from these alternate sources. For example, the parent knew of an impending stock sale and cut dividends from subsidiaries significantly. In future years, dividends from subsidiaries could be restored to normal proportions, bringing the ratios up to adequate levels.

At this point, it must be determined what, if any, criticism is necessary when an unplanned shortfall is made up by any of these alternate sources. The necessity of liquidating assets to meet cash needs may warrant a critical comment. The parent's advances to subsidiaries and its investment in marketable securities are considered temporary investments. That is, the holding company may reasonably expect to sell its securities and be repaid on its advances to subsidiaries within a reasonably short period of time. In the case of advances to a problem subsidiary, repayments may not be forthcoming. Nevertheless, if the parent does receive partial payments, such funds are available to meet cash

needs. The concern to the examiner is the extent to which such temporary investments can be relied upon before they are fully exhausted. If the continued liquidation of those investments to meet cash needs has fully exhausted the assets or will do so in the near future, then appropriate critical comments are warranted. Such comments should stress that the liquidation of the investment portfolio and the advances to subsidiaries can no longer be considered a reliable source of funds.

Another method which may be used by a holding company to overcome a flow of funds deficiency is the sale of capital stock which is an effective source for generating permanent funds for the parent. However, it must be recognized that the primary reason for the stock offering was something other than covering the shortfall (i.e., debt repayment, capital contributions to subsidiaries, acquisitions). Therefore, it cannot be relied upon as a consistent annual source to supplement internally generated funds from operations. Also, it should be realized that the sale of stock will increase future funding requirements as additional dividends will have to be paid. Consequently, where no significant improvement in internal operations is contemplated in future periods, an appropriate comment is warranted indicating the potential problem.

Holding companies also compensate for inadequate funds flow with borrowed money. Although not a permanent source of funds, long-term debt is a source similar to the sale of stock. Its main purpose, however, was not to cover the shortfall. Long-term debt cannot be considered as a reliable, consistent annual source, and moreover, its existence creates new funding requirements.

Short-term debt is perhaps the most commonly used source to cover a deficit cash flow from operations and its use is of serious concern from a supervisory viewpoint. Unlike long-term debt and equity issues, short-term borrowings (i.e., bank loans, commercial paper) are readily available to holding companies which can and do rely on this source year after year for support. As a consequence, this indebtedness increases fixed charges and where material improvement in earnings does not develop, the shortfall could increase in subsequent periods thereby necessitating even larger borrowing requirements. This practice may jeopardize the parent's liquidity position since short-term liabilities rise without a corresponding increase in liquid assets as the borrowed funds are used to pay expenses. Here, an appropriate comment is warranted indicating the problems.

4010.0.6 REPORTING THE RESULTS

If the coverage ratios are less than 1:1, then appropriate comments are necessary to explain the external source utilized to make up the shortfall. The supporting details may be shown within the comments section of the Cash Flow Statement. More significant comments should be included on the “Analysis of Financial Factors” page or the “Examiner’s Comments” page. The examiner may include prior years’ results for comparative purposes.

4010.0.7 INSPECTION OBJECTIVES

1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements.
2. To measure the parent’s ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs.
3. To determine if the parent company’s dividends to stockholders are covered by residual cash earnings.
4. To analyze any cash flow transaction which may adversely affect the financial stability of the parent.
5. To discuss with parent company management:
 - a. Deficit cash flows arising from internal operations;
 - b. Steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.
 - c. Any parent company borrowings or restructurings needed to sustain dividend payments to shareholders; and
 - d. The need to increase cash flow although there may be no deficit in current cash flow coverage.

4010.0.8 INSPECTION PROCEDURES

1. Prepare the “Cash Flow Statement (Parent)” FR 1225.
 - a. Analyze each item of the parent company’s comparative balance sheet and income statement. Since accrual figures may be used for all accounts except tax and dividend payments, adjustment to the figures may be necessary for the difference between accrual and cash basis accounting.

- b. Examine the underlying nature of period increases or decreases for the balances listed on the financial statements, particularly any material transactions that aided in averting coverage ratio shortfalls.

- c. Note contractual long-term debt retired (net decrease in borrowed funds, including sinking fund provisions) as a memo item on the bottom of the page, where indicated.

- d. Compute the fixed charge and common stock cash dividend coverage ratios as illustrated on the page. *The numbered items in the formula correspond with the numbered items on the “Cash Flow Statement (Parent)” page.*

- e. Answer the six questions on the “Cash Flow Statement (Parent)” page that prompt an analysis.

2. Analyze the Results.

- a. If there is full coverage, no problem should be assumed. However, *the underlying assets and transactions that provided for the coverage should be examined to make certain that “no problem” does, in fact, exist.*

- b. If a shortfall exists, provide guidelines to the parent company’s management for developing a workable contingency plan, using your “good examiner judgement”, considering the viability of all sources in resolving the shortfall.

- Review the *sources* for making up shortfalls:
 - Liquidation or sale of assets, *giving full consideration to external market concerns and losses that may result from the sales.*
 - Proceeds from stock offerings.
 - Increase in borrowed funds, including a restructuring of short term debt to long term debt.
 - Sale of capital stock.
 - Payments from subsidiaries on advances in the form of amortization or interest.
 - Short term debt.

3. Report the Results.

- a. *When an “engineered” (planned) shortfall exists, indicate that one does exist, the reasons therefore, and the degree of severity to which it should be addressed, either as part of the answers to the questions on the “Cash Flow Statement (Parent)”, the “Analysis of Financial Factors” page, or the “Examiner’s Comments” page. Provide management’s assessment as to*

whether planned short falls will occur in the future.

b. When an *unplanned shortfall exists*, determine the extent of criticism that is to be made when short falls are lessened or corrected by an imprudent use of *alternative sources*.

Based on the severity of the situation, determine whether the comments will be provided in the inspection report as answers to the questions on the Cash Flow Statement, or within the content of the “Analysis of Financial Factors” page, or the “Examiner’s Comments” page.

BHC financial leverage is the use of debt to supplement the equity in a company's capital structure. It is anticipated that funds generated through borrowings will be invested and earn a rate of return above their cost so that the net interest margin generated will improve the company's net income, providing a higher rate of return on stockholders' equity which has otherwise remained constant. Since no creditor or lender would be willing to extend credit without the cushion and safety provided by the stockholders' equity, this borrowing process is also referred to as "trading on equity." That is, utilizing the existence of a given amount of equity capital as a borrowing base. Stockholders and management often view leveraging as a favorable financial alternative because if owners have provided only a small portion of total financing, much of the financial risk will be borne by the lenders, alleviating the need of the stockholders to assume the total risk. In addition, by raising funds through long-term debt, the owners gain the benefits of maintaining control of the firm with a limited investment rather than diluting existing ownership via the sale of additional capital stock.

There are, however, some unfavorable aspects in this type of financing. As a holding company substitutes debt for equity, keeping its asset size constant, its leverage ratio will increase. The increase in leverage increases the probability that a company may go into default since a larger portion of the income stream generated by earning assets must then be used to meet increased fixed charges (interest expense). (This assumes that increases in future earnings are not anticipated. While earnings may be sufficient to meet fixed interest expenses at the time the debt is issued, it is possible that future earnings will not be sufficient to meet the increased expenses.) In addition, utilization of leverage reduces management flexibility in making future decisions because lenders impose restrictive covenants that may limit future debt issues, limit dividend payments, or impose constraints on specific operating ratios. However, not all of the effects of increased leverage are unfavorable. Additional long-term debt may have the favorable effect of extending maturities on obligations and may improve liquidity.

Leverage ratios measure the contribution of owners compared with the financing provided by lenders. Companies with low leverage ratios generally have less exposure to loss when the economy is in a recession, but they may also have lower expected returns when the economy

booms. Firms with high leverage ratios run the risk of large losses but also have a chance of earning high rates of return on equity and assets. Thus, if a company earns more on the borrowed funds than it pays in interest, the return to the owners is increased. For example, if the company earns 10 percent on assets and debt costs 8 percent, there is a 2 percent differential accruing to the stockholders. However, if the return on assets falls to 7 percent, the differential between that figure and the cost of debt must be made up from total profits.

A bank holding company is composed of at least two tiers, parent and subsidiary, and each tier may issue long-term debt in its own name. Several different types of long-term debt instruments are utilized by holding companies. Corporations make use of instruments such as debentures, convertible debentures, term loans, capital notes and mortgage notes. (See Manual section 2080.0—"Funding"). While most issues are generally sold to the public, in some cases, issues of subsidiaries have been placed directly with another subsidiary, the parent company, or perhaps with an unaffiliated banking institution. Alternatively, issues presently held on the books of the parent may have been originally issued by one of the subsidiaries and later transferred to the parent. These transfers have often occurred at the time of the formation of the holding company when debt of the subsidiaries was assumed by the parent.

The proceeds of parent company long-term debt may be advanced to banking subsidiaries as debt or invested in banking subsidiaries as equity. When parent debt is issued, and the proceeds are advanced to subsidiaries as debt, a condition of "*simple leverage*" exists. When such proceeds are invested in subsidiaries as equity, a condition of "*double leverage*" is said to exist since the increase in the subsidiary bank's capital base will allow the bank to increase its own borrowings.¹ In effect, the

1. Parent company "*total leverage*" may be defined as the relationship between equity at the parent level and the total assets of the parent company. Such assets typically consist of investments in bank and nonbank subsidiaries, advances to affiliates, deposits with bank affiliates and securities. A useful related measure of parent company leverage is "*investment leverage*" which may be defined as the relationship between parent equity and its equity investments in subsidiaries. Since the equity which has been invested in subsidiaries can, and often is, further leveraged by external borrowings of such subsidiaries, this type of parent company investment leverage can lead to what is referred to as "*double leverage*."

parent's capital injection which was funded by debt, provides the bank with greater debt capacity, thereby allowing the bank to borrow additional funds on its own. Therefore, the original borrowing by the parent has, in effect, been compounded when the bank borrows based on its newly injected equity.

If the parent debt is reinvested as equity in a bank, the servicing of interest and principal is usually provided by dividends paid to the parent by the bank subsidiaries. The bank dividends, however, may become restricted based on the bank's earning power which may not provide for sufficient retention of earnings to support its asset growth. Problems may be less severe when parent debt is downstreamed as debt to the bank subsidiary. When the terms and maturities of the indentures match, the obligation of a bank to meet its interest and principal payments to the parent are contractual and represent fixed charges (interest is tax deductible) which will continue up to the maturity of the note. When funds are downstreamed as equity and the bank typically issues dividends to its parent, it is easier to restrict the flow of funds from the bank than if the funds were downstreamed as debt which results in bank payments of interest expense. Bank dividend declarations are subject to limitations imposed by sections 5199(b) (12 U.S.C. 60) and 5204 (12 U.S.C. 56) of the United States Revised Statutes, while interest payments are not subject to such restrictions.

4010.1.1 ACQUISITION DEBT

Some holding companies use debt for the acquisition of subsidiary banks. The Board believes that a high level of acquisition debt can impair

the holding company's ability to act as a source of strength to its bank subsidiaries, and thus does not favor the use of a substantial amount of acquisition debt in bank holding company formations. However, the Board recognizes that the use of acquisition debt in the formation of certain holding companies may be necessary, particularly when transferring the ownership of small community banks (approximately \$150 million or less), and the maintenance of local ownership in those banks. To this end, and in the interest of maintaining a safe and sound banking system, the Board has adopted a policy for assessing financial factors in the formation of small one-bank holding companies. (see Manual section 2090.2)

4010.1.2 INSPECTION CONSIDERATIONS

Generally, it is not the examiner's responsibility to criticize the method of term financing used by a bank holding company. The examiner, however, should be familiar with the various types of leveraging and the possible ramifications that they may have on a holding company structure. While the use of ratios may show an excessive leverage position, indicating vulnerability, it is primarily the corporation's earning power that dictates the acceptable level of debt. Accordingly, the examiner should compute a holding company's ability to meet its fixed charges (as detailed in the preceding section) to determine the appropriateness of the leverage position. If the company's earnings do not support the present fixed charge requirements, or if a declining trend is noted, appropriate comments are warranted.

4010.2.1 INTRODUCTION

Liquidity is generally defined as the ability of a company to meet its short-term obligations, to convert assets into cash or to obtain cash, or to roll-over or issue new short-term debt. Short-term is generally viewed as a time span up to a year. Since a bank holding company does not have the full range of asset and liability management options available to it that a bank does in managing its liquidity position, it therefore, needs to have a sufficient cushion of liquid assets to support maturing liabilities. Certain assets which normally would not be considered current may be readily sold to avert a liquidity squeeze. For example, a holding company may be participating in long-term loans originated by a Small Business Investment Company (S.B.I.C.) subsidiary. If these loans are of good quality, the parent's share may be sold at little or no discount to that S.B.I.C. subsidiary, another subsidiary, or an unaffiliated company to obtain the needed cash. Consequently, the breakdown of assets segregating those that are current would not necessarily be indicative of liquid assets, given the nature of bank holding company investments. Therefore, liquid assets are defined as those assets which are readily available as cash or which can be converted into cash on an "arm's-length" basis without considerable loss.

Liquidity problems are usually a matter of degree of severity. A less serious liquidity problem may mean that the company is unable to take advantage of profitable business opportunities. A more serious lack of liquidity may mean that a company is unable to pay its short-term obligations and is in default. This can lead to the forced sale of long-term investments and assets and, in its most severe form, to insolvency and bankruptcy.

4010.2.2 SUPERVISORY APPROACH TO ANALYZING PARENT COMPANY LIQUIDITY

For bank holding companies with consolidated assets in excess of \$1 billion or material amounts of debt outstanding, or others, at the option of the Reserve Bank, the analytical approach to parent company liquidity will include the following key elements:

1. Beginning an evaluation of parent liquidity with an analysis of the *contractual* maturity structure of assets and liabilities, extended to consider the underlying liquidity of its intercompany advances and deposits. Any judgment of

adequate parent company liquidity must be keyed to a finding that the parent has adequate liquid assets, on an underlying basis, to meet its short-term debt obligations.

2. Estimating the underlying liquidity of parent liabilities and assets, giving particular attention to interest bearing deposits in and advances to subsidiaries. Emphasis should be placed on asset quality and the liquidity profile of the bank and key nonbank subsidiaries. The estimates are to be reflected in a statement of "Parent Company Liquidity Position" as restated data with appropriate explanations as to the basis for the restatement.

3. Using the statement of "Parent Company Liquidity Position" which includes five contractual and estimated underlying maturity categories into which data is to be slotted. They are:

- a. Up to 30 days;
- b. Up to 90 days;
- c. Up to 1 year;
- d. One to two years; and
- e. Beyond two years.

The schedule provides for the use of effective remaining maturity categories for the parent company's short-term assets and liabilities, highlighting funding surpluses or deficits at key specified periods of times. *Examiners have the option of including the statement in the inspection report to substantiate or clarify particular judgments.*

4. Using the conclusions drawn from the statement of parent company liquidity position as a basis for discussions with management. Examiners will also comment on their findings in detail on the "Analysis of Financial Factors" page in the inspection report.

5. Ascertaining that an organization with significant funding activities has in place:

- a. Internal parent liquidity management policies which address and limit the use of short-term funding sources to support various subsidiaries; and
- b. An internal *Contingency Plan* for maintaining parent liquidity under adverse situations.

4010.2.3 STATEMENT OF PARENT COMPANY LIQUIDITY POSITION

The purpose of the statement of "Parent Company Liquidity Position" is to provide a consistent method for analyzing parent liquidity. The schedule is *not* intended to address the issue of

interest sensitivity. While only conclusions drawn from the schedule of estimated, effective maturities are to appear in the inspection report, examiners should also collect data on contractual (remaining life) maturities of parent assets and liabilities. Examiners will treat all externally funded nonbank entities of the parent company in a similar fashion.

The maturity categories appearing on the schedule represent a basic analytical framework for looking at funding mismatches and are not necessarily appropriate for all organizations. As such, categories can be adjusted to fit particular circumstances. On a conceptual basis, the 30 day period corresponds to a period during which markets might be in temporary disarray due to an external shock. For the largest companies with substantial overnight and very short term funding operations, an additional one-to-seven-day category may be needed. The 31 to 90 day period allows for gauging the parent's ability to withstand internal adversity and demonstrate a return to "normal" business operations. The 91 to one year period is a reasonable planning horizon over which an organization might be able to readjust its internal funding policies substantially. In addition, the up to one year categories, as a group, complement the cash flow analysis of debt servicing capacity by specifically addressing maturing debt that must be either paid or rolled over at prevailing rates. The one to two year category provides an early indication of any funding imbalances that would have to be addressed by management in the reasonably near term. As a practical matter, the over two year category has limited analytical value in most cases and is included principally to make certain that all deposits and advances are accounted for.

Using these categories, funding surpluses or deficits can be identified for specific maturity intervals. Guidelines on acceptable practices for funding surpluses and shortfalls are set for the examiners in evaluating gaps based on estimated "underlying" maturities. Examiners would be expected to place particular emphasis on the up to 30 day period, where a net liquidity surplus would be expected to provide at least that much time for a parent to ride out a shock. Similarly, the up to 90 day period would be viewed as the relevant time to demonstrate to the market that problems are being addressed appropriately and are being brought under control. Imbalances in the 91 day to one year categories would generally have less significance,

due to greater uncertainty regarding the assumptions that would go into any adjustments.

A logical point for assessing parent liquidity is an assessment of the contractual maturity structure of the holding company's balance sheet. Contractual maturities of assets and normal runoff of liabilities are to be slotted into the five maturity categories depicted. Once completed, the examiner is provided with an initial indication of whether the parent has an adequate cushion of short-term liquid assets within the 0 to 30 day and the 0 to 90 day categories to cover short-term liabilities or whether a pattern of significant short-term funding gaps exists. Certainly, the identification of such gaps gives guidance on obvious areas for further analysis. However, the absence of short-term funding shortfalls on a strictly contractual basis gives only limited comfort as the parent's underlying liquidity still must be analyzed more deeply.

4010.2.4 ANALYSIS OF UNDERLYING SOURCES TO FUND DEBT AND TO MEET OTHER OBLIGATIONS

Adjustments to the schedule that better reflect the parent's liquidity position will be made as the next step in the analysis. These adjustments require the examiner's judgment on the underlying liquidity of the parent's assets and liabilities with particular emphasis placed on interest bearing deposits with bank subsidiaries and advances to both bank and nonbank subsidiaries.

4010.2.4.1 Interest Bearing Deposits With Subsidiary Banks

The parent's interest bearing deposits¹ with the subsidiary bank(s) may represent either the temporary placement of idle funds or a more permanent source of bank funding. Temporary deposits typically are structured to mature in 90 days or less, are generally not substantial in relation to the overall size of the bank, are usually supported by substantial holdings of highly liquid bank assets, and could be repaid without triggering marketplace concerns regarding the organization's overall funding needs. Therefore, if this pattern exists, the temporary deposits may

1. In concept, the parent could also have advances to bank subsidiaries. Such advances are either booked as deposits (typically off-shore time deposits to avoid reserve requirements) or as instruments qualifying as Tier 1 or Tier 2 capital. To the extent that advances to banks are encountered, the analysis follows the same approach as with deposits.

be considered highly liquid and slotted in the 0 to 30 day (or 0 to 7 day) period on the schedule, regardless of their contractual maturity dates.

Interest bearing deposits with the subsidiary bank(s) that serve as a permanent source of bank funds are typically substantial in relation to the size of the bank and are usually placed to fund bank expansion without additional bank borrowings. Here, judgments regarding underlying liquidity should be keyed to the CAMELS ratings on the bank's liquidity and asset quality as well as reasoned judgments on the bank's ability to liquidate assets and/or replace the funds in the marketplace through additional borrowings. Asset quality is regarded as critical as it is a leading indicator of bad news that will ultimately pull down earnings and undermine market confidence. As a general principle, the liquidity of the parent's deposits in bank(s) should be no better than the liquidity of the bank(s), and subject to downgrading if bank asset quality is suspect. If bank asset quality is worse than fair, the liquidity of these funds should be downgraded. For banks with asset quality rated fair, the parent's deposits might still be considered liquid, but a closer analysis of the particular situation would be warranted.

Under the assumption that the bank's asset quality and liquidity positions do not negatively impact the bank's ability to liquidate or replace these funds, such deposits may be slotted in the 0 to 30 day (or 0 to 7 day for large institutions) period on the schedule regardless of the contractual maturity. However, if these deposits are substantial, their replacement may trigger market concerns. At this point, the examiner's judgment is necessary regarding an acceptable level at which a portion of the deposits could be replaced in the marketplace without triggering such concerns. A starting point for the examiner should be to evaluate the funding gaps appearing on the contractual maturity schedule with particular attention paid to the 0 to 90 day period (0 to 30 days for large institutions). While it may be impossible for the bank(s) to replace all the parent's deposits without triggering concerns, the bank(s) may be able to replace only the portion necessary to eliminate the negative cumulative funding gap in the given time period. If even this amount is deemed to be substantial, the examiner may have no other alternative but to treat the deposits in accordance with the contractual maturity. For clarification purposes, the following example is provided:

The contractual maturity schedule of a large holding company reflects a negative cumu-

lative gap of \$400 million in the 0 to 30 day time frame. The company's balance sheet includes \$2.5 billion in interest bearing deposits at the subsidiary bank(s), with \$1 billion maturing in 30 days and \$1.5 billion in 31 to 90 days.

In the examiner's judgment, the entire \$1.5 billion due in over 30 days qualify to be slotted in the under 30 day category,² but the bank would face liquidity pressures to replace this amount prior to its original maturity. However, \$400 million, the amount needed to eliminate the negative cumulative gap position, could be replaced by the bank without undue market concern. Therefore, \$400 million from the 31 to 90 day period should be reslotted in the appropriate under 30 day period.

4010.2.5 ADVANCES TO SUBSIDIARIES

Given the typical composition of bank holding company assets, the examiner is likely to encounter difficulty in determining the degree of liquidity inherent in advances to subsidiaries.

For those subsidiaries with satisfactory asset quality, the examiner can usually assume the subsidiary could sell qualifying assets to affiliate bank(s) up to the quantitative limitations of section 23A, as long as the affiliated bank(s) are judged to have adequate liquidity. The examiner can also assume that the subsidiary, with an established program of secondary market asset sales, could at least continue or even modestly expand the scope of the program. For subsidiaries without a program of asset sales, but whose assets are of the type that are readily marketable in the secondary market, a *limited* asset sale program could be considered to provide some asset liquidity. However, caution should be used in estimating the magnitude of such sales, particularly because large transactions could not be accomplished quickly without risking market visibility and broadcasting concerns regarding the corporation's funding.

When nonbank advances are substantial, the parent has little or no practical access to the funds advanced. While an arm's-length sale of such a subsidiary or a large portion of its assets to a bank affiliate may not generate a loss, the funding requirements for a large transaction at the bank level would probably initiate market-

2. Subject to early withdrawal penalties which will be eliminated in consolidation.

place concerns.³ Similarly, significantly above normal asset sales to an unaffiliated party would not only trigger market concerns, but would probably also result in a significant discount. Furthermore, although it is possible that another nonbank subsidiary may act as the funding vehicle, the subsidiary's ability to generate the required funds may be restricted at best. Such restrictions may include marketplace concerns as well as limitations on the maximum leverage positions or creation of senior debt imbedded in debt covenants.

Advances to a subsidiary may be either short-term or long-term and are made for a variety of reasons, including providing a temporary source of income for the parent, enhancing a subsidiary's liquidity position, and supporting a subsidiary's operations. Therefore, the purpose of the loan, its maturity, as well as the degree to which high quality assets of a subsidiary cover the amount due to the parent, should also be considered in order to properly categorize advances.

4010.2.6. LIQUIDITY AND LIABILITIES OF THE PARENT

In regard to liabilities of the parent, the policy presumption should be that their contractual maturity reflects the underlying availability of funds. Exceptions will reflect special circumstances, such as funding from foreign ownership interests or partners in joint ventures who have equity interests and an ongoing business relationship. The presence of back-up lines of credit for commercial paper, while especially desirable in the case of regional companies, should not, by itself, cause an examiner to assume that the underlying maturity of a parent's short-term debt is materially longer than its contractual term, or that these lines will always be readily available. In fact, organizations experiencing considerable problems, particularly asset quality and liquidity, have found that these facilities are no longer available.

The examiner should thus review back-up lines on a case-by-case basis and be aware of any escape clauses in interbank agreements. Specifically, for companies with a composite "3" or worse BOPEC rating *or* lead banks with asset quality of a declining "3" or worse *or* where asset quality *and* liquidity are rated "3"

3. Underlying liquidity estimates should follow the same approach previously stated for deposits.

or worse, it is recommended that back-up lines with "material adverse change" or similar escape clauses *not* be regarded as satisfactory support to an imbalanced parent company funding position.

Furthermore, certain holding companies' liabilities may often include unamortizing debt instruments. The company's ability to retire or replace such issues at maturity should be evaluated as part of the organization's overall liquidity analysis. If it is the intention of management to roll over the maturing issues, the evaluation should be based on the company's ability to do so. In cases where debt retirement is the route chosen by management, the examiner's evaluation and judgment should focus on the company's ability to generate the necessary funds either through asset liquidation or the issuance of equity instruments.

The unamortizing portion of debt issues is to be slotted in the appropriate maturity column of long-term debt. If the maturity of such issues falls due within the 0 to 90 day time frame, the examiner should comment on the organization's ability to replace the maturing issues or retire them by the deployment of funds from other sources in a footnote on the schedule. If the maturity of such debt is longer, the replacement or retirement should be addressed in the corporation's funding plan.

4010.2.7 ANALYZING FUNDING MISMATCHES

After adjustments for the underlying liquidity of the parent's interest bearing deposits and advances to subsidiaries and the underlying maturity of its liabilities, the resulting schedule should provide the examiner with the framework for looking at funding mismatches as a tool for assessing the parent's overall liquidity position. The position may be evaluated by the analysis of the underlying liquidity gaps (appearing on the bottom of the schedule). In the 0 to 30 day time frame, a net positive gap is expected and reflects the parent's ability to ride out a temporary market disarray. Although a negative gap in the 8 to 30 day period may be evident in larger organizations, the overall 30 day interval is expected to be positive. Similarly, for most organizations, the 0 to 90 day period is expected to reflect a positive position, regardless of a shortfall in the 31 to 90 day period. Failure to meet these conditions requires appropriate examiner comments on the "Examiner's Comments" page of the report.

The 91 day to 1 year time frame (as well as

the 31 to 90 day period for certain larger organizations) is less critical, and negative cumulative funding positions of modest size may be tolerated if the organization has demonstrated an ability to tap the funding markets, has readily available backup lines of credit, has a reasonable earnings retention policy, adequate funds flow coverage and other fund generating programs such as a dividend reinvestment plan. Judgments on the reasonableness of any imbalances in these longer term categories should be weighed against the examiners' estimates as to the adequacy of these sources. In addition, the examiner should view these longer periods as a reasonable planning horizon over which the organization should be able to readjust its funding policies as well as provide an early indication of how funding imbalances, that may develop, are to be addressed by management.

A significant shortfall in the 91 day to 1 year period is expected to be covered by a contingency funding plan. While no single formula for such plans is recommended or possible, each organization needs to address its own particular situation and the options it faces. At minimum, the organization needs to address possible market shocks whether caused by its own actions or by external events. Funding markets should be addressed individually and as a group both as to their likely resiliency and the particular organization's position within each market. Contingency sources should be tested periodically as to their viability. The examiner should review the reasonableness of assumptions and adequacy of alternative courses as part of the company's liquidity analysis. Where no plan exists, a plan acceptable to the corporation's directors should be required. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.

In analyzing liquidity, the examiner will encounter the least difficulty when liquid assets equal or exceed short-term liabilities. In those instances, the liquidity position is considered adequate. If the examiner notes a declining trend in the liquidity position, an appropriate comment may be warranted, even though sufficient liquidity exists at that time.

Conversely, the examiner will encounter the most difficulty in analyzing liquidity when liquid assets are not sufficient to cover short-term obligations. When this situation exists, it is not necessarily indicative of an inadequate liquidity position. At that point, the examiner must consider other readily available sources of cash not shown on the balance sheet (e.g., unused bank lines, dividends from subsidiaries).

Footnotes to financial statements may also play an important role in such an analysis. One such footnote may be indenture restrictions on long-term debt. While a company may temporarily alleviate a liquidity bind by paying off its commercial paper with short-term bank loans, it may be faced with the problem of paying off the bank debt if it is precluded from issuing additional long-term debt.

4010.2.8 REPORTING THE RESULTS OF THE ANALYSIS

In the normal course of the inspection, the examiner should present his conclusions concerning liquidity to management. Where there is an indication of some vulnerability, the examiner should solicit management's opinion and any corrective action plans being considered. If it appears that management has not addressed itself to the vulnerable or inadequate situation, an appropriate comment should be made. The results of this analysis should be discussed in the parent company section on the "Analysis of Financial Factors" page in the inspection report. In addition, the examiner has the option of incorporating the liquidity schedule in the report to substantiate or clarify particular judgments. Criticism with respect to a liquidity shortfall anywhere within the 0 to 90 day time frame or, in most cases, the absence of a Contingency Plan to cover shortfalls in the under 1 year time frame, should be carried forward to the "Examiner's Comments" page, the transmittal letter, and be included in discussions with management.

4010.2.9 INSPECTION OBJECTIVES

1. To analyze the contractual maturity structure of assets and liabilities, and then extend the analysis to the underlying liquidity of intercompany advances and deposits, considering whether the underlying liquidity is short-term or long-term in nature.

2. To estimate the underlying liquidity of parent liabilities and assets, with particular attention to interest bearing deposits in, and advances to, subsidiaries. Place emphasis on:

- a. Asset quality; and
- b. The liquidity profile of the bank and key nonbank subsidiaries.

3. To restate the estimates on the analysis of

“Parent Company Liquidity Position” using the suggested 5 broad contractual and underlying maturity categories.

4. To judge the adequacy of parent company liquidity, keying it to a finding as to whether the parent has adequate liquid assets, on an underlying liquidity basis, to meet its short term debt obligations.

5. For BHC's that have significant funding activities at the parent level, to determine if the parent company has in place:

a. Internal parent liquidity management policies which address and limit the use of short term funding sources to support subsidiaries.

b. An internal Contingency Plan for maintaining parent liquidity in the face of adversity.

6. To draw conclusions from the estimated remaining effective maturities that appear in the report.

4010.2.10 INSPECTION PROCEDURES

1. Assess the contractual maturities of the parent company's balance sheet.

2. Slot the contractual maturities of assets and normal runoff of liabilities into the five categories on the “Parent Company Liquidity Position” page.

3. On the schedule, make adjustments, as to the underlying maturity of the parent company's assets and liabilities.

4. Review funding mismatches.

5. Review the reasonableness of the Contingency Plan's assumptions and adequacy of alternative sources.

a. If no plan exists, a plan acceptable to the corporation's directors should be required.

b. Even if there are no specific concerns, the existence or lack of a plan should be taken into account when assessing management.

6. Discuss the results in the parent company section of the “Analysis of Financial Factors” page in the inspection report.

7. Include in the “Examiner's Comments,” page 1, criticism of liquidity shortfalls within the 0 to 90 day period or the absence of a contingency plan to cover shortfalls in the under one year time frame, that were discussed with management.

In making the determination as to the condition of the holding company under inspection, an examiner must, as part of his examining procedure, focus his efforts on analyzing the financial condition of the bank(s) owned by the holding company. Such an appraisal is obviously of paramount importance when one considers that the bulk of the consolidated assets and earnings of a holding company are represented by the bank(s). The examiner must incorporate in the analysis, results of the most recent commercial examination of the subsidiary bank(s).

Therefore, for meaningful results, the analysis of the subsidiary bank(s) should commence after the results of the latest examination of the bank(s) have been obtained. The examiner in his analysis of the bank must consider and determine whether certain key facets of a bank's operations meet minimum standards and conform, where required, to bank regulatory restric-

tions. Areas of principal concern are: capital adequacy, asset quality, earnings, liquidity, and quality of management. The examiner should be especially alert to any exceptions or violations of applicable statutes or regulations that could have a materially adverse effect upon the financial condition of the organization. In addition, the examiner should also consider the conclusions drawn as to the extent of compliance and the adequacy of internal bank policies that contribute to the overall analysis of the bank's condition.

Inspection personnel should use the examination ratings of the other federal agencies (where appropriate) when completing the inspection report. However, if substantive differences of opinion exist as to the bank's composite rating, adjustments to the rating may be made and footnoted to indicate the change.

One area of vital importance in the evaluation of a bank's condition is capital adequacy. Consideration should be given by the examiner whether the bank has sufficient capital to provide an adequate base for growth and a cushion to absorb possible losses, thereby providing protection to depositors. In that regard, the Board,

has adopted capital adequacy guidelines, that include risk-based and leverage measures which apply to state member banks. The examiner should refer to section 303.1 of the *Commercial Bank Examination Manual* for guidance on evaluating the capital adequacy of state member banks.

The quality of a bank's assets is another area of major supervisory concern. Indeed, supervisors consider the appraisal and evaluation of a bank's assets to be one of the most important examination procedures. It will be established by the bank examiner during the examination of a subsidiary bank to what degree its funds have been invested in assets of good quality that afford reasonable assurance of ultimate collectibility and regularity of income. The examiner should have further determined that a subsidiary bank's asset composition is compatible with the nature of the business conducted by the bank, the type of customer served, and the locality. The holding company examiner is expected to comment upon the total classifications determined by the bank examiner in relation to the bank's capital. Consideration should also be given to the severity of the classifications. If the classified assets are considered not to possess a significant loss potential, favorable consideration should be accorded this factor.

Past due ratios should also be evaluated. In this respect, it is essential that trends be observed. Although a particular lending department's delinquent outstandings or an institution's overall past due percentage is presently considered reasonable, a noticeable upward trend may be worthy of comment to management. Excessive arrearages in any area warrant an examiner's comment in the inspection report. It behooves management to take appropriate action to improve any undesirable past due levels.

In determining an organization's asset quality, one effective yardstick employed by exam-

iners is the "weighted average" of classifications, which takes into consideration the severity of a bank's classified assets. In rating asset quality, the "weighted average" of classifications system is designed to distinguish the degree of risk inherent in classified assets by ascribing weights to each category of classification thereby providing a more reliable measure of the impact of risk on bank capital.

The following weights are to be used:

<i>Classification</i>	<i>Weights</i>
Substandard	20%
Doubtful	50%
Loss	100%

The ratio of weighted classifications to Tier 1 capital is the primary criterion to be used in determining the quality of assets. However, examiners should also evaluate the adequacy of loan loss valuation reserves as compared to weighted classifications. Loss potential inherent in weighted classified assets must be offset by valuation reserves and equity capital or appropriate comments should be made.

Another tool that should be considered in evaluating asset quality is the bank's internal classification list, if the bank's lending procedures and management are adequate. Additional information on rating a bank's asset quality is available in the Uniform Interagency Bank Rating System.

Comparison of earnings trends with other banks of similar size, along with an analysis of the quality of those earnings, is probably the best initial approach in determining whether or not a bank's earnings are satisfactory. Comprehensive surveys of bank earnings by peer group size are tabulated by the Board and many of the Reserve Banks. The results are sufficiently detailed to permit various methods of comparison of the earnings of a specific bank with those in its peer group.

One ratio used as a means of measuring the quality of a bank's earnings is its return on average assets (net income after taxes divided by average total assets). If the ratio is low or declining rapidly, it could signal, among other things, that the bank's net interest income or margin is declining or that the bank is experiencing increased loan losses.

A bank's current earnings should be sufficient to allow for ample provisions to offset anticipated normal losses. Various factors to be considered in the determination of such losses include a bank's historic loss experience, the adequacy of the valuation reserve, the quality and strength of its existing loans and investments and the soundness of the loan and administrative policies of management.

In assessing a bank's earnings performance capabilities and the quality of those earnings, an examiner should give consideration to any special factors that may affect a particular bank's earnings. For example, a bank located in an urban area of a large city may find it difficult to earn as much as a bank of similar size located in a rural community or a small city. The urban bank is usually subjected to a higher level of operating expenses, particularly in salaries and local taxes. Moreover, its proximity to the large city and the competition afforded by bigger banks may necessitate lower rates of interest on loans as well as higher rates of interest on time deposits. Consideration should also be given to the adequacy of the loan loss provisions as referred to above, the inclusion of any capital-

ized accrued interest into interest income, or the nature of any large nonoperating gains when analyzing earnings. Further consideration should be given to the general nature of a bank's business or management's mode of operation. A bank's deposit structure and its resulting average interest paid per dollar of deposits may differ widely from that of other banks of a similar size and consequently, its earnings may be substantially below average as a direct result of the difference. For example, the maintenance of a high volume of interest bearing time accounts in relation to total deposits is a major expense and is quite often the cause for certain banks falling below the average earnings of comparably sized banks.

A bank's earnings should also be adequate in relation to its current dividend rate. The percentage that should be retained in the capital accounts is not clearly established. One thing is certain, the need for retained earnings to augment capital will depend on the adequacy of the existing capital structure as well as the bank's asset growth rate. Dividend payout rates may be regarded as exceeding prudent banking practices if capital growth does not keep pace with asset growth. Prudent management dictates that a curtailment of the dividend rate be considered if capital inadequacy is obvious and greater earnings retention is required. Apparently excessive dividend payouts or a record of recent operating losses should lead the bank or BHC examiner to refer to sections 5199(b) and 5204 of the United States Revised Statutes and section 208.19 of Regulation H which restrict state member bank dividends.

Analysis of net interest margins is of growing importance. A comparison should be made of a bank's ability to generate interest income on earning assets relative to the interest expenses associated with the funds used to finance the earning assets.

Additional information on rating bank earnings is available in the Uniform Interagency Bank Rating System.

Liquidity is generally defined as the ability to meet short-term obligations, to convert assets into cash or to obtain cash, or to roll-over or issue new short-term debt. Various techniques are employed to measure a bank's liquidity position. The bank examiner considers its location and the nature of its operations. For example, a small rural bank has far different needs than a multi-billion dollar money market institution.

In addition to cash assets, a bank will hold for liquidity purposes a portion of its investment portfolio of securities that are readily convertible into cash. Loan and investment maturities are generally matched to certain deposit or other liability maturities. However, the individual responsible for a bank's money management must be extremely flexible and have alternate means to meet unanticipated changes in liquidity needs. To offset these needs, other means of increasing liquidity may be needed which might include increasing temporary short-term borrowings, selling longer-term assets, or a combination of both. Factors which the "money manager" officer will consider include the availability of funds, the market value of the saleable assets, prevailing interest rates and the susceptibility to interest rate risk, and the bank's earnings position and related tax considerations. Although most small banks do not have a "money manager," they too must monitor their liquidity carefully.

One of the most common methods used by large banks to increase liquidity is to use additional short-term borrowings. Some of the other basic means of improving liquidity include the use of direct short-term credit available through the discount window from Reserve Banks, the use of Federal funds purchases and the use of loans from correspondent banks.

A bank's liquidity must be evaluated on the basis of the bank's capacity to satisfy promptly its financial obligations and its ability to fulfill the reasonable borrowing needs of the communities it serves. An examiner's assessment of a bank's liquidity management should not be restricted to its liquidity position on any particular date. Indeed, the examiner should also focus his efforts towards determining the bank's average liquidity over a specific time period. The evaluation should encompass the overall effectiveness of asset-liability management strategies. Factors such as the nature, volume and anticipated take-down of a bank's credit commitments, should also be considered in arriving at an overall rating for liquidity.

If the bank examiner has commented on a liquidity deficiency at a subsidiary bank, the holding company examiner should consider these findings in the overall analysis of financial factors.

Additional information on rating a bank's liquidity is available in the Uniform Interagency Bank Rating System.

The condition of a bank provides important insight regarding the quality of bank management. An appraisal of management's performance should be measured in terms of long-term profitability, risk exposure, liquidity, and solvency; all geared toward assuring the bank's continued profitability and overall sound financial condition. Management must meet the bank's challenges and position in the market place among its competitors. It must make plans which will achieve the objectives established by the bank's directors. Management must be constantly alert to the need for continued upgrading and expanding of services and facilities to advance, support, and encourage the bank's growth.

Just as sound management decision making will generally produce banks that are free from serious problems, ineffective management has invariably been a prominent factor in almost every serious problem bank situation. An examiner must consider the degree and severity of problems that exist in the bank under examination and attempt to establish the responsibility for such. The examiner should seek to determine to what degree the bank's problems are attributable to questionable management judgment as opposed to outside factors, such as unfavorable economic conditions.

As indicated at the beginning of Part IV, the

major portion of the holding company's consolidated assets are held in the bank subsidiaries. Furthermore, at the parent level, the major asset is generally the investment in subsidiaries, the principal portion of which is the investment in the bank(s). Therefore, with few exceptions, it is the overall condition of the bank subsidiaries that reflects the condition of the parent company. As the holding company examiner reviews the examination report(s) for each bank subsidiary, a decision must be made with respect to the general condition of each bank. When all the bank subsidiaries have been reviewed, the examiner must put these findings within their proper perspective. For example, if four of five bank subsidiaries comprise less than 10 percent of the combined banking assets, it is the condition of the fifth bank subsidiary that will weigh heavily in the analysis. In other words, if the fifth bank comprises 90 percent of the combined banking assets, the parent's investment in that bank also comprises most of the holding company's assets. Thus, the quality of the parent's assets would be reflected in the general condition of that bank and appropriate comments are warranted. It should be noted, however, that regardless of relative size, a bank experiencing problems should be commented upon in the summary analysis.

4020.9.1 DEFINITION AND SCOPE OF
THE DE NOVO BANK SUPERVISION
POLICY

The term “de novo bank” refers to a state member bank that has been in operation for five years or less. The application and supervision standards for de novo state member banks are found in SR-91-17. De novo state member bank subsidiaries of bank holding companies are subject to those policies. The standards discussed in this section are limited to a de novo subsidiary bank’s financial performance.

The de novo policy also extends to commercial banks that have been in existence for less than five years and subsequently convert to membership. Because thrifts, Edge Act companies, and industrial banks that are converting to membership (“converted banks”) have not demonstrated operating stability as commercial banks, they also are subject to the de novo policy, regardless of how long they existed before the conversion.

The policy applies to de novo banks through the fifth year of operations. Experience has shown that pronounced problems often surface during a new bank’s fourth and fifth years of operation, frequently as a result of inexperienced management, management and director changes, dissension among directors, directors’ lack of involvement, and poor lending practices during the early years.

4020.9.2 CAPITAL STANDARDS FOR
SUBSIDIARY BANKS OF BHCs

De novo subsidiary banks of bank holding companies are expected to maintain capital in conformance with the de novo policy guidelines of SR-91-17. Initial capital in a de novo state member bank should be reasonable in relation to state law, the bank’s location and business plan, and the competitive environment. At a mini-

mum, a de novo bank must maintain a tangible Tier 1 leverage ratio of 9 percent for the first three years of operation.¹ The applicant’s (that is, the proposed state member bank’s or the bank holding company’s) initial projections of asset growth and earnings performances should be reasonably in line with the bank’s ability to maintain this ratio without relying on additional capital injections. The de novo policy also applies to newly converted commercial banks through the third year of existence and to other types of institutions that become Federal Reserve members for a three-year period beginning from the date following consummation. Any exceptions to this policy that are being considered for converted banks should be discussed with Board staff. Although a 9 percent tangible leverage ratio is not required after year three, de novo banks are expected to maintain capital ratios commensurate with safety-and-soundness concerns and, generally, well in excess of regulatory minimums.

4020.9.3 CASH FLOWS TO A BHC
PARENT

Under the current policy on small one-bank holding companies (see section 2090.2.3), de novo banks may not provide funds for servicing the parent’s debt until the bank receives two consecutive CAMELS ratings of 1 or 2 based on full-scope examinations and, in the judgment of the Reserve Bank, can be expected to continue operating soundly. An exception to this prohibition is the tax payments that are made in accordance with the Board’s policy under Regulation Y (see section 2070.0 and *FRRS* 4–870).

1. Although this policy applies to a bank holding company’s acquisition of a de novo state member bank, the Federal Reserve also encourages bank holding companies’ nonmember bank subsidiaries to adhere to the same standards.

4030.0.1 INTRODUCTION

Generally, a subsidiary of a bank holding company is not liable for debts of any other subsidiary of the holding company unless it is contractually obligated through guarantees, endorsements, or other similar instruments. This apparent legal separation may induce false confidence that banks are insulated from problems that may befall other subsidiaries of the holding company. If a nonbank subsidiary of a bank holding company finds itself in serious financial trouble, several results are possible. The holding company may work as it was intended, in that debts of the failing subsidiary are isolated and not transferred to other subsidiaries so that at worst, the subsidiary and the parent (the holding company) fail. In this instance, other subsidiaries, including bank subsidiaries, are unharmed, and after a change in management or ownership, they continue in operation. There is no loss of confidence in the bank by its depositors. However, this is not necessarily the result.

Failure of a nonbank subsidiary may lead to a lack of confidence in the affiliated bank's ability to continue in business, which might precipitate a run on the bank's deposits. The failure of a major nonbank subsidiary then may place its affiliated bank in serious financial trouble. The examiner should assess the impact that the failure or the potential failure of a nonbank subsidiary may have on an affiliated bank with a similar name.

Usually, a financially distressed nonbank subsidiary is aided by the holding company, which will do everything in its power to rescue it from failure. At a minimum, refusal to do so would undermine confidence in the strength of the holding company. Refusal to aid its nonbank subsidiary might even result in a rise in the interest cost of the holding company's future debt in the capital markets and, more than likely, preclude issuance of commercial paper.

A holding company has considerable discretion in choosing how to assist one of its troubled subsidiaries. Because the bank is usually the largest subsidiary, the holding company may attempt to draw upon the resources of the bank to aid the nonbank subsidiary. The bank can transfer a substantial portion of its capital through dividends to the parent company, which may pass these funds on to the troubled nonbank subsidiary. Also, the nonbank may attempt to sell part of its portfolio to the bank subsidiary to improve liquidity. The Board's Interpretation 12 C.F.R. 250.250 (at FRRS 3-1133) limits the sale

of nonbank subsidiary loans to the bank affiliate unless the bank had an opportunity to appraise the credit at the inception of the loan. Therefore, the examiner should closely analyze the off-balance-sheet activity of the nonbank subsidiary, particularly activity relating to the sale of loans shortly after they are made. Reference should also be made to section 2020.7, regarding the transfer of low-quality loans or other assets to avoid classification.

4030.0.2 ANALYSIS OF FINANCIAL CONDITION AND RISK ASSESSMENT

Because of the potentially damaging effect on the parent company or its bank subsidiary, the examiner should conduct a detailed analysis of the financial condition and perform a risk assessment of the nonbank subsidiaries. The loss to the holding company may not be confined to the equity in and advances to the subsidiary. The contingent liabilities arising from the nonbank subsidiary's external borrowings are quite often a large multiple of the parent's investment. Particular attention should be directed to holding companies that have made massive capital injections in order to rescue a failing subsidiary or to satisfy the external debt obligations of the subsidiary.

For each bank holding company with nonbank activities, examiners should prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below.¹ This assessment should be performed with the same frequency required for full-scope inspections. The purpose of this assessment is to identify subsidiaries with a risk profile that warrants an on-site presence, even if the subsidiary does not meet the minimum criteria set forth in section 5000.0.4.4.1, "On-site Reviews of Nonbank Subsidiaries." In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

- ongoing monitoring efforts of surveillance and financial analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and,
- reports of internal and external auditors.

The risk assessment should address each non-bank subsidiary's funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with

affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. The examiner should give particular attention to appraising the quality of a nonbank subsidiary's assets because asset problems therein may lead to other financial problems in the nonbank subsidiary and the parent company or bank affiliates. Examiners are expected to document in the inspection workpapers their assessment of the overall risk posed by each nonbank subsidiary and to summarize their assessment of nonbank activities in the bank holding company inspection report.

The examiner has four alternatives with respect to asset classifications. An appraisal of the degree of risk involved in a given asset leads to a selection. The examiner can either “pass” the asset or adversely classify the asset “substandard,” “doubtful” or “loss,” depending on the severity of deterioration noted.

Since the preponderance of all loans are subject to some degree of risk, the following question arises: To what point, or degree, must a given credit deteriorate to warrant a scheduled criticism in the report of inspection? Generally, a passed credit has those characteristics which are recognized as being part of a normal risk asset; the degree of risk is not unreasonable, the loan is being properly serviced, and is either adequately secured or repayment is reasonably assured from a specific source.

Classification units are designated as “substandard,” “doubtful,” and “loss.” A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the nonbank subsidiary will sustain some loss if the deficiencies are

not corrected. An asset classified doubtful has all the weaknesses inherent in one classified substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Assets classified loss are considered uncollectible and of such little value that their continuance as recordable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer reserving against this basically worthless asset even though partial recovery may be effected in the future.

Although the System does not apply bank standards when classifying nonbank assets, the classification categories are the same. Examiners of BHC nonbank subsidiaries must appraise the assets in light of industry standards and conditions inherent in the market.

For information on classifying a parent’s investment in and advances to a noncredit-extending subsidiary, see Manual section 4070.0, BHC Rating System.

For information on the sufficiency of nonbank valuation reserves, see Manual section 4030.4.

When analyzing the earnings of a nonbank subsidiary, the examiner should address two primary questions: (1) Is the return on assets commensurate with the risk associated with the assets? (2) What is the impact of earnings and trends on the parent company and affiliate banks? While a nonbank subsidiary operating at a loss may be in less than satisfactory condition, the loss may not necessarily result in a major adverse impact on the consolidated earnings. The nonbank subsidiary's total assets may be insignificant in relation to the consolidated assets of the BHC, but operating losses may result in a significant reduction in its consolidated earnings position.

In some cases, industry statistics will be available for comparative purposes. However, a favorable comparison should not necessarily be taken as depicting a satisfactory earnings condition. Actions by the parent company could influence the earnings of its subsidiaries. For example, management and/or service fees can be adjusted in order to alter the subsidiary's earnings to desired levels. Also, if the parent company is funding the subsidiary, the cost of funds to the subsidiary can be adjusted above or below the parent's cost of funds thus affecting net income. In addition, an undercapitalized subsidiary with only a marginal return on assets could show a better return on equity than the adequately capitalized independent counterpart experiencing a good return on its assets. As important as return on equity is as a measure of performance, for nonbank subsidiaries, particularly those that are thinly capitalized, absolute level of earnings or return on assets provide a more meaningful measure of earnings performance.

The cash return to the parent from its investment in and advances to a subsidiary less its costs to carry the assets and related expenses should exceed the cash return available from an investment of a similar amount in securities in order to justify retaining the subsidiary. If it seems that an alternative employment of funds would be more rational, the examiner should inquire as to management's plans to improve subsidiary earnings.

Questions to be answered in analyzing the earnings of credit-extending nonbank subsidiaries include:

1. What is the impact on the parent company and affiliate banks of a nonbank subsidiary operating at a loss?
2. Is the return on assets commensurate with the risk inherent in the asset portfolios for those nonbank subsidiaries operating profitably?
3. Are intercompany management/service fees appropriate? From a supervisory perspective, management and service fees should have a direct relationship to and be based solely upon the fair value of goods and services received.
4. Is the subsidiary required to reimburse the parent for the parent's interest expense on borrowed funds, the proceeds of which have been treated as "advances to subsidiaries?"
5. Is the quality of the subsidiary's earnings sound? For example, is the company understating the provision for loan losses, relying upon nonoperating gains or capitalization of accrued interest?

Special attention should be directed by the examiner to the computation of the company's net interest margin (interest income—interest expense, divided by average earning assets). A study of company yields on investments should provide a measure of the company's ability to invest its funds in earning assets that provide a rate of return above the company's cost of funds. As net interest margins narrow, the company may find it more difficult to generate sufficient income to meet operating expenses.

When discussing growth in earnings, the examiner should clearly differentiate between increases due to increased net interest income on a constant base of earning assets as compared to an increase in the earning asset base with a concurrent proportional increase in net interest income. Any improvement in net interest income as a percentage of earning assets may reflect favorably on management's ability to invest its funds at favorable yields or its ability to find less expensive sources of funds.

As a general rule, credit-extending nonbank subsidiaries are funded by the proceeds of parent company borrowings through instruments such as commercial paper or medium to long-term debt or a combination thereof. Equity generally represents only a small portion of funding resources. There are instances, however, where the nonbank subsidiary will arrange direct funding from external sources. This is especially true in certain States where there are tax advantages associated with direct external funding.

Heavy reliance on borrowed funds by a nonbank subsidiary together with its limited capital position often results in a highly leveraged financial condition that is quite sensitive to changes in money market cost of funds. An examiner should consider what a change in the company's cost of funds might do to its net interest margin and earnings.

Many BHCs operate on the premise that a nonbank subsidiary needs little capital of its own as long as the parent company is adequately capitalized. Implicit in this operating practice is management's belief that the parent could act as a source of financial strength to its subsidiary in the event of difficulty at the subsidiary level. However, experience has indicated that in many cases, once trouble has developed in the subsidiary, the parent is hesitant to direct additional funds to the subsidiary, arguing that it is best to limit losses and exposure and it is imprudent for the parent to inject additional capital at this time. Given this experience, it is often considered appropriate for an examiner to comment on a subsidiary's extended leveraged position, indicating to management that the

company has little, if any, capital "cushion" with which to absorb any asset "shrinkage" or loss. The examiner may then conclude and possibly recommend that additional capital be provided for the credit-extending nonbank subsidiary so that its leverage may be reduced and its capital structure altered to reflect more closely an independent organization in the same or similar industry.

Funding should be reviewed to determine that the subsidiary (or the parent) is not mismatching maturities by borrowing short-term funds and applying them to long-term assets that are not readily convertible into cash. A mismatch of maturities can lead to serious liquidity problems.

A primary concern of the holding company examiner is to determine whether the nonbank subsidiary has the capacity to service its debt in an orderly manner. Does the credit-extending nonbank subsidiary have sufficient liquidity and how much will it have to rely on the parent company for funds to retire debt to unaffiliated parties? Factors to be considered include:

1. The subsidiary's asset quality and its ability to convert assets into cash at or near current carrying value. Consider the maturities of borrowings and whether they align with the scheduled assets that will be converted to cash.
2. The subsidiary's and the parent's back-up bank lines of credit available in the event commercial paper cannot be refinanced.
3. The parent company's ability to require its bank or other nonbank subsidiaries to upstream extra dividends to support the illiquid position of one or more of its nonbank subsidiaries.

As a general rule, credit-extending nonbank subsidiaries are funded by the proceeds of parent company borrowings through instruments such as commercial paper or medium to long-term debt or a combination thereof. Equity generally represents only a small portion of funding resources. There are instances, however, where the nonbank subsidiary will arrange direct funding from external sources. This is especially true in certain States where there are tax advantages associated with direct external funding.

Heavy reliance on borrowed funds by a nonbank subsidiary together with its limited capital position often results in a highly leveraged financial condition that is quite sensitive to changes in money market cost of funds. An examiner should consider what a change in the company's cost of funds might do to its net interest margin and earnings.

Many BHCs operate on the premise that a nonbank subsidiary needs little capital of its own as long as the parent company is adequately capitalized. Implicit in this operating practice is management's belief that the parent could act as a source of financial strength to its subsidiary in the event of difficulty at the subsidiary level. However, experience has indicated that in many cases, once trouble has developed in the subsidiary, the parent is hesitant to direct additional funds to the subsidiary, arguing that it is best to limit losses and exposure and it is imprudent for the parent to inject additional capital at this time. Given this experience, it is often considered appropriate for an examiner to comment on a subsidiary's extended leveraged position, indicating to management that the

company has little, if any, capital "cushion" with which to absorb any asset "shrinkage" or loss. The examiner may then conclude and possibly recommend that additional capital be provided for the credit-extending nonbank subsidiary so that its leverage may be reduced and its capital structure altered to reflect more closely an independent organization in the same or similar industry.

Funding should be reviewed to determine that the subsidiary (or the parent) is not mismatching maturities by borrowing short-term funds and applying them to long-term assets that are not readily convertible into cash. A mismatch of maturities can lead to serious liquidity problems.

A primary concern of the holding company examiner is to determine whether the nonbank subsidiary has the capacity to service its debt in an orderly manner. Does the credit-extending nonbank subsidiary have sufficient liquidity and how much will it have to rely on the parent company for funds to retire debt to unaffiliated parties? Factors to be considered include:

1. The subsidiary's asset quality and its ability to convert assets into cash at or near current carrying value. Consider the maturities of borrowings and whether they align with the scheduled assets that will be converted to cash.
2. The subsidiary's and the parent's back-up bank lines of credit available in the event commercial paper cannot be refinanced.
3. The parent company's ability to require its bank or other nonbank subsidiaries to upstream extra dividends to support the illiquid position of one or more of its nonbank subsidiaries.

The purpose of a credit-extending nonbank subsidiary's reserve for bad debts is to provide for known and potential losses in its assets. Although there is no specific formula for measuring the adequacy of a reserve for bad debts, prudence dictates that the reserve account should be maintained at a "reasonable" level. What is reasonable depends on the quality of the subsidiary's assets, its collection history and other facts. However, from a supervisory perspective, the reserve for bad debts should at least provide total coverage for all assets classified "loss" and still be sufficient to absorb future, unidentified, "normal" losses, that are estimated based on the "doubtful" and "substandard" classifications and the company's historic experience. Valuation reserves for a going concern are not considered adequate unless they can absorb 100 percent of identified losses and still have a balance sufficient to absorb future losses from continued operations.

Examiners should recommend the maintenance of valuation reserves sufficient to offset classified losses and may recommend (as opposed to require) that management charge-off the losses to the reserve account. The charge-off of classified losses is considered appropriate in order to assure that financial statements accurately reflect the company's financial condition. The Federal Reserve System has the responsibility to monitor the bank holding company's nonbank subsidiary statements for accuracy and completeness. Failure by management to reflect accurately the financial condition of the subsidiary and/or parent company could result in a formal corrective action to require charge-offs or other adjustments to financial statements.

For additional information, see Manual section 4030.1, "Classifications."

The noncredit-extending nonbank subsidiaries provide services or financial products other than extensions of credit. Some of these companies are insurance agencies, credit life and credit accident and health insurance underwriting companies, electronic data processing centers, management consulting firms and advisory companies.

The operations of some insurance agencies are conducted on the premises of the bank subsidiary(ies) by personnel who often serve as officers or employees of the bank. These companies usually incur little or no liabilities and require only nominal capitalization because risk is limited. However, their commission income is often substantial and a steady source of funds for the parent company. Nevertheless, insurance “underwriters” typically have strong capital bases, good liquidity and profitable operations. Furthermore, their operating risks are generally stable and predictable.

Electronic data processing centers are often established under section 4(c)(8) of the Act, which permits them to sell their services to affiliated and unaffiliated customers. Section 4050.0 of this Manual cites examples of how an EDP servicer can have an unfavorable impact on the parent company or its affiliates. Management consulting firms and advisory companies usually require little capitalization and no funding and generate favorable earnings. Of the noncredit-extending subsidiaries, insurance underwriters and EDP servicers are generally the only companies requiring capital and funding in significant amounts.

However, all subsidiaries are subject to some level of risk, which could impact on the BHC. In the case of insurance underwriters, insurance benefits paid could exceed actuarial estimates. Such a situation, however rare, could necessitate financial support from the parent company. EDP servicers could, as a result of excessive computer down-time or equipment obsolescence, impact on consolidated earnings or require additional capital contributions. In addition, contingent liabilities, resulting from legal actions or failure to perform, could be a large multiple of a subsidiary’s capital and may affect the parent.

4040.0.1 EARNINGS

In analyzing these subsidiaries, the examiner should consider the following:

1. Are any noncredit-extending subsidiaries operating at a loss or incurring low levels of earnings? If so, what is the cause and does it have a material impact on consolidated earnings?

2. Does the loss result in the subsidiary’s reliance on the parent company or bank subsidiary(ies) for financial support? If so, in what form is the support provided?

3. If a loss has been incurred, has management initiated corrective measures? If not, why not?

4. Are the fees charged by the parent for services rendered limited to their *fair market value*? The answer to this question will almost always depend on information supplied by management. Management should be aware of the fair market rates charged by their competitors for similar services rendered.

5. Are the rates charged affiliates commensurate with the services provided and similar to rates charged nonaffiliated customers?

4040.0.2 RISK EXPOSURE

In noncredit-extending subsidiaries, risk exposure, of any meaningful magnitude, is often related to possible losses arising from legal actions for failure to perform services as contracted. The examiner should determine that the subsidiaries are being operated effectively by experienced and competent personnel under the direction of satisfactory management. The examiner should further determine that parent company management exercises appropriate controls over the activities of the subsidiary. Because of potential liability, the examiner should ascertain whether the subsidiaries have adequate insurance coverage (i.e., errors and omissions, public liability, etc.). The examiner should be alert to any contingent liabilities that would have a significant impact of the parent company. For example, the parent company might guarantee the payment of debt or leases for the subsidiary.

The internal services subsidiaries generally derive their business only from the parent company and its affiliates. Examples of such companies include forms printing firms, owners and operators of banking premises, and EDP servicing companies. Banking premises subsidiaries are established to hold or operate properties used wholly or substantially by the parent's subsidiary for its banking business. Generally, their operations do not impact unfavorably on the parent company. However, in instances where the banking premises are not wholly occupied by a banking subsidiary, the examiner should ascertain that the excess space is fully leased/rented. A high vacancy level could result in unprofitable operations or result in an abnormal rental charge to the banking subsidiary in order to operate the subsidiary on a profitable, or break even, basis.

EDP service centers provide bookkeeping or data processing services for the internal operations of the holding company and its subsidiaries, and store and process other banking, financial or related economic data. Generally, these

service centers do not have a material effect on consolidated earnings performance as they provide essential services at costs comparable or below their independent counterparts. They usually operate on a break-even basis or at a nominal profit. However, there are some subsidiaries, including EDP servicers, which also provide services indirectly to unaffiliated concerns. EDP servicers operating under section 4(c)(1)(C) of the Act, may provide services to customers of its bank affiliates, provided that the service contract is between the bank and the customer. EDP servicers that operate as independent subsidiaries under section 4(c)(8) of the Act are not similarly restricted and are not considered "not for profit" organizations.

A financial analysis of a "not for profit" service subsidiary should concentrate on the organization's ability to control its expenses and its ability to provide its services to its affiliates at fair market value. Failure to control expenses may result in excessive charges to affiliates to the detriment of the affiliate.

For purposes of an analysis of earnings, analysts of bank holding companies have placed considerable weight on consolidated BHC financial data. Consolidated data, however, can be very misleading since bank assets and revenues are large in relation to their profit margins. On the other hand, the volume of nonbank assets is generally not nearly as large, but profit margins (or losses) tend to be much more substantial. The organizational structure of a holding company is of prime importance and must first be taken into consideration before attempting to analyze consolidated earnings. As an example, in the case of nonoperating shell bank holding companies with no nonbank subsidiaries, the earnings of the bank subsidiary should be nearly identical with consolidated earnings for the organization. Therefore, in these instances, the views and ratings of the applicable bank regulatory agency would normally be accepted and would apply to consolidated earnings of the BHC. This treatment would not apply to one-bank and multi-bank holding companies with substantial credit-extending nonbank subsidiaries. These holding companies require an in-depth analysis of earnings because of the adverse impact that a poorly operated subsidiary can have upon the consolidated earnings of the BHC.

In order to properly analyze consolidated earnings, it is best to review and study a consolidated statement of income and expense for the purpose of determining each entity's contribution to earnings. It is important to recognize that there need be no direct correlation between the asset size of a subsidiary and its relative contribution to total consolidated earnings. For example, a subsidiary accounting for a minute portion of consolidated assets could substantially negate satisfactory earnings of its larger asset base affiliates because of poor operations and sizeable losses.

When evaluating consolidated earnings, it is important to review the component parts of earnings for prior interim or fiscal periods for comparative purposes in order to determine trends. Considerable attention is to be focused on the various income and expense categories. The net interest income (difference between interest income and interest expense) of a company is highly revealing as it will give an indication of management's ability to borrow at attractive rates and employ those funds with maximum profitable results.

Items having a significant impact on earnings include the noncash charge, "provisions for loan

losses" and the volume of nonaccrual and renegotiated or restructured credits. A large provision for loan losses is made necessary by poor quality assets which result in large charge-offs to valuation reserves. In order to replenish the reserve for loan losses to adequate levels to provide ample coverage against known and potential losses, large amounts of revenues must be "set aside." Nonperforming and renegotiated credits either provide no income or provide a reduced rate of income to the extent that the assets are no longer profitable relative to the cost of funds and the cost of doing business. In situations where earnings are below average or unsatisfactory, a comment concerning the amount of provision for loan losses and volume of nonperforming loans is warranted in the financial analysis.

Other items of significance include taxes, particularly where tax credits are indicative of loss operations, and extraordinary or nonrecurring items. Extraordinary gains or losses are not the result of the normal operations of a company and should be analyzed independently from operating earnings. Generally, extraordinary items result from the sale of current or fixed assets. When significant amounts are involved, examiners should determine the underlying reasons behind such transactions.

After an analysis has been made of the pertinent components of earnings, analyze the "bottom line" or net income of the consolidated company. Generally, analysts relate net income to several benchmarks in order to evaluate performance. The ratios of earnings as a percentage of average equity capital or average assets are most widely used. Conclude the analysis with a comparison of a company's ratios in relation to its peer group.

Comparatively low earnings relative to its peer group may be a reflection of problems and weaknesses such as lax or speculative credit practices (resulting in nonearning assets or loan losses), high interest costs resulting from excessive debt, or rapid expansion into competitive industries subject to wide variations in income potential.

Earnings on a consolidated basis are the best measure of performance. Moreover, while the earnings of individual subsidiaries must not be ignored, the ability of holding company management to control the level of reported earnings in any one subsidiary reaffirms the practi-

cality of using the consolidated approach to analyze holding company profitability.

Essentially, the following points summarize areas which should be considered when analyzing consolidated earnings:

1. The return on consolidated assets and equity capital, as well as historical trends and peer group comparisons.
2. The ability of earnings to provide for capital growth, especially when taking into consideration recent and planned asset and deposit growth.
3. The "quality" of earnings is affected by

the sufficiency of the provision to loan loss reserves and the asset quality of the organization. A high level of earnings that did not include sufficient provisions to the loan loss reserve during a period of high charge-offs may result in reductions in the reserve balance and thereby call to question the merits of high earnings in the face of declining reserve balances.

4. The ability of management to prepare realistic earnings projections in light of the risk structure and quality of assets.

The evaluation of asset quality based on classifications of “substandard, doubtful and loss,” is one of the most important elements to be taken into consideration when performing a financial analysis of a holding company because of the severe impact that poor quality assets can have on the overall condition of the organization. Procedures to measure asset quality of banks involve the use of the relationship of weighted classified assets to Tier 1 capital funds and total classifications to total capital funds. Accordingly, consolidated asset quality could be based on the relationship of aggregate weighted classified assets of the parent company, bank subsidiary(ies) and nonbank subsidiary(ies), to Tier 1 capital.

However, a problem encountered when viewing asset quality on a consolidated basis is the fact that in multi-bank holding companies there is usually a large timing difference between the dates of examinations of the banking subsidiaries. Therefore, the aggregating of classified bank assets from reports prepared at different times, reduces the currentness and validity of conclusions drawn. This problem can only be eliminated by using common examination and inspection dates which are not generally available.

Despite the shortcoming of using classification information from different dates, an examiner may determine that there is a sufficient measure of validity in using the data and may present an analysis based on consolidated weighted classifications. For example, if there are a small number of bank subsidiaries and if the examination dates are near a common point in time, timing differences may be inconsequential. Or, if a review of several years of a bank’s

examinations reveals a relatively constant or stable level of classifications, then the timing of the most recent examination would not invalidate use of the analytical tool. As such, the technique may be employed when circumstances permit.

Other factors to be considered in determining asset quality include the levels of nonaccrual and renegotiated loans, other real estate owned and past due loans. While these assets may not be subject to classification, they usually represent former or emerging problem loans. Moreover, in the aggregate, they may represent a significant proportion of the asset portfolio. If such is the case, they should be taken into consideration when the examiner determines his overall rating of asset quality.

It is difficult to rely on the adequacy of consolidated reserves because they are “fractured” and protect portfolios in different organizations and may not be interchangeable or transferable. The reserve of each entity in the corporate structure must be reviewed or analyzed individually. For example, if consolidated reserves appear inadequate, there is no consolidated reserve account per se that could be increased to adequate proportions. Consequently, the inadequacy would have to be identified at the parent or subsidiary level. Conversely, if consolidated reserves appear to adequately cover the aggregate of all “loss” and a certain portion of “doubtful,” it does not insure that all subsidiaries have adequate reserves. Nevertheless, despite the shortcomings of using consolidated reserves, the analyst should not hesitate to calculate and present a measure of the relationship of consolidated reserves to consolidated loans.

Consolidated Capital (Examiners' Guidelines for Assessing the Capital Adequacy of BHCs) Section 4060.3

4060.3.1 INTRODUCTION TO EXAMINER GUIDELINES FOR RISK-BASED CAPITAL

To assist in assessing the capital adequacy of bank holding companies, the Board has established two measures of capital adequacy, the risk-based capital measure and the tier 1 leverage measure. The tier 1 leverage measure is discussed in section 4060.4.

4060.3.2 OVERVIEW OF RISK-BASED CAPITAL GUIDELINES

The Board's risk-based capital guidelines (guidelines) focus principally on the credit risks associated with the nature of banking organizations' on- and off-balance-sheet assets and on the type and quality of their capital. The information provided in this section should be utilized in conjunction with the risk-based capital guidelines in verifying the bank holding company's risk-based capital. Examiners must refer to Regulation Y (12 C.F.R. 225), appendix A, for a complete description of the risk-based capital adequacy guidelines for bank holding companies.

The guidelines do not incorporate other factors that may also affect the financial condition of banking organizations. These factors include overall interest-rate exposure; liquidity, funding, and market risks; the quality and level of earnings; the effectiveness of loan and investment policies on operational results and the quality of assets; and management's ability to monitor and control financial and operating risks.

The major objectives of the guidelines are to make regulatory capital requirements more sensitive to differences in credit-risk profiles among banking organizations; to factor off-balance-sheet exposures into the assessment of capital adequacy; to minimize disincentives to holding liquid, low-risk assets; and to achieve greater consistency in the evaluation of the capital adequacy of major banking organizations worldwide.

The guidelines set forth *minimum* supervisory capital standards for banking organizations. Therefore, banking organizations are expected to operate with capital levels above the minimum ratios. This is particularly true for banking organizations that are undertaking significant expansion or that are exposed to high or unusual

levels of risk. The guidelines generally apply to those bank holding companies that have \$150 million or more in assets on a consolidated basis.

At year-end 1992, the risk-based capital guidelines require banking organizations to meet a standard, a minimum ratio of total capital to risk-weighted assets of 8.0 percent and a minimum ratio of tier 1 capital to risk-weighted assets of 4.0 percent.

The risk-based capital guidelines are intended to better reflect the differences in credit-risk profiles among banking organizations and explicitly factor off-balance-sheet exposures into the assessment of capital adequacy by weighting on- and off-balance-sheet items by perceived degrees of credit risk. The basic elements of the framework include definitions of capital that include core elements and supplementary elements, assignment of on- and off-balance-sheet items to broad categories of credit risk, and the methodology for computing risk-based capital ratios for banking organizations on an interim and final basis.

In addition, examiners should be aware that when certain organizations that engage in trading activities calculate their risk-based capital ratio under appendix A, they must also refer to appendix E of that part, which incorporates capital charges for certain market risks into the risk-based capital ratio. Examiners should also refer to the *Trading Activities Manual* for more detailed supervisory guidance. When calculating their risk-based capital ratio under appendix A, such organizations are required to refer to appendix E for supplemental rules to determine qualifying and excess capital, calculate risk-weighted assets, calculate market-risk-equivalent assets, and calculate risk-based capital ratios adjusted for market risk.

4060.3.2.1 Definition of Capital

For the purposes of the risk-based capital guidelines, a banking organization's total capital will consist of two major components: "core capital elements" and "supplementary capital elements." To qualify as an element of tier 1 or tier 2 capital, a capital instrument must be unsecured and may not contain or be covered by any covenants, terms, or restrictions that are

inconsistent with safe and sound banking practices.

4060.3.2.1.1 Tier 1 Capital

Tier 1 capital will consist of permanent core capital elements (common stockholders' equity, noncumulative perpetual preferred stock, a limited amount of cumulative perpetual preferred stock, and minority interest in the equity of consolidated subsidiaries) less goodwill and other intangible assets that are required to be deducted. Common stockholders' equity is limited to common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock; less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values. For this purpose, net unrealized holding gains on such equity securities and net unrealized gains (losses) on available-for-sale debt securities are not included in common stockholders' equity.

4060.3.2.1.1.1 Common Stock Considerations

A capital instrument that is not permanent, or that has preference with regard to liquidation or the payment of dividends, is not deemed to be common stock, regardless of whether or not it is called common stock. Other preferences may also call into question whether the capital instrument is common stock. Close scrutiny should be paid to the terms of common stock issues that have issued more than one class of common stock. Preference features may be found in one of the classes and, if so, that class generally should not be treated as common stock.

From a supervisory standpoint, it is desirable that voting common stockholders' equity remain the dominant form of tier 1 capital. Accordingly, the risk-based capital guidelines state that bank holding companies should avoid overreliance on nonvoting equity elements in tier 1 capital. Nonvoting equity elements can arise in connection with common stockholders' equity in cases where a bank holding company has two classes of common stock, one voting and the other nonvoting. Alternatively, one class may have so-called super-voting rights entitling the holder to substantially more votes per share than the other class. In this case, the super-voting shares may

have so many votes per share that the voting power of the other shares is effectively overwhelmed.

Although no formal limit is placed on the amount of noncumulative perpetual preferred stock that may be included in tier 1 capital, the guidelines state that bank holding companies should avoid overreliance on preferred stock and other nonvoting equity elements in tier 1 capital.¹ Bank holding companies that have nonvoting, or effectively nonvoting, common equity and tier 1 perpetual preferred stock in excess of their voting common stock are clearly overrelying on nonvoting equity elements in tier 1 capital. In such cases, it may be appropriate to reallocate some of the nonvoting equity elements from tier 1 capital to tier 2 capital.

4060.3.2.1.1.2 Perpetual Preferred Stock Considerations

Traditional convertible perpetual preferred stock, which the holder can convert into a fixed number of common shares at a preset price, ordinarily does not raise supervisory concerns and therefore generally qualifies as tier 1 capital. However, forms of preferred stock for which the holder must or can convert common stock at the market price prevailing at the time of conversion do raise supervisory concerns. Such preferred stock may be converted into an increasing number of common shares as the banking organization's condition deteriorates, for example, as the market price of the common stock falls. The potential conversion of such preferred stock into common stock could pose a threat of dilution to the existing common shareholders. The threat of dilution could make the issuer reluctant to sell new common stock or place the issuer under strong market pressure to redeem or repurchase the convertible preferred. Such convertible preferred stock generally should be excluded from tier 1 capital.

Perpetual preferred stock issues may include other provisions or pricing mechanisms that would provide significant incentives or pressures for the issuer to redeem the stock for cash, especially at a time when the issuer is in a weakened financial condition. As a general matter, an issue that contains such features would be ineligible for tier 1 treatment.

1. A noncumulative issue may not permit the accruing or payment of unpaid dividends in any form, including the form of dividends payable in common stock. Perpetual preferred stock that calls for the accumulation and future payment of unpaid dividends is deemed to be cumulative, regardless of whether it is called noncumulative, and is generally includable in tier 2 capital.

4060.3.2.1.1.3 Considerations Regarding Minority Interest in Equity Accounts of Consolidated Subsidiaries

Minority interest in equity accounts of consolidated subsidiaries is included in tier 1 capital because, as a general rule, it represents equity that is freely available to absorb losses in operating subsidiaries. Banking organizations are expected to avoid using minority interest as an avenue for introducing elements that do not otherwise qualify as tier 1 capital (such as cumulative or auction-rate perpetual preferred stock) or that would, in effect, result in an excessive reliance on preferred stock within tier 1 capital. If a banking organization uses its minority interest in these ways, supervisory concerns may warrant reallocating some of the minority interest in equity accounts of consolidated subsidiaries from tier 1 to tier 2 capital.

Whenever a banking organization has included perpetual preferred stock of an operating subsidiary in minority interest, a possibility exists that such capital has been issued in excess of the subsidiary's needs for the purpose of raising cheaper capital. Stock issued under these circumstances may, in substance if not in legal form, be secured by the subsidiary's assets. Should the subsidiary fail, the outside preferred investors would have a claim on the subsidiary's assets that is senior to the claim that the banking organization, as a common shareholder, has on those assets. Therefore, as a general rule, issuances in excess of a subsidiary's needs do not qualify for inclusion in capital. The possibility that a secured arrangement exists should be considered if the subsidiary lends significant amounts of funds to the parent banking organization, is unusually well capitalized, has cash flow in excess of its operating needs, holds a significant amount of assets with minimal credit risk (for example, U.S. Treasury securities) that are not consistent with the subsidiary's operations, or has issued preferred stock at a significantly lower rate than the parent could obtain for a direct issue.

Some bank holding companies may use a nonoperating subsidiary or special-purpose entity (SPE) to issue perpetual preferred stock to outside investors. Such a subsidiary may be set up offshore so that it can receive favorable tax treatment for the dividends paid on the stock. In such arrangements, a strong presumption exists that the stock is, in effect, secured by the assets of the subsidiary. It has been agreed upon internationally that a banking organization may not

include in its tier 1 capital minority interest in the perpetual preferred stock of nonoperating subsidiaries. Furthermore, such minority interest may not be included in tier 2 capital unless it can conclusively be proven that the stock is unsecured. Even if the banking organization's accountants have permitted it to account for perpetual preferred stock issued through an SPE as stock of the banking organization, rather than as minority interest in the equity accounts of a consolidated subsidiary, the stock may not be included in tier 1 capital and most likely is not includable in tier 2 capital.

Banking organizations may also use operating or nonoperating subsidiaries to issue subordinated debt. As with perpetual preferred stock issued through such subsidiaries, it is possible that such debt is in effect secured and therefore not includable in capital.

4060.3.2.1.1.4 Certain Tier 1 Cumulative Preferred Stock

On October 21, 1996, the Board approved the use of certain cumulative preferred stock instruments in tier 1 capital for bank holding companies. These instruments, which are marketed under a variety of proprietary names, such as MIPS and TOPRS, are issued out of a special-purpose subsidiary that is wholly owned by the parent company. The proceeds are lent to the parent in the form of a very long-term, deeply subordinated note.

Bank holding companies seeking to issue such securities should consult with their District Federal Reserve Bank. Such arrangements, which give rise to minority interest upon consolidation of the subsidiary with the parent holding company, normally will be accorded tier 1 capital status.

To be eligible as tier 1 capital, such instruments must provide for a minimum five-year consecutive deferral period on distributions to preferred shareholders. In addition, the intercompany loan must be subordinated to all subordinated debt and have the longest feasible maturity.

The amount of these instruments, together with other cumulative preferred stock a bank holding company may include in tier 1 capital, is limited to 25 percent of tier 1 capital. Like other preferred stock includable in capital, these

instruments require Federal Reserve approval before they may be redeemed.

4060.3.2.1.2 Tier 2 Capital

Tier 2 capital consists of (1) a limited amount of the allowance for loan and lease losses;² (2) cumulative perpetual preferred stock (original term of 20 years or more) including related surplus (also includes cumulative perpetual preferred stock exceeding its tier 1 limitation, including auction-rate preferred stock, or any other perpetual preferred stock in which the dividend rate is reset periodically, in whole or in part, based on the holding company's financial condition); (3) hybrid capital instruments, perpetual debt, mandatory convertible debt securities; (4) limited amounts (50 percent of tier 1 capital) of term subordinated debt, intermediate-term preferred stock, and unsecured long-term debt issued before March 12, 1988, that qualified as secondary capital when issued; and (5) limited unrealized holding gains on equity securities. Tier 2 capital may not exceed tier 1 capital (net of goodwill and other intangible assets required to be deducted in accordance with section II.B.1.b. of the risk-based measure of the capital adequacy guidelines).

The amount of mandatory convertible securities that have the proceeds of common or perpetual preferred stock dedicated to retire or redeem them, and a maximum maturity of 12 years, should be treated as term subordinated debt. Mandatory convertible securities, net of the stock dedicated to redeem or retire the issues, are included within tier 2 on an unlimited basis.

There is a limit on the amount of unrealized holding gains on equity securities and the unrealized gains (losses) on other assets. Up to 45 percent of pretax net unrealized holding gains (that is, the excess, if any, of the fair value over historical cost) on available-for-sale equity securities, with readily determinable fair values, may be included in supplementary capital. However, the Federal Reserve may exclude all or a portion of these unrealized gains from tier 2 capital if the Federal Reserve determines that the equity securities are not prudently valued. Unrealized gains (losses) on other types of assets, such as bank premises and available-for-sale

debt securities, are not included in supplementary capital. The Federal Reserve may take these unrealized gains (losses) into account as additional factors when assessing an institution's overall capital adequacy.

4060.3.2.1.3 Deductions from Tier 1 and Tier 2 Capital

The risk-based capital guidelines require that 50 percent of the aggregate amount of capital investments in unconsolidated banking and finance subsidiaries should be deducted from the bank holding company's tier 1 capital and 50 percent from its tier 2 capital. If the amount of tier 2 capital is insufficient for the required deduction, the additional amount needed would be deducted from tier 1 capital. Reciprocal holdings of other banking organizations' capital instruments are to be deducted from the sum of tier 1 and tier 2 capital.

4060.3.2.2 Risk-Weighting of On- and Off-Balance-Sheet Items

The risk-based capital guidelines establish four general categories of credit risk. These categories of credit risk reflect the nature and quality of collateral, guarantees, and organizations issuing or backing obligations. Assets and credit-equivalent amounts of off-balance-sheet items are allocated to the various categories, which are assigned weights of zero percent, 20 percent, 50 percent, and 100 percent depending on the perceived level of credit risk to the banking organization. The majority of on-balance-sheet items will fall in the 100 percent category. The appropriate dollar value of the amount in each category is multiplied by the risk weight associated with that category. The resulting weighted values for each of the risk categories are added together.

Off-balance-sheet items are incorporated into the risk-based capital ratio through a two-step process. First, a credit-equivalent amount³ for the item is calculated by multiplying the item by a credit-conversion factor. Second, the credit-equivalent amount of the off-balance-sheet item

2. At year-end 1992, this allowance is limited to 1.25 percent of risk-weighted assets.

3. For interest-rate and foreign-exchange contracts, the credit-equivalent amount is determined by multiplying the notional amount by a conversion factor (which is different for contracts maturing in one year or less and those maturing in over a year) and adding the resulting amount to the positive mark-to-market values of the contracts. The maximum risk weight applied to interest-rate and exchange-rate contracts is 50 percent.

is then categorized in the same manner as on-balance-sheet items, that is, by credit risk. The credit-conversion factors, that is, factors ranging from zero to 100 percent,⁴ are intended to reflect the risk characteristics of the activity in terms of an on-balance-sheet equivalent. Once the credit-equivalent amount of the off-balance-sheet item is calculated, that amount is then categorized in the same manner as on-balance-sheet items, that is, by credit risk. The resulting sum of the risk-adjusted on- and off-balance-sheet items is the bank holding company's total risk-weighted assets, which comprises the denominator of the risk-based capital ratio.

Generally, if an item may be assigned to more than one risk category, that item should be assigned to the category that has the lowest risk weight. An exception to this general rule exists for an investment in shares of a fund that invests in various securities or money market instruments that are eligible to be assigned to different risk categories. In this case, the total investment would generally be assigned to the risk category appropriate to the highest risk-weighted asset the fund may hold in accordance with the stated limits set forth in the prospectus. Bank holding companies have the option of assigning the investment on a pro rata basis to different risk categories according to the investment limits in the fund's prospectus. Regardless of the risk-weighting method used, the total risk weight of a mutual fund must be no less than 20 percent. If the bank holding company chooses to assign a fund investment on a pro rata basis, and the sum of the investment limits for all asset categories as described in the fund's prospectus exceeds 100 percent, it must assign risk weights *based on the assumption that the fund invests the largest possible percentage of its assets in the highest risk-weighted categories*.^{4a} If, in order to maintain a necessary degree of short-term liquidity, a fund is permitted to hold an insignificant amount of its assets in short-term, highly

liquid securities of superior credit quality that do not qualify for a preferential risk weight, then those securities may be disregarded in determining the fund's risk weight.

The prudent use of hedging instruments by a fund to reduce the risk of its assets will not increase the risk weighting of the fund investment. For example, the use of hedging instruments by a fund to reduce the interest-rate risk of its government bond portfolio will not increase the risk weight of that fund above the 20 percent category. Nonetheless, if a fund engages in any activities that appear speculative in nature or the fund has any other characteristics that are inconsistent with the preferential risk weighting assigned to the fund's assets, holdings in the fund will be assigned to the 100 percent risk category.

Under the guidelines, the primary determinant of the risk category of a particular on- or off-balance-sheet item is the obligor. To a limited extent, collateral or guarantees securing some obligations may be used to place an item or items in lower risk weights than would be available to the obligor.

The forms of collateral that are available for this purpose are cash on deposit in subsidiary lending institutions;⁵ securities issued or guaranteed by the central governments of the OECD-based group of countries, U.S. government agencies, or U.S. government-sponsored agencies; and securities issued by multilateral lending institutions or regional development banks. Obligations that are fully secured by such collateral are assigned to the 20 percent risk category.

In order for a claim to be considered collateralized for risk-based capital purposes, the underlying arrangements must provide that the claim will be secured by recognized collateral throughout its term. A commitment may be considered collateralized for risk-based capital purposes to the extent that its terms provide that advances made under the commitment will be secured throughout their term.

The market value of eligible securities used as collateral should be used to determine whether an obligation is partially or fully secured. For partially secured obligations, the secured por-

4. Interest-rate and exchange-rate contracts use conversion factors significantly below those used for other off-balance-sheet activities. These factors are assigned by remaining maturity, one year or less or more than one year, and range from 0 to 5 percent.

4a. For example, assume that a fund's prospectus permits up to 30 percent of the fund's assets to be invested in 100 percent risk-weighted assets, up to 40 percent of the fund's assets to be invested in 50 percent risk-weighted assets, and up to 60 percent of the fund's assets to be invested in 20 percent risk-weighted assets. In such a case, the bank holding company must assign 30 percent of the total investment to the 100 percent risk category, 40 percent to the 50 percent risk category, and 30 percent to the 20 percent risk category. It may not minimize its capital requirement by assigning 60 percent of the total investment to the 20 percent risk category and 40 percent to the 50 percent risk category.

5. With regard to syndicated credits secured by cash on deposit in the lead institution, there is a limited exception to the rule that cash must be on deposit in the lending institution to be recognized as collateral. A lending institution participating in the syndication may treat its pro rata share of the credit as collateralized if it has a perfected interest in its pro rata share of the collateral.

tion is assigned a 20 percent risk weight. Any unsecured portion is assigned the risk weight appropriate for the obligor or guarantor, if any. The extent to which an off-balance-sheet item is secured by collateral is determined by the degree to which the collateral covers the face amount of the item before it is converted to a credit-equivalent amount and assigned to a risk category.

Certain guarantees are recognized for risk-based capital purposes as follows: guarantees of the OECD and non-OECD central governments; U.S. government agencies and U.S. government-sponsored agencies; state and local governments of the OECD-based group of countries; multilateral lending institutions and regional development banks; and U.S. depository institutions and foreign banks. If an obligation is partially guaranteed, the portion that is not fully covered is assigned the risk weight appropriate for the obligor or collateral, if any. An obligation that is covered by two types of guarantees having different risk weights is apportioned between the two risk categories appropriate for the guarantors.

4060.3.3 IMPLEMENTATION

The guidelines apply to those bank holding companies having \$150 million or more in assets on a consolidated basis. For bank holding companies having *less than* \$150 million in assets on a consolidated basis, the guidelines will apply only to their subsidiary banks unless (1) the parent bank holding company is engaged in nonbank activity involving significant leverage (including off-balance-sheet activity) or (2) the parent holding company has a significant amount of outstanding debt that is held by the general public.

Banking organizations are expected to meet the minimum risk-based capital ratio by year-end 1992. The minimum ratio of capital to risk-weighted assets should be 8 percent or more with at least 4 percent taking the form of tier 1 capital. An assessment of the banking organization's capital adequacy should reflect the level and severity of the classified assets summarized in the examination and inspection.

Banking organizations that do not meet the minimum risk-based capital ratios, or that are considered to lack sufficient capital to support their activities, are expected to develop and implement capital plans acceptable to the Fed-

eral Reserve for achieving adequate levels of capital that will satisfy the provisions of the guidelines or with agreed-upon arrangements established for designated banking organizations. In addition, such banking organizations should avoid any actions, including increased risk-taking or unwarranted expansion, that would lower or further erode their capital positions. In these cases, examiners are to review and comment on banking organizations' capital plans and their progress in meeting minimum risk-based capital requirements.

It would be appropriate to include comments on risk-based capital in the open section of the examination/inspection report when assessing the organization's capital adequacy. Banking organizations should be encouraged to establish as soon as possible capital levels and ratios that are consistent with the organization's overall financial profiles. Examiner comments should address the adequacy of the banking organization's plans and progress toward meeting and maintaining the minimum capital ratios, according to the guidelines.

4060.3.4 DOCUMENTATION

Banking organizations are expected to have adequate systems in place to compute their risk-based capital ratios. Such systems should be sufficient to document the composition of the ratios for regulatory reporting and other supervisory purposes. Generally, supporting documentation will be expected to establish how banking organizations track and report their capital components and on- and off-balance-sheet items that are given preferential treatment. It may be necessary for examiners to reassign on- or off-balance-sheet items that are given a preferential risk weight to a weight of 100 percent, when supporting documentation is inadequate.

Examiners are expected to verify that bank holding companies are correctly reporting the information requested on the holding companies' consolidated financial statements (FR Y-9C), which are used to compute the organization's risk-based capital ratios.

4060.3.5 SELECTED SUPERVISORY CONSIDERATIONS FOR CALCULATING AND EVALUATING RISK-BASED CAPITAL

Examiners must consider certain requirements

and factors when assessing the risk-based capital ratios and the overall capital adequacy of banking organizations. Analysis of these requirements and factors may have a material impact on the amount of capital banking organizations must hold to appropriately support certain activities for on- and off-balance-sheet items. The treatment of the following activities must be considered when assessing compliance with the guidelines and overall capital adequacy of banking organizations.

- *Certain capital-adjustment considerations:*
 - investments and advances to unconsolidated banking and finance subsidiaries
 - review and monitoring of intangible assets
 - reciprocal holdings of banking organizations' capital instruments
- *Certain balance-sheet activity considerations:*
 - investment in shares of a mutual fund
 - mortgage-backed securities
 - loans secured by first liens on one- to four-family residential properties
- *Certain off-balance-sheet activity considerations:*
 - securities lent
 - unused commitments
 - financial and performance standby letters of credit
 - avoidance of double-counting of interest-rate and exchange-rate contracts
 - treatment of commodity and equity swaps

- netting of swaps and similar contracts
- assets sold with recourse
- *Considerations in the overall assessment of capital adequacy:*
 - unrealized asset values
 - terms of subordinated debt and intermediate-term preferred stock
 - ineligible collateral and guarantees
 - overall asset quality
 - interest-only and principal-only strips
 - interest-rate risk
 - claims on, and claims guaranteed by, OECD central governments

4060.3.5.1 Investments in and Advances to Unconsolidated Banking and Finance Subsidiaries and Other Subsidiaries

Generally, debt and equity capital investments and any other instruments deemed to be capital in unconsolidated banking and finance subsidiaries⁶ are to be deducted from the consolidated capital of the banking organizations, regardless of whether the investment is made by a parent bank holding company or its direct or indirect subsidiaries.⁷ Fifty percent of the investment is to be deducted from tier 1 capital and 50 percent from tier 2 capital. In cases where tier 2 capital is not sufficient to absorb the portion (50 percent) of the investment allocated to it, the remainder (up to 100 percent) is to be deducted from tier 1 capital. In addition, capital investments in certain other subsidiaries that, while consolidated for accounting purposes, are not consolidated for certain supervisory or regulatory purposes, such as to facilitate functional regulation, are to be deducted from tier 1 and tier 2 capital of the banking organization in the same proportion as for unconsolidated banking and finance subsidiaries.

Advances to banking and finance subsidiaries (that is, loans, extensions of credit, guarantees, commitments, or any other credit exposures) not considered as capital are included in risk assets at the 100 percent risk weight (unless recognized collateral or guarantees dictate weighting at a lower percentage). However, such advances may be deducted from the parent

banking organization's consolidated capital if examiners find that the risks associated with the advances are similar to the risks associated with capital investments, or if such advances possess risk factors that warrant an adjustment to capital for supervisory purposes. These risk factors could include the absence of collateral support or the clear intention of banking organizations to allow the advances, regardless of form, to serve as capital to subsidiaries.

The Board does not automatically deduct investments in other unconsolidated subsidiaries or investments in joint ventures and associated companies. Nonetheless, resources invested in these entities support assets that are not consolidated with the rest of the bank holding company and, therefore, may not be generally available to support additional leverage or absorb losses of affiliated institutions. Moreover, experience has shown that banking organizations often stand behind the losses of affiliated institutions in order to protect the reputation of the organization as a whole. In some cases, this has led to losses that have exceeded the investments in these entities.

Accordingly, the level and nature of such investments should be closely monitored. For risk-based capital purposes, on a case-by-case basis, a bank holding company may be required to deduct such investments from total capital, to apply an appropriate risk-weighted capital charge against its pro rata share of the assets of the affiliated entity, to perform a required line-by-line consolidation of the entity, or to operate with a risk-based capital ratio above the minimum. In determining the appropriate capital treatment for such actions, the Board will generally take into account whether (1) the banking organization has significant influence over the financial or managerial policies or operations of the affiliated entity, (2) the banking organization is the largest investor in the entity, or (3) other circumstances prevail (such as the existence of significant guarantees from the bank holding company) that appear to closely tie the activities of the affiliated company to the banking organization.

4060.3.5.1.1 Review and Monitoring of Intangible Assets

For bank holding companies, tier 1 capital is generally defined as the sum of core capital

6. A banking and finance subsidiary generally is defined as any company engaged in banking or finance in which the parent institution directly or indirectly holds more than 50 percent of the outstanding voting stock, or which is otherwise controlled or capable of being controlled by the parent organization.

7. An exception to this deduction is to be made in the case of shares acquired in the regular course of securing or collecting a debt previously contracted in good faith.

elements less goodwill and other intangible assets required to be deducted in accordance with section II.B.1.b. of the risk-based measure of the capital adequacy guidelines for BHCs. Certain intangible assets *are not required to be deducted* from capital.

4060.3.5.1.1.1 Certain Intangible Assets That May Be Included in Capital

All servicing assets, including servicing assets on assets other than mortgages (that is, nonmortgage-servicing assets), are deemed identifiable intangible assets. The only types of identifiable intangible assets that may be included in, that is, not deducted from, an organization's capital are readily marketable mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships (PCCRs). The total amount of these assets that are included in capital, in the aggregate, cannot exceed 100 percent of tier 1 capital. Nonmortgage-servicing assets and purchased credit-card relationships are subject to a separate sublimit of 25 percent of tier 1 capital.⁸

Purchased mortgage-servicing assets are identifiable intangible assets associated with the right to service mortgage loans. They usually arise when the rights are purchased from the entity that originated the mortgage loans. An organization that acquires purchased mortgage-servicing assets (PMSAs) has the obligation to collect principal and interest payments and escrow accounts from the mortgagor and to ensure that all amounts collected from the mortgagor are passed on to the appropriate parties. For performing these services, the servicer receives a fee, which is generally based on the remaining principal amount due on the mortgages being serviced.

Originated mortgage-servicing assets (OMSAs) generally represent the servicing rights acquired when an organization originates mort-

gage loans and subsequently sells the loans but retains the servicing rights. OMSAs are capitalized as balance-sheet assets in the same manner as PMSAs as a result of a June 1996 Financial Accounting Standards Board decision (FAS 125), "Accounting for the Transfers and Servicing of Financial Assets and Extinguishments of Liabilities." FAS 125 requires the right to service mortgage loans for others to be separately recognized as a servicing asset or liability, however the rights were acquired. Servicing becomes a distinct asset or liability only when it is contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or by separate purchase or assumption of the servicing. See section 3070.0.6 for information on, and accounting for, mortgage-servicing assets.

Purchased credit-card relationships are identifiable intangible assets associated with the right to provide future advances and other services to credit card holders and to provide correspondent-merchant processing under credit card arrangements that have been originated by, and purchased from, another entity. PCCRs usually arise when a credit card portfolio is bought, and the purchaser acquires the current advances outstanding under the credit card arrangements, which are tangible assets, as well as the right to provide future services to the cardholders, which is an intangible asset. The value of PCCRs is derived from the anticipated profit the purchaser will earn from interest on future advances and from fees charged for other future credit card-related services, after covering expenses and other operating costs such as credit losses.

When calculating the limitations on mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships, the definition of tier 1 capital will be the sum of core capital elements, net of goodwill and net of all identifiable intangible assets and similar assets other than mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships, regardless of when they were acquired, but prior to the deduction of deferred-tax assets.

Bank holding companies must review the book value of all intangible assets at least quarterly and make adjustments to these values as necessary. The fair market values of all intangible assets, nonmortgage-servicing assets, and purchased credit-card relationships also must be determined at least quarterly. This determination is to include adjustments for any significant changes made to the original valuation assumptions, including changes in prepayment estimates or account-attrition rates.

8. Amounts of mortgage-servicing rights and purchased credit-card relationships in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from an organization's core capital elements in determining tier 1 capital. Identifiable intangible assets, however, exclusive of mortgage-servicing assets and purchased credit-card relationships, acquired on or before February 19, 1992, generally *will not* be deducted from capital for supervisory purposes. They will, however, continue to be deducted for applications purposes.

Examiners will review both the book value and the fair market value assigned to these assets, together with supporting documentation, during the inspection process. In addition, the Federal Reserve may require, on a case-by-case basis, an independent valuation of a BHC's intangible assets.

The amount of mortgage-servicing rights, nonmortgage-servicing assets, and purchased credit-card relationships that a bank holding company may include in capital is limited to the lesser of 90 percent of their fair market value (as determined according to the guidance herein), or 100 percent of their book value (on a GAAP basis), as adjusted for capital purposes in accordance with the instructions to the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C Report). If both the application of the limits on mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships and the adjustment of the balance-sheet amount for these intangibles would result in an amount being deducted from capital, the BHC would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

Bank holding companies may elect to deduct disallowed servicing assets on a basis that is net of any associated deferred-tax liability. Deferred-tax liabilities netted in this manner cannot also be netted against deferred-tax assets when determining the amount of deferred-tax assets that are dependent upon future taxable income.

The treatment of identifiable intangible assets discussed above generally will be used in the calculation of a bank holding company's capital ratios for supervisory and applications purposes. In making an overall assessment of an organization's capital adequacy for applications purposes, however, the Board, if it deems appropriate, may take into account the quality and composition of an organization's capital, together with the quality and value of its tangible and intangible assets.

4060.3.5.1.1.2 Examiners' Review of Intangibles

During on-site examinations and inspections, examiners are to review the evidence of title to and the accounting for intangible assets, including their respective amortization schedules and supporting documentation. Carrying values of intangible assets and fair market values assigned to these assets that are overstated or not adequately supported with documentation on how the carrying values were originated, amortized,

or adjusted should be excluded from banking organizations' risk-based capital calculations. Intangible assets in excess of 25 percent of tier 1 capital should be closely scrutinized along with any unusual items and, if supervisory concerns warrant, deducted from tier 1 capital. An arrangement whereby a bank holding company enters into a licensing or leasing agreement or similar transaction to avoid booking an intangible asset should be subject to particularly close scrutiny. Normally, such arrangements will be dealt with by adjusting the bank holding company's capital calculation in an appropriate manner. In making their evaluation of intangible assets, examiners are to consider a number of factors, including—

1. the reliability and predictability of any cash flows associated with the asset and the degree of certainty that can be achieved in periodically determining the asset's useful life and value,
2. the existence of an active and liquid market for the asset, and
3. the feasibility of selling the asset apart from the banking organization or from the bulk of its assets.

Intangible rights that have been allowed to lapse or that are no longer used should be recommended for authorized write-off. Examiners should review intangible assets, such as mortgage-servicing rights, nonmortgage-servicing rights (for example, core deposit intangibles and leaseholds), and purchased credit-card relationships, and determine that the organization properly monitors their level and quality.

Consistent with long-standing Board policy, banking organizations experiencing substantial growth, whether internally or by acquisition, are expected to maintain strong capital positions substantially above minimum supervisory levels, without significant reliance on intangible assets.

4060.3.5.1.2 *Reciprocal Holdings of Banking Organizations' Capital Instruments*

Reciprocal holdings (intentional cross-holdings) of banking organizations' capital instruments are to be deducted from the total capital of an organization for the purpose of determining the total risk-based capital ratio. Reciprocal holdings are cross-holdings resulting from formal or

informal arrangements between banking organizations to swap or exchange each other's capital instruments. Deductions of holdings of capital securities also would not be made in the case of interstate "stake-out" investments that comply with the Board's policy statement on nonvoting equity investments (12 C.F.R. 225.143). In addition, holdings of capital instruments issued by other banking organizations but taken in satisfaction of debts previously contracted would be exempt from any deduction from capital.

4060.3.5.1.3 *Deferred-Tax Assets*

The amount of deferred-tax assets that are dependent on future taxable income, net of the valuation allowance for deferred-tax assets, that may be included in, that is, not deducted from, a banking organization's capital may not exceed the lesser of—

1. the amount of these deferred-tax assets that the banking organization is expected to realize within one year of the calendar quarter-end, based on the projections of future taxable income for that year,⁹ or
2. 10 percent of tier 1 capital. The reported amount of deferred-tax assets, net of any valuation allowance for deferred-tax assets, in excess of the lesser of these two amounts is to be deducted from a banking organization's core capital elements in determining tier 1 capital.

For purposes of calculating this 10 percent limitation, tier 1 capital is defined as the sum of the core capital elements, net of goodwill, and net of all identifiable intangible assets other than mortgage-servicing assets, nonmortgage-

servicing assets, and purchased credit-card relationships, before any disallowed deferred-tax assets are deducted. There generally is no limit in tier 1 capital on the amount of deferred-tax assets that can be realized from taxes paid in prior carry-back years and from future reversals of existing taxable temporary differences.

4060.3.5.1.4 *Revaluation Reserves*

These reserves reflect the formal balance-sheet restatement or revaluation for capital purposes of asset carrying values to reflect the current market values. The Federal Reserve generally has not included unrealized asset appreciation in capital-ratio calculations, although it has long taken such values into account as a separate factor in assessing the overall financial strength of a banking organization.

Consistent with long-standing supervisory practice, the excess of market values over book values for assets held by bank holding companies will generally not be recognized in supplementary capital or in the calculation of the risk-based capital ratio. However, all bank holding companies are encouraged to disclose their equivalent of premises (building) and security-revaluation reserves. The Federal Reserve will consider any appreciation, as well as any depreciation, in specific asset values as additional considerations in assessing overall capital strength and financial condition.

4060.3.5.2 *Certain Balance-Sheet Activity Considerations*

4060.3.5.2.1 *Investment in Shares of a Mutual Fund*

Under the guidelines, the general rule applied when weighting the full amount of an item that qualifies for placement in more than one category—for example, a state revenue bond (50 percent) collateralized by U.S. Treasury securities (20 percent)—is that the asset is assigned to the lowest risk weight. An exception to this general rule is made for an investment in shares of mutual funds when the portfolio consists of various securities and money market instruments that could be assigned to different categories. Such investments in shares of mutual funds are assigned to the risk category appropriate to the *highest* weighted security or instrument that the fund is permitted to hold in accordance with its stated investment objectives. In no case are investments in shares of funds

9. To determine the amount of expected deferred-tax assets realizable in the next 12 months, a banking organization should assume that all existing temporary differences fully reverse as of the report date. Projected future taxable income should not include net operating loss carry-forwards to be used during that year or the amount of existing temporary differences a bank holding company expects to reverse within the year. Such projections should include the estimated effect of tax-planning strategies that the organization expects to implement to realize net operating loss or tax credit carry-forwards that will otherwise expire during the year. A new 12-month projection does not have to be prepared each quarter. On interim report dates, banking organizations may use the future taxable income projections for their current fiscal year, adjusted for any significant changes that have occurred or are expected to occur.

assigned to the zero risk category. For example, if a fund consists of U.S. Treasuries and commercial paper, the entire investment would be risk-weighted at 100 percent. However, if a fund is permitted to hold for short-term liquidity purposes insignificant amounts of its assets in short-term, highly liquid securities that would be weighted at 100 percent, such securities are not to be considered when determining the appropriate risk category into which the banking organization's holdings in the overall investment funds should be assigned. Regardless of the composition of the funds' securities, if the fund engages in any activities that *appear speculative* or have other characteristics that are inconsistent with the preferential risk weighting assigned to the fund's investments, holdings in the fund will be assigned to the 100 percent risk weight. Examiners are to review the holdings of investments in funds that are assigned to a risk category less than 100 percent to determine that the preferential weighting is appropriate.

4060.3.5.2.2 Mortgage-Backed Securities

Mortgage-backed securities (including pass-throughs and collateralized mortgage obligations, but not stripped securities) that are *issued or guaranteed* by a U.S. government agency or U.S. government-sponsored agency are assigned to the risk-weight category appropriate to the issuer or guarantor.

For risk-based capital purposes, mortgage-backed securities (MBSs), including pass-throughs, collateralized mortgage obligations (CMOs), and real estate mortgage investment conduits (REMICs), fall into one of the following categories:

4060.3.5.2.2.1 MBSs Issued or Guaranteed by a U.S. Government Agency or U.S. Government-Sponsored Agency

U.S. government agency MBSs, that is, Government National Mortgage Association (GNMA or Ginnie Mae) securities, generally are assigned a zero percent risk weight. U.S. government-sponsored agency MBSs, that is, Federal National Mortgage Association (FNMA or Fannie Mae) and Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac) securities, generally are assigned a 20 percent risk weight.

4060.3.5.2.2.2 Privately Issued MBSs Meeting Certain Criteria

The holdings of privately issued mortgage-backed securities are to be treated as indirect holdings of the underlying assets and weighted the same as the underlying assets. Privately issued mortgage-backed securities are included in the 50 percent risk-weight category provided that—

1. the structure of the security meets the criteria as set forth in section III.B.3. of the guidelines (and as discussed below);
2. if the security is backed by a pool of conventional mortgages, on one- to four-family residential or multifamily residential properties, *each* underlying mortgage meets the criteria described in section III.B.3. of the guidelines for eligibility for the 50 percent risk category at the time the pool is originated;
3. if the security is backed by privately issued mortgage-backed securities, *each* underlying security qualifies for the 50 percent risk category; and
4. if the security is backed by a pool of multifamily residential mortgages, principal and interest payments on the security are not 30 days or more past due.

Privately issued mortgage-backed securities that do not meet these criteria or that do not qualify for a lower risk weight are generally assigned to the 100 percent risk category. When mortgage-backed securities have underlying assets composed of more than one type of asset that could be assigned to different risk cate-

gories, the entire mortgage-backed security is assigned to the highest risk-weight category, but in no case to a zero risk-weight category.

Examiners are to review holdings of privately issued mortgage-backed securities that are assigned a 50 percent risk weight to ensure that they meet the specified criteria.

Privately issued mortgage-backed securities, including pass-throughs and collateralized mortgage obligations, may be treated as indirect holdings of the underlying assets, provided that—

1. the underlying assets are held by an independent trustee and the trustee has a first-priority, perfected security interest in the underlying assets on behalf of the holders of the security;
2. either the holder of the security has an undivided pro rata ownership interest in the underlying mortgage assets, or the trust or single-purpose entity (or conduit) that issues the security has no liabilities unrelated to the issued securities;
3. the security is structured such that the cash flow from the underlying assets in all cases fully meets the cash-flow requirements of the security without undue reliance on any reinvestment income; and
4. there is no material reinvestment risk associated with any funds awaiting distribution to the holders of the security.

4060.3.5.2.2.3 Stripped Mortgage-Backed Securities

All stripped mortgage-backed securities, including interest-only strips (IOs), principal-only strips (POs), and similar instruments, and any class of mortgage-backed securities that can absorb more than its pro rata share of loss without the whole issue being in default, are assigned to the 100 percent risk-weight category, regardless of the issuer or guarantor.

4060.3.5.2.3 Loans Secured by First Liens on One- to Four-Family Residential Properties or Multifamily Residential Properties

Qualifying one- to four-family residential properties, either owner-occupied or rented, or multifamily residential properties (as listed in the instructions to the bank holding company FR Y-9C Report), are accorded preferential risk-weighting treatment under the guidelines. These loans include loans to builders with substantial

project equity for the construction of one- to four-family residential properties that have been presold under firm contracts to purchasers who have obtained firm commitments for permanent qualifying mortgage loans and have made substantial earnest-money deposits.¹⁰ Effective with an April 1, 1999, amendment, such loans to builders will be considered prudently underwritten only if the bank holding company has obtained sufficient documentation that the buyer of the home intends to purchase the home (that is, has a legally binding written sales contract). The buyer must have the ability to obtain a mortgage sufficient to purchase the home (that is, has a firm written commitment for permanent financing of the home upon completion).

To ensure that only qualifying residential mortgage loans are assigned to the 50 percent risk-weight category, examiners are to review the real estate loans that are included in that category. Such loans are not eligible for preferential treatment unless the loans are made subject to prudent credit underwriting standards; the loan-to-value ratios are conservative;¹¹ the loan-to-value ratios¹² are based on the most current appraisal or evaluation¹³ of the properties, with such appraisal or evaluation conforming to both the Board's real estate appraisal regulations and guidelines and the banking organization's internal appraisal guidelines; and the

10. An amendment, effective December 29, 1992, lowered from 100 to 50 percent the risk weight on loans to finance the construction of one- to four-family residences that have been presold.

11. Prudent underwriting standards dictate that a loan-to-value ratio used in the case of originating a loan to acquire a property would not be deemed conservative unless the value is based on the lower of the acquisition cost of the property or the appraised (or, if appropriate, evaluated) value. Otherwise, the loan-to-value ratio generally would be based on the value of the property as determined by the most current appraisal or, if appropriate, the most current evaluation. All appraisals and evaluations must be made in a manner consistent with the federal banking agencies' real estate appraisal regulations and guidelines and with the banking organization's own appraisal guidelines.

12. If a banking organization holds the first and junior lien(s) on a residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of determining the loan-to-value ratio and assigning a risk weight.

13. Appraisals made at the inception of one- to four-family residential property loans are to be used in calculating loan-to-value ratios. Subsequent appraisals showing increased property values may be used to support higher loan-to-value ratios. However, to avoid penalizing banking organizations doing business in markets with declining real estate values, appraisals of residential properties as conducted at inception are to be used in calculating loan-to-value ratios, even though more current appraisals showing decreases in values are available.

loans are performing in accordance with their original terms and are not 90 days or more past due or carried in nonaccrual status.

Where examiners find that some residential mortgage loans do not meet all the specified criteria or are made for the purpose of speculative real estate development, such loans should be assigned to the 100 percent risk-weight category in accordance with the guidelines.

Examiners should keep in mind that loans secured by multifamily residential property must meet additional criteria to be included in the 50 percent risk-weight category. These include the requirement that all principal and interest payments on the loan must have been made on time for at least the year preceding the placement of the loan in this risk-weight category. If the existing property owner is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this risk-weight category. In addition, amortization of the principal and interest must occur over a period of not more than 30 years and the minimum original maturity for repayment of principal must not be less than seven years. Also, the annual net operating income (before debt service) generated by the property during its most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate) or, in the case of a cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection to the institution.

If examiners find material evidence of residential mortgage loans having questionable eligibility for preferential risk-weighting, but cannot readily identify the amounts that were inappropriately weighted, the overall evaluation of the banking organization's capital adequacy should reflect a higher capital requirement than otherwise would be the case.

4060.3.5.2.4 Small-Business Loans and Leases on Personal Property Transferred with Recourse

A qualifying banking organization (that is, a bank holding company) that has transferred small-business loans and leases on personal property (small-business obligations) with recourse can include in weighted-risk assets only

the amount of retained recourse, provided two conditions are met. First, the transaction must be treated as a sale under GAAP and, second, the banking organization must establish pursuant to GAAP a noncapital reserve sufficient to meet the organization's reasonably estimated liability under the recourse arrangement. Only loans and leases to businesses that meet the criteria for a small-business concern established by the Small Business Administration under section 3(a) of the Small Business Act are eligible for this capital treatment.

A banking organization qualifies if it meets the criteria for well capitalized or, by order of the Board, adequately capitalized, as those criteria are set forth in the Board's prompt-corrective-action regulation for state member banks (12 C.F.R. 208.40). For purposes of determining whether an organization meets these criteria, its capital ratios must be calculated without regard to the capital treatment for transfers of small-business obligations with recourse. The total outstanding amount of recourse retained by a qualifying banking organization on transfers of small-business obligations receiving the preferential capital treatment cannot exceed 15 percent of the organization's total risk-based capital. By order, the Board may approve a higher limit.

If a bank holding company ceases to be qualifying or exceeds the 15 percent capital limitation, the preferential capital treatment will continue to apply to any transfers of small-business obligations with recourse that were consummated during the time that the organization was qualifying and did not exceed the capital limit.

4060.3.5.3 Certain Off-Balance-Sheet Activity Considerations

4060.3.5.3.1 Securities Lent

Examiners are to review securities-lent transactions of banking organizations and verify that, when banking organizations have risk of loss as either principal or agent, the transaction is converted at 100 percent and assigned to the appropriate risk-weight category. The guidelines treat securities lent in two ways, depending on the nature of the transactions and the risk of loss. If banking organizations are acting as their customers' agent and do not indemnify their customers against loss, the amount of securities lent is excluded from risk-based capital calculations. If banking organizations lend their own securities or, acting as an agent for a customer,

lend the customers' securities and indemnify their customers against loss, the amount of securities lent is converted at 100 percent and assigned the risk weight appropriate to the obligor, or to any collateral delivered to the lending banking organizations or the independent custodians acting on the lenders' behalf.

If securities lent are secured by cash on deposit in subsidiary lending institutions, the appropriate risk weight is either zero or 20 percent,

depending on qualification criteria. Claims collateralized by cash on deposit in subsidiary lending institutions for which a margin of collateral is maintained on a daily basis—fully taking into account any change in the bank's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim—are assigned the zero risk weight. When securities lent are collateralized by cash on deposit in subsidiary lending institutions for which a daily margin is not maintained, the cash collateral is assigned a 20 percent risk weight.

When a banking organization is acting as agent for a customer in a transaction involving the lending or sale of securities that is collateralized by cash delivered to the banking organization, the transaction is deemed to be collateralized by cash on deposit in a subsidiary lending institution for purposes of determining the appropriate risk-weight category, provided that any indemnification is limited to no more than the difference between the market value of the securities and the cash collateral received and any reinvestment risk associated with that cash collateral is borne by the customer.

4060.3.5.3.2 Commitments to Make Off-Balance-Sheet Transactions

A commitment to make a standby letter of credit is considered to be a standby letter of credit. Accordingly, such a commitment should be converted to an on-balance-sheet credit-equivalent amount at 100 percent if it is a commitment to make a financial standby letter of credit or at 50 percent if it is a commitment to make a performance standby letter of credit.

A commitment to make a commitment is treated as a single commitment whose maturity is the combined maturity of the two commitments. For example, a six-month commitment to make a one-year commitment is considered to be a single eighteen-month commitment. Because the maturity is over one year, such a commitment would be accorded the 50 percent conversion factor appropriate to long-term commitments, rather than the zero percent conversion factor that would be accorded to separate unrelated short-term commitments of six months and one year.

A commitment to make a commercial letter of credit may be treated as either a commitment or a commercial letter of credit, whichever results in the lower conversion factor. Normally, this would mean that a commitment under one year to make a commercial letter of credit would

be treated as a commitment and converted at zero percent, while a similar commitment of over one year would be treated as a commercial letter of credit and converted at 20 percent.

If a commitment facility is structured so that it can be drawn down in several forms, such as a standby letter of credit, a loan, or a commercial letter of credit, the entire facility should be treated as a commitment to extend credit in the form that incurs the highest capital charge. Thus, if a facility could be drawn down in any of the three forms just cited, the entire facility would be treated as a commitment to issue a standby letter of credit and would be converted at 100 percent rather than being treated as a commitment to make a loan or commercial letter of credit, which would have a lower conversion factor.

4060.3.5.3.3 Unused Commitments

Unused commitments (including underwriting commitments and commercial and consumer credit commitments) that have an original maturity of one year or less are converted at zero percent, as are commitments that are unconditionally cancelable at any time at the option of the banking organization, provided that a separate credit decision is made before each drawing under the facility. Unused commitments with an original maturity of over one year are converted at 50 percent.

“Original maturity” is defined as the length of time between the date the commitment is issued and the earliest date on which (1) the banking organization can, at its option, unconditionally cancel¹⁴ the commitment *and* (2) the banking organization is scheduled to (and as a normal practice actually does) review the facility to determine whether or not the unused commitment should be extended. See SR-90-23 regarding loan commitments and put options.

Banking organizations must continue to review unused commitments at least annually to determine that they qualify for short-term commitment treatment. Examiners are to review unused commitments to determine that they meet the conditions for being treated as short-term or long-term and are appropriately weighted for risk-based capital calculations.

14. Does not refer to material-adverse-change clauses.

A commitment may be issued that expires within one year with the understanding that the commitment will be renewed upon expiration subject to a thorough credit review of the obligor. Such a commitment may be converted at zero percent only if (1) the renegotiation process is carried out in good faith, involves a full credit assessment of the obligor, and allows the bank holding company flexibility to alter the terms and conditions of the new commitment; (2) it has absolute discretion to decline renewal or extension of the commitment; and (3) the renegotiated commitment expires within 12 months from the time it is made. Some commitments contain unusual renegotiation arrangements that would give the borrower a considerable amount of advance notice that a commitment would not be renewed. Provisions of this kind can have the effect of creating a rolling-commitment arrangement that should be treated for risk-based capital purposes as a long-term commitment and, thus, be converted to a credit-equivalent amount at 50 percent. Normally, the renegotiation process should take no more than six to eight weeks, and in many cases it should take less time. The renegotiation period should immediately precede the expiration date of the commitment. The reasons for provisions in a commitment arrangement that would appear to provide for a protracted renegotiation period should be thoroughly documented by the bank holding company and reviewed by the examiner.

A commitment may be structured to be drawn down in a number of tranches, some exercisable in one year or less and others exercisable in over one year. The full amount of such a commitment is deemed to be over one year and converted at 50 percent. Some long-term commitments may permit the customer to draw down varying amounts at different times to accommodate, for example, seasonal borrowing needs. The 50 percent conversion factor should be applied to the maximum amount that could be drawn down under such commitments.

4060.3.5.3.4 Derivative Contracts (Interest-Rate, Exchange-Rate, and Commodity- (Including Precious Metals) and Equity-Linked Contracts)

Credit-equivalent amounts are computed for each of the following off-balance-sheet contracts:

1. interest-rate contracts

- a. single-currency interest-rate swaps
 - b. basis swaps
 - c. forward-rate agreements
 - d. interest-rate options purchased (including caps, collars, and floors purchased)
 - e. any other instrument linked to interest rates that gives rise to similar credit risks (including when-issued securities and forward deposits accepted)
2. exchange-rate contracts
 - a. cross-currency interest-rate swaps
 - b. forward foreign-exchange-rate contracts
 - c. currency options purchased
 - d. any other instrument linked to exchange rates that gives rise to similar credit risks
 3. equity derivative contracts
 - a. equity-linked swaps
 - b. equity-linked options purchased
 - c. forward equity-linked contracts
 - d. any other instrument linked to equities that gives rise to similar credit risks
 4. commodity (including precious metal) derivative contracts
 - a. commodity-linked swaps
 - b. commodity-linked options purchased
 - c. forward commodity-linked contracts
 - d. any other instrument linked to commodities that gives rise to similar credit risks

Derivative Contract Exceptions. Exchange-rate contracts with an original maturity of 14 or fewer calendar days and derivative contracts traded on exchanges that require daily receipt and payment of cash variation margin may be excluded from the risk-based ratio calculation. Gold contracts are accorded the same treatment as exchange-rate contracts except that gold contracts with an original maturity of 14 or fewer calendar days are included in the risk-based ratio calculation. Over-the-counter options purchased are included and treated in the same way as other derivative contracts.

4060.3.5.3.4.1 Calculation of Credit-Equivalent Amounts and the Application of Risk Weights

The credit-equivalent amount of a derivative contract that is not subject to a qualifying bilateral netting contract in accordance with subsection 4060.3.5.3.4 above is equal to the sum of—

1. the current exposure (sometimes referred to as the replacement cost) of the contract and
2. an estimate of the potential future credit exposure of the contract.

The current exposure is determined by the mark-to-market value of the contract. If the

mark-to-market value is positive, then the current exposure is equal to that mark-to-market value. If the mark-to-market value is zero or negative, then the current exposure is zero. Mark-to-market values are measured in dollars, regardless of the currency or currencies specified in the contract, and should reflect changes in the relevant rates, as well as in counterparty credit quality.

The potential future credit exposure of a contract, including a contract with a negative mark-to-market value, is estimated by multiplying the notional principal amount of the contract by a credit-conversion factor. Banking organizations should use, subject to examiner review, the effective rather than the apparent or stated notional amount in this calculation. The conversion factors (in percent) are listed below.

For a contract that is structured such that on specified dates any outstanding exposure is settled and the terms are reset so that the market value of the contract is zero, the remaining maturity is equal to the time until the next reset date. For an interest-rate contract with a remaining maturity of more than one year that meets these criteria, the minimum conversion factor is 0.5 percent.

For a contract with multiple exchanges of principal, the conversion factor is multiplied by the number of remaining payments in the contract. A derivative contract not included in the definitions of interest-rate, exchange-rate, equity, or commodity contracts as set forth in subsection 4060.3.5.3.4 is subject to the same conversion factors as a commodity, excluding precious metals.

No potential future credit exposure is calculated for a single-currency interest-rate swap

in which payments are made based on two floating-rate indices, so-called floating/floating or basis swaps; the credit exposure on these contracts is evaluated solely on the basis of their mark-to-market values.

The Board has noted that these conversion factors, which are based on observed volatilities of the particular types of instruments, are subject to review and modification in light of changing volatilities or market conditions.

100 Percent Credit-Conversion Factor for Off-Balance-Sheet Items for BHCs

1. Direct credit substitutes (These include general guarantees of indebtedness and all guarantee-type instruments, including standby letters of credit backing the financial obligations of other parties.)
2. Risk participations in banker's acceptances and direct credit substitutes, such as standby letters of credit
3. Sale and repurchase agreements and assets sold with recourse that are not included on the balance sheet
4. Forward agreements to purchase assets, including financing facilities, on which draw-down is certain
5. Securities lent for which the banking organization is at risk

50 Percent Conversion Factor

1. Transaction-related contingencies (These include bid-bonds, performance bonds, warranties, and standby letters of credit backing the nonfinancial performance of other parties.)

CONVERSION FACTORS

[in percent]

<i>Remaining maturity</i>	<i>Interest-rate</i>	<i>Exchange-rate and gold</i>	<i>Equity</i>	<i>Commodity, excluding precious metals</i>	<i>Precious metals, except gold</i>
One year or less	0.0	1.0	6.0	10.0	7.0
Over one to five years	0.5	5.0	8.0	12.0	7.0
Over five years	1.5	7.5	10.0	15.0	8.0

2. Unused portions of commitments with an original maturity exceeding one year, including underwriting commitments and commercial credit lines

3. Revolving underwriting facilities (RUFs), note issuance facilities (NIFs), and similar arrangements

20 Percent Conversion Factor

Short-term, self-liquidating, trade-related contingencies, including commercial letters of credit

Zero Percent Conversion Factor

Unused portions of commitments with an original maturity of one year or less, or which are unconditionally cancelable at any time, provided a separate credit decision is made before each drawing

Examples of the calculation of credit-equivalent amounts for these instruments are shown on the following page.

**CALCULATING CREDIT-EQUIVALENT AMOUNTS
FOR DERIVATIVE CONTRACTS**

<i>Type of contract</i>	<i>Notional principal amount</i>	<i>Conversion factor</i>	<i>Potential exposure (dollars)</i>	<i>Mark-to-market</i>	<i>Current exposure (dollars)</i>	<i>Credit-equivalent amount</i>
(1) 120-day forward foreign exchange	5,000,000	.01	50,000	100,000	100,000	150,000
(2) 4-year forward foreign exchange	6,000,000	.05	300,000	-120,000	0	300,000
(3) 3-year single-currency fixed and floating interest-rate swap	10,000,000	.005	50,000	200,000	200,000	250,000
(4) 6-month oil swap	10,000,000	.10	1,000,000	-250,000	0	1,000,000
(5) 7-year cross-currency floating and floating interest-rate swap	20,000,000	.075	1,500,000	-1,500,000	0	1,500,000
TOTAL			2,900,000	+	300,000	= 3,200,000

If contracts (1) through (5) above are subject to a qualifying bilateral netting contract, then the following applies:

<i>Contract</i>	<i>Potential future exposure</i>	<i>Net current exposure</i>	<i>Credit-equivalent amount</i>
(1)	50,000		
(2)	300,000		
(3)	50,000		
(4)	1,000,000		
(5)	1,500,000		
TOTAL	2,900,000	+ 0	= 2,900,000

Note: The total of the mark-to-market values from the first table is -\$1,570,000. Since this is a negative amount, the net current exposure is zero.

To recognize the effects of bilateral netting on potential future exposure the following formula applies:

$$A_{\text{net}} = (0.4 \times A_{\text{gross}}) + 0.6(\text{NGR} \times A_{\text{gross}})$$

In the above example, where the net current exposure is zero, the credit-equivalent amount would be calculated as follows:

$$\text{NGR} = 0 = (0/300,000)$$

$$A_{\text{net}} = (0.4 \times \$2,900,000) + .6(0 \times \$2,900,000)$$

$$A_{\text{net}} = \$1,160,000$$

The credit-equivalent amount is

$$\$1,160,000 + 0 = \$1,160,000.$$

If the net current exposure was a positive number, for example \$200,000, the credit equivalent would be calculated as follows:

$$\text{NGR} = .67 = (\$200,000/\$300,000)$$

$$A_{\text{net}} = (0.4 \times \$2,900,000) + 0.6(.67 \times \$2,900,000)$$

$$A_{\text{net}} = \$2,325,800$$

The credit-equivalent amount would be $\$2,325,800 + \$200,000 = \$2,525,800$.

Applying Risk Weights. Once the credit-equivalent amount for a derivative contract, or a group of derivative contracts subject to a qualifying bilateral netting contract, has been determined, that amount is assigned to the risk-weight category appropriate to the counterparty, or, if relevant, the guarantor or the nature of any collateral.¹⁵ However, the maximum weight that will be applied to the credit-equivalent amount of such contracts is 50 percent.

4060.3.5.3.4.2 Avoidance of Double Counting of Derivative Contracts

In certain cases, credit exposures arising from derivative contracts may be reflected, in part, on the balance sheet. To avoid double counting

such exposures in the assessment of capital adequacy and, perhaps, assigning inappropriate risk weights, counterparty credit exposures arising from the derivative instruments covered by the guidelines may need to be excluded by examiners from balance-sheet assets in calculating a banking organization's risk-based capital ratios. This exclusion will eliminate the possibility that an organization could be required to hold capital against both an off-balance-sheet and on-balance-sheet amount for the same item. This treatment is not accorded to margin accounts and accrued receivables related to interest-rate and exchange-rate contracts.

The aggregate on-balance-sheet amount excluded from the risk-based capital calculation is equal to the lower of—

1. each contract's positive on-balance-sheet amount or
2. its positive market value included in the off-balance-sheet risk-based capital calculation.

For example, a forward contract that is marked to market will have the same market value on the balance sheet as is used in calculating the credit-equivalent amount for off-balance-sheet exposures under the guidelines. Therefore, the on-balance-sheet amount is not included in the risk-based capital calculation. Where either the contract's on-balance-sheet amount or its market value is negative or zero, no deduction from on-balance-sheet items is necessary for that contract.

If the positive on-balance-sheet asset amount exceeds the contract's market value, the excess (up to the amount of the on-balance-sheet asset) should be included in the appropriate risk-weight category. For example, a purchased option will often have an on-balance-sheet amount equal to the fee paid until the option expires. If that amount exceeds market value, the excess of carrying value over market value would be included in the appropriate risk-weight category for purposes of the on-balance-sheet portion of the calculation.

4060.3.5.3.5 Treatment of Commodity and Equity Contracts

Credit-equivalent amounts of swap agreements and futures, forwards, and option contracts on commodities, equities, and equity indexes are calculated in the same way as credit-equivalent amounts of foreign-exchange-rate contracts. Contracts on commodities, equities, and equity

15. For derivative contracts, sufficiency of collateral or guarantees is determined by the market value of the collateral or the amount of the guarantee in relation to the credit-equivalent amount. Collateral and guarantees are subject to the same provisions noted under section III.B. of appendix A of Regulation Y.

indexes traded on exchanges that require daily payment of variation margin are excluded from the risk-based capital calculation. Such a margining arrangement requires the marking to market of contracts and the settling of the resulting gains and losses in cash on a daily basis.

4060.3.5.3.6 *Netting of Swaps and Similar Contracts*

Netting refers to the offsetting of positive and negative mark-to-market values in the determination of a current exposure to be used in the calculation of a credit-equivalent amount. Any legally enforceable form of bilateral netting (that is, netting with a single counterparty) of derivative contracts is recognized for purposes of calculating the credit-equivalent amount provided that—

1. the netting is accomplished under a written netting contract that creates a single legal obligation, covering all included individual contracts, with the effect that the organization would have a claim to receive, or an obligation to receive or pay, only the net amount of the sum of the positive and negative mark-to-market values on included individual contracts in the event that a counterparty, or a counterparty to whom the contract has been validly assigned, fails to perform due to default, insolvency, liquidation, or similar circumstances;

2. the banking organization obtains written and reasoned legal opinions that in the event of a legal challenge—including one resulting from default, insolvency, liquidation, or similar circumstances—the relevant court and administrative authorities would find the banking organization's exposure to be such a net amount under—

- a. the law of the jurisdiction in which the counterparty is chartered or the equivalent location in the case of noncorporate entities, and if a branch of the counterparty is involved, then also under the law of the jurisdiction in which the branch is located;

- b. the law that governs the individual contracts covered by the netting contract; and

- c. the law that governs the netting contract;

3. the banking organization establishes and maintains procedures to ensure that the legal characteristics of netting contracts are kept under review in light of possible changes in relevant law; and

4. the banking organization maintains in its files documentation adequate to support the netting of rate contracts, including a copy of the bilateral netting contract and necessary legal opinions.

A contract containing a walkaway clause is not eligible for netting for purposes of calculating the credit-equivalent amount.¹⁶

By netting individual contracts for the purpose of calculating credit-equivalent amounts of derivative contracts, a banking organization represents that it has met the requirements of the risk-based measure of the capital adequacy guidelines for BHCs and that all the appropriate documents are in the organization's files and available for inspection by the Federal Reserve. The Federal Reserve may determine that a banking organization's files are inadequate or that a netting contract, or any of its underlying individual contracts, may not be legally enforceable. If such a determination is made, the netting contract may be disqualified from recognition for risk-based capital purposes or underlying individual contracts may be treated as though they are not subject to the netting contract.

The credit-equivalent amount of contracts that are subject to a qualifying bilateral netting contract is calculated by adding—

1. the current exposure of the netting contract (net current exposure) and

2. the sum of the estimates of the potential future credit exposures on all individual contracts subject to the netting contract (gross potential future exposure) adjusted to reflect the effects of the netting contract.¹⁷

The net current exposure of the netting contract is determined by summing all positive and negative mark-to-market values of the individual contracts included in the netting contract. If the net sum of the mark-to-market values is positive, then the current exposure of the netting contract is equal to that sum. If the net sum of the mark-to-market values is zero or negative, then the current exposure of the netting contract is zero. The Federal Reserve may determine that a netting contract qualifies for risk-based capital netting treatment even though certain individual

16. A walkaway clause is a provision in a netting contract that permits a nondefaulting counterparty to make lower payments than it would make otherwise under the contract, or no payment at all, to a defaulter or to the estate of a defaulter, even if the defaulter or the estate of the defaulter is a net creditor under the contract.

17. For purposes of calculating potential future credit exposure to a netting counterparty for foreign-exchange contracts and other similar contracts in which notional principal is equivalent to cash flows, total notional principal is defined as the net receipts falling due on each value date in each currency.

contracts may not qualify. In such instances, the nonqualifying contracts should be treated as individual contracts that are not subject to the netting contract.

Gross potential future exposure or A_{gross} is calculated by summing the estimates of potential future exposure (determined in accordance with subsection 4060.3.5.3.4.1) for each individual contract subject to the qualifying bilateral netting contract.

The effects of the bilateral netting contract on the gross potential future exposure are recognized through the application of a formula that results in an adjusted add-on amount (A_{net}). The formula, which employs the ratio of net current exposure to gross current exposure (NGR), is expressed as:

$$A_{\text{net}} = (0.4 \times A_{\text{gross}}) + 0.6(\text{NGR} \times A_{\text{gross}})$$

The NGR may be calculated in accordance with either the counterparty-by-counterparty approach or the aggregate approach.

Under the counterparty-by-counterparty approach, the NGR is the ratio of the net current exposure for a netting contract to the gross current exposure of the netting contract. The gross current exposure is the sum of the current exposures of all individual contracts subject to the netting contract calculated in accordance with subsection 4060.3.5.3.4.1. Net negative mark-to-market values for individual netting contracts with the same counterparty may not be used to offset net positive mark-to-market values for other netting contracts with the same counterparty.

Under the aggregate approach, the NGR is the ratio of the sum of all the net current exposures for qualifying bilateral netting contracts to the sum of all the gross current exposures for those netting contracts (each gross current exposure is calculated in the same manner as in subsection 4060.3.5.3.6 (counterparty-by-counterparty approach)). Net negative mark-to-market values for individual counterparties may not be used to offset net positive current exposures for other counterparties.

A banking organization must consistently use either the counterparty-by-counterparty approach or the aggregate approach to calculate the NGR. Regardless of the approach used, the NGR should be applied individually to each qualifying bilateral netting contract to determine the adjusted add-on for that netting contract.

In the event a netting contract covers contracts that are normally excluded from the risk-based ratio calculation—for example, exchange-

rate contracts with an original maturity of 14 or fewer calendar days or instruments traded on exchanges that require daily payment of cash variation margin—an institution may elect to either include or exclude all mark-to-market values of such contracts when determining net current exposure, provided the method chosen is applied consistently.

Examiners are to review the netting of off-balance-sheet derivative contractual arrangements used by banking organizations when calculating or verifying risk-based capital ratios to ensure that the positions of such contracts are reported gross unless the net positions of those contracts reflect netting arrangements that comply with the netting requirements listed previously.

4060.3.5.3.7 Treatment of Assets Sold with Recourse

For capital adequacy purposes, a bank holding company must hold capital against assets sold with recourse if any risk of loss is retained, regardless of how the transaction is reported. As a general rule, bank holding companies report all assets sold with recourse in accordance with the Financial Accounting Standards Board (FASB) Statement No. 77, "Reporting of Transferors for Transfers of Receivables with Recourse." Therefore, many of the holding company's assets sold with recourse are treated as sales of the underlying assets and removed from the company's balance sheet. (In accordance with FASB Statement No. 77, the holding company must also book a liability reserve for the amount of the expected loss.)

The outstanding amount of the assets sold with recourse that are removed from the holding company's balance sheet must be reported, for purposes of regulatory financial statement reporting, as an off-balance-sheet transaction. For risk-based capital purposes, bank holding companies must hold capital against the entire amount of those assets reported as off-balance-sheet transactions and convert them to a credit-equivalent amount at 100 percent. Such assets must then be assigned to the risk category appropriate to the obligor or, if relevant, the guarantor or nature of the collateral, provided that the transactions meet the definition of assets sold with recourse, including assets sold subject to *pro rata* and other loss-sharing arrange-

ments.¹⁸ This treatment applies to the sale, with recourse, of any assets, including the sale of one- to four-family and multifamily residential mortgages, with one limited exception.

The limited exception applies to transfers of pools of residential mortgages that have been made with insignificant recourse for which a liability or specific noncapital reserve has been established and is maintained for the maximum amount of possible loss under the recourse provision. No capital charge is assessed on transfers of pools of residential mortgages, either under government-related programs or to private obligors, if the maximum possible recourse obligation at the time of the transfer is less than the expected loss on the transferred assets and if a liability or a specifically identified noncapital reserve is established and maintained in an amount equal to the maximum loss possible under the recourse provision. Under this arrangement, at the time of sale, the transferring banking organization effectively reduces current earnings and, thus, capital (through the retained earnings account) by the amount of the maximum possible loss, and is not subject to further loss.

4060.3.5.3.8 Financial Standby Letters of Credit and Performance Standby Letters of Credit

The determining characteristic of whether a standby letter of credit is financial or performance is the contractual obligation that triggers payment. If the event that triggers payment is financial, such as a failure to pay money, the standby letter of credit should be classified as financial. If the event that triggers payment is performance-related, such as a failure to ship a product or provide a service, the standby letter of credit should be classified as performance. The vast majority of standby letters of credit a bank issues are considered, for risk-based capi-

tal purposes, to be financial standby letters of credit. (See SR-95-20 (SUP).)

4060.3.5.3.8.1 Financial Standby Letters of Credit

The risk-based capital guidelines describe a financial standby letter of credit as an irrevocable undertaking by a banking organization to guarantee repayment of a financial obligation. Such a guarantee is considered a direct credit substitute and is converted to an on-balance-sheet credit-equivalent amount at 100 percent. The resulting credit-equivalent amount is then risk-weighted according to the type of counterparty or, if relevant, to any guarantee or collateral.

Financial standby letters of credit have a higher conversion factor than performance standby letters of credit. This is primarily because, unlike performance standby letters of credit, financial standby letters of credit tend to be drawn down only when the account party's financial condition has deteriorated.

A standby letter of credit guaranteeing the performance of a contractual obligation to pay money is viewed as a financial letter of credit. For example, a standby letter of credit backing a purchaser's contractual obligation to pay for delivered goods is a financial guarantee backing the purchaser's credit standing for the sale. It would not be viewed as a performance letter of credit guaranteeing the purchaser's performance to make payment under the contract.

A failure to perform a contractual obligation involving the payment of money can arise in a variety of situations, for example, failure to pay insurance premiums or deductibles, failure to pay insurance claims, failure to pay worker's compensation obligations, or failure to pay for (or arrange) cleanup in the event the account party's operations cause environmental damage. In each instance, the triggering event is the failure to pay money under a contractual obligation. A standby letter of credit guaranteeing payment in the event the account party fails to perform any of these contractual financial obligations or other circumstances should be treated as a financial standby letter of credit and converted to an on-balance-sheet credit-equivalent amount at 100 percent.

4060.3.5.3.8.2 Performance Standby Letters of Credit

A performance standby letter of credit is an irrevocable undertaking by the organization to

18. The terms of a transfer of assets with recourse may contractually limit the amount of the institution's liability to an amount less than the effective risk-based capital requirement for the assets being transferred with recourse. If such a transaction is recognized as a sale under GAAP, the amount of total capital required is equal to the maximum amount of loss possible under the recourse provision less any amount held in an associated noncapital liability account established pursuant to GAAP to cover estimated probable losses under the recourse provision.

make payment in the event the customer fails to perform a nonfinancial contractual obligation. This type of letter of credit is considered a transaction-related contingency and is converted to an on-balance-sheet credit-equivalent amount at 50 percent. The resulting credit-equivalent amount is then risk-weighted according to the type of counterparty or, if relevant, to any guarantee or collateral.

4060.3.5.3.9 *Credit Derivatives*

For purposes of risk-based capital, credit derivatives generally are to be treated as off-balance-sheet direct credit substitutes. They are arrangements that allow one party (the beneficiary) to transfer the credit risk of a "reference asset," which it often actually owns, to another party (the guarantor).^{18a} The notional amount of the contract should be converted at 100 percent to determine the credit-equivalent amount to be included in risk-weighted assets of the guarantor.^{18b} A banking organization providing a guarantee through a credit-derivative transaction should assign its credit exposure to the risk category appropriate to the obligor of the reference asset or any collateral. On the other hand, a banking organization that owns the underlying asset upon which effective credit protection has been acquired through a credit derivative may under certain circumstances assign the unamortized portion of the underlying asset to the risk category appropriate to the guarantor (for example, to the 20 percent risk category if the guarantor is a bank or, if a bank holding company, to the 100 percent risk-weight category).

Whether the credit derivative is considered an eligible guarantee for purposes of risk-based capital depends on the *degree of credit protection* actually provided, which may be limited depending on the terms of the arrangement. For example, a relatively restrictive definition of a default event or a materiality threshold that requires a comparably high percentage of loss to

occur before the guarantor is obliged to pay could effectively limit the amount of credit risk actually transferred in the transaction. If the terms of the credit-derivative arrangement significantly limit the degree of risk transference, then the beneficiary bank cannot reduce the risk weight of the "protected" asset to that of the guarantor. On the other hand, even if the transfer of credit risk is limited, a banking organization providing limited credit protection through a credit derivative should hold appropriate capital against the underlying exposure while the organization is exposed to the credit risk of the reference asset.

Banking organizations providing a guarantee through a credit derivative may mitigate the credit risk associated with the transaction by entering into an offsetting credit derivative with another counterparty, a so-called "back-to-back" position. Organizations that have entered into such a position may treat the first credit derivative as guaranteed by the offsetting transaction for risk-based capital purposes. Accordingly, the notional amount of the first credit derivative may be assigned to the risk category appropriate to the counterparty providing credit protection through the offsetting credit-derivative arrangement (for example, to the 20 percent risk category if the counterparty is an OECD bank).

In some instances, the reference asset in the credit-derivative transaction may not be identical to the underlying asset for which the beneficiary has acquired credit protection. For example, a credit derivative used to offset the credit exposure of a loan to a corporate customer may use a publicly traded corporate bond of the customer as the reference asset, whose credit quality serves as a proxy for the on-balance-sheet loan. In such a case, the underlying asset will still generally be considered guaranteed for capital purposes as long as both the underlying asset and the reference asset are obligations of the same legal entity and have the same level of seniority in bankruptcy. In addition, banking organizations offsetting credit exposure in this manner would be obligated to demonstrate to examiners that there is a high degree of correlation between the two instruments; the reference instrument is a reasonable and sufficiently liquid proxy for the underlying asset so that the instruments can be reasonably expected to behave similarly in the event of default; and, at a minimum, the reference asset and underlying asset are subject to mutual cross-default provisions. A

18a. Once the market-risk capital rules are used, after January 1, 1997, credit derivatives that are held in a banking organization's (a bank's or bank holding company's) trading account will be subject to those rules. The rules are required to be effective by January 1, 1998, but early application is permitted, subject to appropriate supervisory approval.

18b. Guarantor banks or bank holding companies that have made cash payments representing depreciation on reference assets may deduct such payments from the notional amount when computing credit-equivalent amounts for capital purposes. For example, if a guarantor bank or bank holding company makes a depreciation payment of \$10 on a \$100 notional total-rate-of-return swap, the credit-equivalent amount would be \$90.

banking organization that uses a credit derivative, which is based on a reference asset that differs from the protected underlying asset, must document the credit derivative being used to offset credit risk and must link it directly to the asset or assets whose credit risk the transaction is designed to offset. The documentation and the effectiveness of the credit-derivative transaction are subject to examiner review. Banking organizations providing credit protection through such arrangements must hold capital against the risk exposures that are assumed.

4060.3.5.4 Considerations in the Overall Assessment of Capital Adequacy

Examiners are to take into account the following factors when assessing the overall capital adequacy of banking organizations.

4060.3.5.4.1 *Unrealized Asset Values*

Banking organizations often have assets on their books that are carried at significant discounts below current market values. This difference between book value (historical cost or acquisition value) and market value of any asset, particularly for banking premises, may represent potential capital to the banking organization. These "unrealized asset values" *are not included* in the risk-based capital calculation. Examiners should take into consideration such unrecognized capital when assessing capital adequacy. Particular attention should be given to the nature of the asset, the reasonableness of its valuation, its marketability, and the likelihood of its sale.

4060.3.5.4.2 *Subordinated Debt*

To be included in tier 2 capital, subordinated debt must be subordinated in right of payment to the claims of the issuer's general creditors. For bank holding companies, such debt must be subordinated to senior indebtedness. To meet this requirement, bank holding company debt must, at a minimum, be subordinated to (1) all borrowed and purchased money, (2) similar obligations arising from off-balance-sheet guarantees and direct credit substitutes, and (3) obligations associated with derivative products such as interest-rate and foreign-exchange-rate contracts, commodity contracts, and similar arrangements. (See SR-92-37.)

Subordinated debt (and intermediate-term preferred stock) must have an original weighted average maturity of at least five years to qualify as supplementary capital. The average maturity of an obligation whose principal is repayable in scheduled periodic payments (for example, a so-called serial redemption issue) is the weighted average of the maturities of all such scheduled repayments. If the holder has the option to require the issuer to redeem, repay, or repurchase the instrument before the original stated maturity, maturity is defined as the earliest possible date on which the holder can put the instrument back to the issuing banking organization. This date may be much earlier than the instrument's stated maturity date. In the last five years prior to the maturity of a limited-life instrument, the outstanding amount includable in tier 2 capital must be discounted by 20 percent a year (20 percent of the original amount less any redemptions) during the instrument's last five years before maturity. The aggregate amount of subordinated debt and intermediate-term preferred stock that may be included in tier 2 capital is limited to 50 percent of tier 1 capital (net of goodwill and other intangible assets required to be deducted in accordance with section II.B.1.b. of the risk-based capital measure). Amounts issued or outstanding in excess of this limit are not included in the risk-based capital calculation. However, examiners are to take any excess amount not included in the risk-based capital calculation into consideration when assessing the banking organization's funding and financial condition.

Consistent with long-standing Board policy, a banking organization may not repay, redeem, or repurchase a subordinated-debt issue without the prior written approval of the Federal Reserve. The terms of the debt indenture should note that such approval is required.

Close scrutiny should be given to terms that permit the holder to accelerate payment of principal upon the occurrence of certain events. The only acceleration clauses acceptable in a subordinated-debt issue included in tier 2 capital are those that are triggered by bankruptcy (in the case of a bank holding company) or receivership (in the case of a bank) (see SR-92-37).¹⁹ Terms that permit the holder to accelerate pay-

19. A provision in bank holding company subordinated debt that permits acceleration in the event a major bank subsidiary enters into receivership would not jeopardize the issue's tier 2 capital status. A provision permitting acceleration in the event that any other type of affiliate of the issuer entered into bankruptcy or receivership would not be acceptable in a subordinated debt issue included in capital.

ment of principal upon the occurrence of other events jeopardize the subordination of the debt because such terms could permit debtholders in a troubled institution to be paid out before the depositors. In addition, debt whose terms permit holders to accelerate payment of principal upon the occurrence of events other than insolvency does not meet the minimum five-year maturity requirement for debt-capital instruments. Holders of such debt have the right to put the debt back to the issuer upon the occurrence of the named events, which could happen on a date well in advance of the debt's stated maturity.

Close scrutiny should also be given to the terms of those debt issues if an event of default is defined more broadly than insolvency or a failure to pay interest or principal when due. There is a strong possibility that such terms are inconsistent with safe and sound banking practice and that, accordingly, the debt issue should not be included in capital. Concern is heightened when an event of default gives the holder the right to accelerate payment of principal or when other borrowings contain cross-default clauses. Some events of default, such as making additional borrowings in excess of a certain amount, may unduly restrict the day-to-day operations. Other events of default, such as change of control or disposal of a banking organization subsidiary, may limit the flexibility of management or supervisors to work out the problems of a troubled organization. Still other events of default, such as failure to maintain certain capital ratios or rates of return or to limit the amount of nonperforming assets or charge-offs to a certain level, may be intended to allow the debtholder to be made whole before a deteriorating banking organization becomes truly troubled. Debt issues that include any of these types of events of default are not truly subordinated and should not be included in capital. Likewise, bank holding companies should not include in capital debt issues that otherwise contain terms or covenants that could adversely affect the issuer's liquidity; unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty; or limit the regulator's ability to resolve problem situations.

Certain terms found in subordinated debt, however, may provide protection to investors without adversely affecting the overall benefits of the instrument to the organization and thus, would be acceptable for subordinated debt to be included in capital. Among such acceptable terms would be a provision that prohibits a bank holding company from merging, consolidating,

or selling substantially all of its assets unless the new entity assumes the subordinated debt. Another acceptable provision would be the inclusion as an event of default the failure to pay principal and interest on a timely basis or to make mandatory sinking fund deposits, so long as such event of default does not allow the debtholders to accelerate the repayment of principal (see SR-92-37).

Debt issues, including mandatory convertible securities, that tie interest payments to the financial condition of the borrower generally should not be included in capital. Such payments may be linked to the financial condition of an institution through various ways, such as (1) an auction-rate mechanism, which is a preset schedule mandating interest-rate increases either over the passage of time or as the credit rating of the bank holding company declines,²⁰ or (2) a term that raises the interest rate if payment is not made in a timely fashion. As the financial condition of a bank holding company declines, it is faced with higher and higher payments on its credit-sensitive subordinated debt at a time when it most needs to conserve its resources. Thus, credit-sensitive debt does not provide the support expected of a capital instrument to an institution whose financial condition is deteriorating; rather, the credit-sensitive feature can accelerate depletion of the organization's resources and increase the likelihood of default on the debt. While such terms may be acceptable in perpetual preferred stock qualifying for Tier 2 capital, they are not acceptable in a capital debt issue because a banking organization in a deteriorating financial condition may not have the option available in equity issues of eliminating the higher payments without going into default. If a bank holding company has included in its capital subordinated debt issued by an operating or nonoperating subsidiary, it is possible that the debt is in effect secured and, thus, not includable in capital.

20. Although payment on debt whose interest rate increases over time may not on the surface appear to be directly linked to the financial condition of the issuing banking organization, such debt (sometimes referred to as expanding or exploding-rate debt) has a strong potential to be credit-sensitive in substance. Banking organizations whose financial condition has strengthened are more likely to be able to refinance the debt at a lower rate than that mandated by the preset increase, whereas those banking organizations whose condition has deteriorated are less likely to be able to do so. Moreover, just when these latter institutions would be in the most need of conserving capital, they would be under strong pressure to redeem the debt as an alternative to paying higher rates and therefore would accelerate depletion of their resources.

4060.3.5.4.3 *Ineligible Collateral and Guarantees*

The risk-based capital guidelines recognize collateral and guarantees in only a limited number of cases. Other types of collateral and guarantees support the asset mix of banking organizations, particularly within their loan portfolios. Such collateral or guarantees may serve to substantially improve the overall quality of loan portfolios and other credit exposures, and should be considered by examiners when they are arriving at their overall assessment of capital adequacy.

4060.3.5.4.4 *Overall Asset Quality*

The conclusions drawn by banking organizations from calculating their risk-based capital ratios may be significantly different from conclusions drawn by examiners. The main reason for these differences is the assessment of asset quality. Examiners must assess the capital adequacy of banking organizations, taking into account examination or inspection findings, particularly those findings regarding the severity of problem and classified assets and investment- or loan-portfolio concentrations, as well as the adequacy of the banking organization's allowance for loan and lease losses.

4060.3.5.4.5 *Interest-Only Strips (IOs) and Principal-Only Strips (POs)*

IOs and POs have highly volatile price characteristics as interest rates change and are generally not considered appropriate investments for most banking organizations. However, some sophisticated banking organizations may use IOs and POs as hedging vehicles. The Board does not want to discourage the legitimate use of IOs and POs as hedging vehicles. Examiners' assessments of capital adequacy should reflect banking organizations' appropriate use of hedging instruments, including IOs and POs. Banking organizations that have appropriately hedged their interest-rate exposure may be permitted to operate with lower levels of capital than those banking organizations that are vulnerable to interest-rate changes.

4060.3.5.4.6 *Interest-Rate Risk*

Examiners are to continue to scrutinize banking organizations' interest-rate risk exposure care-

fully and to require that organizations with undue levels of interest-rate risk strengthen their capital positions even though they may meet the minimum risk-based capital standards.

4060.3.5.4.7 *Claims On, and Claims Guaranteed by, OECD Central Governments*

The risk-based capital guidelines assign a zero percent risk weight to all direct claims (including securities, loans, and leases) on the central governments of the OECD-based group of countries and U.S. government agencies. Generally, the only direct claims banking organizations have on the U.S. government and its agencies are in the form of Treasury securities. Zero-coupon, that is, single-payment, Treasury securities trading under the U.S. Treasury's Separately Traded Registered Interest and Principal (STRIP) Program are assigned to the zero percent risk category. A security that has been stripped by a private-sector entity, such as a brokerage firm, is considered an obligation of that entity and, accordingly, is assigned to the 100 percent risk category.

Claims that are directly and unconditionally guaranteed by an OECD-based central government or a U.S. government agency are also assigned to the zero percent risk category. Such claims that are not unconditionally guaranteed are assigned to the 20 percent risk category. A claim is not considered to be unconditionally guaranteed by a central government if the validity of the guarantee is dependent upon some affirmative action by the holder or a third party. Generally, securities guaranteed by the U.S. government or its agencies that are actively traded in financial markets are considered to be unconditionally guaranteed. These include Government National Mortgage Association (GNMA) and Small Business Administration (SBA) securities.

As of December 30, 1992, banking organizations are permitted to assign to the zero percent risk category claims collateralized by cash on deposit in the banking organization or by OECD central governments or U.S. government agency securities for which a positive collateral margin is maintained on a daily basis, fully taking into account any change in the banking organization's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim. The

Board is not requiring that a specific minimum margin of collateral be maintained on collateralized transactions assigned to the zero percent risk category. The Board expects that banking organizations will establish, as a part of prudent operating procedures, a minimum level of margin for these transactions based upon such factors as the volatility of the securities involved, so as to avoid unduly frequent margin calls.

A limited number of U.S. government agency–guaranteed loans are deemed to be unconditionally guaranteed and, hence, can be assigned to the zero percent risk category. These include most loans guaranteed by the Export-Import Bank (Exim Bank),²¹ loans guaranteed by the U.S. Agency for International Development (AID) under its Housing Guaranty Loan Program, SBA loans subject to a secondary participation guaranty (in accordance with SBA Form 1086), and Farmers Home Administration (FmHA) loans subject to an assignment guaranty agreement in accordance with FmHA Form 449–36.

Apart from the exceptions noted in the preceding paragraph, loans guaranteed by the U.S. government or its agencies are considered conditionally guaranteed. The guaranteed portion of the loans is assigned to the 20 percent category. These loans include, but are not limited to, loans guaranteed by the Commodity Credit Corporation (CCC), the Federal Housing Administration (FHA), the Foreign Credit Insurance Association (FCIA), the Overseas Private Investment Corporation (OPIC), and the Veteran's Administration (VA) and, except as indicated above, portions of loans guaranteed by the FmHA and the SBA. Loan guarantees offered by FCIA and OPIC often guarantee against political risk. However, only that portion of a loan guaranteed by FCIA or OPIC against commercial or credit risk may receive a preferential 20 percent risk weight. The portion of Government Trust Certificates issued to provide funds for the refinancing of foreign military sales loans made by the Federal Financing Bank or the Defense Security Assistance Agency that are indirectly guaranteed by the U.S. government also qualify for the 20 percent risk weight.

21. Loans guaranteed under Exim Bank's Working Capital Guarantee Program, however, receive a 20 percent risk weight.

4060.3.6 DIFFERENCE IN APPLICATION OF THE RISK-BASED CAPITAL GUIDELINES TO BANKING ORGANIZATIONS

The capital guidelines are generally the same for state member banks and bank holding companies. Since year-end 1992, however, there has been one significant difference: the manner in which capital is defined for use in computing the risk-based capital ratio. Specifically, perpetual preferred stock is handled differently for state member banks than for bank holding companies.

4060.3.6.1 Difference in Treatment of Perpetual Preferred Stock

Bank holding companies may include unlimited amounts of *noncumulative* perpetual preferred stock in Tier 1 capital and limited amounts of cumulative perpetual preferred stock. The aggregate amount of *cumulative* stock that may be included in a bank holding company's Tier 1 capital is limited to one-third of the sum of core capital elements, excluding cumulative perpetual preferred stock. Any amount of *cumulative* perpetual preferred stock in excess of this limit may be included as Tier 2 capital. In contrast, state member banks may include only noncumulative perpetual preferred stock in Tier 1 capital.

4060.3.6.2 Perpetual Preferred Stock (Terms Relating to Tier 1 Treatment)

Given the importance of core capital, the Federal Reserve's guidelines exclude from Tier 1 capital preferred stock (including auction rate preferred) in which the dividend rate is reset periodically, based in whole or in part upon the banking organization's financial condition or credit standing. Under such instruments, the obligation to pay out higher dividends in response to a deterioration in an organization's financial condition is inconsistent with the essential precept that capital should provide both strength and loss-absorption capacity to an organization during periods of adversity. Rather than paying out higher dividends, banking organizations are expected to conserve capital during such periods.

Ordinarily, fixed-rate preferred stock and traditional floating- or adjustable-rate preferred stock—where the dividend rate is based upon an independent market index that is in no way tied to the issuer's financial condition—do not

raise significant supervisory concerns, especially if the adjustable-rate instrument is accompanied by reasonable spreads and cap rates. However, certain other features that have been incorporated in, or mentioned for possible inclusion in, some preferred stock issues do raise serious questions about whether these issues will truly serve as a permanent, or even long-term, source of capital. Such features include “exploding-rate” or similar mechanisms, whereby, after a specified period, the dividend rate automatically increases to a level that appears unreasonable or that could create substantial incentives for the issuer to redeem the instrument. Perpetual preferred stock with this type of feature could cause the banking organization to be faced with higher dividend requirements at a future date when it is experiencing financial difficulties. Such preferred stock is not generally includable in Tier 1 capital.

4060.3.7 CASH REDEMPTION OF PERPETUAL PREFERRED STOCK

Under the Federal Reserve’s risk-based capital guidelines, two essential characteristics of core (Tier 1) capital—which comprises common stock and perpetual preferred stock—are loss-absorption capacity and stability. In addition to existing laws and regulations that pertain to the redemption or repurchase of capital securities, the Federal Reserve’s risk-based capital guidelines generally provide that any bank holding company contemplating the redemption of material amounts of permanent equity instruments, including perpetual preferred stock, should receive Federal Reserve approval prior to taking such action.²² Any perpetual preferred stock with a feature permitting redemption at the option of the issuer may qualify as capital *only if* the redemption is subject to prior approval of the Federal Reserve.

The guidelines indicate that consultation with the Federal Reserve could be unnecessary if the instrument is redeemed with the proceeds of another acceptable Tier 1 instrument and the organization’s capital is considered fully adequate. However, because of the need to make supervisory judgments on these conditions, as well as the objective of fostering sound capital positions, banking organizations contemplating

material redemptions of core capital are generally expected to discuss these plans with their appropriate supervisory authorities, regardless of the circumstances. This has long been the expectation and practice of the Federal Reserve. Prior consultation puts the supervisory authority in a position to take appropriate action if any planned capital redemption could have an adverse impact on an organization’s financial condition.

The Federal Reserve’s interest in the level and composition of capital derives both from the System’s general supervisory responsibilities to monitor and address any actions that could erode an organization’s capital base and from the need to implement the letter and spirit of supervisory guidelines on capital adequacy. Under the Federal Reserve’s guidelines, to qualify as capital an instrument may not contain or be covered by covenants, terms, or restrictions that are inconsistent with safe and sound banking practice. Moreover, perpetual preferred stock cannot contain provisions that would require future redemption of the issue, and the issuer must have the ability and legal right to defer or eliminate preferred dividends.

4060.3.7.1 The Federal Reserve’s Supervisory Position on Cash Redemption of Tier 1 Preferred Stock

To qualify for Tier 1 treatment, redemption for cash, regardless of source, is permissible only at the issuer’s option. Moreover, in view of the importance of ensuring the stability of Tier 1 capital, Tier 1 preferred stock instruments should also provide that cash redemption would be permitted only with the prior consent of the Federal Reserve. The Federal Reserve expects that it would usually grant such approval, when consistent with the organization’s overall financial condition, if the preferred shares are redeemed with the proceeds of an acceptable Tier 1 capital instrument that would maintain or strengthen the issuer’s capital base. Approval could also be granted if the Federal Reserve determines that the issuer’s capital position after the redemption would clearly be adequate and that the issuer’s condition and circumstances warrant the reduction of a source of permanent capital.

22. This general principle also applies to the redemption of limited-life capital instruments prior to their stated maturities.

4060.3.8 COMMON STOCK REPURCHASES AND DIVIDEND INCREASES ON COMMON STOCK

The Federal Reserve has long emphasized the importance of prudent levels of capital to the overall safety and soundness of banking organizations. In pursuit of its supervisory objective to achieve an adequate level of capitalization in banking organizations, the Federal Reserve has over time promulgated various rules, guidelines, and standards concerning capital levels and the acceptable characteristics of various capital instruments and transactions. With respect to cash redemptions of common stock, section 225.4(b)(1) of Regulation Y requires bank holding companies to give the Federal Reserve prior notice of any repurchase of common stock that would reduce total equity capital by 10 percent or more aggregated over any 12-month period. The risk-based capital guidelines further request that bank holding companies consult with the Federal Reserve prior to any material redemption of permanent equity instruments.

Because of the need for banking organizations to strengthen their capital positions generally, the Board strongly recommends that bank holding companies deemed to be experiencing financial weaknesses (or those at significant risk of developing financial weaknesses) consult with the appropriate Federal Reserve Bank prior to any cash redemption of common stock. Similarly, any bank holding company considering expansion, either through acquisitions or through new activities, is also requested to consult with the appropriate Federal Reserve Bank prior to any cash redemption of common stock. Although there may be legitimate uses of repurchased shares (for example, in ESOP transactions), this request is intended to prevent an imprudent or untimely repurchase that would have an immediate or potentially adverse impact on the financial condition of the banking organization. In general, Reserve Banks should discourage bank holding companies from repurchasing their shares if there would be an adverse effect on the capital of the organization. A similar procedure was adopted for redemptions of perpetual preferred stock (see section 4060.3.7 or SR-89-20).

Further, because the banking organizations' ability to gain access to capital markets can be further diminished by rating agency downgrades, the Federal Reserve considers internal capital generation an important element in a

banking organization's capital planning. Therefore, bank holding companies in general, but particularly those experiencing any degree of financial weakness, are requested to consult with the appropriate Federal Reserve Bank before increasing the rate of cash dividends paid on common stock, an action that reduces capital-generation rates for companies experiencing financial weakness. It is the intention of the Federal Reserve to ensure that the financial condition, future earnings prospects, and capital level of the banking organization are consistent with any proposed increase in dividends. See Regulation Y, section 225.4(b)(1) and Regulation Y, appendix A, section II.

4060.3.9 MANDATORY CONVERTIBLE DEBT SECURITIES AND PERPETUAL DEBT

Mandatory convertible debt securities are essentially subordinated debt instruments that may be converted into common or perpetual preferred stock within a specified period of time, not to exceed 12 years. To be counted as Tier 2 capital, mandatory convertible securities must meet the criteria set forth below. These criteria cover the two basic types of mandatory convertible securities: equity contract notes (securities that obligate the holder to take common or perpetual preferred stock of the issuer in lieu of cash for repayment of principal) and equity commitment notes (securities that are redeemable only with the proceeds from the sale of common or perpetual preferred stock). Bank holding companies may include mandatory convertible debt securities (net of the stock dedicated to retire the issue(s)), in the form of equity contract notes or equity commitment notes as unlimited elements of Tier 2 capital, provided that the applicable criteria set forth below are met (see also Regulation Y, appendix B). They are also permitted to include perpetual debt as an element of Tier 2 capital. To be included as unlimited elements of Tier 2 capital for bank holding companies, these instruments must meet the respective criteria set forth below (also found in Regulation Y, appendix B). The amount of mandatory convertible securities that have the proceeds of the issuance of common stock dedicated to redeem or retire them are treated as term subordinated debt subject to the specified limitation. A banking organization must receive Federal Reserve approval before redeeming (or repurchasing) mandatory convertible debt prior to maturity. The terms of

the securities should note that such approval is required.

4060.3.9.1 Treatment of Debt with Dedicated Proceeds

If a bank holding company has issued common or perpetual preferred stock and dedicated the proceeds to the retirement or redemption of mandatory convertibles, the portion of mandatory convertibles covered by the dedication no longer carries a commitment to issue equity and, thus, has in effect been rendered into ordinary subordinated debt. Accordingly, the amount of the stock dedicated is netted from the amount of mandatory convertibles includable as unlimited Tier 2 capital. The portion of such securities covered by dedications should be included in capital as subordinated debt, subject to amortization in the last five years of its life, and should be limited, together with other subordinated debt and intermediate-term preferred stock, to 50 percent of Tier 1 capital. For example, a bank holding company has an outstanding equity contract note for \$1 million and issues \$300,000 of common stock, dedicating the proceeds to the retirement of the note. It would include the \$300,000 of common stock in its Tier 1 capital. The \$700,000 of the equity contract note not covered by the dedication would be treated as an unlimited element of Tier 2 capital. The \$300,000 of the note covered by the dedication would be treated as subordinated debt.

4060.3.9.2 Treatment of Debt with Segregated Funds

In some cases, the indenture of a mandatory convertible debt issue may require the bank holding company to set up segregated trust funds to hold the proceeds from the sale of equity securities dedicated to pay off the principal of the mandatory convertibles at maturity. The portion of mandatory convertible securities covered by the amount of such segregated trust funds is considered secured and, thus, may not be included in capital. The maintenance of such a separate segregated fund for the redemption of mandatory convertibles exceeds the requirements of appendix B of Regulation Y. Accordingly, if a banking organization, with the agreement of the debtholders, wishes to eliminate the fund, regulatory approval normally should be given unless supervisory concerns warrant otherwise.

4060.3.9.3 Criteria Applicable to Both Types of Mandatory Convertible Securities

1. The securities must mature in 12 years or less.

2. The issuer may redeem securities prior to maturity only with the proceeds from the sale of common or perpetual preferred stock of the bank holding company. Any exception to this rule must be approved by the Federal Reserve. The securities may not be redeemed with the proceeds of another issue of mandatory convertible securities, nor may the issuer repurchase or acquire its own mandatory convertible securities for resale or reissuance.

3. Holders of the securities may not accelerate the payment of principal except in the event of bankruptcy, insolvency, or reorganization.

4. The securities must be subordinate in right of payment to all senior indebtedness of the issuer. If the proceeds of the securities are loaned to an affiliate, the loan must be subordinated to the same degree as the original issue.

5. If an issuer intends to dedicate the proceeds of an issue of common or perpetual preferred stock to satisfy the funding requirements of an issue of mandatory convertible securities (that is, the requirement to retire or redeem the notes with the proceeds from the issuance of common or perpetual preferred stock), the issuer generally must make the dedication during the quarter in which the new common or preferred stock is issued.²³ As a general rule, if the dedication is not made within the prescribed period, then the securities issued may not at a later date be dedicated to the retirement or redemption of the mandatory convertible securities.²⁴

23. Common or perpetual preferred stock issued under dividend reinvestment plans or issued to finance acquisitions, including acquisitions of business entities, may be dedicated to the retirement or redemption of the mandatory convertible securities. Documentation certified by an authorized agent of the issuer showing the amount of common stock or perpetual preferred stock issued, the dates of issue, and amounts of such issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.

24. For each dollar of common or perpetual preferred proceeds dedicated to the retirement or redemption of the notes, there is a corresponding reduction in the amount of outstanding mandatory securities that may qualify as Tier 2 capital (the amount of proceeds dedicated would be included in Tier 2 capital as subordinated debt subject, together with other subordinated debt, to a limit of 50 percent of Tier 1

4060.3.9.3.1 *Additional Criteria Applicable to Equity Contract Notes*

1. The note must contain a contractual provision (or be issued with a mandatory-stock-purchase contract) that requires the holder of the instrument to take the common or perpetual stock of the issuer in lieu of cash in satisfaction of the claim for principal repayment. The holder's obligation to take the common or perpetual preferred stock of the issuer may be waived if, and to the extent that, prior to the maturity date of the obligation, the issuer sells new common or perpetual preferred stock and dedicates the proceeds to the retirement or redemption of the notes. The dedication generally must be made during the quarter in which the new common or preferred stock is issued.

2. A stock-purchase contract may be separated from a security only if (1) the holder of the contract provides sufficient collateral²⁵ to the issuer, or to an independent trustee for the benefit of the issuer, to ensure performance under the contract and (2) the stock-purchase contract requires the purchase of common or perpetual preferred stock.

4060.3.9.3.2 *Additional Criteria Applicable to Equity Commitment Notes*

1. The indenture or note agreement must contain the following two provisions:

a. The proceeds of the sale of common or perpetual preferred stock will be the sole source of repayment for the notes, and the issuer must dedicate the proceeds for the purpose of repaying the notes. (Documentation, certified by an authorized agent of the issuer, showing the amount of common or perpetual preferred stock issued, the dates of issue, and amounts of such

capital and to discounting of 20 percent per year during the last five years to maturity). De minimis amounts of common or perpetual stock issued under arrangements in which the amount of stock issued is not predictable, such as dividend reinvestment plans and employee stock option plans (but excluding public stock offerings and stock issued in connection with acquisitions), should be dedicated by no later than the company's fiscal year-end.

25. Collateral is defined as: (1) cash or certificates of deposit; (2) U.S. government securities that will mature prior to or simultaneous with the maturity of the equity contract and that have a par or maturity value at least equal to the amount of the holder's obligation under the stock-purchase contract; (3) standby letters of credit issued by an insured U.S. bank that is not an affiliate of the issuer; and (4) other collateral as may be designated from time to time by the Federal Reserve.

issues dedicated to the retirement or redemption of mandatory convertible securities will satisfy the dedication requirement.)

b. By the time that one-third of the life of the securities has run, the issuer must have raised and dedicated an amount equal to one-third of the original principal of the securities. By the time that two-thirds of the life of the securities has run, the issuer must have raised and dedicated an amount equal to two-thirds of the original principal of the securities. At least 60 days prior to the maturity of the securities, the issuer must have raised and dedicated an amount equal to the entire original principal of the securities. Proceeds dedicated to redemption or retirement of the notes must come only from the sale of common or perpetual preferred stock.²⁶

2. If the issuer fails to meet any of these periodic funding requirements, the Federal Reserve will immediately cease to treat the unfunded securities as Tier 2 capital and will take appropriate supervisory action. In addition, failure to meet the funding requirements will be viewed as a breach of a regulatory commitment, which the Board will take into consideration when it acts on statutory applications.

3. If a security is issued by a subsidiary of a bank or bank holding company, any guarantee of the principal by that subsidiary's parent bank or bank holding company must be subordinate to the same degree as the security issued by the subsidiary and limited to repayment of the principal amount of the security at its final maturity.

4060.3.9.4 *Criteria for Determining the Tier 2 Capital Status of Perpetual Debt Instruments of Bank Holding Companies*

1. The instrument must be unsecured.

2. The instrument may not give the noteholder the right to demand repayment of principal except in the event of bankruptcy, insolvency, or reorganization. The instrument must provide that nonpayment of interest shall not trigger repayment of the principal of the perpetual debt note or any other obligation of the issuer, nor shall it constitute prima facie evidence of insolvency or bankruptcy.

3. The issuer shall not voluntarily redeem the debt issue without prior Federal Reserve approval, except when the debt is converted to, exchanged for, or simultaneously replaced in like amount by an issue of common or perpetual

²⁶ The funded portions of the securities will be deducted from the amount of mandatory convertible securities outstanding, but included in the amount of subordinated debt.

preferred stock of the issuer or the issuer's parent company.

4. If issued by a bank holding company, a bank subsidiary, or a subsidiary with substantial operations, the instrument must contain a provision that allows the issuer to defer interest payments on the perpetual debt in the event of, and at the same time as, the elimination of dividends on all outstanding common or preferred stock of the issuer (or, in the case of a guarantee by a parent company, at the same time as the elimination of the dividends of the parent company's common and preferred stock). In the case of a nonoperating subsidiary (a funding subsidiary or one formed to issue securities), the deferral of interest payments must be triggered by elimination of dividends by the parent company.

5. If issued by a bank holding company or a subsidiary with substantial operations, the instrument must convert automatically to common or perpetual preferred stock of the issuer when the issuer's retained earnings and surplus accounts become negative. If an operating subsidiary's perpetual debt is guaranteed by its parent, the debt may convert to the shares of the issuer or parent when the issuer's or parent's retained earnings and surplus accounts become negative. If issued by a nonoperating subsidiary of a bank holding company or bank, the instrument must convert automatically to common or preferred stock of the issuer's parent when the retained earnings and surplus accounts of the issuer's parent become negative.

4060.3.10 INSPECTION OBJECTIVES

1. To determine the adequacy of capital in relation to the risks inherent in the transactions and activities of the banking organization.

2. To determine compliance with the risk-based and Tier 1 leverage measures of the capital adequacy guidelines as they apply to bank holding companies (see section 4060.4 of this manual).

3. To determine if the capital management and operating policies, practices, and procedures are adequate, and whether they reflect the requirements of the capital adequacy guidelines, if applicable.

4. To evaluate the performance of the bank holding company's officers and employees in administering and controlling the capital position of the organization, including its banking and nonbanking subsidiaries.

5. To evaluate the propriety and consistency of the banking organization's present and planned level of capitalization in light of the risk-based

and leverage capital measures, as required, as well as existing conditions and future plans.

6. To initiate corrective action, in conjunction with the inspection process, when policies, procedures, or capital are deficient.

4060.3.11 INSPECTION PROCEDURES

Section 4060.3.5 lists items that examiners should consider during their analysis of capital adequacy with regard to the risk-based measure. The instructions in that section are to be followed in addition to the inspection procedures listed below.

Verification of the Risk-Based Capital Ratio

NOTE: Examiners should verify that the bank holding company has adequate systems in place to compute and document its risk-based capital ratios.

1. Determine if the bank holding company is correctly reporting risk-based capital information requested on the Federal Reserve's FR Y-9C Reports of Condition and Income and supplementary schedules.

a. If the bank holding company has consolidated assets of less than \$150 million, determine whether the bank holding company risk-based capital guidelines still apply because—

(1) the bank holding company is engaged in nonbank activity involving significant leverage (includes off-balance-sheet activities) or

(2) the parent company has a significant amount of outstanding debt that is held by the general public.

For the Qualifying Components of Capital:

2. Determine if management is adhering to the underlying terms of any currently outstanding stock issues.

3. Review common stock to ensure that the bank holding company is in compliance with the terms of any underlying agreement(s) and to determine if more than one class exists. If more than one class exists, review the terms for any preference or nonvoting features. If the terms include such features, determine whether the class of common stock qualifies for inclusion in Tier 1 capital.

4. Review any perpetual and long-term preferred stock for the following:

a. compliance with terms of the underlying agreement(s), carefully noting—

(1) adherence to the cumulative or non-cumulative nature of the stock and

(2) adherence to any conversion rights

b. proper categorization as Tier 1 or Tier 2 for capital adequacy purposes, noting the following requirements:

(1) Tier 1 perpetual preferred stock must have the following characteristics:

- no maturity date
- not redeemable at the option of the holder
- unsecured
- ability to absorb losses
- ability and legal right for issuer to defer or eliminate dividends
- any issuer redemption feature subject to Federal Reserve prior approval
- fixed-rate or traditional floating- or adjustable-rate
- no features that would require or create an incentive for the issuer to redeem or repurchase the instrument, such as an “exploding rate,” an auction-rate pricing mechanism, or a feature that allows the stock to be converted into increasing numbers of common shares

(2) Perpetual preferred stock, includable within Tier 2 capital without a sublimit, must have the characteristics listed within inspection procedure 4.b.(1) above for Tier 1 perpetual preferred stock, but does not otherwise qualify for inclusion in Tier 1 capital. For example, cumulative or auction-rate perpetual preferred stock, which does not qualify for Tier 1 capital, may be includable in Tier 2 capital.

5. Verify that minority interest in equity accounts of consolidated subsidiaries included in Tier 1 capital consists of Tier 1 capital elements. Determine whether any perpetual preferred stock of a subsidiary that is included in minority interest is secured by the subsidiary's assets; if so, that stock may not be included in capital.

6. Review the intermediate-term preferred stock and subordinated debt instruments included in capital for the following:

a. compliance with terms of the underlying agreement(s), noting that subordinated debt containing one or both of the following

terms may not be included in capital:

(1) interest payments tied to the banking organization's financial condition

(2) acceleration clauses or broad conditions of events of default that are inconsistent with safe and sound banking practices

b. compliance with restrictions on the inclusion of such instruments in capital by verifying that the aggregate amount of both types of instruments does not exceed 50 percent of Tier 1 capital (net of all goodwill) and that the portions includable in Tier 2 capital possess the following characteristics:

(1) unsecured

(2) minimum five-year original weighted-average maturity

(3) in the case of subordinated debt, contains terms stating that the debt (a) is not a deposit, (b) is not insured by a federal agency, (c) cannot be redeemed without prior approval from the Federal Reserve, and (d) is subordinated to depositors and general creditors

c. appropriate amortization, if the instruments have a remaining maturity of less than five years

7. Determine, through review of minutes of the board of directors meetings, if a stock offering or subordinated debt issue is being considered. If so, determine that management is aware of the risk-based capital requirements for inclusion in capital.

8. Review any mandatory convertible debt securities for the following:

a. compliance of the terms with the criteria set forth in Regulation Y (12 C.F.R. 225), appendix B

b. notification in the terms of agreement that the redemption or repurchase of such securities prior to maturity is subject to prior approval from the Federal Reserve

c. the treatment of the portions of such securities covered by the issuance of common or perpetual preferred stock dedicated to the repayment of the securities, bearing in mind the following:

(1) The amount of the security covered by dedicated stock should be treated as subordinated debt and is subject, together with other subordinated debt and intermediate-term preferred stock, to a sublimit within Tier 2 capital of 50 percent of Tier 1 capital, as well as to amortization in the last five years of life.

(2) The portion of a mandatory convertible security that is not covered by dedication qualifies for inclusion in Tier 2 capital without any sublimit and without being subject to amortization in the last five years of life.

9. Verify that the transactions within the allowance for loan and lease losses have been properly accounted for during the inspection period and verify that the amount included in Tier 2 capital has been limited to 1.25 percent of weighted-risk assets.

For the Calculation of Risk-Weighted Assets:

10. Verify that each on- and off-balance-sheet item has been assigned to the appropriate risk category in accordance with the risk-based capital guidelines. Close attention should be paid to the underlying obligor, collateral, and guarantees, and to assignment to a risk category based upon the terms of a claim. The claim should be assigned to the risk category appropriate to the highest risk option available under the terms of the transaction. Verify that the bank holding company's documentation supports the assignment of preferential risk weights. If necessary, recalculate the value of risk-weighted assets.

11. Verify that all off-balance-sheet items have been converted properly to credit-equivalent amounts based on the risk-based capital guidelines. Close attention should be paid to the proper reporting of assets sold with recourse, financial and performance standby letters of credit, participations of off-balance-sheet transactions, and commitments.

Verification of the Tier 1 Leverage Ratio

1. Verify that the bank holding company has correctly calculated Tier 1 capital in accordance with the definition of Tier 1 capital for year-end 1992 as set forth in the risk-based capital guidelines.

2. Verify that the bank holding company has properly calculated average total consolidated assets.

Overall Assessment of Capital Adequacy

1. For bank holding companies that do not meet the minimum risk-based Tier 1 leverage capital standard, as required, or that are otherwise considered to lack sufficient capital to support their activities, examine the capitalization plans for achieving adequate levels of capital and determine whether they are acceptable to the Federal Reserve District's management. Review and comment on these plans and any progress achieved in meeting the requirements.

2. The analysis of capital adequacy requires an evaluation of the propriety and consistency of the bank holding company's present and planned level of capitalization in light of existing conditions and future plans. In this regard,

the examiner assigned to assessing capital adequacy should do the following:

a. Using the latest Bank Holding Company Performance Report (BHCPR), analyze applicable ratios involving capital funds, comparing these ratios with those of its peer group and investigating trends or significant variations from peer-group averages.

b. Determine that capital is sufficient to compensate for any instabilities or deficiencies in asset and liability mix and quality.

c. Determine if the bank holding company's consolidated earnings performance enables it to fund its expansion adequately, to remain competitive in the market, and to replenish or increase its capital funds as needed.

d. Analyze trends in the levels of debt versus equity funding, including double leverage, to determine the level of borrowing to fund equity, if any.

e. If the reserve for loan losses is determined to be inadequate, analyze the impact of current and potential losses on the bank holding company's capital structure.

f. Consider the impact of any management deficiencies on present and projected capital.

g. Determine if there are any assets or contingent accounts whose quality represents an actual or potential serious weakening of capital.

h. Consider the potential impact, should approval be given, of any proposed changes in controlling ownership on the projected capital position.

i. Analyze assets that are considered undervalued on the balance sheet and carried at below-market values. The excess of market value over cost may represent an additional cushion to the bank holding company.

j. Consider the cushion for absorbing losses that may be provided by any subordinated debt or intermediate-term preferred stock not included in Tier 2 capital because of the 50 percent of Tier 2 capital limitation or not included in capital for Tier 1 leverage ratio purposes.

k. Analyze any collateral and guarantees supporting assets that may not be taken into account for risk-based or Tier 1 leverage capital purposes, and consider these in the overall assessment of capital adequacy. This includes guarantees provided through credit-derivative transactions (see section 4060.3.5.3.9) in which the credit exposure is assigned to the risk category of the obligor of the reference asset or any collateral. For the latter, determine whether adequate capital and reserves are held against

the exposures to reference assets.

l. Evaluate the consolidated asset quality of the bank holding company and determine whether it needs to strengthen its capital position based on the following:

(1) the severity of problem and classified assets

(2) investment- or loan-portfolio concentrations

(3) the adequacy of loan-loss reserves

m. Analyze the bank holding company's management of interest-rate risk and use of hedging instruments. Determine if the bank holding company should strengthen its capital position based on undue levels of risk at any structural level within the organization. Review hedging instruments for any use of IOs and POs that may raise concerns, and management's expertise in using hedging instruments.

3. Review capital adjustments for goodwill, and other intangible assets (such as core deposit intangibles, favorable leasehold rights, organization costs, purchased trust-servicing rights, purchased investment-management relationships, purchased home-equity rights, merchant-servicing rights), that are required to be deducted from capital. An analysis of intangible assets that may be included in capital also must be performed. The analysis of these intangible assets should be performed using the following procedures:

a. Verify the existence, the evidence of title to, and the accounting for intangible assets. Review and assess both the book values and the fair market values assigned to intangible assets, as well as the adequacy of the documentation evidencing the values, the amortization methods, and assigned amortization periods. When assessing the quality of a banking organization's intangible assets for purposes of evaluating its overall capital position, consider—

(1) the reliability and predictability of any cash flows associated with the assets and the degree of certainty that can be achieved in periodically determining the asset's useful life and value,

(2) the existence of an active and liquid market for the assets, and

(3) the feasibility of selling the asset apart from the banking organization or from the bulk of its assets.

b. Verify that intangibles are being reduced in accordance with the amortization method and that, if the carrying amount exceeds its value, the carrying value of the intangible asset is reduced accordingly, or is written off.

c. Determine if a quarterly review of the level and quality of all intangibles is performed.

d. Verify that goodwill and nonqualifying identifiable intangibles are deducted from Tier 1 capital.

e. Determine if the amount of mortgage-servicing rights or purchased credit-card relationships was within the established limitations on the amount that may be included in Tier 1 capital.

f. Ascertain whether the asset values of the intangible assets were reassessed during the annual audit.

4. In light of the overall capital adequacy analysis, and in accordance with the Federal Reserve's capital adequacy guidelines, determine if any appropriate supervisory action is warranted because of deficient levels of capital in relation to inherent risks of the bank holding company organization.

5. Review the following in preparation for discussion with appropriate management:

a. all noted deficiencies regarding the capital accounts and

b. the adequacy of present and projected capital

6. Ascertain through minutes, reports, etc., or through discussions with management how the bank holding company's future business and operational plans will affect its asset quality, capital position, and other areas of its balance sheet.

7. Prepare comments for the inspection report based on the bank holding company's capital position, including any comments on deficiencies that were observed.

8. Update the appropriate workpapers with any information that will facilitate future inspections.

4060.4.1 INTRODUCTION

On August 2, 1990, the Board issued capital leverage guidelines, effective September 10, 1990. The Board established the capital leverage ratio to be applied in conjunction with the risk-based capital guidelines. The leverage ratio is designed to complement the risk-based capital ratios when the overall capital adequacy of banking organizations is being determined.

4060.4.2 CAPITAL ADEQUACY GUIDELINES FOR BANK HOLDING COMPANIES: TIER 1 LEVERAGE MEASURE

The tier 1 leverage measure is found in appendix D of Regulation Y (12 C.F.R. 225).

4060.4.2.1 Overview of the Tier 1 Leverage Measure for Bank Holding Companies

The Board of Governors of the Federal Reserve System has adopted a minimum ratio of tier 1 capital to total assets to assist in the assessment of the capital adequacy of bank holding companies (banking organizations).¹ The principal objective of this measure is to place a constraint on the maximum degree to which a banking organization can leverage its equity capital base. It is intended to be used as a supplement to the risk-based capital measure.

The guidelines apply on a consolidated basis to bank holding companies with consolidated assets of \$150 million or more. For bank holding companies with less than \$150 million in consolidated assets, the guidelines will be applied on a bank-only basis unless (1) the parent bank holding company is engaged in a nonbank activity involving significant leverage² or (2) the parent company has a significant amount of outstanding debt that is held by the general public.

The tier 1 leverage guidelines are to be used in the inspection and supervisory process as well as in the analysis of applications acted

upon by the Federal Reserve. The Board will review the guidelines from time to time and will consider the need for possible adjustments in light of any significant changes in the economy, financial markets, and banking practices.

4060.4.2.2 Tier 1 Leverage Ratio for BHCs

The Board has established a minimum level of tier 1 capital to total assets of 3 percent for strong bank holding companies (rated composite "1" under the BOPEC rating system for bank holding companies) and for bank holding companies that have implemented the Board's risk-based capital measure for market risk as set forth in appendixes A and E of part 225 of Regulation Y. For all other bank holding companies, the minimum ratio of tier 1 capital to total assets is 4.0 percent. Banking organizations with supervisory, financial, operational, or managerial weaknesses, as well as organizations that are anticipating or experiencing significant growth are expected to maintain capital ratios well above the minimum levels. Moreover, higher capital ratios may be required for any bank holding company if warranted by its particular circumstances or risk profile. In all cases, bank holding companies should hold capital commensurate with the level and nature of the risks, including the volume and severity of problem loans, to which they are exposed.

A banking organization's tier 1 leverage ratio is calculated by dividing its tier 1 capital (the numerator of the ratio) by its average total consolidated assets (the denominator of the ratio). The ratio will also be calculated on the basis of period-end assets, whenever necessary, on a case-by-case basis. For the purpose of this leverage ratio, the definition of tier 1 capital for year-end 1992, as set forth in the risk-based capital guidelines in appendix A of Regulation Y, will be used.³ As a general matter, average

1. Supervisory risk-based capital ratios that relate capital to weighted-risk assets for bank holding companies are outlined in appendix A of Regulation Y.

2. A parent company that is engaged in significant off-balance-sheet activities would generally be deemed to be engaged in activities that involve significant leverage.

3. Tier 1 capital for bank holding companies includes common equity, minority interests in equity accounts of consolidated subsidiaries, qualifying noncumulative perpetual preferred stock, and qualifying cumulative perpetual preferred stock. (Cumulative perpetual preferred stock is limited to 25 percent of tier 1 capital.) In addition, as a general matter, tier 1 capital excludes goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, exceed 100 percent

total consolidated assets are defined as the quarterly average total assets (defined net of the allowance for loan and lease losses) reported on the banking organization's Consolidated Financial Statements (FR Y-9C Report), less goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, are in excess of 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, are in excess of 25 percent of tier 1 capital; all other identifiable intangible assets; any investments in subsidiaries or associated companies that the Federal Reserve determines should be deducted from tier 1 capital; and deferred-tax assets that are dependent upon future taxable income, net of their valuation allow-

of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, exceed 25 percent of tier 1 capital; all other identifiable intangible assets; and deferred-tax assets that are dependent upon future taxable income, net of their valuation allowance, in excess of certain limitations. The Federal Reserve may exclude certain investments in subsidiaries and associated companies as appropriate.

ance, in excess of the limitation set forth in section II.B.4 of appendix A of Regulation Y⁴

Whenever appropriate, including when an organization is undertaking expansion, seeking to engage in new activities, or otherwise facing unusual or abnormal risks, the Board will continue to consider the level of an individual organization's tangible tier 1 leverage ratio (after deducting all intangibles) in making an overall assessment of capital adequacy. This is consistent with the Federal Reserve's risk-based capital guidelines and long-standing Board policy and practice with regard to leverage guidelines. Organizations experiencing growth, whether internally or by acquisition, are expected to maintain strong capital positions substantially above minimum supervisory levels, without significant reliance on intangible assets.

4. Deductions from tier 1 capital and other adjustments are discussed more fully in section II.B. of appendix A of Regulation Y.

Banking organizations and supervisors¹ must consider a broader range of exposures and deal with an increasingly complex array of financial instruments and activities that reflect important, but often subtle, differences in the levels of risk. Many banking organizations, especially large banking organizations and others with complex risk profiles, or those that are engaged in complex transfers of risk,² require formal analytical processes to identify and measure their risks and to maintain an adequate overall level of capital that is appropriate to those risks.

4060.7.1 FACTORS USED IN EVALUATING OVERALL CAPITAL ADEQUACY

Most banking organizations are currently considering several factors in evaluating their overall capital adequacy:

1. a comparison of their own capital ratios with regulatory standards and with those of industry peers
2. consideration of their—
 - a. identified risk concentrations in credit and other activities;
 - b. current and desired credit-agency ratings, if applicable; and
 - c. the organization's historical experiences, including severe adverse events in its past.

4060.7.2 SOPHISTICATED TECHNIQUES USED IN ASSESSING CAPITAL ADEQUACY

Some more sophisticated banking organizations use risk-modeling techniques and scenario analyses to evaluate risk, but they generally have not formally incorporated these analyses into their overall assessment of capital adequacy. Those banking organizations that are using risk modeling and scenario analysis as tools to illuminate

potential economic losses arising from certain types of risk are working to integrate these tools, as they apply to different risk types, into their capital adequacy assessments. The approaches and methods used vary among banking organizations, as does the degree of precision and integration. Sound practices are clearly moving toward a more quantitative, systematic, and comprehensive process for risk evaluation. Sophisticated banking organizations are also increasingly using analytical techniques developed either for pricing and performance measurement across business and product lines or for making portfolio risk-management decisions. Such techniques incorporate one or more volatility-based measures that allow for analysis of unexpected losses as well as more subjective considerations.

Regardless of the techniques used, nearly all U.S. banking organizations have found it advantageous to operate with capital levels above regulatory minimums—and above levels defined as “well capitalized” by regulation. High capital ratios are often not indicative of overall capital adequacy, especially for securitizations of high-quality assets and other capital arbitrage techniques. Supervisors often cannot rely solely on risk-based capital ratios as indicators of capital strength at banking organizations engaging in these types of activities.

4060.7.3 STRENGTHENING CAPITAL ADEQUACY

Banking organizations and their supervisors are increasingly emphasizing internal processes for assessing risks and for ensuring that capital, liquidity, and other financial resources are adequate in relation to an organization's overall risk profile. This increased emphasis stems from the greater scope and complexity of the banking business, particularly those activities related to ongoing financial innovation. Banking organizations therefore need to ensure that their capital is not only adequate to meet formal regulatory standards, but is also fully sufficient to support their underlying risk positions. Internal capital-management processes at large, complex banking organizations need to be significantly improved for better integration with internal risk measurement and analysis. See SR-99-18.

1. The term “supervisors” refers to, as an example, federal banking organization supervisors.

2. Such complex transfers of risk would include collateralized loan obligations (CLOs), credit derivatives, and credit-linked notes. For information on CLOs, see section 4353.1 in the *Trading and Capital-Markets Activities Manual*. For information on credit derivatives, see SR-96-17 or section 2129.0, and for secondary-market credit activities, SR-97-21 or section 2129.05.

4060.7.4 SUPERVISORY APPROACH TO EVALUATING CAPITAL ADEQUACY MANAGEMENT

Supervisors and examiners need to determine whether internal capital-management processes meaningfully tie the identification, monitoring, and evaluation of the risks that arise from the banking organization's business activities to the determination of its capital needs. The larger and more complex banking organizations are working to broaden their consideration of risks in assessing capital adequacy, and examiners should not immediately expect these organizations to have in place a comprehensive internal process for assessing capital adequacy. Examiners should expect, however, that such banking organizations will initiate improved capital-management efforts to do so promptly, and thereafter will make steady and meaningful progress toward that end. As these processes develop and become fully implemented, supervisors and examiners should also place increasing reliance on internal assessments of capital adequacy as an integral part of a banking organization's *capital adequacy* rating. Examiners should evaluate an organization's progress in developing these internal processes for capital adequacy assessment since the previous inspection, considering the organization's former practices and current status relative to its peers. The results of the examiner's evaluation should be recorded in the inspection report.

4060.7.5 FUNDAMENTAL ELEMENTS OF AN INTERNAL ANALYSIS OF CAPITAL ADEQUACY

A sound and effective internal analysis of capital adequacy should include the following elements:

1. *Identifying and measuring all material risks.* A disciplined risk-measurement program promotes consistency and thoroughness in assessing current and prospective risk profiles, recognizing that risks often cannot be precisely measured. The detail and sophistication of risk measurement should be appropriate for the nature of the risks posed by each of the banking organization's activities and its asset size. At a minimum, risk-measurement systems should be sufficiently comprehensive and rigorous to capture the

nature and magnitude of the risks faced by the organization, while differentiating risk exposures consistently among risk categories and levels of riskiness. Controls should be in place to ensure objectivity and consistency and that all material risks—both on- and off-balance-sheet—are adequately addressed.

Banking organizations should conduct detailed analyses to support the accuracy or appropriateness of the risk-measurement techniques used. Similarly, inputs used in risk measurement should be of good quality. Those risks not easily quantified should be evaluated through more subjective, qualitative techniques or through stress testing. Risk-profile changes should be promptly incorporated into risk measures, whether the changes are due to new products, increased volumes or changes in concentrations, the quality of the portfolio, or the overall economic environment. Such measurement *should not* be oriented to the current treatment of these transactions under risk-based capital regulations.

When measuring such risks, banking organizations should perform comprehensive and rigorous stress tests to identify possible events or changes in markets that could have serious adverse effects in the future. Adequate consideration should be given to contingent exposures arising from loan commitments, securitization programs, and other transactions or activities that may create such exposure.

2. *Relating capital to the level of risk.* The amount of capital held should reflect not only the measured amount of risk but also an additional amount to account for potential uncertainties in risk measurement. A banking organization's capital should reflect the perceived level of precision in the risk measures used, the potential volatility of exposures, and the relative importance of the activities producing the risk. Capital levels should also reflect the fact that historical correlation among exposures can change rapidly.

Banking organizations should be able to demonstrate that their approach to relating capital to risk is conceptually sound and that outputs and results are reasonable.³ Sensi-

3. One credible method for assessing capital adequacy would be for a banking organization to consider itself adequately capitalized if it meets a reasonable and objectively determined standard of financial health, tempered by sound judgment—such as a target public-agency debt rating or even a statistically measured maximum probability of becoming insolvent over a given time horizon. In effect, this latter method is the foundation of the Basle Accord's treatment of capital requirements for market and foreign-exchange risk.

tivity analysis of key inputs and peer analysis can be used in assessing an organization's approach to relating its capital to risk.

3. *Stating explicit capital adequacy goals with respect to risk.* Explicit goals need to be established for capitalization as a standard for evaluating the banking organization's capital adequacy with respect to risk. Its target capital levels might reflect the desired level of risk coverage or, alternatively, a desired credit rating that reflects a desired degree of creditworthiness and thus access to funding sources. These goals should be reviewed and approved by the board of directors. Because risk profiles and goals may differ across banking organizations, the chosen target levels of capital may differ significantly from one organization to another. Moreover, banking organizations should evaluate whether long-run capital targets might differ from short-run goals, based on current and planned changes in risk profiles and the recognition that accommodating new capital needs can require significant lead time.

In addition, capital goals and the monitoring of performance against those goals should be integrated with the methodology used to identify the adequacy of the allowance for credit losses (the allowance). Both the allowance and capital represent the ability to absorb losses; however, an insufficiently clear distinction between their respective roles can distort the analysis of their adequacy. For example, a banking organization's internal standard of *capital* adequacy for credit risk could reflect the desire that capital absorb "unexpected losses"—that is, some level of potential losses above that level already estimated as being inherent in the current portfolio and reflected in the allowance.⁴ If the allowance is not maintained at the high end of the range of estimated credit losses, the banking organization would require more capital than would otherwise be necessary to maintain its overall desired capacity to absorb potential losses. Failure to recognize this relationship could lead to overestimating the strength of its capital position.

4. *Assessing conformity to the banking organization's stated objectives.* A banking organi-

4. In March 1999, the banking agencies and the Securities and Exchange Commission issued a joint interagency letter to financial institutions stressing that depository institutions should have prudent and conservative allowances that fall within an acceptable range of estimated losses. The Federal Reserve has issued additional guidance on credit-loss allowances to supervisors and bankers. See SR-99-13 and SR-99-22.

zation's target level and composition of capital, along with the process for setting and monitoring such targets, should be periodically reviewed and approved by its board of directors.

4060.7.6 RISKS ADDRESSED IN A SOUND INTERNAL ANALYSIS OF CAPITAL ADEQUACY

Sound internal risk-measurement and capital-assessment processes should address the full range of risks faced by the banking organization. The capital regulations of the Federal Reserve (and the other U.S. banking agencies) refer to many specific factors and other risks that banking organizations should consider in assessing capital adequacy.⁵

Credit risk. Internal credit-risk-rating systems are vital to measuring and managing credit risk at large banking organizations. A large banking organization's internal ratings system should be adequate to support the identification and measurement of risk for its lending activities and be adequately integrated into its overall analysis of capital adequacy (see SR-98-25). Well-structured credit-risk-rating systems should reflect implicit, if not explicit, judgments of loss probabilities or expected loss, and should be supported where possible by quantitative analysis. Definitions of risk ratings should be sufficiently detailed and descriptive, consistently applied, and reviewed throughout the organization.⁶

Banking organizations should also take full account of credit risk arising from securitization and other secondary-market credit activities, including credit derivatives (see SR-97-21).⁷ Maintaining detailed and comprehensive credit-risk measures is most necessary at banking orga-

5. See 12 CFR 208, appendix A (overview), for state member institutions and 12 CFR 225, appendix A (overview), for bank holding companies.

6. SR-98-25 and section 2122.0 discuss the need for banking organizations to have sufficiently detailed, consistent, and accurate risk ratings for all loans, not only for criticized or problem credits. This guidance also describes an emerging sound practice of incorporating such ratings information into internal capital-allocation frameworks, recognizing that riskier assets require higher capital levels.

7. Secondary-market credit activities generally include loan syndications, loan sales and participations, credit derivatives, and asset securitizations, as well as the provision of credit enhancements and liquidity facilities to support such transactions. See SR-97-21 and section 2129.05.

nizations that conduct asset securitization programs, as these activities have the potential to greatly change—and reduce the transparency of—the risk profile of credit portfolios.⁸ Because the current capital standard treats most loans alike, banking organizations have incentives to reduce their regulatory capital requirements by securitizing or otherwise selling lower-risk assets, while increasing the average level of remaining credit risk through devices like first-loss positions and contingent exposure. Thus, it is important that banking organizations are able to assess their remaining risks and hold appropriate levels of capital and allowances. Banking organizations are at the frontier of financial innovation, and they should also be at the frontier of risk measurement and internal capital allocation.

Market risk. The regulatory capital standard for market risk is based largely on a banking organization's own measure of value-at-risk (VaR). The market-risk standard emphasizes the importance of stress testing as a critical complement to a VaR-based calculation in evaluating the adequacy of capital to support the trading function.

Interest-rate risk. The interest-rate risk inherent in a banking organization's activities should also be closely monitored. The banking agencies have emphasized that banking organizations should carefully assess the risk to the economic value of their capital from adverse changes in interest rates. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13) stresses the importance of (1) assessing interest-rate risk in relation to the economic value of a banking organization's capital and (2) sound practices in selecting appropriate interest-rate scenarios to be applied for capital adequacy purposes.

Operational and other risks. Many banking organizations view operational risk—often viewed as any risk not categorized as credit or market risk—as being second in significance only to credit risk. Although operational risk does not easily lend itself to quantitative measurement, it can result in substantial costs through error,

fraud, or other performance problems. The growing dependence of banking organizations on information technology emphasizes one aspect of the need to identify and control this risk.

4060.7.7 CAPITAL COMPOSITION

The analysis of capital adequacy should couple (1) a rigorous assessment of the particular measured and unmeasured risks the banking organization faces with (2) consideration of the capacity of its paid-in equity and other capital instruments to absorb economic losses. The Board's long-standing view is that common equity (that is, common stock and surplus and retained earnings) should be the dominant component of a banking organization's capital structure and that organizations should avoid undue reliance on capital elements that do not form common equity.⁹ Common equity allows an organization to absorb losses on an ongoing basis and is permanently available for this purpose. Further, this element of capital best allows organizations to conserve resources when they are under stress because it provides full discretion as to the amount and timing of dividends and other distributions. Consequently, common equity is the basis on which most market judgments of capital adequacy are made.

Consideration of the capacity of a banking organization's capital structure to absorb losses should also take into account how that structure could be affected by changes in performance. For example, a banking organization experiencing a net operating loss—perhaps due to realization of unexpected losses—will not only face a reduction in its retained earnings, but also possible constraints on its access to capital markets. These constraints could be exacerbated if detrimental conversion options are exercised. A decrease in common equity, the key element of tier 1 capital, may have further unfavorable implications for a banking organization's regulatory capital position. The eligible amounts of most types of tier 1 preferred stock and tier 2 or tier 3¹⁰ capital elements may be reduced because

8. SR-97-21 and section 2129.05 state that such changes have the effect of distorting portfolios that were previously "balanced" in terms of credit risk. The term "balanced" refers to the overall weighted mix of risks assumed in a loan portfolio by the current regulatory risk-based capital standard. This standard, for example, effectively treats the commercial loan portfolios of all banks as having "typical" levels of risk.

9. The Basle Committee on Banking Supervision affirmed this view in an October 1998 release, which stated that common shareholders' funds are the key element of capital. It also suggested that, to protect the integrity of an organization's tier 1 capital and its common equity base, innovative instruments included in tier 1 capital generally should be limited to 15 percent of total tier 1.

10. For the definition of tier 3 capital, see market-risk measure, Regulation Y (12 C.F.R. 225), appendix E, section 2(d).

current capital requirements limit the amount of these elements to a maximum percentage of tier 1 capital. Such adverse magnification effects could be further accentuated if adverse events take place at critical junctures for raising or maintaining capital (for example, as limited-life capital instruments are approaching maturity or new capital instruments are being issued).

4060.7.8 EXAMINER REVIEW OF INTERNAL ANALYSIS OF CAPITAL ADEQUACY

During inspections and supervisory contacts at large, complex banking organizations (LCBOs), examiners should review internal capital-assessment processes, as well as the adequacy of the organizations' capital and their compliance with regulatory capital standards. Such reviews should assess the degree to which an organization has in place, or is making progress toward implementing, a sound internal process to assess capital adequacy. Examiners should briefly describe in the inspection report the approach and internal processes that are used by the banking organization to assess capital adequacy with respect to its risks. Examiners should then document their evaluation of the adequacy and appropriateness of these processes for the size and complexity of the organization and its risk profile. Examiners should also report their assessment of the quality and timing of the organization's plans to develop and enhance its processes for evaluating capital adequacy with respect to risk. Significant deficiencies and inadequate progress in developing and maintaining capital-assessment procedures should also be noted. Examiners should discuss plans for correcting any deficiency with the organization's directors and management and, as appropriate, initiate supervisory action.

In all cases, the examiner's evaluation of the internal processes for an organization's capital adequacy review should be considered in determining its supervisory rating for management. Examiners should expect those organizations that are already active in complex activities involving the transfer of risk, such as securitization and related activities, to have sound internal processes for assessing capital adequacy in place immediately as a fundamental element of safe and sound operation.

Beyond its consideration in evaluating management, the examiner's review should also become, over time, an integral element of assessing and assigning a supervisory rating for capital adequacy. The banking organization

should be developing appropriate processes for establishing capital targets and analyzing its capital adequacy. If these internal assessments suggest that capital levels appear to be insufficient to support the risks taken by the banking organization, examiners should note this finding in the inspection report; discuss plans for correcting this insufficiency with the banking organization's directors and management; and, as appropriate, initiate follow-up supervisory actions.

4060.7.8.1 Adequacy of Risk Measurement and Risk Coverage

Examiners should assess the degree to which internal targets and processes incorporate the full range of material risks faced by the banking organization. They should also assess the adequacy of risk measures used in assessing internal capital adequacy, and the extent to which these risk measures are also used operationally in setting limits, evaluating business-line performance, and evaluating and controlling risk. Measurement systems that are in place but are not integral to the banking organization's risk management should be viewed with some skepticism. Examiners should review whether an organization's approach treats similar risks across products and/or business lines consistently, and whether changes in its risk profile are timely. Finally, examiners should consider the results of sensitivity analyses and stress tests conducted by the banking organization and how these results relate to its capital plans.

4060.7.8.2 Relating Capital to the Level of Risk

In addition to complying with regulatory capital ratios, banking organizations should be able to demonstrate through internal analysis that their capital levels and composition are adequate to support the risks they face, and that these levels are properly monitored and reviewed by directors. Examiners should review this analysis, including the target levels of capital chosen, to determine whether it is sufficiently comprehensive and relevant to the current operating environment. Examiners should also consider the extent to which the banking organization has provided for unexpected events in setting its capital levels. The analysis should cover a suffi-

ciently wide range of external conditions and scenarios, and the sophistication of techniques and stress tests used should be commensurate with the banking organization's activities. Consideration of such conditions and scenarios should take appropriate account of the possibility that adverse events may have disproportionate effects on overall capital levels, such as the effect of tier 1 limitations, adverse capital-market responses, and other magnification effects. Finally, supervisors should consider the quality of the banking organization's management information reporting and systems, the manner in which business risks and activities are aggregated, and management's record in responding to emerging or changing risks.

Finally, when performing their review, supervisors and examiners should be careful to distinguish between a comprehensive process that seeks to identify a banking organization's capital requirements on the basis of measured economic risk, and one that focuses only narrowly on the calculation and use of allocated capital or "economic value added" (EVA) for individual products or business lines for internal profitability analysis. This latter approach, which measures the amount by which operations or projects return more or less than their cost of capital, can be important to an organization in targeting activities for future growth or cutbacks. It requires, however, that the organization first determine—by some method—the amount of capital necessary for each activity or business line. The process for determining the necessary capital should not be confused with management's related efforts to measure relative returns of the firm or of individual business lines, given an amount of capital already invested or allocated. Such EVA approaches often do not meaningfully aggregate the allocated capital across business lines and risk types as a tool for evaluating the banking organization's overall capital adequacy.

4060.7.9 INSPECTION OBJECTIVES

1. To integrate an assessment of capital adequacy with a comprehensive analysis of existing risk.
2. To determine whether internal capital-management processes meaningfully tie the identification, monitoring, and evaluation of the banking organization's risks, arising from its business activities, to the determination of its capital needs.

3. To evaluate a banking organization's progress in developing a comprehensive internal process for assessing capital adequacy, and to document that progress in the inspection report.
4. To place greater reliance on internal assessments of the banking organization's processes that are used to evaluate capital adequacy, and to incorporate those assessments into a supervisory rating for management and capital adequacy.
5. For banking organizations involved in complex activities such as securitization, other secondary-market activities (including credit derivatives), or other complex transfers of risk, to determine and report whether a sound, fundamental internal process for the analysis of capital adequacy currently exists.
6. To discuss with the board of directors and management any insufficiency in capital adequacy management, recognizing the risks taken, and to reach agreements for corrective action.

4060.7.10 INSPECTION PROCEDURES

Internal Capital Assessment

1. Review the banking organization's internal capital-assessment processes as well as its capital adequacy and compliance with regulatory capital standards.
2. Briefly describe in the inspection report the approach and internal processes that are used to assess capital adequacy with respect to the banking organization's risks.
 - a. Evaluate and document an assessment of the adequacy and appropriateness of these internal processes (including the extent of their contribution to the assignment of a management supervisory rating). Consider the size and complexity of the banking organization with respect to the quality and timing of its plans to develop and enhance its processes for evaluating capital adequacy with respect to risk.
 - b. If the banking organization is already involved in complex activities involving the transfer of risk, such as securitization and related activities, ascertain whether sound internal processes currently exist for evaluating capital adequacy.
 - c. If the internal assessments described above suggest that capital levels appear to be insufficient to support the risks taken, dis-

cuss plans for correcting this insufficiency with the directors and management, and note these finding(s) in the inspection report and initiate follow-up supervisory action(s).

Measurement and Risk Coverage

1. Determine the degree to which internal targets and processes incorporate the full range of material risks faced by the banking organization.
 - a. Evaluate the adequacy of risk measures used in assessing internal capital adequacy.
 - b. Assess the extent to which these risk measures are used operationally in setting limits, evaluating business-line performance, and evaluating and controlling risk.
2. Ascertain whether the banking organization's approach treats similar risks across products and/or business lines consistently, and whether changes in the risk profile are fully reflected in a timely manner.
3. Evaluate the results of sensitivity analyses and stress tests conducted by the banking organization, and determine how these results relate to its capital plans.

Relating Capital to the Level of Risk

1. Determine whether the banking organization can demonstrate through internal analysis that its target capital levels and composition

are adequate to support present risks, and whether these levels are properly monitored and reviewed by the directors. Decide if the internal analysis is sufficiently comprehensive and relevant to the current operating environment.

2. Ascertain if the banking organization has provided for unexpected events in setting its capital levels.
 - a. Evaluate whether the analysis covers a sufficiently wide range of external conditions and scenarios.
 - b. Determine if the sophistication of techniques and stress tests used are commensurate with the banking organization's activities.
3. Evaluate the quality of the banking organization's management information reporting and systems, the manner in which business risks and activities are aggregated, and management's record in responding to emerging or changing risks.
4. Establish whether the internal capital-analysis plan is—
 - a. a comprehensive process that seeks to identify the banking organization's capital requirements on the basis of measured economic risk; or
 - b. a narrow process that focuses only on the calculation and use of allocated capital or "economic value added" (EVA) for individual products or business lines for internal profitability analysis.

The bank holding company rating system is a management information and supervisory tool which defines the condition of bank holding companies in a systematic way. The system adopts the “component” approach by: (1) evaluating the financial condition and risk characteristics of each major component of the bank holding company; (2) assessing the important interrelationships among the components; and (3) analyzing the strength and significance of key consolidated financial and operating performance characteristics. This approach is particularly appropriate since holding companies are to be a source of financial and managerial strength to their bank subsidiaries.

In order to arrive at an overall assessment of financial condition, the following elements of the bank holding company are evaluated and rated on a scale of one through five in descending order of performance quality:

1. Bank Subsidiaries
2. Other (Nonbank) Subsidiaries
3. Parent Company
4. Earnings—Consolidated
5. Capital Adequacy—Consolidated

The first three elements of the rating, i.e., the bank, other subsidiaries, and parent company, reflect the contribution of each to the fundamental financial soundness of the holding company. The rating of consolidated earnings and capital recognizes the importance that regulators place on these factors and their crucial role in maintaining the financial strength and supporting the risk characteristics of the entire organization.

The ability and competence of holding company management bear importantly on every aspect of holding company operations and, consequently, are included as a major factor in the evaluation of each of the five principal elements of the bank holding company rating, as well as in the assignment of an overall holding company rating.

In addition to the individual elements described above, each company is accorded an overall or composite rating, comprising both a financial and managerial component. The financial composite rating is predicated upon an overall evaluation of the ratings of each of the five principal elements of the holding company’s operations as defined above. The financial composite rating is also based upon a scale of one through five in descending order of performance quality. Thus, one represents the lowest and five the highest degree of supervisory concern. The managerial composite is predicated upon a comprehensive evaluation of holding company man-

agement as reflected in the conduct of the affairs of the bank and nonbank subsidiaries and the parent company. The managerial composite is indicated by the assignment of “S”, “F”, or “U” for, respectively, management that is found to be satisfactory, fair or unsatisfactory.

The complete rating represents a summary evaluation of the bank holding company in the form of a rating “fraction.” The “numerator” reflects the condition of the principal components of the holding company and assessments of certain key consolidated financial and operating factors. The “denominator” represents the composite rating, as defined in greater detail below, including both its financial and managerial components. While the elements in the “numerator” represent the essential foundation upon which the composite rating is based, the composite need not reflect a simple arithmetic mean or rigid formula weighting of the individual performance dimensions. Any kind of formula could be misleading and inappropriate. Rather, the composite should reflect the rater’s judgment of the overall condition of the bank holding company based upon his knowledge and experience with the company. Thus, the complete rating is displayed as follows:

$$\frac{B-O-P-E-C}{F-M}$$

The bank holding company rating system parallels the uniform interagency bank rating system to some degree by utilizing similar rating scales and performance definitions to evaluate both the individual elements and the summary or overall condition of the holding company. This framework will provide for consistency and facilitate the adoption and use of the holding company rating system. The rating system is also sufficiently flexible to allow for appropriate differences in appraising shell bank holding companies.

Since shell bank holding companies comprise the majority of supervised companies, and involve a substantial volume of banking assets, they must also be addressed by the rating system. The procedure would be similar to that so far described; however, the other (nonbank) subsidiaries, consolidated earnings, and consolidated capital ratings would be assigned a “0” rating since these components have little relevance for

the shell company. This leaves the parent (with emphasis on cash flow and debt servicing ability), bank and composite (both financial and managerial) as remaining elements of the shell bank holding company rating.

For purposes of the rating, shell companies shall be defined as bank holding companies that have total consolidated assets less than \$150 million *and* that have no significant nonbank subsidiaries. Companies with consolidated assets of \$150 million or more are obliged to file consolidated FR Y-9 C and FR Y-9 LP reports and, therefore, are to be accorded a complete rating regardless of the existence of nonbank subsidiaries. (Companies of \$150 million or more in assets with no significant nonbank subsidiaries would be assigned a “0” for the “other subsidiary” component of the rating.) Nonshell companies under \$150 million in consolidated assets with significant nonbank assets should be assigned a rating that includes a component for the nonbank subsidiaries. Thus, such companies’ ratings will include the bank, other nonbank, and parent components, but may exclude consolidated earnings and capital ratings since the needed figures may not be available. In order to avoid confusion as to which components have been rated, and to provide for computer processing, whenever a component is not rated, a “0” should be assigned (i.e., 2-0-3-0-0).

As this scheme suggests, elements are to be rated whenever they are relevant for a particular company. In practice, this means that: (1) all companies with \$150 million or more in consolidated assets should be given a complete rating; (2) shell companies as defined above should be accorded a rating for the bank and parent components and both composites; and (3) nonshell companies under \$150 million in assets with significant nonbank operating subsidiaries should receive a rating that includes a nonbank component. Ratings of consolidated earnings and capital may also be included for such companies at the discretion of the examiner if the figures are available or if deemed necessary to accurately reflect overall condition. Of course, a managerial composite rating should be provided for all companies.

4070.0.1 FINANCIAL COMPOSITE RATING

The five composite ratings are defined and distinguished as follows:

1. Composite 1

Bank holding companies in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Such holding companies and their subsidiaries are resistant to external economic and financial disturbances and readily generate cash flow which is more than adequate to service their debt and other fixed obligations with no harm to subsidiaries.

2. Composite 2

Bank holding companies in this group are also fundamentally sound but may reflect modest weaknesses correctable in the normal course of business. Such holding companies and their subsidiaries generate cash flow which is adequate to service their obligations; however, areas of weakness could develop into conditions of greater concern. To the extent that the minor adjustments are handled in the normal course of business, the supervisory response is limited.

3. Composite 3

Bank holding companies in this group exhibit a combination of weaknesses ranging from fair to moderately severe. Such holding companies and their subsidiaries are less resistant to the onset of adverse business conditions and could likely deteriorate if concerted action is not effective in correcting the areas of weakness. The company’s cash flow is sufficient to meet immediate obligations but, unless action is taken to correct weaknesses, parent cash flow needs could adversely affect the financial condition of the subsidiaries. Consequently, such bank holding companies are vulnerable and require more than normal supervision. Overall strength and financial capacity, however, are still such as to pose only a remote threat to the viability of the company.

4. Composite 4

Bank holding companies and their subsidiaries in this group have an immoderate volume of asset weaknesses, or a combination of other conditions that are less than satisfactory. An additional weakness may be that the holding company’s cash flow needs are met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, they could impair future viability. Bank holding companies in this category require close supervisory attention and increased financial surveillance.

5. Composite 5

The volume and character of the weaknesses of bank holding companies in this category are so critical as to require urgent aid from shareholders or other sources to prevent insolvency. The imminent inability of such compa-

nies to service their fixed obligations and/or prevent capital depletion from severe operating losses places their viability seriously in doubt. Such companies require immediate corrective action and constant supervisory attention.

4070.0.2 MANAGEMENT COMPOSITE RATING

The management rating is intended to reflect an overall evaluation of the capabilities and competence of the management of the parent company and senior management of the bank(s) and non-bank subsidiaries. The assessment of management must take place within the context of the situation and circumstances surrounding the individual holding company under evaluation. Since business complexities and operating problems vary with the size and type of holding company activity, management that is competent to effectively discharge responsibilities under one set of conditions may be less competent as these conditions change. Management performance must be evaluated against virtually all factors necessary to operate the holding company's activities soundly and prudently. In addition to objective operating results, important subjective considerations in assessing management performance include the following:

1. technical competence, leadership, administrative ability, and management depth and succession
2. knowledge of and compliance with the Bank Holding Company Act and related regulations, and all other relevant laws and regulations
3. history of serving the banking needs of the community
4. ability to plan and respond to changing circumstances
5. ability of parent management to monitor and direct subsidiary operations to ensure prudent operation and compliance with established holding company policies
6. adequacy and scope of internal audit systems and controls, and evaluation of them as contained in audit reports
7. attitude toward risk as indicated by any undue reliance on resources of subsidiary bank(s) to support nonbank activities

A rating of satisfactory (S) is indicative of management that is fully effective with respect to almost all factors and that exhibits a responsiveness and ability to cope successfully with existing and foreseeable problems that may arise in the conduct of the parent's or subsidiaries' affairs. Management rated satisfactory is knowl-

edgeable concerning relevant laws and regulations, and has demonstrated an understanding of the need to insulate the subsidiary bank(s) from any undue risk associated with nonbank activities. A rating of fair (F) reflects performance that is lacking in some measure of ability that would be desirable to meet responsibilities necessitated by various situations which management must address. Performance is characterized by modest talent when above-average abilities are called for or by distinctly below-average talent for the type and size of organization. Thus, management's responsiveness or ability to correct less than satisfactory conditions may be lacking. Moreover, such management may reflect a less than satisfactory understanding of relevant holding company laws and regulations. A rating of unsatisfactory (U) is indicative of management that is demonstrably inferior or incompetent in relation to the responsibilities or problems it faces. This rating may also be indicative of management that has demonstrated an inclination to subject the subsidiary bank(s) to excessive or unwarranted risk as a result of the activities of the nonbank subsidiaries. In these cases, problems resulting from management weakness are of such severity that management must be strengthened or replaced before sound conditions can be brought about.

4070.0.3 PERFORMANCE EVALUATION

The five components of holding company operations (bank subsidiaries, nonbank subsidiaries, parent only, consolidated earnings, and capital) are to be evaluated on a scale of one to five. The following is a description of the gradations to be utilized in assigning performance ratings:

1. Rating No. 1 indicates strong performance. It is the highest rating and is indicative of performance that is significantly higher than average and that obviates the need for supervisory concern.
2. Rating No. 2 reflects satisfactory performance. It reflects performance that is average or above; it includes performance that adequately provides for the safe and sound operation of the bank holding company and its subsidiaries.
3. Rating No. 3 represents performance that is flawed to some degree; as such, it is considered fair. It is neither satisfactory nor marginal but is characterized by performance of below-average quality. Such performance requires man-

agement attention due to the distinct possibility of further deterioration.

4. Rating No. 4 represents marginal performance which is significantly below average; if left unchecked, such performance might evolve into weaknesses or conditions that could threaten the viability of the institution.

5. Rating No. 5 is considered unsatisfactory. It is the lowest rating and is indicative of performance that is critically deficient and in need of immediate remedial attention. Such performance by itself, or in combination with other weaknesses, could threaten the viability of the institution.

4070.0.4 BANK CONDITION

The bank condition component is intended to reflect the overall condition of the banking subsidiary or subsidiaries. For this purpose, use is made of the subsidiary bank CAMELS composite rating(s). In the case of multibank companies, each bank's composite rating should be weighted according to its asset size to arrive at an average bank composite rating. Weighting implies that, in most cases, the bank condition component in the holding company rating system will usually reflect the lead bank's composite according to the Uniform Financial Institutions Rating System (CAMELS).

To highlight the presence of one or more problem bank(s) in a multibank holding company whose bank condition component, based on weighted averages, might not otherwise reveal their presence (that is, bank condition ratings of 1, 2, or 3), a problem identifier (P) would be attached to the bank condition rating (for example, 1P, 2P, 3P). Thus, 2P would indicate that, while on balance the banking subsidiaries are rated satisfactory, there exists a problem bank (composite 4 or 5) among the banking subsidiaries. The problem identifier is unnecessary when the bank condition component is rated 4 or 5. Although the bank condition component is a weighted average, it can be adjusted for subjective, judgmental reasons at the discretion of the rater.

4070.0.5 OTHER (NONBANK) SUBSIDIARIES

The other subsidiaries rating is designed to assess the condition of the nonbank subsidiaries

in the context of their overall impact on the financial condition of the holding company and the subsidiary bank(s). In so doing, emphasis must be placed on the asset quality of credit-extending subsidiaries and the profitability and operating soundness of non-credit-extending subsidiaries. The evaluation of other subsidiaries should concentrate on the quality and condition of nonbank assets defined as—

1. the underlying assets of credit-extending nonbank subsidiaries; and

2. the parent's investment in and advances to non-credit-extending subsidiaries.

The inclusion of No. 2 in the definition acknowledges the fact that poorly run servicing or other non-credit-extending subsidiaries can pose significant risk exposure to the holding company, which should be explicitly reflected in the rating. Such exposure might result, for example, from operating losses or off-balance-sheet items such as guarantees. In many cases, since non-credit-extending subsidiaries are not heavy borrowers from external sources, the parent's investments in and advances to such companies will serve as a proxy for the magnitude of their operations. The degree of risk associated with the non-credit-extending subsidiaries may be quantified for the purpose of analyzing nonbank asset quality by classifying the parent's investments in and advances to such subsidiaries if the financial condition of the subsidiaries or the characteristics of their assets permits a meaningful conventional asset classification. This might be the case, for instance, if the subsidiaries' historical earnings record has not, in the examiner's judgment, adequately accounted for the development of clearly identifiable loss potential associated with the entity's operations. If a conventional classification of the investments in or advances to the non-credit-extending subsidiaries is not considered suitable, the examiner should identify and fully analyze the risk exposure posed by the non-credit-extending subsidiaries in the inspection report, specifically in the open section narrative analysis of financial condition. Any classifications or analysis of the parent's investments in and advances to non-credit-extending subsidiaries should be presented in the open section of the report and considered in arriving at the nonbank subsidiary component of the rating system. In assessing the investment in or advance to a non-credit-extending subsidiary, the analysis should parallel that for any asset appraisal, with particular attention given to the subsidiary's purpose and operating efficiency, management reporting procedures, and profitability. Also, foreign subsidiaries should be assessed in a

manner similar to that for the company's domestic nonbank investments.

The degree of risk associated with credit-extending subsidiaries is determined by the classification of the underlying assets of the subsidiaries. The severity of both problem investments and classified assets should be reflected by using the following weights: 100 percent of "loss," 50 percent of "doubtful," and 20 percent of "substandard."

A major step in rating nonbank activities is first to appraise their significance to the company's overall financial performance. The appraisal should focus on the potential loss exposure these activities pose to the bank holding company. One way of estimating this exposure is to compare total nonbank assets as defined above, plus any additional exposure not reflected in total assets, to total consolidated capital. As a general rule, other subsidiaries should be rated whenever nonbank assets exceed 5 percent of consolidated capital or \$10 million, whichever is lower. If this condition is not met, a "0" should be entered for the rating of other subsidiaries. Other subsidiary assets that do not meet the significance conditions may be rated if, in the opinion of the rater, not to do so would significantly misrepresent the condition of the holding company.

When a rating is assigned to nonbank assets, considerations should include—

1. the relationship of problem investments in and advances to non-credit-extending subsidiaries plus classified assets in the credit-extending nonbank subsidiaries to total nonbank assets as defined above;
2. the relationship of problem investments and advances plus classified assets to the sum of parent company and nonbank valuation reserves and ex-bank consolidated equity capital, or to any more appropriate or refined capital index or measure, if warranted;
3. the ability of nonbank management to supervise and exercise overall control over nonbank subsidiary operations in order to ensure prudent operation, sound asset administration, and compliance with established holding company policies and relevant laws and regulations; and
4. management attitudes toward risk as indicated by any undue reliance on resources of affiliated bank(s) to support nonbank subsidiaries.

The specific delineation of the above considerations is not meant to preclude taking into account other relevant factors such as profitability, operating efficiency, management controls, reporting procedures, and any other relevant

factors that, in the judgment of the rater, are necessary to assess accurately the condition of the nonbank subsidiaries.

An asset quality rating of 1 obviates the need for supervisory concern due to the existence of sound, well-managed nonbank operations, investments, and loan portfolios. A 2 rating may indicate the existence of some asset problems or other minor operational weaknesses, but still represents fundamentally sound, well-managed asset conditions warranting minimal supervisory concern. A 2 may also reflect asset problems that are clearly of little supervisory concern, given their unlikely impact on the bank(s) and the size and overall strength of the holding company. Problems associated with a 2 rating can readily be resolved in the normal course of business. A 3 rating represents the existence of deficiencies such as a significant upward trend in classifications, management control weaknesses, or other problems that, if left unchecked, could cause substantial deterioration and have an adverse impact on the banking subsidiaries. A 4 rating represents an increased need for supervisory surveillance and concern due to any combination of poor operations, weak management, or severe asset problems that are currently having a serious impact on the holding company or the banking subsidiaries. A 5 rating applies to a critical level of nonbank problems.

4070.0.6 PARENT COMPANY

The parent company rating reflects the financial condition of the parent company by focusing on (1) its ability to readily service its debt and other fixed obligations and (2) the quality of direct parent credit extensions to entities that are not subsidiaries of the holding company. (Investments in and advances to holding company subsidiaries are treated above in connection with the evaluation of the nonbank subsidiaries.)

In analyzing the parent company, consideration should be given to its ability to generate adequate cash flow from its ongoing operations and the liquidity of its assets. Potential sources of cash flow to the parent include, for example, bank and nonbank dividends, loan repayments, management and service fees, tax benefits, interest income, and liquidation of assets; cash needs would include interest and operating expenses, debt retirement, and preferred and common stock dividends. The analysis should also take into account the capacity of the parent company to

safely obtain liquidity from its subsidiaries by, for example, the prudent upstreaming of additional subsidiary dividends.

Factors which should be incorporated in the analysis of the parent company include—

1. volume and composition of parent-company debt, and cash-flow needs deriving therefrom;
2. comparison of the maturities of parent-company borrowings with the maturities of the investments which they fund;
3. quality of credits to nonaffiliated companies;
4. ability to readily convert assets to cash without incurring serious loss or adversely affecting the banking subsidiaries;
5. ability of management to plan for liquidity and cash-flow needs and respond to changing conditions in the markets for short-term funds;
6. ability of the company to obtain long- and short-term funds on reasonable terms, and the existence of firm backup lines of credit;
7. reasonableness of any bank management or service fees paid to the parent;
8. demonstrated performance in meeting past and current servicing requirements; and
9. ability of parent management to supervise and exercise overall control over subsidiary and parent operations to ensure prudent operation, sound asset administration, and compliance with established holding company policies and relevant laws and regulations.

Also of importance, but treated elsewhere, are the use of parent debt to fund equity investments in subsidiaries, the adequacy of the company's capital and capital plans, and the strength of corporate earnings.

The shell company would be appraised in a manner similar to that outlined above. Cash flow to service parent-company debt would be the major aspect of the analysis, with attention focused on its effects on the subsidiary bank's capital position. In addition, the amount of parent-company debt should be compared to the parent's proportionate interest in the subsidiary bank's equity capital. This serves as a good estimate of the company's ability to carry existing debt or to borrow additional funds should an unexpected need arise.

A parent company rating of 1 indicates that the holding company can readily generate cash flow which is more than adequate to service its debt obligations and other cash-flow needs and provide for the smooth rollover of debt without adverse effect on its subsidiaries. The rating also

reflects good management and the absence of significant asset problems. A 2 rating, while reflecting a fundamentally sound situation, indicates a possible trend toward tighter liquidity due to lower earnings, asset quality, or other relevant operating indices. A rating of 3 represents a decidedly tight, but still manageable, cash-flow situation. The company will likely have little or no liquidity in its asset portfolio and/or be overly dependent on potentially harmful dividends and fees from its subsidiaries. Weak earnings might also be expected to complicate such a situation. The 3 rating would reflect increasing difficulty for the parent company in obtaining short-term funds on favorable terms. A rating of 4 indicates serious cash-flow problems caused or exacerbated by severe asset deterioration or poor or no corporate earnings. Companies so rated may be seriously draining funds from bank subsidiaries to service cash-flow needs and may be completely unable to serve as a source of funds or financial strength to their subsidiaries. A rating of 5 may represent an inability to enter money markets. Moreover, the problems represented by a rating of 5 would reflect an imminent danger of default or insolvency of the parent company.

4070.0.7 EARNINGS— CONSOLIDATED

The rating of earnings is based on the assessment of fully consolidated profitability. This approach is appropriate since consolidated earnings serve as a source of financial strength and capital growth for the entire organization.

Profitability has two dimensions, quantity and quality, both of which must be incorporated in the evaluation of earnings. Quantity refers to the absolute level of net income and its adequacy in relation to the considerations listed below. The appraisal of quality is an attempt to determine the strength of operating earnings (i.e., the ability to generate ongoing revenues and hold down expenses), and the degree to which earnings reflect the impact of unusually large securities gains or losses, unusual tax items (i.e., credits, carryforwards, etc.), or other large, nonrecurring, extraordinary gains or losses. Quality of earnings also refers to the effect on net income of adequately providing additions to the loan-loss reserve to properly recognize the impact of poor, overstated, or loss assets carried on the balance sheet. Other things being equal, consolidated net income that relies unduly on unusually large, nonrecurring gains or that fails to reflect adequate loan-loss provisions is of lower quality

than net income of equal magnitude that reflects strong operations and adequate loss provisions. On the other hand, the concept of quality “works both ways.” While care must be taken to avoid attempting to predict the future, net income that otherwise appears somewhat low may be of high quality and, consequently, suggests stronger future net income. This would especially be the case if current earnings reflected a level of charge-offs that was not expected to recur, given the relatively high quality of the company’s assets.

Generally, consolidated earnings since the prior inspection will be rated with emphasis given to the most recent year’s performance. In light of the above discussion, earnings will be rated with respect to the following considerations:

1. the return on consolidated assets, historical earnings trends, and peer-group comparisons
2. the quality of earnings as reflected by (a) extent of reliance on nonrecurring gains or losses or unusual tax effects, and (b) the sufficiency of loss provisions in view of the condition of the asset portfolio and the adequacy of the loan-loss reserves
3. the ability to adequately cover charge-offs, maintain public confidence, and provide for the safe, ongoing operation of the company
4. the ability of management to plan and devise realistic earnings projections in light of the risk structure and quality of assets
5. the outlook for earnings as implied by the current risk structure and quality of assets
6. the ability of earnings to provide for the growth of capital in light of recent and planned asset growth

Inclusion of no. 6 above is not meant to suggest that the level or adequacy of current capital determines the rating for earnings; capital per se is treated elsewhere. It simply recognizes that retained earnings is a primary source of capital. If a company opts for rapid growth, its earnings must enable it to raise the necessary capital either through retention or by permitting ease of entry into the capital markets. While this notion must be kept in mind in evaluating a company’s profitability, it is quite possible for a company to simultaneously have low capital and good earnings or vice versa.

Earnings rated 1 are sufficient to make full provision for the absorption of losses and accretion of capital when due consideration is given to asset quality and bank holding company growth. Generally, holding companies so rated will have earnings well above peer-group averages. A company whose earnings are relatively

static or even moving downward may receive a 2 rating, provided its level of earnings is adequate in view of the considerations discussed above. Normally, companies so rated will have earnings that are in line with or slightly above peer-group norms. A 3 rating should be accorded earnings that are not fully adequate to make sufficient provisions for the absorption of losses and the accretion of capital in relation to company growth. The earnings pictures of such companies may be further clouded by static or inconsistent earnings trends, chronically insufficient earnings, or less than satisfactory asset quality. Earnings of such companies are generally below peer-group averages. Earnings rated 4, while generally positive, are clearly not adequate to make full provision for losses and the necessary accretion of capital. Companies with earnings rated 4 may be characterized by erratic fluctuations in net income, poor earnings (and the likelihood of the development of a further downward trend), intermittent losses, chronically depressed earnings, or a substantial drop from the previous year. Earnings of such companies are ordinarily substantially below peer-group averages. Bank holding companies with earnings accorded a 5 rating should be experiencing losses or reflecting a level of earnings that is worse than that defined in rating 4 above. Such losses, if not reversed, could represent a distinct threat to the holding company’s solvency through the erosion of capital.

4070.0.8 CAPITAL ADEQUACY— CONSOLIDATED

Capital is to be evaluated with regard to the volume and risk of the operations of the consolidated corporation. Emphasis on capital from the standpoint of the consolidated entity is appropriate since holding company management exercises some discretion with respect to the allocation of capital resources within the corporation. Thus, it is the holding company’s capital on a consolidated basis that must serve as the ultimate source of support and strength to the entire corporation.

To be considered adequate, holding company capital must (1) support the volume and risk characteristics of all parent and subsidiary activities; (2) provide a sufficient cushion to absorb unanticipated losses arising from holding company and subsidiary activities; (3) support

the level and composition of corporate and subsidiary borrowing; and (4) serve as a source of strength by providing an adequate base for the growth of risk assets and permitting entry into the capital markets as the need arises. An essential step in the analysis of capital is the assessment of the risk characteristics and capital requirements deriving from the lending activities and operations of the parent and each of the operating subsidiaries.

The analysis of capital should incorporate the following considerations:

1. the relationship of consolidated capital to risk-weighted assets as reflected in (a) the ratio of tier 1 capital to total risk-weighted assets, and (b) the ratio of total capital to risk-weighted assets

2. the capital requirements that derive from the asset quality and risk associated with each holding company activity

3. the relationship of consolidated debt to tier 1 capital

4. the extent of reliance on long-term debt in the capital structure

5. the extent of the use of debt at the parent level to fund capital investments in subsidiaries

6. the trends of indices of capital adequacy and peer-group ratio comparisons

7. the management's ability to devise adequate capital plans and retention policies in light of any capital deficiency and/or planned expansion of risk assets

8. the capacity to enter capital markets or tap other sources of long-term debt and equity

9. the extent of any balance-sheet concentration in any category or related categories of intangible assets, particularly those in excess of the 25 percent threshold, including the reasonableness of the amortization periods of those assets

10. the relationship of high or inordinate off-balance-sheet risk exposure to tier 1 capital

11. the nature and amount of nonbanking activities in relationship to tier 1 and total capital levels

4070.0.8.1 Rating Consolidated Capital

The capital adequacy guidelines discussed in sections 4060.3 and 4060.4 are to be used in the inspection of bank holding companies. Holding company inspections should contain information on the principal subsidiary banks' capital positions. Inspection reports should contain criti-

cal comments on the capital positions of individual subsidiary banks supervised by other agencies only if the criticisms are consistent with the other agencies' positions as described in examination reports, or if they have first been discussed with the primary supervisor of the bank. Inspection reports should address any instances of noncompliance with capital commitments made in connection with the Federal Reserve's approval of bank holding company applications.

While the ratio guidelines are to be applied to both the bank and its holding company, it is the consolidated entity whose financial condition and strength will ultimately determine the condition of the banking organization. It is recognized that, to some extent, strong consolidated holding company capital positions may offset minor deficiencies in the bank subsidiaries. However, bank capital positions, particularly those that reflect double leveraging, generally do not alleviate consolidated holding company capital deficiencies.

4070.0.9 DISCLOSURE OF NUMERIC BOPEC COMPOSITE AND COMPONENT INSPECTION RATINGS

It is a long-standing policy of the Federal Reserve to discuss fully and clearly in examination and inspection reports, and in meetings with senior management and boards of directors, supervisory issues, problems, or concerns relating to the banking organizations under the System's supervision. Beginning on December 16, 1988, the Board authorized examiners to disclose to the senior officials and boards of directors of inspected bank holding companies the composite numeric rating assigned in an inspection as part of the inspection report process (see SR-88-37). Generally, the Federal Reserve has also provided senior management and directors with the word descriptions that consist of a single word corresponding to the numeric component ratings assigned.

In an effort to further strengthen communication with supervised banking organizations, beginning on January 1, 1997, the Federal Reserve will also provide the numeric and the assigned alphabetic component ratings under various supervisory rating systems¹ to senior manage-

1. The disclosure of the composite and supporting component rating applies to the following rating systems:

- CAMELS (state member banks)
- BOPEC (bank holding companies)

continued

ment and directors (see SR-96-26 and section 5010.4). Such disclosure includes the alphabetic component ratings assigned to management under the BOPEC rating system. Building on existing practice, this step is intended to better focus management's attention on possible areas of weakness and the need for timely corrective actions.

The disclosure of the rating and its components should be made in the Examiner's Comments and Matters Requiring Special Board Attention, core page 1 of inspection reports; in the summary reports prepared for boards of directors of inspected institutions; and in meetings with senior management and directors. In

conjunction with disclosing the ratings and their components, examiners and/or supervisory officials should clearly explain their meaning.

In the context of the exit meeting, the examiner should discuss key overall inspection findings, including preliminary composite and component numeric ratings. Examiner-assigned ratings are subject to a review by Reserve Bank supervisory officials, and final ratings are to be included in the inspection report. *In disclosing composite and component ratings, the examiner-in-charge should remind management that the ratings assigned are a part of the findings of the inspection and are privileged and confidential under applicable law.* If composite and component ratings are changed between inspections as a result of off-site analysis, the board of directors and management should be informed of the change. Ratings should not be disclosed to the bank holding company's directors and management until preliminary approval has been received from the appropriate senior Reserve Bank supervisory officials.

Rating the Adequacy of Risk-Management Processes and Internal Controls of Bank Holding Companies Section 4070.1

The Federal Reserve places significant supervisory emphasis on the importance of sound risk-management processes and strong internal controls when evaluating the activities of banking organizations it supervises. Properly managing risks is always critical to the conduct of safe and sound banking activities, and it is even more important as new technologies, product innovation, and the size and speed of financial transactions change the nature of banking markets.

A bank holding company's failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Accordingly, while a bank holding company's financial performance is an important indicator of the adequacy of management, it is essential that examiners give significant weight to the quality of risk-management practices and internal controls when they evaluate the management and overall financial condition of banking organizations.

Consistent with the greater supervisory emphasis given to risk management in Federal Reserve examination and supervisory policy statements, System examiners are to assign a formal supervisory rating to the adequacy of a bank holding company's risk-management processes, including its internal controls. This step is a natural extension of current procedures that incorporate an assessment of risk management and internal controls during each on-site, full-scope inspection. The specific rating of risk management and internal controls should be given significant weight when evaluating management under the bank holding company (BOPEC) rating system. Like the components of this system, the risk-management rating should be based on a five-point numerical scale.

This rating of the risk-management process is designed to bring together and summarize much of the analysis of and many of the findings about a bank holding company's process for managing and controlling risks, which are an important part of the examiner's review of these individual areas. The formal rating is intended to highlight and incorporate both the quantitative and qualitative aspects of an examiner's review of an organization's overall process for identifying, measuring, monitoring, and controlling risk and to facilitate appropriate follow-up action.

The overall profitability, asset quality, and capital adequacy of a bank or bank holding company should continue to influence the exam-

iner's assessment of management, but these indicators can to some extent be affected, either favorably or adversely, by factors outside management's control. For this reason, the specific evaluation of the risk-management process should be a primary factor when rating management, especially in the case of larger banking organizations whose activities and structures require more formal and extensive procedures.

Examiners should apply this guidance flexibly to appropriately reflect the banking organization's circumstances and the nature, scope, and complexity of its operations. Risk-management ratings should be assigned to all bank holding companies, regardless of their size.

Examiners should discuss in a clear and straightforward manner in the appropriate open sections of the inspection report the nature and severity of any problems or deficiencies found and the steps required to correct them, particularly if the risk-management rating is less than satisfactory. Serious lapses or deficiencies in internal controls, including inadequate separation of duties, can constitute an unsafe and unsound practice and possibly lead to significant losses or otherwise compromise the financial integrity of the organization. If appropriate, the bank holding company's directors and officers should be advised that the Federal Reserve will initiate supervisory actions if its failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of its activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company, its responsible officers and directors, or both and would require the immediate implementation of all necessary corrective measures.

4070.1.1 ELEMENTS OF RISK MANAGEMENT

When rating the quality of risk management at bank holding companies as part of the evaluation of the overall quality of management, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk measurement, monitoring, and management information systems
- comprehensive internal controls

Examiners should recognize that the considerations specified in SR-95-51 are intended only to assist in the evaluation of risk-management practices. *They are not a checklist of requirements for an individual organization.* Moreover, while all bank holding companies should be able to assess the major risks of the consolidated organization, examiners should expect parent companies that centrally manage the operations and functions of their subsidiary banks to have more comprehensive, detailed, and developed risk-management systems than companies that delegate the management of risks to relatively autonomous banking subsidiaries.

4070.1.1.1 Active Board and Senior Management Oversight

In assessing the quality of the oversight by boards of directors and senior management, examiners should consider whether the bank holding company follows policies and practices such as those described below:

- The board and senior management have identified and have a clear understanding and working knowledge of the types of risks inherent in the bank holding company's activities, and they make appropriate efforts to remain informed about these risks as financial markets, risk-management practices, and the bank holding company's activities evolve.
- The board has reviewed and approved appropriate policies to limit risks inherent in the bank holding company's lending, investing, trading, trust, fiduciary, and other significant activities or products.
- The board and management are sufficiently familiar with and are using adequate record-keeping and reporting systems to measure and monitor the major sources of risk to the organization.
- The board periodically (1) reviews and approves risk exposure limits to conform with any changes in the bank holding company's strategies, (2) addresses new products, and (3) reacts to changes in market conditions.

- Management ensures that its lines of business are managed and staffed by personnel with knowledge, experience, and expertise consistent with the nature and scope of the bank holding company's activities.
- Management ensures that the depth of staff resources is sufficient to operate and soundly manage the bank holding company's activities and that its employees have the integrity, ethical values, and competence that are consistent with a prudent management philosophy and operating style.
- All levels of management adequately supervise the day-to-day activities of officers and employees, including management supervision of senior officers or heads of business lines.
- Management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
- Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activity or product and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

4070.1.1.2 Adequate Policies, Procedures, and Limits

A bank holding company's board of directors and senior management should tailor their risk-management policies and procedures to the types of risks that arise from the organization's activities. The following guidelines should assist examiners in evaluating the adequacy of a bank holding company's policies, procedures, and limits:

- The bank holding company's policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, trust, fiduciary, and other significant activities.
- The policies, procedures, and limits are consistent with management's experience level, the organization's stated goals and objectives, and its overall financial strength.
- Policies clearly delineate accountability and lines of authority across the organization's activities.
- Policies provide for the review of new activities of the organization to ensure that the infrastructures necessary to identify, monitor,

and control risks associated with an activity are in place before the activity is initiated.

4070.1.1.3 Adequate Risk Monitoring and Management Information Systems

Effective risk monitoring requires banking organizations to identify and measure all material risk exposures. Consequently, risk-monitoring activities must be supported by information systems that provide senior managers and directors with timely reports on the financial condition, operating performance, and the risk exposure of the consolidated organization, as well as with regular and sufficiently detailed reports for line managers engaged in the day-to-day management of the organization's activities.

In assessing the adequacy of a bank holding company's measurement and monitoring of risk and its management reports and information systems, examiners should consider whether the following conditions exist:

- The bank holding company's risk-monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate and adequately documented and tested for reliability on an ongoing basis.
- Reports and other forms of communication are consistent with the bank holding company's activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.
- Reports to management or the directors are accurate and timely and contain sufficient information for decision makers to identify any adverse trends and to evaluate adequately the level of risk the bank holding company faces.

4070.1.1.4 Adequate Internal Controls

A bank holding company's internal control structure is critical to its safe and sound functioning generally and to its risk-management system, in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate separation of duties—such as trading, custodial, and back-office—is one of management's more important responsibilities.

Appropriate segregation of duties is a fundamental and essential element of a sound risk-management and internal control system. Fail-

ure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise the financial integrity of the bank holding company. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and bank holding company policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the bank holding company's board of directors or its designated committee, which is typically the audit committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or other personnel, should be adequately documented, as should management's responses to them. In addition, communication channels should exist that allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee.

In evaluating the adequacy of a bank holding company's internal controls and audit procedures, examiners should consider whether the following conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization's activities.
- The bank holding company's organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
- Reporting lines provide sufficient independence of the control areas from the business lines, and they provide adequate separation of duties throughout the organization, such as those relating to trading, custodial, and back-office activities.
- Official organizational structures reflect actual operating practices.
- Financial, operational, and regulatory reports are reliable, accurate, and timely. When appli-

cable, exceptions are noted and promptly investigated.

- Adequate procedures exist for ensuring compliance with applicable laws and regulations.
- Internal audit or other control review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are adequately documented; identified material weaknesses are given appropriate and timely high-level attention; and management's actions to address material weaknesses are objectively verified and reviewed.
- The audit committee or board of directors reviews the effectiveness of internal audits and other control review activities regularly.

4070.1.2 RATING DEFINITIONS

The rating for risk management is based on a scale of one through five in ascending order of supervisory concern. Examiners should assign this rating to reflect their findings in all four of the elements of sound risk management described above. The risk-management rating should be reflected in the overall "Management" rating of the bank holding company and should be consistent with the following criteria:

Rating 1 (Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the bank holding company's activities, including those from new products and changing market conditions. The board and management are active participants in managing risk and ensure that appropriate policies and limits exist, and the board understands, reviews, and approves them. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the necessary information and analysis to make timely and appropriate responses to changing conditions.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the bank holding company. There are few noted exceptions to the organization's established policies and procedures, and none is material. Management effectively and

accurately monitors the condition of the organization consistent with standards of safety and soundness and in accordance with internal and supervisory policies and practices. Risk management is considered fully effective to identify, monitor, and control risks to the bank holding company.

Rating 2 (Satisfactory). A rating of 2 indicates that the bank holding company's management of risk is largely effective but lacking to some modest degree. It reflects a responsiveness and ability to cope successfully with existing and foreseeable exposures that may arise in carrying out the organization's business plan. While the bank holding company may have some minor risk-management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound bank holding company. Generally, risks are being controlled in a manner that does not require additional or more than normal supervisory attention.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the organization.

Rating 3 (Fair). A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound risk management is considered fair and has precluded the organization from fully addressing a significant risk to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and adequately control all significant risks to the organization. Weaknesses may include continued control exceptions or failures to adhere to written policies and procedures, which could have adverse effects on the organization.

The internal control system may be lacking in some important respects, particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures. The risks associated with the internal control system could have adverse effects on the safety and soundness of the bank holding

company if corrective actions are not taken by management.

Rating 4 (Marginal). A rating of 4 represents marginal risk-management practices that generally fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management is considered marginal and requires immediate and concerted corrective action by the board and management. A number of significant risks to the organization have not been adequately addressed, and the risk-management deficiencies warrant a high degree of supervisory attention.

The bank holding company may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in its internal control or accounting procedures or in its ability to adhere to supervisory standards or requirements. Unless properly addressed, these conditions may result in unreliable financial records or reports or operating losses that could seriously affect the safety and soundness of the bank holding company.

Rating 5 (Unsatisfactory). A rating of 5 indicates a critical absence of effective risk-management practices to identify, monitor, or control significant risk exposures. One or more of the four elements of sound risk management is considered wholly deficient, and management and the board have not demonstrated the capability to address deficiencies.

Internal controls may be sufficiently weak as to seriously jeopardize the continued viability of the bank holding company. If such weaknesses are not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and about potential losses that could result if corrective measures are not taken immediately. Deficiencies in the bank holding company's risk-management procedures and internal controls require immediate and close supervisory attention.

4070.1.3 REPORTING CONCLUSIONS

For bank holding companies, the separate numerical rating for risk management and the rationale for the rating assigned should be included as "Risk-Management Rating: (numerical rating)" and discussed on confidential page B, Condition of Bank Holding Company, of the bank holding company inspection report, and

should also be reflected in the examiner's overall rating of management. Comments, conclusions, and criticisms relating to a bank holding company's risk-management process should be brought to the attention of management and included on the Policies and Supervision page¹ of the bank holding company inspection report, as well as on Core Page 1, Examiner's Comments and Matters Requiring Special Board Attention, if considered appropriate and particularly if the rating is less than satisfactory.

In inspection reports and transmittal letters to boards of directors of bank holding companies, reference should be made specifically to the types and nature of corrective actions that bank holding companies need to take to address noted risk-management and internal control deficiencies. When appropriate, bank holding companies should also be advised that the Federal Reserve will initiate supervisory actions if the failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of their activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company (or a state member bank), its responsible officers and directors, or both and would require the immediate implementation of all necessary corrective measures.

1. If a problem area is cited within the Core Section, the respective supporting report pages (the Policies and Supervision page) are to be included in the report to support the critical comments. See section 5010.1.3.

Supervisory ratings should be revised whenever there is strong evidence that the financial condition or risk profile of an institution has significantly changed.¹ In a risk-focused and continuous-supervision environment, supervisory ratings should be viewed as a continuum, rather than as a point-in-time assessment of an institution's financial condition.² It is important that supervisory ratings reflect a current assessment of an institution's financial condition and risk profile. The ratings can affect risk-based deposit insurance premiums; statutory and regulatory requirements, including applications and the prompt-corrective-action provisions of the Federal Deposit Insurance Act; and supervisory reporting and inspection/examination requirements, as well as other factors. While supervisory ratings are most frequently revised as a result of on-site supervisory activities, other sources of information reviewed off-site may also indicate the need for a rating change.³ See SR-99-17.

1. SR-99-17 supersedes SR-92-31, which suspended the practice of revising CAMELS ratings for state member banks between examinations.

2. The procedures in SR-99-17 pertain to supervisory rating systems for bank holding companies (BOPEC); state member banks (CAMELS); U.S. branches and agencies of foreign banking organizations (ROCA); and Edge and agreement corporations, overseas subsidiaries of U.S. banks, and U.S. nonbank subsidiaries of foreign banking organizations (CAMEO).

3. For example, a significant change in financial condition may be evident from some combination of reports of examination conducted by other agencies, meetings or other communication with management of the institution, published financial reports or press releases, status reports submitted by the institution as required by an enforcement action, and information generated by ongoing surveillance activities.

In addition, when a component of one of the supervisory rating systems is changed, the Reserve Bank must also reaffirm or revise the other component ratings and the composite rating, based upon available information at that time. The factors contributing to a change in the rating of a selected component can affect one or more of the other components in the rating system, as well as the composite rating. Accordingly, if there is a compelling reason to change a selected component rating, all of the other components in the supervisory rating system must be either reaffirmed or revised. As applicable for bank holding companies and state member banks, the risk-management rating must also be reaffirmed or revised when a CAMELS or BOPEC rating is changed.⁴

Any change to a component or composite rating and the rationale for that change must be communicated in writing via a letter or report to the board of directors of the affected institution (or to the senior U.S. management official in the case of a U.S. branch, agency, office, or nonbank subsidiary of a foreign bank) and to the appropriate state and federal supervisory agencies.

4. Pursuant to the guidelines set forth in SR-97-27, the assignment of a separate risk-management rating is not required for small shell bank holding companies.

Federal Reserve System BHC Surveillance Program

Section 4080.0

Under the Systemwide Bank Holding Company Surveillance Program, bank holding company financial data are monitored by computer-generated screens on an ongoing basis. Information generated through the surveillance process is to be used to monitor the financial condition of BHCs between inspections, assist in setting inspection schedules, and allocate supervisory or inspection resources toward institutions with declining financial conditions.

The Systemwide Surveillance Program consists of three components: The first phase consists of computer screening of BHC financial data, which involves generating and reviewing an exception list of organizations meeting the exception criteria (these BHCs are referred to as having “failed the screen”). During the second phase, an analysis is prepared that discusses the factors or reasons why the BHCs appeared on the exception list. The analysis is based on data summarized in the BHC Performance Report (BHCPR), the off-site SEER (System to Estimate Examination Ratings) rating and the on-site CAMELS rating, supplemental investment and other screens, as well as on other relevant financial data. The third phase focuses on developing a suitable supervisory response, corrective action, and follow-up by System staff to address problems first identified through the surveillance process.

The *computer screen*, generated at the Board, identifies BHCs that have over \$150 million in consolidated assets and those multibank holding companies that have less than \$150 million in consolidated assets (and that may have financial weaknesses or deficiencies). The *analytical* effort of Reserve Bank analysts and examiners is designed to spot trends and changes in financial condition and to determine if companies identified by the screening effort require further in-depth review. The System *corrective action and follow-up* ensures that identified problems are monitored until they can be corrected or resolved.

The BHC surveillance program is designed to meet the following objectives:

- To monitor BHC performance using the BHCPR.
- To incorporate SEER and CAMELS ratings into an off-site monitoring program. The SEER rating model identifies, based on the most recent call report data, banks that exhibit financial characteristics of those in lower-

rated categories.¹ Because the condition of a consolidated holding company is typically highly correlated with the condition of its bank subsidiaries, the BHC surveillance program makes use of the off-site SEER ratings and on-site CAMELS ratings of bank subsidiaries in identifying deteriorating holding companies.

- To achieve a BHC program that is sensitive to changes in the condition of the banking industry. The financial criteria, as discussed below, identify outliers based on either a poor relative percentile ranking or absolute levels of key financial ratios that meet minimum benchmarks.
- To incorporate supplemental screens into the BHC surveillance process. A supplemental investment activities screen identifies holding companies with high levels of unrealized securities depreciation relative to tier 1 capital. Additional supplemental criteria may include BHCs identified through growth and parent company screens, as well as screens based on the FR Y-11 nonbank reporting series.
- To provide monitoring tools for BHCs with assets below \$150 million. By comparing bank subsidiary CAMELS/SEER rating results to BOPEC ratings for all BHCs, the BHC program provides a mechanism to monitor the thousands of top-tier holding companies with assets below \$150 million. While written analyses are not required for these companies, this common surveillance tool assists Reserve Bank personnel in prioritizing which of these companies merit increased supervisory focus (discussed in more detail below).
- To enhance and maintain quarterly communication with Reserve Bank surveillance staff. The Board’s Surveillance Section sends a quarterly letter to all Reserve Banks to inform them of the most recent quarter’s surveillance results. A corresponding Reserve Bank quarterly letter to the Board provides Reserve Bank staff with an opportunity to report on BHCs not identified in the Board screening process, but whose condition has deteriorated significantly since the last inspection.

1. The SEER methodology is described in detail in “FIMS: A New Monitoring System for Banking Institutions,” January 1995 *Federal Reserve Bulletin* 1–15. The acronym FIMS was substituted in the article for the acronym SEER. However, both acronyms describe the same system.

4080.0.1 EXCEPTION LIST

BHC surveillance is conducted quarterly for all banking organizations for the reporting periods ending on the last days of March, June, September, and December. Board staff initiate the surveillance process by subjecting all BHCs, regardless of size or BOPEC rating, to the screens. BHCs that fail the screens and are top-tier holding companies that (1) file the FR Y-9C report; (2) have consolidated assets of \$150 million or more; (3) have a composite BOPEC rating of 1, 2, or 3; (4) have not been designated as an “atypical” BHC by the responsible Reserve Bank; and (5) are not part of the top 50 population are placed on the exception list.

The Board sends quarterly BHC exception lists to the surveillance staff at each Reserve Bank following the finalization of FR Y-9 data. Reserve Banks review the condition of the BHC, prepare a written analysis addressing factors that caused the BHC to be placed on the exception list, and submit written analyses of the BHCs on the list to the Board. The deadline for submission of written analyses is extended if the Reserve Bank determines that an on-site presence is warranted to satisfy the requirements of the written analysis.

Three surveillance screens are used to identify BHC exceptions as outlined below:

1. *Rating screen.* The rating screen provides a comparison between the bank component (“B”) in a BHC’s BOPEC rating and the asset-weighted CAMELS and SEER ratings for the company’s bank subsidiaries. It includes companies meeting the criteria below:

<i>Bank Component (“B”) BOPEC Rating</i>	<i>Weighted CAMELS Rating</i>	<i>or Weighted SEER Rating</i>
1	3 +	3 +
2	3 +	3 +
3	4 +	4 +

2. *Financial screen.* The financial screen uses three consolidated ratios from the BHCPR and identifies exceptions as bank holding companies that meet the cut-off criteria for at least *two* of these ratios. A company can qualify as an exception if it (1) meets the minimum *relative* criteria for two of the ratios, which indicates a BHC with a poor percentile ranking relative to its BHCPR peer group, or (2) meets the *absolute* criteria for two of the ratios. The latter indicates a BHC with a low level of earnings or capital or with a high level of nonperforming assets. Specific ratios are presented in the table on the following page.

3. *Investment activities screen.* The investment activities screen identifies BHCs whose ratio of total unrealized securities depreciation (after tax) to tier 1 capital is –15 percent or worse *and* whose leverage ratio, adjusted for total securities depreciation, is less than 5 percent.

A written analysis is prepared for investment activities exceptions when one or both of the following conditions apply: (1) the organization manages the investment process on a consolidated or global basis (that is, the parent company or lead bank formulates and possibly implements the investment strategy for the parent company and bank subsidiaries) or (2) the majority of the organization’s bank subsidiary assets consists of state member bank assets.

If the written analysis conditions do not apply, Reserve Banks are requested to provide a brief summary of the primary regulator’s findings and actions concerning the bank subsidiaries’ investment activities. This summary is to ensure that the primary regulator is aware of potential concerns with subsidiary banks’ investment activities, and it also ensures that the BHC is acting as a source of strength to these particular bank subsidiaries. In addition, a BHC investment activities analysis does not have to be prepared if the Reserve Bank is in the process of preparing or has provided (in one of the previous two quarters) an investment activities analysis for one of the bank holding company’s state member bank subsidiaries.

4080.0.2 REVIEW OF BHC EXCEPTION LIST AND RESERVE BANK ANALYSIS

The exception list provides a record of BHCs that failed the screens and helps track Reserve Bank conclusions on the reasons why they failed the screens. In their review, Reserve Banks are specifically requested to prepare a written analy-

Cut-Off Criteria—BHCPR Financial Screen Ratios

	<i>Last Fourth-Quarter Return on Average Assets</i>	<i>Tier 1 Leverage Ratio</i>	<i>Nonperforming and 90+ Days Past-Due Ratio</i>
Peer-Ranking Criteria	Percentile of 5 or less	Percentile of 5 or less	Percentile of 95 or more
Ratio Level Criteria	0.5% or less	5.0% or less	5.0% or more

sis for all BHCs on the exception list. This Reserve Bank analysis is to include the following sections:

1. *Heading*, including BHC's name, location, total assets, BOPEC rating, and date of last inspection; lead bank's name, location, charter, total assets, CAMELS rating, and date of last examination; the reason for appearance on the exception list; and the Reserve Bank analyst's name. For investment activities exceptions, also include the ratio of total securities depreciation to tier 1 capital and the leverage ratio adjusted for total securities depreciation.

2. *Background*, including a summary of prior surveillance results. For investment activities exceptions, a brief summary of the investment process is included (that is, who formulates and approves the investment strategy and how it is implemented for the organization).

3. *Analysis* of current period's surveillance results, highlighting key changes in the BHC's condition during the most recent quarter and since the most recent inspection. In particular, this analysis explicitly discusses whether the factors identified as being responsible for the company's appearance on the exception list present any cause for supervisory concern. Any areas where the current period's surveillance results are believed to be misleading or inaccurate are detailed in this section. Additional guidance regarding the analysis section is provided below:

a. The analysis should note any acquisitions, mergers, or de novo activities responsible for the BHC's meeting the exception criteria.

b. For BHCs that meet the CAMELS rating exception criteria, the analysis should explicitly discuss the factors underlying the CAMELS rating as presented in the examination findings.

c. For BHCs that meet the SEER rating exception criteria, the analysis should explicitly discuss the factors responsible for the SEER results, as presented in SEER Schedule 1A.

d. For BHCs that meet the financial exception criteria, the analysis should explicitly discuss the ratios identified by the financial screen.

e. For BHCs that require a written analysis of investment activities, the discussion should include—

- the securities portfolio composition and maturity;
- the investment strategy;
- management's ability to understand and manage the risks inherent in the investment portfolio, including a discussion of risk limits (For example, are the limits appropriate and is the BHC in compliance with these limits?);
- the ability and intent to hold securities with unrealized losses and any contingency plans if the ability to hold these securities is tested;
- the susceptibility of the portfolio to further depreciation (quantify if possible);
- hedging strategies, if any;
- the liquidity position of the BHC, including a discussion of the structure of the funding base and concentration of funding sources; and
- the overall impact of securities depreciation on the financial condition of the BHC.

f. For BHCs that fail the investment activities screen but do not meet the conditions requiring a written analysis of investment activities, a brief summary of the primary regulator's findings and actions concerning the bank subsidiaries' investment activities should be provided.

4. *Conclusion*, summarizing the BHC's condition and the key factors supporting the analysis.

5. *Corrective action*, detailing corrective action taken by the BHC or Reserve Bank staff,

including supervisory follow-up actions resulting from the current period's surveillance results. If no further actions are to be taken or recommended, the reason for this decision is stated, as well as the date and scope of the next scheduled inspection.

6. *Sign-off.* The analysis report is signed by an officer in charge of bank holding company supervision, an officer in charge of bank holding company surveillance, and, if there are any investment activities exceptions, a capital markets coordinator. The signatures may just appear once on the cover letter accompanying the individual BHC analyses.

4080.0.3 CORRECTIVE ACTION AND FOLLOW-UP

Corrective action associated with newly identified problems must be initiated by the Reserve Bank as soon as possible. Follow-up action may include correspondence or meetings with the banking organization's management or an on-site inspection/examination. Problem situations are closely monitored by System surveillance and supervision staff until they have been resolved.

4080.0.4 ATYPICAL BHCs

No written analysis is required for BHCs that are designated "atypical." Reserve Banks identify atypical BHCs annually. Atypical BHCs could include those whose parent equity in nonbank subsidiaries is one-third or more than their equity in bank subsidiaries, those that choose not to consolidate material nonbank subsidiaries, and those BHCs that are directly owned by banks. BHCs may also be considered atypical due to other characteristics determined at the Reserve Bank's discretion.

The atypical BHC list should (1) provide the name, location, and RSSD-ID of the company; (2) explain the reason why the BHC is considered atypical; and (3) indicate whether the company was included on the list during the prior year. BHCs coming off the prior year's atypical listing are similarly identified and discussed.

Reserve Banks should monitor atypical BHCs quarterly and provide a written analysis for an atypical company when deemed appropriate.

4080.0.5 ROLE IN INSPECTION PROCESS

In setting inspection schedules, companies identified as having weak or declining financial conditions would generally not qualify for an extension of the inspection cycle as discussed in section 5000.0 of this manual. These companies, therefore, would be inspected more frequently than companies without deficiencies.

A pre-inspection analysis, using the latest BHCPR and other relevant data, should be performed to help the examiner to focus the inspection on areas that may require supervisory attention. This analysis may uncover declining financial trends or may indicate financial positions recently taken by the BHC that could eventually lead to a problem situation.

The performance report covers consolidated and parent-only, current and historical financial information; ratios; and peer-group percentiles. This information can be used to analyze and spot trends with respect to parent or consolidated asset growth, earnings, capital, liquidity, cash flow and leverage, and reliance on subsidiary dividends. By reviewing performance reports, analysts and examiners can gain insights to weaknesses, as well as to their nature and severity. For example, parent leverage, cash-flow, and coverage ratios may indicate problems at the parent level, which could have implications for the bank's financial condition. Information on the parent's income from subsidiaries could indicate that nonbank subsidiaries of the holding company are experiencing financial difficulties. Financial information on the parent's dependence on bank and nonbank subsidiaries through dividends and management fees, for example, can give the examiner valuable insights on the effect the holding company may be having on the financial condition of the subsidiaries, particularly on the depository institutions. Analysis of profitability ratios, income and expense data, and loan-loss information can also be used to pinpoint areas for further review when the examiners arrive on-site.

Much of this analysis can be conducted before the on-site inspection, thus enabling the examiner to better allocate his or her time on-premises to those areas requiring on-site review. For example, initial evaluations of capital, earnings, liquidity, leverage, and cash flow can be accomplished using information from the performance reports before the examiner's arrival on-site. This early evaluation will allow the examiner to isolate areas requiring further on-site review and also to focus attention on other areas that require on-site inspection, such

as asset quality, nonbank activities, management, supervisory report accuracy, and legal compliance.

Screening results should also be reviewed to determine which screens, or combination of screens, the BHC failed and by what margin. If a particular company has been identified as an exception, analyses conducted by Reserve Bank

analysts should be reviewed as well as information available from Board staff. Finally, follow-up material available from Reserve Bank and Board staff should be reviewed and, in some cases, consultation with surveillance staff may be appropriate. The goal of all these activities is to help the examiner in identifying areas to focus on during the inspection.

Apart from the consideration of the credit-worthiness of individual borrowers, holding companies engaged in international activities are subject to elements of country risk. Country risk encompasses the entire spectrum of risks arising from the economic, social and political environments of a foreign country, and governmental policies structured to respond to these conditions which may have potentially favorable or adverse consequences for foreigners' debt and equity investments in that country. More specifically country risk focuses on a borrower's capacity to obtain the foreign exchange required to service his cross-currency debt. A borrower's debt service capacity may also be affected by the risks of political and social upheaval, nationalization and expropriation, governmental repudiation of external indebtedness, exchange controls and devaluation. Events such as these may materially affect the condition of investments and profitability of lending activities overseas and examiners must alert management to those risks that may be difficult for the holding company and its subsidiaries to absorb.

Uniform examination procedures and techniques for evaluating country risk exposures have been adopted by the three federal regulators with respect to domestic banks. Under these procedures, examiners segregate country risk factors from the evaluation of other lending risks, and deal with this category of lending risks in a separate section of examination reports. The procedures emphasize diversification of exposure to individual countries as the primary method of moderating country risk in international portfolios. The approach consists of three parts:

1. The measurement of exposure in each country where a business relationship exists;
2. The analysis of exposure in relation to the bank's capital resources and the economic and financial conditions of each country in which the bank has outstanding credits;
3. Evaluation of the risk management system used by the bank in relation to the size and nature of its foreign lending activities.

4090.0.1 REPORTING REQUIREMENTS

4090.0.1.1 Country Risk Exposure Report (FFIEC 009)

Banks and bank holding companies that own banks are required to file the Country Exposure

Report (Form FFIEC 009, formerly Form FR 2036) when the bank or banks have a foreign branch, a foreign subsidiary, or an Edge Corporation and have on a consolidated basis total outstanding claims on residents of foreign countries that exceed \$30 million. The report is to be filed on a quarterly basis within 45 days of the end of March, June, September and December.

The report measures lending to residents of foreign countries by U.S. banking organizations and is used to provide information on the distribution by country of foreign claims held by such banking organizations, to assess country risk for supervisory purposes, and to assist the Bank for International Settlements in compiling worldwide data on cross-border claims.

4090.0.1.2 Country Exposure Information Report (FFIEC 009a)

This report is a supplement to the Country Exposure Report (FFIEC 009). The purpose of the Country Exposure Information Report is to provide public disclosure of significant country exposures of U.S. banking institutions. It is submitted by every institution that submits the (FFIEC 009) report and that has exposures meeting the reporting requirements for FFIEC 009a.

4090.0.1.3 Report for U.S. Branches and Agencies of Foreign Banks (FFIEC 019)

This report is similar to the (FFIEC 009) report that is filed by U.S. Banks. The (FFIEC 019) report collects information, by country, on the direct claims, indirect claims, and total adjusted claims on foreign residents; information on claims on related non-U.S. offices that are included in total adjusted claims on the home country; and a breakdown of adjusted claims on unrelated foreign residents. The data is used by the supervisory agencies to monitor significant foreign country exposures of U.S. branches and agencies of foreign banks. They are also used to evaluate the financial condition of these branches and agencies.

The Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (FFIEC 019) is collected quarterly from those branches

and agencies of foreign banks that have, as of the quarterly report date, more than \$30 million in total direct claims on residents of foreign countries. The FFIEC 019 provides data on the foreign risk exposure of each reporting branch and agency.

Respondents to the FFIEC 019 must prepare the data as of the close of each calendar quarter and submit the forms to the appropriate Reserve Bank no later than 45 days following the report date. Data are due at the Board 60 days following the report date.

5000.0.1 INSPECTION REPORTING PROGRAM

The BHC inspection report is intended to effectively communicate the result of inspections without compromising the integrity of inspection and reporting procedures. The inspection report serves the needs of several distinct audiences. These include the bank holding company (the directors, executive management, and line management), the Federal Reserve Board and its staff, the Federal Reserve Bank, and other banking organization regulators (state, OCC, and the FDIC). It is intended that the inspection report serve as an effective and efficient vehicle for communicating conclusions, concerns, and recommendations to the principal audience, the BHC's board of directors, without sacrificing to any great extent the needs of the other users. The inspection reporting program operates on the condition that inspection workpapers can be obtained for immediate review by Federal Reserve Bank or Federal Reserve Board staff, when requested.

The presentation within the inspection report is intended to be concise and direct with the information needed by all audiences found in the core section. The core section comprises the Examiner's Comments, the Scope, Structure and Abbreviations, the Analysis of Financial Factors, an analysis of asset quality and off-balance-sheet risk, and certain other required financial statements and schedules. Supporting schedules are required and added to the core section when an area of concern or problem is addressed in the report.

One standardized bank holding company inspection report format, FR 1225, has been designed to meet the desired objectives of the full-scope report for all organizations regardless of the structure and complexity of the bank holding company under inspection. A few report pages, designated FR 1241, are to be used for BHCs that have less than \$150 million in assets. These are the "Parent Company and Nonbank Assets Subject to Classification" page, the "Bank Subsidiary" page, the "Capital Structure" page, and the "Other Supervisory Issues" page. The latter two report pages are for the lead bank or other comparable bank subsidiary.

This part of the manual presents policy and procedures for the inspection process, the collection and presentation of data, and the preparation of the resulting analyses in the inspection report. Section 5010.0 corresponds directly to each page for the report (FR 1225). Manual

sections 5020.0 and 5030.0 provide instructions for limited and targeted inspections.

Each report page's instructions are generally organized to state what information is to be presented on a report page, the objectives for the information that is to be presented, the potential source of the information, and how it is to be presented in the report. Also, the instructions mention other areas in the report that are affected by material reported on the page.

The examiner is reminded that the instructions contained in manual sections 5010, 5020, and 5030 are intended only as a starting point. As such, the instructions are principally directed toward the collection of information and the presentation in the report of the findings of the inspection. When working on specific functional aspects of the inspection, the examiner should also refer to the appropriate subject heading in the manual.

5000.0.2 POLICY FOR FREQUENCY AND SCOPE OF INSPECTIONS FOR BANK HOLDING COMPANIES

On October 7, 1985, the Board announced its policy, effective January 1, 1986, to increase the frequency of inspections of bank holding companies. The policy objectives are (1) to help prevent the development of problems at banking institutions and (2) to make more effective the Federal Reserve's ability to identify and resolve problems that develop nonetheless.

In general, the policy provides that—

1. the larger and more complex bank holding companies will be inspected at least annually;
2. the largest bank holding companies, and those with significant problems, will be inspected semiannually; and
3. as an exception to the general rule, small "shell" holding companies with no known problems and low levels of debt relative to the book value of their subsidiary bank's stock will be inspected on a more limited basis.

See section 5000.0.3 for the parameters of the policy statement.

Federal Reserve Banks are to intensify their involvement in the inspection of large organizations and those with significant problems. Greater

reliance is to be placed on state examinations/inspections in the case of smaller organizations. If a state lacks the resources to conduct inspections in accordance with the specifications of the policy or is unwilling to do so, or, in the case of holding companies, lacks authority, the Federal Reserve will conduct the examinations/inspections to the extent needed to meet the specifications. In addition, if a bank holding company or its state member bank subsidiary indicates its wish to be examined/inspected by its Federal Reserve Bank, that wish should be honored.

5000.0.3 SUMMARY TABLE FOR THE FREQUENCY AND SCOPE OF BANK HOLDING COMPANY INSPECTIONS

Rating	Asset Size						
	\$10 Billion and over	\$500 MM to \$10 Billion		\$150 MM to \$500 MM		Less than \$150 MM	
		Complex ⁴	Noncomplex ⁵	Complex	Noncomplex	Complex	Noncomplex ⁷
1 or 2	Full-scope required annually. ¹ Additional limited-scope or targeted presumed annually.	Full-scope required annually. Limited-scope ² or targeted ³ when needed.	Limited-scope required every two years. Additional limited-scope or targeted when needed.	Full-scope required annually.	Limited-scope required every 3 years.	Full-scope required every other year.	See Note 3.
3	Full-scope required annually. One limited-scope or targeted also required annually.			Full-scope required annually.	Inspection required annually, may be limited-scope or targeted.	Full-scope inspection required annually.	Inspection required every other year.
4 or 5	Full-scope required annually. One limited-scope or targeted also required annually.			Full-scope required annually; one limited-scope or targeted also required annually.	Inspection required annually.	Full-scope inspection required annually.	Inspection required annually.

SPECIAL CHARACTERISTICS:

1. BHCs formed to acquire going concerns: inspection to be conducted between the 6th and 18th months of operation, or within 36 months under specific condition, or waived if under \$50 mm with specific conditions.

2. Change in control or de novo BHCs: inspection required within 12 months.

3. BHCs that fail surveillance screen or for which other significant adverse information is received: triggers in-depth off-site review to evaluate need for limited-scope or targeted inspection.

NOTES:

1. A *full-scope inspection* covers all areas of interest to the Federal Reserve in depth.

2. A *limited-scope* inspection will review all areas of activity covered by a full-scope inspection, but less intensively.

3. *Targeted inspections* will focus intensively on one or two activities.

4. A complex BHC is defined as one with material credit-extending nonbank subsidiaries or debt outstanding to the general public.

5. A noncomplex BHC is without credit-extending subsidiaries and without public debt.

6. See section 5000.0.4.5 and SR-97-27 pertaining to the frequency of inspections for small shell bank holding companies.

7. For small BHCs, Reserve Banks should explore the possibility, under appropriate circumstances, of enlisting the assistance of the primary bank regulator in conducting the inspection.

5000.0.4 INSPECTION FREQUENCY REQUIREMENTS

5000.0.4.1 Bank Holding Companies with No Identified Problems or Special Characteristics

Multinational bank holding companies and all others with consolidated assets over \$10 billion are to receive a full-scope inspection annually to be coordinated with the examination of the lead bank to the extent possible. Although the inspection of the holding company and the examination of the lead bank need not be commenced simultaneously, they should overlap and rely on financial statements as of the same date, if possible, in order to facilitate the analysis and the presentation of findings to management and directors. A limited-scope or targeted inspection of these companies is also to be conducted between the annual full-scope inspections, the precise timing to be determined by off-site surveillance reports and by opportunities to coordinate with the examination of the lead bank. The requirement for a limited-scope or targeted inspection may be waived by the Reserve Bank if, on the basis of the findings of the last full-scope inspection and of the surveillance system, the institution is judged to be in satisfactory condition.

Complex bank holding companies (defined as companies with nonbank subsidiaries that extend a material amount of credit or companies whose parent has a material amount of debt outstanding to the general public) with consolidated assets between \$500 million and \$10 billion receive a full-scope inspection annually. Non-complex “shell” organizations in this size group are to receive a limited-scope inspection every two years. These inspections should be conducted, to the extent possible, in coordination with the examination of the lead bank. All bank holding companies in this size group should be subject to additional limited-scope or targeted inspections when the Reserve Bank has information that suggests the institution may be developing significant problems.

Complex bank holding companies with consolidated assets between \$150 million and \$500 million are to receive an annual full-scope inspection. The inspection frequency for small shell bank holding companies (SSBHCs) with assets of less than \$1 billion follows the risk-focused program and its supervisory cycle for its lead bank. See section 5000.0.4.5 for the

definition of SSBHCs and the supervisory policy and guidance associated with the inspection of this group of bank holding companies. (Also see SR-97-27.) The program provides, in general, for enhanced monitoring of banking organizations on a continual basis and for greater supervisory attention to specific weaknesses that need attention. The program permits a more flexible approach to supervising those entities in a risk-focused environment that is designed to enhance the overall effectiveness and efficiency of the Federal Reserve System’s supervisory efforts.

Inspection frequency for bank holding companies with consolidated assets of less than \$150 million is to be determined by their structural characteristics and their debt levels. Complex bank holding companies are to receive a full-scope inspection every other year.

5000.0.4.2 Bank Holding Companies Requiring Special Supervisory Attention

Inspection frequency of bank holding companies requiring special supervisory attention is to be determined by both the size and complexity of the organization. The most intensive frequency requirements are directed at bank holding companies rated BOPEC composite 4 or 5, or whose lead bank subsidiary has been rated CAMELS composite 4 or 5. All bank holding companies so rated with consolidated assets over \$500 million are to receive an annual full-scope inspection and a limited-scope or targeted inspection during the interval between full-scope inspections. The same requirements apply to complex bank holding companies with assets between \$150 million and \$500 million. To the extent possible, inspections of these 4- and 5-rated bank holding companies are to be coordinated with the examination of the lead bank subsidiary. Noncomplex bank holding companies with assets of \$500 million or less are to receive an annual inspection whose scope may be determined by the Reserve Bank based upon the nature of the companies’ problems.¹ Complex holding companies with assets under \$150 million are to receive a full-scope inspection annually.

Bank holding companies rated composite 3 with consolidated assets over \$500 million are subject to the same requirements as those rated 4 or 5. Bank holding companies with con-

1. Reserve Banks may, under appropriate circumstances, enlist the assistance of the primary bank regulator in conducting these inspections.

solidated assets between \$150 million and \$500 million with complex structures are to receive an annual full-scope inspection; those with noncomplex structures are to receive an annual inspection, the scope of which is to be determined by the Reserve Bank. Complex bank holding companies with assets under \$150 million should receive a full-scope inspection annually; noncomplex bank holding companies with assets less than \$150 million are to be inspected every other year. The type of inspection for these small noncomplex companies may be determined by the Reserve Bank.

5000.0.4.3 Bank Holding Companies with Special Characteristics

Bank holding companies formed to acquire an existing bank are to be inspected to determine their compliance with Federal Reserve regulation and the extent to which they have fulfilled commitments the Board of Governors required of the organization in approving its application. Such inspections should be conducted between the 6th and 18th month after the acquisition; their scope is to be determined by the Reserve Bank. If information available to the Reserve Bank—the most recent examination of the bank, the most recent FR Y-6 and FR Y-9 reports from the holding company, and other pertinent information—indicates that (1) the condition of the bank and bank holding company is satisfactory, (2) the bank holding company is fulfilling its commitments to the Board of Governors, and (3) the ratio of the parent's debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent then, at the Reserve Bank's discretion, the inspection may be delayed as long as 36 months after the formation. Moreover, the requirement for an inspection may be waived in the case of a bank holding company whose bank subsidiary has less than \$50 million in total assets, if in the Reserve Bank's judgment, (1) the holding company's financial condition is satisfactory, and its commitments to the Board of Governors are being fulfilled, and (2) the ratio of the holding company's debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent.

Bank holding companies that have undergone a change in control and de novo bank holding companies organized to acquire de novo banks, are to receive a full-scope inspection within 12 months following the change in control or formation. A limited-scope or targeted inspection may be conducted in lieu of the full-scope

inspection if, in the judgment of the Reserve Bank, the financial condition of the holding company appears satisfactory.

In those cases when bank holding companies fail the surveillance screen or when other information suggests the company has experienced an adverse development, an in-depth off-site review will be made to determine the need for a limited-scope or targeted inspection.

5000.0.4.4 Inspection of Nonbank Subsidiaries of Bank Holding Companies

The instructions in this subsection are intended to supplement the guidance in the Board's policy statement regarding the frequency and scope of inspections for bank holding companies as set forth above and included with SR-85-28 (October 7, 1985). See sections 4030.0.2, 5010.6.3, and 5010.31; SR-93-19 (April 13, 1993); and FRRS 3-1531.

5000.0.4.4.1 On-Site Reviews of Nonbank Subsidiaries

Notwithstanding the risk assessment that is to be performed for each nonbank subsidiary (see section 4030.2), an on-site review is required for the following nonbank subsidiaries:²

1. *Any individual subsidiary that meets either of the following two significance criteria or that is otherwise deemed by the Reserve Bank to have a significant impact on the bank holding company's condition or performance:*³
 - The subsidiary has total assets equal to 10 percent or more of the bank holding company's consolidated tier 1 capital.

2. The on-site review for these nonbank subsidiaries should be performed with the same frequency as required for a full-scope inspection but may be performed as a targeted review that is not concurrent with the full-scope inspection.

3. Generally, examiners would not be required to conduct an on-site review of those nonbank subsidiaries that hold premises that are necessary for the operation of the banks or other affiliates. Furthermore, these criteria are not intended to include nonbank subsidiaries that have been subject to recent on-site review by another federal or state banking agency in accordance with interagency agreements or Reserve Bank agreements with state banking supervisors (for example, the Interagency EDP Examination, Scheduling, and Distribution Policy). These criteria also should not limit Reserve Bank flexibility in coordinating supervisory efforts with functional regulators at the federal or state level.

- The subsidiary's total operating revenue equals 10 percent or more of the bank holding company's consolidated total operating revenue.⁴
2. *Nonbank subsidiaries that are issuing debt to unaffiliated parties or relying to a significant degree upon affiliated banks for funding.* "Significant" is defined as debt that exceeds the lesser of \$10 million or 5 percent of the bank holding company's consolidated tier 1 capital.
 3. *Those mortgage banking subsidiaries and other nonbank subsidiaries involved in asset securitization, and all nonbank subsidiaries that generate assets and sell them to affiliated parties.* Examiners involved in the on-site review of these subsidiaries should consider the appropriate examination guidelines for asset securitization, for example, those set forth in SR-90-16 (May 25, 1990) and in SR-91-2 (January 31, 1991), dealing with collateralized mortgage obligations (CMOs) and real estate mortgage investment conduits (REMICs). See also section 2190.0.
 4. *Consistent with existing inspection guidelines, all section 20 subsidiaries should be subject to an annual on-site review.* See SR-90-8 (February 27, 1990) and section 2185.0.
 5. *All nonbank subsidiaries that broker or deal in derivative instruments, as a principal or agent, to unaffiliated parties.*

Furthermore, for each credit-extending nonbank subsidiary that meets the above on-site review criteria, examiners are to review sufficient credit files through either judgmental or attribute sampling to assess the adequacy and accuracy of internal risk-identification systems.

5000.0.4.4.2 Off-Site Review of Nonbank Activities

Reserve Banks should review reports submitted to the Federal Reserve to monitor the condition and performance of significant nonbank subsidiaries between inspections. FR Y-series reports on individual and combined nonbank subsidiaries should be used for this purpose and, when available, financial statements on nonbank activities that are included with the FR Y-6

4. For bank holding companies, "total operating revenue" is the sum of total interest income and total noninterest income (before extraordinary items).

annual reports of bank holding companies should also be reviewed.⁵ When warranted by a deterioration in the condition and performance of nonbank subsidiaries, the significance of the nonbank subsidiaries (including those selected for on-site review as discussed above), or other reasons, Reserve Banks should require bank holding companies to submit additional information (for example, balance sheets, income statements, and schedules on nonperforming assets and off-balance-sheet activities) obtained from a company's internal systems. Furthermore, on an exception basis, Reserve Banks will be expected to obtain from a bank holding company's internal systems information on the off-balance-sheet exposures of nonbank subsidiaries and to monitor the risks posed by these exposures when considered significant. If the Reserve Bank determines that a situation warrants material departure from these procedures, it should be discussed with Board staff.

5000.0.4.5 Risk-Focused Supervision Policy for Small Shell Bank Holding Companies

The Board of Governors approved, effective November 30, 1997, a risk-focused program for Federal Reserve Banks to follow in supervising small shell bank holding companies (SSBHCs) with assets of less than \$1 billion. Small shell bank holding companies are defined for the purpose of this program as those companies with less than \$1 billion in consolidated assets that do not have debt outstanding to the public and that do not engage in significant nonbank activities. A nonbank activity could be considered

5. For example, combined financial statements of nonbank subsidiaries are submitted to the Board quarterly on FR Y-11Q, and annually by type of nonbank subsidiary on FR Y-11AS when the following criteria are met:

- the bank holding company has total consolidated assets of \$1 billion or more or
- the bank holding company has total consolidated assets of \$150 million or more but less than \$1 billion and meets one or more of the following conditions:
 - the assets of the bank holding company's nonbank subsidiaries make up 5 percent or more of the bank holding company's total consolidated assets
 - the net income of the bank holding company's nonbank subsidiaries makes up 5 percent or more of the bank holding company's total consolidated net income
 - the bank holding company's investments in and/or loans and advances to nonbank subsidiaries exceed 5 percent of the bank holding company's total consolidated equity capital

Annual reports of selected financial data for individual nonbank subsidiaries are also submitted to the Board on FR Y-11I. Section 20 subsidiaries submit quarterly financial statements to the Board on FR Y-20.

significant based on the scope or type of activity. For example, credit-extending activities as well as investment and trading activities in which the holding company acts as a principal would generally be considered significant. Providing services on a fee basis, such as the provision of data processing services to affiliated and/or unaffiliated banks or the sale of instruments on an agency basis, may also, in certain instances, be considered significant, depending on the scale of the activity or other factors that may pose direct or indirect risk to the holding company or any insured depository institution subsidiary.

The risk-focused supervision program builds upon long-standing Board policies aimed at the early identification of problems in banking organizations and at improved coordination and cooperation with other federal banking agencies and state banking departments. In general, the program provides for enhanced monitoring of bank holding companies on a continual basis and for greater supervisory attention to specific weaknesses that need correction.

In 1985, the Board adopted guidelines that called for periodic on-site inspections of all bank holding companies in accordance with a standard frequency based on the size and condition of the consolidated organization. (See section 5000.0.4 and S-2493, October 7, 1985, and SR 85-28.) The supervisory program of 1997 supersedes the 1985 inspection frequency guidelines, but only for SSBHCs. The SSBHC program permits a more flexible approach that supervises these entities in a risk-focused environment designed to enhance the overall effectiveness and efficiency of the Federal Reserve System's supervisory efforts.

The Board's policy sets forth the framework for applying risk-focused supervision concepts to SSBHCs. In recent years, changes to statutory frequency requirements for bank examinations, enhancements to off-site monitoring procedures, and the implementation of risk-focused examination practices have made it possible to focus supervisory activities more effectively on those SSBHCs exhibiting the greatest degree of risk. Accordingly, the Federal Reserve adopted a risk-focused supervision program for SSBHCs that tailors supervisory activities for these companies based on an assessment of their reported condition and activities and the condition of their bank subsidiaries. Based on those assessments, Reserve Banks are required to develop a strategy for addressing the supervisory issues related to each organization. For companies in which significant risk factors are present, Reserve Banks must consider a range of supervisory

responses, including informational requests and management interviews, visitations or advisory visits, and on-site targeted and full-scope inspection activities.

5000.0.4.5.1 Risk-Assessment Process

Under the program, Reserve Banks should perform a risk assessment for each SSBHC at least once during each "supervisory cycle." For each company, its supervisory cycle will be determined by the examination frequency mandated for the lead subsidiary bank. The purpose of this risk assessment is to determine whether the risk profile of the SSBHC has weakened, the company is having an adverse effect on the subsidiary bank(s), or there are violations of law or regulation warranting further review. When the risk assessment does not raise significant supervisory concerns, the assessment serves as the basis for assigning a final BOPEC rating for the company. The risk assessment should be completed within 45 days of receipt of the lead bank's full-scope examination report. While risk assessments will be driven in most cases by the conclusions expressed in the current examination reports for subsidiary banks, they should also incorporate information from other sources available at the Reserve Bank, such as regulatory financial reports, previous inspection reports, and surveillance reports. The preparation of risk assessments should not routinely require requests for additional information from the company. Risk assessments should include reviews of the following areas:

1. financial condition of the parent company, including an evaluation of debt levels and cash flow
2. financial condition of bank subsidiaries
3. consolidated analysis (if applicable)
4. management, including any changes to senior management or ownership
5. compliance with laws and regulations by the bank holding company and its bank subsidiaries, as well as compliance with regulatory orders and other requirements imposed in connection with the granting of any application or other request
6. intercompany and insider transactions as addressed by examinations and financial reports
7. new activities and recent or planned acquisitions

In the process of conducting the risk assessment, Reserve Banks should pay special attention to bank examination report findings pertaining to possible violations of law or inappropriate transactions. In addition, changes in the organizational structure, management, or ownership of the company should be assessed to determine whether these may be cause for concern. The use of automated analytical tools and screens to perform the required financial analysis will normally suffice. When this review discloses no material supervisory concerns, the risk assessment should be used to assign a final BOPEC rating to the company.

5000.0.4.5.2 Development of Supervisory Strategies

If no unusual supervisory issues or concerns are identified by the risk assessment, no special follow-up with the company is necessary. However, all companies should continue to be monitored under existing surveillance and monitoring programs aimed at identifying significant changes in a company's condition, performance, or compliance profile that may prompt further review. Such changes may include (1) a material decline in the earnings performance or capital position of a bank subsidiary; (2) significant changes in management or ownership; (3) a large increase in outstanding debt; (4) new or expanded activities that may pose additional risk; (5) rapid growth; (6) questionable insider or intercompany transactions; (7) less-than-satisfactory SEER or other performance factors for the subsidiary bank(s); or (8) information suggesting less-than-satisfactory compliance with regulatory orders and other requirements imposed in connection with the granting of any application or other request. When these or other changes raise supervisory concerns, the risk assessment should be updated.

When a risk assessment is prepared in conjunction with the review of an examination report for a bank that is rated satisfactory or better, but supervisory concerns such as those listed above preclude the immediate assignment of a satisfactory BOPEC rating, a strategy for addressing those concerns must be developed and documented as part of the risk assessment. The strategy would typically require gathering additional written or verbal information from the bank regulator or the company. When supervisory concerns are not satisfactorily addressed

through off-site measures, a number of remedies should be considered, including visitations; targeted reviews of internal processes and specific transactions; or broader inspections encompassing a review of more significant financial and managerial issues, processes, or reporting systems. The specific timing of these activities is not prescribed by this policy; however, the on-site activity should be conducted as soon as possible following the off-site review, given that it is required only in situations when supervisory concerns have surfaced.

5000.0.4.5.3 Strategies for Problem and Deteriorating Companies and Those with Identified Management Weaknesses

A full-scope, on-site inspection should be conducted the first time that the risk assessment preliminarily supports the assignment of a BOPEC rating of 3 or worse, or a management rating of less than satisfactory. Typically, this would occur when a significant subsidiary bank's CAMELS composite or management component is assigned a rating of 3, 4, or 5. In such a case, an inspection is deemed necessary to ensure that sufficient information is available to develop an effective supervisory strategy. The purpose of the inspection is (1) to confirm the Reserve Bank's understanding of the SSBHC's financial condition, activities, and management oversight of the bank, as well as whether violations of law or regulation or inappropriate intercompany transactions have occurred; (2) to determine the extent to which any of these factors is having an adverse effect on the bank(s); (3) to identify steps the holding company should take to strengthen its subsidiary bank(s); and (4) to assign a BOPEC rating to the company. Based on these inspection results and information available before the inspection, and in consultation with the bank's federal and state supervisory authorities, the Reserve Bank should develop a supervisory strategy for dealing with the company.

For situations in which the company and management are adversely affecting the bank, the supervisory strategy should contemplate enforcement activities that are coordinated with those of the bank's federal or state regulators and are a clear delineation of the actions and reports expected of holding company management. Plans for additional supervisory activities, either on-site or off-site, should be included. The Reserve Bank should designate a primary contact who is responsible for monitoring the company's condition and updating the risk assessment and supervisory strategy. For situa-

tions in which the bank holding company is neither contributing to the bank's problems nor in a position to serve as a source of strength, a typical supervisory strategy would be to maintain an open dialogue with the bank's primary regulators and to review relevant regulatory reports.

5000.0.4.5.4 Communicating Supervisory Findings

When a risk assessment discloses no supervisory concerns, or when an existing 3, 4, or 5 BOPEC rating is reaffirmed through the risk assessment, a brief letter detailing this overall conclusion and the SSBHC's BOPEC rating should be forwarded to the company. The following is an example of such a letter.

PROTOTYPE LETTER TO COMMUNICATE FINDINGS OF A RISK ASSESSMENT

Board of Directors
[name and address of SSBHC]

Dear Members of the Board:

This Reserve Bank has conducted a review of [SSBHC] based primarily on financial and other information regularly provided by your organization to the Federal Reserve and other supervisory agencies, as well as the recent examination report for [Bank], SSBHC's subsidiary bank. The review was conducted by Examiner [EIC] and disclosed no supervisory concerns [or, no concerns in addition to those previously communicated to the institution].

[SSBHC] is assigned a composite BOPEC rating of [numerical rating], based on a bank component rating of [numerical rating] and a parent company component rating of [numerical rating]. Management is regarded as [rating]. The ratings assigned to the bank holding company are part of the overall findings of this review and are confidential. They should not be disclosed or made public.

If you have any questions or comments regarding the risk assessment, or any regulatory matter concerning your organization, please contact [Reserve Bank contact] of this Reserve Bank at [telephone number].

Sincerely yours,

When more detailed off-site reviews are performed or on-site targeted inspections or visitations are conducted, Reserve Banks may also communicate the scope of these activities, relevant findings, and supervisory recommendations to the company in a letter. Alternatively, the findings can be conveyed to the company in a more structured report similar to the existing bank holding company inspection report. When full-scope inspections are conducted for SSBHCs, use of existing bank holding company report pages is mandatory. However, the only pages required to be completed are the core pages—the Examiner’s Comments and Matters Requiring Special Board Attention, the Scope of Inspection and Abbreviations, Analysis of Financial Factors, and the confidential pages (A through D). (See section 5010.0.1.) The use of any other page (including financial data pages) should be limited to situations in which its presentation is useful for supporting conclusions or recommendations involving areas of concern.

With regard to correspondence and reports to satisfactorily rated SSBHCs, it is generally appropriate for commissioned, non-officer personnel who are designated as the primary contact or portfolio manager for such companies to have signing authority. Reports and other official communications to problem and deteriorating companies require an officer’s signature.

5000.0.4.5.5 Risk-Management Ratings for SSBHCs

Effective January 1, 1997, the Uniform Financial Institutions Rating System (CAMELS) was amended specifically to require the evaluation of risk-management systems both in the overall management rating and in the individual financial components. By definition, financial and management activities at SSBHCs are conducted in the subsidiary banks, and the risk-management process of the company is essentially the same as that of the bank(s). Accordingly, a separate risk-management rating is not required of SSBHCs.

5000.0.4.5.6 Newly Formed SSBHCs

Consistent with long-standing Federal Reserve policy, an initial full-scope, on-site inspection of a newly formed SSBHC should be conducted within the first 12 to 18 months of operations. Thereafter, risk assessments should be performed in accordance with the SSBHC inspection policy.

5000.0.5 BANK HOLDING COMPANIES EXEMPT FROM THE PROHIBITIONS OF SECTION 4 OF THE BHC ACT OF 1956

Bank holding companies exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, as a result of any of the following exemptions will not be subject to any required periodic inspection:

1. section 4(a)(2)—permanent grandfather rights
2. section 4(c)(i)—labor, agricultural, or horticultural organization
3. section 4(c)(ii)—85 percent family-owned
4. section 4(c)(12)—irrevocable declaration to cease to be a BHC
5. section 4(d)—hardship exemption

However, the Reserve Bank should continue to monitor the financial condition of such holding companies and should conduct inspections whenever there is any indication of a potential problem in a subsidiary bank.

5000.0.6 OUT-OF-DISTRICT INSPECTIONS

In addressing the issue of Reserve Bank supervision of out-of-District facilities, the Board approved the policy that the Reserve Bank of the District where the parent holding company or lead bank is located would be responsible for the supervision, examination, inspection, and applications of all of that company’s out-of-District facilities. The following administrative procedures and guidelines have been established.

The Reserve Bank responsible for the supervision of the parent holding company is also responsible for the supervision of all of its non-bank subsidiaries, regardless of location. Classification of assets of out-of-District nonbank subsidiaries should be performed at the office of the parent company by the responsible Reserve Bank when sufficient information is available or could be made available upon request. In adopting the inspection frequency requirements for selected bank holding companies (see above), the Board recognized that the inspection of non-bank subsidiaries and the classification of non-bank assets was an essential part of the inspection process. However, an on-site inspection of out-of-District nonbank subsidiaries should not be done on a routine basis by the responsible

Reserve Bank. In those cases in which the responsible Reserve Bank concludes that information necessary to classify assets is available only on-site, or when problems or other material circumstances lead to the conclusion that an on-site inspection is required, the local Reserve Bank should be asked to perform the inspection. Staff from the responsible Reserve Bank may participate when supervisory problems are serious enough to warrant the involvement of the responsible Reserve Bank.

5000.0.7 MULTI-TIER BANK HOLDING COMPANY INSPECTIONS

With the marked increase in interstate banking activity, there exist a growing number of multi-tier bank holding company structures in which the top-tier and the second-tier institutions (as well as other lower-level tiers) are in different Federal Reserve Districts. Consistent with the policy presented in SR-78-464 on the supervision of out-of-District nonbank subsidiaries, the general framework presently in place will remain the primary guideline. The Reserve Bank responsible for the supervision of the top-tier bank holding company will also be responsible for the supervision of all of the subsidiary tier bank holding companies and their nonbank operations, regardless of the District where they are located.

Given this overall policy direction, general guidelines are established for inter-District coordination pertaining to multi-tiered bank holding companies where the second-tier institution is located in a different District from that of the top-tier parent holding company. (See also SR-89-25.)

5000.0.7.1 Population of Second-Tiers Suitable for On-Site Inspection

A second-tier holding company (and other lower tiers) that (1) has assets greater than \$5 billion, (2) irrespective of size, has a financial condition deemed in need of special supervisory attention (BHC or lead bank rated 3, 4, or 5), or (3) is prone to insider or abusive practices would usually warrant an on-site inspection, the preparation of an inspection report, the assignment of a rating, and a presentation of findings to management, as well as its board of directors if the board includes any "outside directors." To the

extent possible, the inspection should be coordinated with that of the top-tier parent holding company.

5000.0.7.2 Frequency Guidelines for Second-Tier BHCs over \$5 Billion

It shall be assumed that the second-tier will be subject to inspection frequency guidelines that pertain to the top-tier on a consolidated basis. Although top-tier companies greater than \$10 billion in assets may be subject to a second on-site presence annually, these guidelines are not intended to require a second annual presence for the second-tier company.

5000.0.7.3 Frequency Guidelines for Second-Tier BHCs Rated 3, 4, or 5

In those cases where the second-tier holding company requires special supervisory attention, or is prone to insider or abusive practices, the responsible Reserve Bank may conclude that the second-tier holding company warrants inspection at least as frequently or more frequently than the top-tier holding company. Under such circumstances, it would be appropriate for the second-tier holding company to receive a second presence annually despite the fact that the top-tier holding company, may be inspected less frequently. Problem bank holding companies acquired as "debts previously contracted" need not be inspected any more frequently than the top-tier company.

5000.0.7.4 Second-Tier Shell BHCs

To the extent that the second-tier holding company is strictly a shell without outside directors and no substantive policymaking authority, and the records necessary to review its operations and condition are available at the location of the top-tier holding company, then the inspection of the second-tier need not be done on-site, but rather may be done at the top-tier parent location. In either case, if an inspection is conducted, a rating should be assigned to the second-tier holding company. (See SR-89-25.)

5000.0.7.5 Staffing of Inspections of Out-of-District Second-Tier BHCs and Nonbank Subsidiaries

To the extent possible and consistent with the principles of efficiency and effectiveness, the responsible Reserve Bank should rely on the

local Reserve Bank to provide the resources necessary to conduct the inspection of out-of-District second-tier bank holding companies and nonbank subsidiaries that are located in that District, including nonbank subsidiaries held directly by the parent. However, the responsible Reserve Bank has overall responsibility for the consolidated organization and must determine the appropriate scope of the inspection to ensure that it is consistent with the overall supervisory objectives for the consolidated organization. The following guidelines supplement SR-89-25 and SR-79-464.

Consistent with this overall responsibility, the responsible Reserve Bank should also decide, in consultation with the local Reserve Bank, how the inspection will be managed. The examiner-in-charge (EIC) may come from either the responsible Reserve Bank or the local Reserve Bank, or in some instances co-EICs may be appropriate. Selection of the EIC can depend on a variety of factors, including the composition of the examination crew, the complexity of the supervisory plan, the condition of the organization, the degree of centralization within the consolidated organization, and the knowledge of local banking conditions. For those inspections involving co-EICs, the EIC from the responsible Reserve Bank will have overall responsibility for the findings and the rating resulting from the inspection. The co-EICs will, of necessity, communicate and coordinate closely, ensuring that all matters affecting the supervised banking organization are carefully considered and presented as a single Federal Reserve position. (See SR-93-48.)

5000.0.7.6 Scope of Inspection

The inspection of the second-tier ought to be conducted on a full-scope basis at least every other inspection. Interim inspections may be done on a limited-scope or targeted-scope basis. Any full-scope inspection of a second-tier bank holding company should include a review of the loan-administration function and an evaluation of the adequacy of the internal loan-review capability in order to determine the reliance that can be placed on the information by the regulators and the parent.

5000.0.7.7 Need for a Report

When an on-site inspection of a second-tier holding company is conducted, inspection findings should ordinarily be presented in a

separate report to its management and a summary provided to the board of directors (in those cases where any outside directors are on the board). The inspection report on the top-tier holding company will incorporate the findings pertaining to any coordinated inspection of the second-tier holding company either by reference to a separate report to be attached, or by inclusion of relevant findings in a summary presented in the body of the report on the top-tier company.

5000.0.7.8 Surveillance and Reporting Requirements

The local Reserve Bank is responsible for maintaining a high level of current awareness of the financial condition and activities of large second-tier holding companies (and other lower-tier companies) in its District. To assist in this regard, quarterly consolidated financial statements on Form FR Y-9C should be requested by the *responsible* Reserve Bank from all second-tier (and lower-tier) holding companies with consolidated assets greater than \$1 billion. As is the case with Form FR Y-9LP which is already being submitted by a second-tier holding company, the reporting holding company should be instructed to send the completed Form FR Y-9C directly to the Reserve Bank responsible for the top-tier bank holding company. The responsible Reserve Bank, in turn, should electronically transmit the data to the Board and also send a hard copy to the local Reserve Bank for its information. Any analysis of the second-tier holding company's condition should be exchanged between Reserve Banks.

5000.0.7.9 Intra-District Multi-Tiered BHCs

In those cases where a multi-tier holding company exists within a single Federal Reserve District, inspection guidelines remain essentially the same as those presented above.

5000.0.8 INTERAGENCY INSPECTION/EXAMINATION AGREEMENTS

In order to ensure continuing close coordination and consistency in the examination and super-

vision of banking organizations, the three federal bank regulatory agencies (i.e., Federal Reserve System (FRS), Comptroller of the Currency (OCC), and Federal Deposit Insurance Corporation (FDIC)), have adopted two policies intended to enhance the interagency supervision of bank holding companies and their bank and nonbank subsidiaries.

5000.0.8.1 Interagency Coordination of BHC Inspections and Subsidiary Bank Examinations

The first policy was adopted in conjunction with the Federal Financial Institutions Examination Council (FFIEC), and addresses large and problem holding companies and holding companies with deteriorating financial conditions. The policy requires the agencies to coordinate the bank holding company inspection and the examination of the lead bank subsidiary for—

1. any bank holding company with consolidated assets in excess of \$10 billion;
2. any bank holding company or bank holding company subsidiary lead bank rated composite 4 or 5 (the two lowest rating categories) under the Bank Holding Company Rating System or the Uniform Rating System for banks; and
3. any bank holding company or bank holding company subsidiary lead bank rated composite 3 (the middle of the rating categories) whose financial condition appears to have worsened significantly since the last inspection/examination.

It is recognized that substantial problems could develop for a holding company as a result of serious difficulties in significant subsidiary banks other than its largest bank, and the policy as adopted affords the agencies the flexibility to conduct coordinated examinations when any bank, regardless of size, has problems warranting supervisory concern. In implementing this aspect of the policy, the agencies will conduct coordinated examinations when any significant bank subsidiary is rated 4 or 5, or when the financial condition of any other subsidiary causes serious concern about that subsidiary's impact on the condition of the holding company or any other banking affiliate.

5000.0.8.2 Interagency Agreement to Conduct Concurrent Examinations of Certain BHCs and Their Lead Bank Subsidiaries

The second policy implements a program to conduct an annual concurrent examination by the Federal Reserve and the OCC or the FDIC of holding companies with consolidated assets greater than \$1 billion and their lead bank subsidiaries. The major provisions of this program are as follows:

1. The agencies will conduct concurrent examinations of certain bank holding companies and their lead bank subsidiaries, as well as any other subsidiary or subsidiaries as appropriate. Concurrent examinations are defined as the performance of certain on-site examination activities by examiners from the agencies on a simultaneous or coordinated basis so as to enhance cooperation, minimize potential duplication, and reduce burden on banking institutions. Concurrence does not necessarily require coincidence of beginning and closing dates of bank and holding company examinations. The geographical location of the lead bank shall determine the district bank and regional office responsible for coordination of examination logistics of all involved subsidiaries.
2. The banking organizations to which this program will apply will be mutually agreed upon by the Director of the Division of Banking Supervision and Regulation (FRS) and the Senior Deputy Comptroller for Bank Supervision (OCC) for holding companies with lead national bank subsidiaries, and by the Director of the Division of Banking Supervision and Regulation (FRS) and the Director of the Division of Bank Supervision (FDIC) for holding companies with lead state-chartered nonmember bank subsidiaries. These banking organizations will be specified in a list prepared jointly by the FRS and OCC for holding companies with lead national banks, and by the FRS and FDIC for holding companies with lead state-chartered nonmember banks.
3. In general, this program will apply to holding companies whose lead bank subsidiaries are national or state-chartered nonmember banks, and whose consolidated holding company assets are equal to or exceed \$1 billion. However, the program may be applied to other holding companies upon the agreement of the FRS, OCC, and FDIC.

4. In general, banking organizations included in the program will be examined on an annual basis, although each agency reserves the right not to participate in an examination due to resource constraints or other supervisory imperatives.
5. The agencies will mutually agree upon the division and sharing of work assignments and routines for concurrently examining the holding company and the bank with the goal of minimizing unnecessary overlap, duplication, and burden on the banking organization. In general, the division of examination duties will be based upon the locus of primary statutory examination and supervisory responsibility, but will recognize that in some areas the agencies have common supervisory interests and needs for information.
6. Findings, conclusions, recommendations, reports, and transmittal letters pertaining to examinations of the holding company or subsidiaries included in the program should be provided to or discussed with the district bank and regional office of the other agency responsible for coordination of the concurrent examinations before being forwarded to management or directors of the holding company or bank(s).
7. Each district bank and regional office receiving examination information from the other agency should inform the other agency on a timely basis of any major findings, conclusions, or recommendations with respect to which the receiving agency substantially disagrees.
8. Before forwarding examination results to management or directors, every effort should be made to resolve significant differences between the district bank and regional office concerning major examination findings, conclusions, and recommendations.
9. Significant differences that cannot be resolved by examiners or officials at the regional office-district level should be referred to the Director of the Division of Banking Supervision and Regulation of the Board of Governors (FRS) and the Senior Deputy Comptroller for Bank Supervision (OCC) for ultimate resolution in the case of a holding company and its lead national bank. Cases that involve significant differences at the regional office-district level with regard to a holding company and its lead state-chartered nonmember bank will be referred to the Director of the Division of Banking Supervision and Regulation of the Board of Governors (FRS) and the Director of the Division of Bank Supervision (FDIC) for ultimate resolution. If major differences cannot be resolved, the agencies may proceed with the transmission of examination findings and conclusions to management according to each agency's existing procedures.
10. Reasonable efforts should be made by the agencies to hold joint or combined final interviews and meetings with the management or directors of the holding company and the bank subsidiaries to discuss significant supervisory issues involving examination results. In the ordinary course, the district bank (FRS) would initiate meetings with the holding company, and the regional offices (OCC and FDIC) would initiate meetings with the national or state-chartered nonmember bank subsidiaries, respectively. If such meetings are not appropriate or feasible, each agency should inform the other agency in advance of any plans to meet with management or directors of the holding company or bank to discuss significant supervisory matters, and the other agency should be given the opportunity to attend such meetings or send a representative. If the other agency does not attend or send a representative, significant results of the meetings should be transmitted to that agency.
11. This agreement is intended to foster cooperation and is not meant by the exclusion of other arrangements to preclude other reasonable efforts or cooperative arrangements to strengthen interagency coordination and consistency.
12. Nothing in this agreement precludes or prohibits the agencies from examining any entity for which the agency has statutory examination authority, or from taking timely supervisory action against any entity for which the agency has statutory supervisory authority.

5000.0.8.3 Interagency Policy Statement on Examination Coordination

On June 10, 1993, an interagency policy statement was developed to strengthen coordination and cooperation among the federal banking agencies responsible for examining and supervising depository institutions and their holding companies, thus minimizing the disruptions and burdens associated with the examination process.

The policy expands on existing interagency agreements. See SR-93-30.

5000.0.8.3.1 Primary Supervisory and Coordination Responsibility

Examinations or inspections of a particular legal entity are to be conducted by the federal regulatory agency that has primary supervisory authority for that entity. In carrying out its supervisory responsibilities for a particular entity within a banking organization, each regulatory agency, to the extent possible, is to rely on examinations or inspections conducted by the primary regulator of the affiliate, thereby avoiding unnecessary duplication and unnecessary disruption of the banking organization. In certain situations, however, it may be necessary for a regulatory agency other than the entity's primary supervisory authority to participate in the examination or inspection in order to fulfill its regulatory responsibilities.

Primary supervisory authority and coordination responsibilities are organized as follows:

OCC	national banks
FDIC	state nonmember banks
OTS	thrift holding companies and savings associations
FRB	parent bank holding companies, non-bank subsidiaries of bank holding companies, the consolidated bank holding company, and state member banks

The primary federal regulator is responsible for scheduling, staffing, and setting the scope of supervisory activities, including coordinating formal and informal *administrative* actions, as necessary. In fulfilling these responsibilities, the primary regulatory agency is to consult closely with the other appropriate agencies when there is need for coordination.

5000.0.8.3.2 Overview of Examination Coordination and Implementation Guidelines

The agencies are to make every effort to coordinate the examinations and the inspections of banking organizations. Coordinated examinations and inspections may not be practical in all cases because of resource constraints, serious scheduling conflicts, or geographic consider-

ations; however, particular emphasis will be placed on coordinating examinations and inspections of banking organizations with over \$10 billion in consolidated assets and those banking organizations (generally, with assets in excess of \$1 billion) that exhibit financial weaknesses.

5000.0.8.3.3 Coordinating the Planning, Timing, and Scope of Examinations and Inspections

When multiple regulators have authority over a legal entity, representatives from the appropriate supervisory offices should, if necessary, meet quarterly to discuss supervisory strategies for specific banking organizations. They should meet at least annually to review and establish examination and inspection schedules, to plan for the next year, and to consider the need for coordination in the following areas:

1. sharing the strategy and scope of each examination or inspection
2. determining if agencies other than the primary regulator of a particular entity should participate in the examination or inspection of that entity
3. determining whether a consolidated request letter should be prepared to avoid duplicative information requests
4. sharing workpapers and resultant findings and conclusions from prior examinations and inspections
5. other areas as necessary

5000.0.8.3.4 Interagency Review of Bank, Nonbank, and Parent Company Activities

Certain functions and procedures—such as internal audit, credit review, and the procedures for determining the allowance for loan and lease losses—transcend the boundaries that distinguish legal entities. Such functions and procedures may be located at the bank or holding company level. The primary regulator of the depository institution and the holding company both may have supervisory responsibility to assess such functions. In these cases, coordinated and concurrent examinations or inspections should be conducted to avoid duplicative reviews and unnecessary disruption.

The primary regulator of the entity being examined or inspected should take the lead in a coordinated examination or inspection, unless there is an agreement that another agency will serve as the lead agency. The responsibilities of

the lead agency, in consultation with other appropriate agencies, include developing the scope of the examination or inspection and determining the staff requirements. The lead agency will also coordinate scheduling of the examination or inspection and presentation of examination or inspection findings to the appropriate management.

5000.0.8.3.5 Joint Meetings between Regulators and Bank or BHC Management

At the conclusion of examinations and inspections conducted under the guidelines, the agencies should coordinate and plan joint meetings with the board of directors to discuss the findings and conclusions. The agencies will coordinate responsibility as outlined in the guidelines.

5000.0.8.3.6 Significant Differences in Agencies' Findings, Conclusions, and Recommendations

Before examination and inspection results are forwarded to management or boards of directors, every effort should be made to resolve any significant differences in major findings, conclusions, and recommendations. These differences should be resolved by examiners, or officials at the regional level, within 10 business days of identification. If the regional offices cannot resolve the matter, it should be referred to the national level, where it will be resolved within a reasonable time frame.

5000.0.8.3.7 Inspection and Examination Reports

The primary regulator should prepare the formal report of examination or inspection covering the entity for which it is the primary federal regulator and in those cases for which it serves as the lead agency. The report should be addressed and transmitted to the directors of the entity for which the regulator is the primary federal supervisory authority. The report may also be sent to the directors of other entities that have a need for the information. The agencies may agree, if necessary and appropriate, to prepare a joint report.

5000.0.8.3.8 Coordinating Information Requests

Any request for information to be obtained from

an entity for supervisory purposes should nominally be made through the entity's primary regulator. The primary regulator should also share relevant supervisory information with the other appropriate regulatory agencies.

5000.0.8.3.9 Coordinating Enforcement Actions

When one or more regulatory agencies is contemplating an enforcement action, the agencies should consider initiating a joint enforcement action to address and correct deficiencies within a banking organization. At a *minimum*, each agency considering enforcement action should inform the other agencies. This provision reaffirms the existing interagency enforcement agreement.

5000.0.8.3.10 State Banking Departments

The agencies will endeavor to coordinate with state banking departments, when appropriate and feasible.

5000.0.9 POLICY FOR COMMUNICATING PROBLEMS OF SUPERVISORY CONCERN TO MANAGEMENT AND BOARDS OF DIRECTORS

5000.0.9.1 Introduction

On October 7, 1985, the Board announced a second policy to strengthen and formalize practices for communicating the findings of examinations/inspections to management and boards of directors and to set out guidelines for such meetings. The policy—

1. establishes specific criteria for determining which examination findings require follow-up meetings with boards of directors and sets out guidelines for such meetings;
2. requires that, in addition to providing a complete examination or inspection report to the bank or bank holding company, a written summary of findings be sent to the bank or bank holding company for distribution to each director; and
3. requires that senior Reserve Bank officials become more involved in presenting examination findings to boards of directors.

The policy was effective immediately, with initial implementation expected on January 1, 1986.

5000.0.9.2 Meetings with Directors

The decision to hold a meeting with the board of directors at the conclusion of a state member bank examination or a bank holding company inspection is to be determined on the basis of the organization's financial condition, its size, the type of examination/inspection conducted, and other factors which, in the judgment of the Reserve Bank, indicate the need for such a meeting. To the extent possible, meetings with the board of directors of state member banks should include representatives of the state banking department. Where appropriate, meetings with the boards of bank holding companies may be held jointly with the meeting of the lead bank subsidiary's board of directors and the bank's primary federal or state bank supervisor.

5000.0.9.2.1 *Criteria for Conducting Meetings*

5000.0.9.2.1.1 Condition

A meeting with the board of directors is to be held at the conclusion of any full-scope inspection in which a bank holding company is rated BOPEC composite 4 or 5. SR-95-19 stipulates, however, that a meeting with the board of directors need not be held after an inspection that results in a BOPEC composite rating of 3, 4, or 5 for a shell BHC with less than \$500 million in assets if all of the following conditions are met:

1. A meeting was held when the BHC was first downgraded to a BOPEC composite rating of 3, 4, or 5.
2. The examination of subsidiary banks revealed no significant deterioration since the prior meeting.
3. No significant violations were revealed by the inspection of the BHC.
4. The BHC is in compliance with any informal or formal enforcement actions.

Except for the above, meetings are also required if an organization is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since the previous examination/inspection in which it received

a composite 3 rating.⁶ A meeting should also be held with all these organizations following a limited-scope or targeted examination/inspection, if deemed appropriate and desirable by the Reserve Bank.

5000.0.9.2.1.2 Size

A meeting will be required at the conclusion of a full-scope examination/inspection of all multinational organizations and major regional organizations with assets in excess of \$5 billion. Reserve Banks also are encouraged to conduct such meetings at the conclusion of a full-scope examination/inspection of regional institutions with assets in excess of \$1 billion.

5000.0.9.2.1.3 Guidelines for Meetings

It is understood that meetings with boards of directors will have to be tailored to meet the needs of each specific situation. In general, meetings with the full board are to be preferred, but in certain cases the Reserve Bank may determine that a meeting with a committee of the board of directors, such as executive or audit committees, will serve adequately. In all cases, however, the written summary of examination/inspection findings is to be provided to each member of an organization's board of directors.

For bank holding companies with consolidated assets of \$500 million or more, the Reserve Bank's presentation to the board should ordinarily be chaired by a Reserve Bank official, with the examination staff in attendance. The larger the organization or more serious its problem, the more senior should be the Federal Reserve official.

Reserve Bank presidents are expected to become directly involved in the supervision of multinational organizations and regional institutions with over \$5 billion in assets that have been rated composite 3, 4, or 5. Reserve Banks have the discretion to determine the circumstances under which the participation of Reserve Bank presidents is appropriate and necessary. It may be necessary for the Reserve Bank president to meet with the board of directors and become involved in other ways, the precise nature of involvement to depend on the situation.

A meeting with the board of directors should include a formal, structured presentation con-

6. Reserve Banks also are encouraged to hold a meeting at the conclusion of a full-scope examination/inspection of an organization with assets greater than \$500 million rated composite 2 if its condition appears to be deteriorating, and those rated composite 3 even if showing some improvement.

taining a clear statement that an institution is considered a “problem” institution⁷ or about to become a problem institution if existing conditions deteriorate. Use of slides, other visual aids, and hard-copy handouts is encouraged. Information should also be presented on financial trends and peer-group comparisons. The presentation should make clear the nature of problems uncovered, such as—

1. deficiencies in capital, asset quality, earnings, or liquidity;
2. violations of law;
3. inadequacies in policies, practices, and reporting systems necessary for the proper administration of the organization;
4. lack of well-documented lending, collection, investment, and liability-management policies;
5. failure of management in addressing previously discussed deficiencies;
6. lack of reporting systems sufficient to keep senior management and the board of directors fully informed; and
7. failure of the board of directors to participate in the active management of the organization.

For bank holding companies with consolidated assets of less than \$500 million, the Reserve Banks, effective March 30, 1995 (SR-95-19), were provided the discretion to have senior supervision/examination staff represent the Reserve Bank in meetings with the directors of banks and bank holding companies. Conference calls with directors may be made in place of on-site meetings for these BHCs when considered appropriate and if an on-site meeting was held following the previous inspection.

5000.0.9.3 Summary of BHC Inspection Findings

The Federal Reserve Banks will provide special written reports summarizing the results of the inspection findings to bank holding companies in the following situations:

1. An organization is rated composite BOPEC 3, 4, or 5 (except for organizations rated BOPEC 3 or 4 in cases in which a written summary report was provided on a preceding inspection, the organization has been taking

actions to comply fully with the provisions of that report, and, in the examiner’s judgment, no good purpose would be served by issuing another summary report).

2. An organization is rated composite 1 or 2 but is showing signs of a significant deterioration in condition or an apparent violation of law.

Examiners in these and other cases may decide to issue summaries to board members when the summaries will prove constructive in resolving potential or actual problems.

The page prepared for the inspection report entitled Examiner’s Comments and Matters Requiring Special Board Attention may serve as the full text of the summary report to directors and should be written with that purpose in mind. The discussion on the page (and thus in the summary report) should focus on identified problems of the organization rather than its strengths. Problems should be presented in a succinct and unmistakably clear manner. The types of actions to be taken by the directors and management to address these problems should be specifically noted. Institutions rated 4 or 5 are to be told they are “problem” institutions that warrant “special supervisory attention.” Institutions rated 3 are to be informed that their condition is not satisfactory, that they are subject to more than normal supervision, and that they may become “problems” if their weaknesses are not addressed adequately.

The summary report will be sent directly to the banking organization’s management for their distribution to each director. The transmittal letter to the banking organization is to state that the report is a summary of identified problems and contemplated supervisory actions and to request that management distribute the report to each director. The letter is to state further that each director should read the report, sign the introductory statement attesting to having read the report, and return the report to management. Management is to keep on file copies of the statements signed by the directors but is to destroy all but a file copy of the summaries themselves.

In order to provide the directors with prior notice of the deficiencies to be discussed, the directors’ summary report is to be completed and distributed before any Reserve Bank meeting with the board of directors. Reserve Banks should also make every effort to distribute the complete examination/inspection report to management before meeting with directors.

7. As has been long-standing Federal Reserve practice, the exact numeric rating assigned in the examination/inspection is not to be disclosed.

5000.0.10 SUMMARY TO DIRECTORS OF INSPECTION FINDINGS

SUMMARY TO DIRECTORS OF INSPECTION FINDINGS

Prepared by the
Federal Reserve Bank

For the Board of Directors of

Inspection Conducted As of

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report.

THIS SUMMARY SHOULD BE HELD IN STRICTEST CONFIDENCE

5000.0.10 SUMMARY TO DIRECTORS OF INSPECTION FINDINGS—
Continued

Summary Signature Page

The attached summary of an inspection of _____ completed on _____, has been prepared to assist members of the board of directors of the bank holding company in fulfilling their fiduciary responsibilities. As a member of the board you are urged to review this summary and the inspection report as soon as possible.

As an elected member of the holding company's board of directors, you have a duty to ensure that the organization is operated in a safe and sound manner. You may be held liable for losses caused by your failure to supervise properly the affairs of the holding company. It is suggested that you review one or more of the publications that explain the functional and legal responsibilities of a director.

Congress has placed great emphasis on the role of holding company directors and officers by passing legislation allowing regulatory authorities to use "cease and desist" actions against individuals, to assess civil money penalties, and even to remove an officer or director demonstrating willful or continuing disregard for safety and soundness considerations.

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report. After reviewing this summary, please sign below and return this entire document to the bank holding company.

I have received and read the attached summary of the inspection of _____ by the Federal Reserve Bank of _____ conducted as of _____.

Summary of Inspection Findings

5000.0.11 COMPLETION STANDARD FOR INSPECTION REPORTS

Inspection reports issued by the Federal Reserve must be completed and mailed within 60 calendar days, beginning with the day following the examiner's exit meeting. This standard applies to all inspections, regardless of the complexity of the bank holding company. For bank holding companies rated 3, 4, or 5, Reserve Banks are encouraged to follow an internal target of 45 calendar days for processing and mailing reports. In those cases where reports are issued jointly with other state banking agencies, this standard may be extended at the discretion of the senior management at the Reserve Bank. (See SR-93-4.)

5000.0.12 COMBINED EXAMINATION/INSPECTION REPORT FOR BANK HOLDING COMPANIES WITH LEAD STATE MEMBER BANKS

Reserve Banks are permitted, under the circumstances and procedures specified in SR-94-46, to issue a combined report for a bank holding company and its lead state member bank subsidiary. A letter should be sent to the qualified holding companies that explains their option of receiving a combined report. The combined report may be issued when—

1. a bank holding company's lead bank subsidiary is a state member bank;⁸ and
2. the holding company's board of directors formally approves, by board resolution, a combined report being released to its lead state member bank subsidiary.

A combined examination/inspection report format is attached to SR-94-46. At a minimum, a combined report will contain all examination report pages required by the interagency bank examination report instructions, as well as information on the parent holding company, its bank and nonbank subsidiaries, and the consolidated bank holding company organization. For detailed information on required and optional report pages, refer to section 6000 of the *Commercial Bank Examination Manual* and sections 5010.0 to 5010.43 of this manual.

Separate examination and inspection Supervisory Information System (SIS) entries are required for each combined report. The combined report's cover page is to be green, must provide BHC and Bank RSSD⁹ numbers, and must clearly indicate that the report is a combined report.

8. In cases where the company has more than one state member bank, separate examination reports should be prepared for all other state member bank subsidiaries.

9. Research, Statistics, Supervision and Regulation, and Discount and Credit (RSSD)

FR 1241:

5010.13		Capital Structure (lead bank subsidiary)
5020.1		Bank Subsidiary
5020.2		Other Supervisory Issues

This “full-scope” report is designed to be used as a minimum standard in reporting the results of a bank holding company inspection. The report to be provided to the bank holding company consists of a Core Section and an Appendix Section, the latter consisting of certain required financial statements. Supporting schedules are added to the Core or Appendix Sections when an area of concern or problem is addressed. Such schedules provide detailed information relevant to a particular activity area.

The Core Section contains a table of contents, a summary of the scope of the inspection, and a page that presents the examiner’s comments and discusses matters requiring special Board attention. Also, the Core Section should contain an analysis of financial factors, including an assessment of the quality of assets and a complete analysis of the BOPEC components. Specifically, the Core Section is made up of the pages described in the following subsections.

5010.1.1 CORE SECTION

The inspection report format contains the following pages in the Core Section:

<i>Page No.</i>	<i>Page Title</i>
	Standard Report Cover
i.	Table of Contents
1.	Examiner’s Comments and Matters Requiring Special Board Attention
2.	Scope of Inspection and Abbreviations
3.	Analysis of Financial Factors
4.	Audit Program

5010.1.2 APPENDIX SECTION

The Appendix Section will consist of a mandatory section that presents the following financial statements for the organization:

- Parent Company Comparative Balance Sheet
- Parent Company Comparative Statement of Income and Expenses
- Consolidated Comparative Balance Sheet
- Consolidated Comparative Statement of Income and Expenses

Bank holding company inspections should be conducted as of the latest fiscal quarter. All financial statements should be presented as of the most recent calendar quarter. The dollar amounts are reported in thousands.

Financial statements prepared by the bank holding company may be used to meet these requirements provided they are prepared in accordance with generally accepted accounting principles and are, in the examiner’s judgment, suitably detailed, clear, and accurate. Any adjustments to any financial statements made by the examiner should be footnoted. Any other supporting schedules or visual aids (for example, graphs or charts) can be included in the Core Section to communicate and/or support the examiner’s findings. Percentages should be rounded to the nearest tenth of 1 percent, unless finer detail is necessary.

5010.1.3 OPTIONAL PAGES TO BE INCLUDED IN THE CORE OR APPENDIX SECTIONS

Supporting Report Pages for All Inspections

The listed optional report pages are to provide support¹ to the Core or Appendix Section of the report. They will normally be sequenced as listed below. If a problem area is cited within the Core Section, the respective typed supporting report pages need to be included to support the critical comments. The optional pages listed in this section are to be included by the examiner in the report when they convey significant

1. Supporting report pages refers to information gathered in essentially the same format as when the page is being prepared by the examiner for inclusion in the report. However, certain information may not provide sufficient value to address an area of concern in the report, but should be retained in workpaper form to provide evidential matter for the inspection report. For example, the Statement of Changes in Stockholders’ Equity may be summarized in an audit report or may be included with the company’s audited annual financial statements. The examiner reviews the statement and concludes that the information is reliable and complete and that it agrees with the respective balances reported in the inspection report. A photocopy of the information could be used to provide evidence of the examiner’s review, including any related notes.

findings in the Core Section or when they support the discussion in the Core Section with an Appendix page. If appropriate standardized report pages do not exist to address a particular area of concern, the relevant analytical support can be included on the “Other Matters” page as part of the inspection report. Any or all supporting report pages and workpapers should be available to be forwarded immediately to Board staff, if requested.

The designated supporting report pages are—

- Policies and Supervision
- Summary of Consolidated-Classified and Special-Mention Assets, and Other Transfer Risk Problems
- Consolidated Capital Structure
- Capital Structure (lead bank subsidiary)
- Treasury Activities/Capital Markets
- Violations
- Other Matters
- Classified Assets and Capital Ratios of Subsidiary Banks²
- Organization Chart
- History and Structure
- Investment in and Advances to Subsidiaries
- Commercial Paper (Parent)
- Lines of Credit (Parent)
- Commercial Paper/Lines of Credit (Parent) (including questions)
- Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)
- Statement of Changes in Stockholders’ Equity Income from Subsidiaries (Fiscal and Interim)
- Cash Flow Statement (Parent) (including questions)³
- Parent Company Liquidity Position
- Parent Company and Nonbank Assets Subject to Classification
- Bank Subsidiaries
- Nonbank Subsidiaries
- Nonbank Subsidiary Financial Statements
- Fidelity and Other Indemnity Insurance
- Other Supervisory Issues
- Extensions of Credit to Bank Holding Company Officials and Their Related

- Interests and Investments in and Loans on Stock or Obligations of Their Related Interests
- Interest Rate Sensitivity—Assets and Liabilities

In addition to the FR 1225 report pages, a few replacement report pages are designated as FR 1241 pages. The following pages are designed and are to be used for smaller bank holding companies having less than \$150 million in assets:

- Capital Structure (lead bank subsidiary)
- Bank Subsidiary
- Other Supervisory Issues

5010.1.4 CONFIDENTIAL SECTION FOR ALL INSPECTION REPORTS

The confidential section for bank holding company inspection reports is reserved for confidential comments that will be limited to staff of the Federal Reserve System. The Confidential Section of the inspection report will consist of the following pages:

<i>Page</i>	<i>Page Title</i>
A.	Principal Officers and Directors
B.	Condition of the Bank Holding Company
C.	Liquidity and Debt Information
D.	Administrative and Other Matters

Discussion presented in the confidential section should be kept to a minimum. As much information as possible should be incorporated in other sections of the report that are available to the bank holding company. The complete analysis of the holding company organization (that is, BOPEC components) is to appear in the front of the report on the “Analysis of Financial Factors” page. The information reported on these confidential pages should be printed on yellow paper.

5010.1.5 GENERAL COMMENTS FOR ALL REPORT PAGES

The specified format of the report pages should be used whenever possible, but when flexibility is necessary, additions and limited deletions can be made. Examiners are required to include in the Core Section only a relatively small number

2. Included if assets are classified and/or written up as required.

3. This page is required to be included in the inspection report for bank holding companies with consolidated assets in excess of \$1 billion or those companies that have substantive fixed charges or debt outstanding, as well as select other organizations at the option of the Reserve Bank.

of report pages and, in the Appendix Section, only financial statements for the organization. These pages will normally be sequenced as listed previously. At the same time, examiners have the discretion to decide whether to include other standard pages in a report and whether to include them in the Core or the Appendix Sections. This choice should be made on the basis of whether the content of the page will highlight a significant inspection finding (in which case, the finding should be included in the Core Section) or whether the content will provide support for comments offered in the Core Section (in which case, the finding should ordinarily be placed in the Appendix Section).⁴ Given the discretion being accorded examiners to tailor reports to accurately convey inspection findings, reports prepared for large and small companies alike should be prepared to achieve that objective.

Another important objective is to avoid excessive length in the report, particularly in the open section, that can result from including comments that may provide directors and management with information of marginal importance or from repeating findings and conclu-

sions on different pages of the report.⁵ In addition, reports should be understandable and readable. A further objective is for examiners to determine precisely what should be conveyed in their reports to boards of directors and management and then to present that information in clear and concise language.

All reports are to be on 8½- by 11-inch paper, bound on the left margin. Responses to questions should be provided below the last question in the section or, if necessary, on an additional page. Do not repeat the question in the response. Indicate the question number in the response.

All credit-extending nonbank subsidiaries will be subject to asset classification. The examiner should recommend that management maintain a loan-loss reserve that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated, future losses from operations. The examiner and BHC management should consider the guidance provided in section 2065.2 on the determination of an adequate level for the Allowance for Loan and Lease Losses. Examiners should also review the organization's loan-loss history to determine trends and to help evaluate the adequacy of the existing reserve.

4. If a problem area is cited within the Core Section, inclusion of the listed, typed, supporting report pages will be necessary to support the critical comments.

5. While brevity is an important goal, examiners should note that, when an enforcement action is contemplated, the inspection report must fully support the proposed provisions of the enforcement document.

Procedures for Inspection Report Preparation (Cover)

Section 5010.2

The official name, location, and the RSSD ID number of the bank holding company being inspected is to be provided. Also provide the dates the inspection commenced and concluded as well as the inspection date. The cover includes a notice that its content is strictly confidential.

The cover must include the official seal of the Board of Governors of the Federal Reserve System. It may also include the names and seals of the Reserve Bank and the state bank supervisory agency that participated in the inspection as part of a cooperative inspection agreement.

FR 1225-Cover
(Revised 7/94)

**REPORT OF
BANK HOLDING COMPANY
INSPECTION**

Name: _____ Inspection Commenced: _____
 Location: _____ Inspection Concluded: _____
 RSSD ID Number: _____ Inspection Date: _____

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors dis-

close or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

The table of contents indicates the report pages included in the report and the sequential numbering of pages within the report. All pre-numbered Core Section inspection report pages are included in each table of contents along with any other supporting report pages. Supporting report pages will be numbered sequentially in FR 1225, starting with page number “11”.

If included, individual subsidiaries may be

listed with their respective page numbers, or they may be grouped such as “Nonbank Subsidiaries” with a page reference such as “26–26c” to indicate the number of such subsidiaries. At the bottom of the page, insert the commencement date of the previous inspection followed by the date of the financial statements in parentheses.

Procedures for Inspection Report Preparation (Core Page 1—Examiner’s Comments; Matters Requiring Special Board Attention) Section 5010.4

The report page is to include a summary of the examiner’s findings relating to—

- violations,
- criticisms,
- special comments,
- matters requiring special board attention, and
- recommendations.

In addition, it will also include the BOPEC financial composite rating (see SR-88-37 and section 4070.0.9). Beginning in January 1997, component ratings for the current inspection and the two prior inspections will be reported at the top of the page as illustrated below (see SR-96-26). Component ratings should only be detailed if the date of the inspection is after January 1, 1997.

BOPEC Rating System

<i>Inspection Date:</i>	<i>Current Inspection</i> <i>09-03-X7</i>	<i>Prior Inspection</i> <i>10-19-X6</i>	<i>Prior Inspection</i> <i>8-22-X5</i>
Composite rating:	2	2	2
Component ratings:			
Banks	2		
Other (nonbank subsidiaries)	2		
Parent company	2		
Earnings	2		
Capital adequacy	2		
Management	S		

This listing should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; however, they should be made available to management and directors upon request.

When a combined examination/inspection report format is used, similar matrices for each composite and component rating assigned should be included in the report.

Numeric and alphabetic component ratings should also be included on the pages of reports that discuss findings related to the components.

The purpose of this report page is to communicate to the holding company’s board of directors and its management the examiner’s views on the overall condition of the company, significant problems that have been identified in the inspection, and actions the company’s board of directors and management need to take to correct the company’s problems and strengthen its condition. The comments should summarize only material concerns, criticisms, analyses, or violations, referring the reader to an appropriate optional report page for additional detail. The use of subcaptions to identify and separate the areas subject to comment is encouraged.

The comments are generally written on an exception basis. Avoid laudatory comments. The examiner may, however, comment on improvements initiated by management.

Items suitable for discussion within the Examiner’s Comments and Matters Requiring Special Board Attention report page include, but are not limited to—

- policies and supervision of subsidiaries,
- earnings,
- cash flow or liquidity,
- level of classified assets,
- adequacy of capital,
- borrowings,
- condition of subsidiaries,
- violations of the Bank Holding Company Act and Regulation Y,
- violations of section 23A and/or section 23B of the Federal Reserve Act and other statutes,
- fees and dividends being paid to the parent by subsidiaries,
- audit function, and
- information that is to serve as an alternative to issuing a separate Summary to Directors of Inspection Findings.

Any substantive recommendations contained elsewhere in the inspection report should be presented briefly in the core page entitled “Examiner’s Comments and Matters Requiring Special Board Attention.” A summary comment

relative to the adequacy of the BHC's oversight of its subsidiaries may be provided. Any comments that refer specifically or indirectly to details presented elsewhere in the report should be consistent with that information. Each inspection report page entitled Examiner's Comments and Matters Requiring Special Board Attention will be written to accomplish these

objectives: give an overall assessment of the condition of the company, discuss significant problems, and specify needed corrective action. In cases of composite ratings of 3, 4, and 5, the text of this page will also be used for the summary report. The signature of the examiner-in-charge should appear below the comments.

The scope of the inspection describes generally the coverage parameters of the inspection. When determining the scope of the inspection, the examiner must consider the Board's policy statement on the examination and inspection of state member banks and bank holding companies (October 7, 1985, S-2493). See sections 5000.0.7 to 5000.0.9.

The scope generally includes a presentation of the following:

- the purpose for the inspection
- which subsidiaries were inspected on-site and which were done from the parent's location
- the depth of inspection coverage¹
- an identification of the peer group(s) and the bank holding companies used for comparison with the bank holding company being inspected
- the source of information regarding the administration of policies and the supervision over subsidiaries

- comments as to the extent examiners relied on internal classification systems or classifications of other bank regulatory agencies
- the senior officers with whom the overall inspection findings were discussed
- the sources upon which the examiner based his conclusions and/or recommendations

The opening paragraph of the scope should include authority under which the inspection was conducted (section 5(c) of the Bank Holding Company Act of 1956, as amended), and may include the dates the inspection commenced and closed, and the date(s) of financial statements used as the basis for the inspection.

In brief paragraphs, the examiner should also indicate what minute books were read, which nonbank subsidiaries were examined, what size loans were reviewed in credit-extending subsidiaries, with whom corporate policies were discussed, and to what extent banking subsidiaries were reviewed.

The report page will also include explanations of abbreviations used in the report. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word "bank" to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

1. This includes a statement as to the percentage of loans reviewed in each credit-extending nonbank subsidiary, without consideration to statistical sampling or any form of extrapolation. The ratio will include loans actually reviewed by Federal Reserve examiners divided by total loans in each nonbank subsidiary. When different categories of loans are housed in a nonbank subsidiary, it may be relevant to provide a breakdown by percentage of loans reviewed for each category of loans, further segregated by current and delinquent categories. See SR-90-26.

The Analysis of Financial Factors presents a complete financial analysis of the components (nonconfidential BOPEC comments) of the holding company—parent, bank subsidiaries, nonbank subsidiaries, and consolidated (as applicable)—supported and followed by parent and consolidated financial statements, consolidated asset quality, and consolidated capital ratios. See section 4000 for specific information on analyzing financial factors.

The analysis is to serve the informational needs of senior management of the holding company and the supervisory authorities by presenting both positive and negative factors affecting the condition of the major components and the consolidated company. Such analysis helps identify problems or potential problems and measures the holding company's ability to be a source of financial strength to its subsidiaries. This analysis is considered one of the most important parts of the report.

The information is available from discussions with management, financial statement data within the report, published statements such as the SEC Form 10-K, and unpublished information sometimes available through the offices of the officer in charge of finance, the treasurer, or the comptroller.

5010.6.1 PARENT COMPANY

For the parent company, present an analysis of each of the financial factors in narrative form. Tables may be used to support the narrative analysis.

The analysis of the parent should include a discussion of the following: debt structure (with indications of how debt proceeds are used), debt/equity ratios (with comparisons to previous years), sufficiency of cash flow, sources and stability of income, interest coverage, dividend-payout ratios, classifications of parent company assets, changes in dividend policy, comparisons to peer group, and a conclusion about whether the holding company is considered to be a source of financial strength to its subsidiaries.

Within the analysis of the parent, the examiner should also include comments regarding whether dividend payments to stockholders have been reasonable, considering the parent's leveraged position, debt servicing, cash flow, and capital needs. The examiner should describe how dividend policy is formulated and what the policy is. See the Board's policy on cash dividend payments in section 2020.5.1.

Dividends paid by subsidiaries, both bank and nonbank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt-service requirements and other obligations. The examiner will need to conclude and discuss in the report whether dividend assessments of any subsidiary are excessive. The examiner can draw conclusions about excessive dividends based on discussions with management concerning dividend policies and information that may be contained in the report, such as—

1. peer-group averages,
2. the condition and capitalization of each subsidiary,
3. the type of subsidiary (credit-extending subsidiaries need more capitalization than service subsidiaries),
4. the bank holding company's reasons for extracting proportionately more or less from each subsidiary,
5. past policy and payments, and
6. compliance with regulatory policy and guidelines.

5010.6.2 BANK SUBSIDIARIES

A summary write-up should be prepared for each bank subsidiary comprising 10 or more percent of the bank holding company's consolidated assets and/or bank subsidiaries evidencing material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company's board of directors.¹ These write-ups should summarize noteworthy examiner comments from the open section of the latest reports of examination of the subsidiary bank(s) and comment on any actions taken to correct significant weaknesses or violations. The summary should also include an analysis of the level and trend of earnings and classified assets, and the adequacy of capital (for example, Tier 1, total capital, and leverage ratios).

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that the cross guarantee provisions of FIRREA can have on nontroubled bank subsidiaries.

For the other bank subsidiaries, the examiner should provide an overall summary: the number of subsidiaries by composite rating, an overall analysis of the level and trend of earnings, classified assets, capital (that is, capital adequacy), and any other financial analysis indicators.

5010.6.3 NONBANK SUBSIDIARIES

The examiner should present an analysis of the condition and an analysis of the risk assessment of nonbank subsidiaries. The analyses presented within this report page should support the nonbank component of BOPEC without causing the reader to refer to other report pages.

Because of the number of nonbank subsidiaries of a bank holding company, it may not be possible or reasonable to discuss the condition and risk assessment of each subsidiary in this section of the inspection report. The analysis presented on this page should, therefore, be based on the combined performance of the nonbanking activities. However, if the company has significant or troubled credit-extending nonbank subsidiaries, individual analyses of each of these subsidiaries should be included.

The analysis of nonbank subsidiaries should include information on the nonbank's financial condition, including the level, trend, and quality of earnings; composition of the loan portfolio; level and trend of classified, past-due, and nonperforming assets; and the adequacy of the loan-loss reserve, capital, financial management of debt-to-equity ratios, and funds management. The combined risk assessment should address the funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary (see SR-93-19). Conclude with a general statement on the condition and overall risk assessment of the nonbank subsidiaries.

5010.6.4 CONSOLIDATED

Present an analysis of the consolidated balance sheet, including levels and trends of debt, the adequacy of capital (Tier 1, total capital, and leverage ratios), growth in loans, assets and liabilities, and peer-group comparisons. Also present an analysis of the consolidated earnings trends, asset quality, and the adequacy of valuation reserves. Such analysis should include comments on performance results based on net interest margins, return on average assets, return on average equity, factors influencing earnings, and peer-group comparisons. Include a statement on the condition of the company, including its reliance on interest-sensitive funds and its ability to borrow additional short- or long-term funds or to issue new capital stock.

5010.6.5 GENERAL INSTRUCTIONS

The examiner should make certain that—

1. the figures and comments related to the parent are consistent with the various parent-company financial statements;
2. the analysis of bank subsidiaries is consistent with data included on the "Bank Subsidiaries" and the "Classified Assets and Capital Ratios of Subsidiary Banks" pages;
3. the analysis of nonbank subsidiaries is consistent with data on the "Nonbank Subsidiary," "Nonbank Subsidiary Financial Statements," and "Nonbank Company Assets Subject to Classification" report pages;
4. the consolidated analysis is consistent with information presented throughout the report, primarily with the consolidated financial statements and the unaffiliated borrowings on the "Liquidity and Debt Information" confidential page "C";
5. all names are the same as those on the "Scope and Abbreviations" Core page 2, the "Organization Chart" page, and other report pages and tables within the report; and
6. all debt figures agree with the unaffiliated borrowings of the "Liquidity and Debt Information" confidential page "C."

This page presents the adequacy of the internal audit program, the effectiveness and quality of the overall audit program, and the BHC's relationship with its external auditor. See section 2060.1 for related information.

The examiner's review of the BHC's internal audit program will establish whether the program is adequate to effectively audit the BHC's operations regularly. It will also help determine whether the audit function provides the directors with sufficient information on the corporation's conditions and operations. The review will allow the examiner to determine the external auditor's role and relationship with the internal auditor.

The information on the audit program is available from the auditor, audit committee, the audit staff, and the internal audit reports. Information on the external auditor should be available from the management letter, the internal auditor, and the audit committee minutes.

Comments on the internal audit program may include an appraisal of the effectiveness of the program at meeting the frequency guidelines for auditing subsidiaries, information on the recipients of audit reports, and the party to whom the auditor is responsible. The examiner's comments on the external auditor may include the name of the firm, the scope of the audit, the degree of interface with the internal auditors, any "qualified opinion" submitted by the independent auditors in certifying the most recent years' financial statements, and any pertinent comments regarding relations with the directors' audit committee. The comments should conclude with an appraisal of the quality and effectiveness of the overall audit program.

The following is a list of suggested questions for the internal auditor in developing comments for this section:

5010.7.1 INTERNAL AUDITOR

1. How is the audit staff organized? To whom do they report?
2. What are the educational backgrounds and experience of the staff?
3. What is the size of the staff and the length of time that most of the staff have been in audit? Is the staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor? Is the department used as a training ground for other departments?
4. What is the schedule for the audit of banking and nonbanking subsidiaries and for particular departments therein?

5. Are copies of audit programs and reports available for the Federal Reserve's review?

6. Are audit programs coordinated with and workpapers reviewed by outside accountants?

7. Are qualified EDP auditors on the staff?

Although more information is obtained through interviews with the auditor, as opposed to receiving responses to written questions, these questions represent a general framework on which the conversation may develop.

5010.7.2 EXTERNAL AUDITORS

1. Have independent public accountants audited the bank holding company's consolidated financial statements for the FR Y-6 annual report if the BHC's consolidated assets exceed \$500 million or more?

2. Does the external auditor work with the internal auditor in establishing the scope and frequency of audits?

3. In addition to performing some of the basic functions of the internal auditor, did the external auditor review the internal auditing program to assess its scope and adequacy?

4. When the BHC does not have sufficient earnings to employ an internal audit staff, yet the complexities of the organization necessitate the need for an audit, has an external auditor been engaged for this purpose?

5. Does the external auditor have the ability to conduct surprise audits and sufficient flexibility for establishing the scope of the audits and in making recommendations on internal control changes?

6. Have the BHC's insured depository institutions furnished their independent auditors with the required call reports, memorandums of understanding, written agreements, and other designated supervisory information required by section 7(a) of the FDIC Act (see section 2060.1.1)?

The comments detailed on this report must be consistent with summarized comments on the Policies and Supervision page and the Other Supervisory Issues page (item 8). Any noteworthy deficiencies in the audit program may be included on the Examiner's Comments and Matters Requiring Special Board Attention, core page 1, at the examiner's discretion.

The comparative balance sheet presents the composition of the parent company's balance sheet as to assets, liabilities, and capital and should be representative of the functions and activities of the company. The comparative balance sheet allows the reader to compare changes in accounts on a line-by-line basis from one period to another. It aids and gives written support to the financial analysis.

The parent company balance sheets may be requested in the officer's questionnaire or may be obtained from the accounting department. Fiscal statements can also be found in the most recent SEC Form 10-K and the FR Y-6 and Y-9 LP.

The detail on the most recent balance sheet accounts should be reconciled to subsidiary ledgers or a detailed trial balance. The statements should be adjusted to reflect generally accepted accounting principles. Adjustments should be footnoted. The statements should be presented in four columns with two interims and two fiscals except for year-end inspections when only two fiscals are required. The presentation should be (from left to right) current interim period, prior interim period, current fiscal, and prior fiscal. The statement may be formatted like the FR Y-9 LP.

The parent company comparative balance sheet should have specific detail or schedules supporting balance-sheet accounts and amounts as follows.

1. Show investments in and advances to subsidiaries as separate accounts, with separate subtotals for banks and nonbanks.
2. Provide supplementary schedules on the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page showing a breakdown of accounts not detailed in the report, such as marketable securities, CDs, and other investments when considered appropriate or when the account exceeds 25 percent of total footings.
2. Break out goodwill and other intangibles from "Other Assets" or "Investments in Subsidiaries," and detail on the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page.
3. Break out "other real estate owned" from "Other Assets," and detail on the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page.

4. "Other Assets" and "Other Liabilities" should be broken down and detailed on the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page if any item in the account is considered significant.

5. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the unaffiliated borrowings on the "Liquidity and Debt Information" confidential page "C."

6. Stockholder's equity should contain the following categories, as applicable: common stock, perpetual preferred stock, limited life preferred stock, capital surplus, retained earnings (undivided profits), reserves for contingencies and other capital reserves. Limited life preferred stock should be shown separate from stockholders' equity. For all capital stock issues indicate in a footnote the par value and the number of shares authorized and outstanding for each period. If there is more than one type of stock, indicate the voting rights, preferential dividend rights, and conversion rights, where applicable.

The examiner should make certain that the—

1. investments in subsidiaries equals the investments detailed on the "Investment in and Advances to Subsidiaries" page,
2. advances to subsidiaries equals advances detailed on the "Investment in and Advances to Subsidiaries" page,
3. commercial paper total equals the commercial paper totals detailed on the Commercial Paper (Parent) page and the "Liquidity and Debt Information" confidential page "C,"
4. total of short-term and long-term debt equals the same totals for unaffiliated borrowings on the "Liquidity and Debt Information" confidential page "C,"
5. "Other Assets" and any other accounts detailed on the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page reconciles to the corresponding items on the page (the "Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)" page may show only significant items in the categories without totals), and
6. parent's equity accounts equal those on the "Statement of Changes in Stockholder's Equity" and on the "Consolidated Comparative Balance Sheet" page.

Inspection Report Preparation (Appendix Page 6—Comparative Statement of Income and Expenses (Parent))

Section 5010.9

The comparative income statement presents income of the parent available to satisfy expense requirements. It also can be an indicator of the structure of services and activities provided at the parent level.

The purpose of the statement is to determine—

- the levels and types of intercompany income,
- that the sources of external income are consistent with authorized activities,
- the changes in corporate policy via changes in intercompany income, and
- that the types and levels of the parent's expenses are appropriate for the parent's activities.

All statements of income and expenses should be requested in the officer's questionnaire. Fiscal information can be found in the holding company's annual report to shareholders, FR Y-6, and/or SEC Form 10-K. Interim results are generally requested from the corporation's accounting or comptroller department.

Two interims and two fiscals should be presented unless the inspection is as of fiscal year-end, when only two fiscals are required. The report page should show all significant categories of operating income and expense. A supplementary schedule should be provided breaking down any category of other income or expense

that equals or exceeds 25 percent of its respective total.

If possible, insurance commission income is to be shown net of premiums collected, and, when available, commissions should be broken down to show those directly related to credit extended within the bank holding company organization. The various income components from internal and external sources need to be detailed separately to allow cross checking with the "Income from Subsidiaries" pages.

Equity in undistributed earnings of subsidiaries should be listed below net operating income to derive "net income." Where applicable, show separately the equity in undistributed earnings of subsidiary banks and nonbanks.

The examiner should make certain that—

- dividends, interest, management, and service fees and equity in undistributed earnings of subsidiaries equal the totals on the "Income from Subsidiaries" pages and
- net income equals the amounts reported on the "Statement of Changes in Stockholders' Equity (Parent)" and "Comparative Statement of Income and Expense (Consolidated)" pages. In those cases where the figures do not agree, the difference should be footnoted and detail should be provided for the difference.

Inspection Report Preparation (Appendix Page 7—Consolidated Classified & Special Mention Assets & OTRP) Section 5010.10

Classified assets, off-balance transactions, and other transfer risk problems (OTRP) are summarized by organizational level, whether at the parent company, banking subsidiaries, or non-bank subsidiaries, and compared to valuation reserves established to absorb known and potential losses. For banking subsidiaries the classified items are derived from the most recent federal and state examinations for the individual bank subsidiaries.

Report the classification, reserve, noncurrent, and loan/lease level ratios as detailed on the report page. The ratio of consolidated classified assets to Tier 1 capital should be included.

The “continued” page should contain comments regarding the sources of information and methods used by the examiner for determining consolidated asset quality.

For the parent company, the classification totals should be broken down into the major asset categories (e.g., “Loans,” “Other Real Estate,” and “Other Assets”). The lead bank subsidiary’s classification should be broken out along with any other bank that has classified assets representing 20 percent or more of total consolidated classified assets. Nonbank credit extending subsidiary assets should be broken out if the nonbank subsidiary had classifications greater than 5 percent of consolidated classified assets, or other large problem credits or classified assets.

There may be occasions where one or more subsidiary banks may not have been subject to an asset quality review by a bank supervisory agency within the last two years, which impedes the bank holding company examiner from making an accurate judgment on the company’s asset quality. The examiner may depict the internal criticized assets of the bank holding company *only if* the internal system was tested by the examiner and deemed to be valid. Generally, such testings should be conducted as necessary in order to make an informed judgment on consolidated asset quality. Comments should be provided about whether the examiner was able to rely on information depicting asset quality or that such information was not available.

Classification totals of off-balance-sheet transactions, if any, should be broken out separately and summarized for each level of the organization (parent company, bank subsidiaries, and nonbank subsidiaries).

The source for reporting classified asset totals should be stated (FRB, OCC, FDIC, internal operations, or internal audit review) along with

the respective as-of date. As an alternative, classified asset totals may be listed for individual bank and nonbank subsidiaries.

The purpose of preparing this summary is to—

1. determine the amount and degree of risk and potential loss associated with on- and off-balance-sheet transactions and activities. This is accomplished by summarizing the amount of classified assets and losses and other potential losses that may result from on- and off-balance-sheet activities. This includes off-balance-sheet risk and transfer risk at the consolidated organizational level, as well as the general composition of such potential losses at the parent company, bank subsidiaries, or non-bank subsidiaries;

2. analyze ratio trends in consolidated asset quality for the current and previous two inspections;

3. determine the extent to which such classified assets and off-balance-sheet risk influence the overall financial condition of the consolidated organization;

4. determine the adequacy of reserves. The page alerts management about the need for increasing the valuation reserve accounts;

5. disclose problem assets and off-balance-sheet transactions requiring management’s attention;

6. show in summary form all classifications and criticisms assigned by examiners in determining asset quality and the adequacy of respective reserves; and

7. aid in the identification of existing and potential problems in the banks that may have an overall effect on the bank holding company.

The information for the report page is derived from two other completed pages/workpapers, “Parent Company and Nonbank Assets Subject to Classification” and “Classified Assets and Capital Ratios of Subsidiary Banks.” The information is obtained by determining the collectibility or forced sale value of assets or potential losses that may arise from certain on- and off-balance-sheet transactions. For banks, the information is to be generated from bank examination reports, which are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

Investments in and advances to bank and credit-extending nonbank subsidiaries by the

parent are not to be classified. The examiner may, however, classify the parent's investments in and advances to noncredit-extending nonbank subsidiaries. For additional information on classifying an investment to a noncredit-extending subsidiary, see section 4070.0.

The use of abbreviations of subsidiaries within narrative comments, as presented on the "Scope and Abbreviations" Core page 2, is permissible. The examiner may comment on and analyze lending policies, documentation, collection procedures, and past-due volume in the aggregate. Such comments should be consistent with comments contained in other report pages and workpapers.

The examiner should provide comments on the adequacy of the valuation reserves and any recommendations to management to provide for additional loan-loss provisions. The examiner should also recommend that management maintain a level of loan-loss reserves that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated future losses from operations.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, 20 percent of substandard and, when applicable, value impaired (net of adjusted transfer risk reserve). It is appropriate to comment on weighted classified assets on the "Analysis of Financial Factors" Core page 3.

Noncurrent loans and leases refers to the end-of-period dollar amount of loans and lease-financing receivables past due 90 days or more and still accruing, plus those carried in nonaccrual status, as reported for each loan category.

This report page should not be included in the Core Section of the report for one-bank holding companies. For those bank holding companies, the examiner will include the classifications on the "Parent Company and Nonbank Assets Subject to Classification" and the "Bank Subsidiaries" report pages when assets are classified and/or written up as required.

The examiner should make certain that the aggregate classifications and reserve amounts agree with those reported for the parent, the banking subsidiaries, and the nonbank subsidiaries on the "Parent Company and Nonbank Assets Subject to Classification" and the "Classified Assets and Capital Ratios of Subsidiary Banks" pages/workpapers. If classifications are discussed on the "Examiner's Comments and Matters Requiring Special Board Attention" page, the totals should be confirmed.

5010.10.1 CLASSIFICATION OF ASSETS

On May 7, 1979, the three federal banking agencies issued a joint statement announcing a "Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks." The statement includes definitions of the classification categories and specific information on classifying securities in bank examinations. The classification categories established are also applicable to classifying parent company and nonbank assets. Although bank asset classification standards are generally not applied to classifying nonbank assets due to the difference in risk characteristics of the assets, the classification categories are the same. Despite the differences that may exist between bank and nonbank assets, the standards for classifying investment securities can be applied directly to securities held by the parent company. The statement revised bank examination procedures established in 1938 and revised July 15, 1949.

Classification units are designated as substandard, doubtful, and loss.

5010.10.1.1 Substandard Assets

A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected.

5010.10.1.1.1 Substandard Classification—Guidelines for an Asset When a Substantial Portion Has Been Charged Off

In some cases, credit-extending subsidiaries with loans to financially troubled borrowers have charged off substantial portions of these credits. Consistent with long-standing supervisory practice, the evaluation of each extension of credit should be based upon the fundamentals of the particular credit. That is, the evaluation of each credit should be based upon the borrower's (or the collateral's) current and stabilized cash flow, earning and debt service capacity, financial performance, net worth, guarantees, future prospects, and other factors relevant to the borrower's ability to service and retire its debt.

Based upon consideration of all of the above relevant financial factors, this evaluation may indicate that a credit has well-defined weaknesses that jeopardize repayment in full, but that a portion of the loan may be reasonably assured of repayment. When a charge-off has been taken in a sufficient amount so that the remaining recorded balance of the loan is being serviced (based upon reliable sources of cash flow) and is reasonably assured of repayment, this remaining recorded balance would generally be classified no more severely than substandard. Consistent with long-standing classification guidelines, a substandard classification of the remaining recorded balance would only be appropriate when well-defined weaknesses continue to be present in the credit. For example, when the remaining recorded balance of an asset is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be classified.

This approach would generally be appropriate when an organization maintains sufficient controls over its lending function and maintains adequate current documentation to support the credit analysis of the loan. This classification approach could not be utilized for loans for which the loss exposure cannot be reasonably determined, e.g., loans collateralized by properties subject to environmental hazards. This approach would also not be justified when sources of repayment are considered unreliable.

5010.10.1.2 Doubtful Assets

An asset classified doubtful has all the weaknesses inherent in one classified substandard. However, it has the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

5010.10.1.3 Loss Assets

Assets classified loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future.

“Fifty percent of the total of doubtful and all of loss will be deducted in computing the net

sound capital of the bank. Amounts classified loss should be promptly charged off.”

5010.10.2 THE APPRAISAL OF SECURITIES IN BANK EXAMINATIONS

“Investment quality securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group generally includes investment securities in the four highest rating grades and unrated securities of equivalent quality. Neither market appreciation nor depreciation in these securities will be taken into account in figuring net sound capital of the bank. This policy is intended to apply to recognized sound investment practices of banks and not to those situations where the portfolio requires special treatment by a supervisory agency.”

“Subinvestment quality securities are those in which the investment characteristics are distinctly or predominantly speculative. This group generally includes securities in grades below the four highest grades and unrated securities of equivalent quality, defaulted securities, and subinvestment quality stocks.”

“Securities in grades below the four highest rating grades and unrated securities of equivalent value will be valued at market price and the depreciation will be classified doubtful; remaining book value will be classified substandard. Depreciation in defaulted securities and subinvestment quality stocks will generally be classified loss; remaining book value will be classified substandard.”

“An exception to the above will be made in the case of municipal general obligations which are backed by the credit and taxing power of the issuer. The entire book value of subinvestment quality municipal general obligations, which are not in default, will be classified substandard. In the event of a default of a municipal general obligation, a period of time is usually necessary to permit the market for these defaulted securities to stabilize or for the issuer to put in place budgetary, tax or other actions that may eliminate the default, or otherwise improve the post-default value of the securities. The market for the defaulted securities will be periodically reviewed by the regulatory authorities. Upon a determination that a functioning market has been reestablished, depreciation on defaulted municipal general obligations will be classified

as loss. During such interim, the book value of all defaulted municipal general obligation securities will be classified doubtful. (The above exceptions will not apply in those instances where the supervisory authorities determine that there is no likelihood that the municipality will be able ultimately to repay or satisfactorily restructure its obligations.)”

5010.10.3 1979 REVISION TO THE 1938 ACCORD

Type of Security	Classification		
	Substandard	Doubtful	Loss
Investment quality	XXX	XXX	XXX
Subinvestment quality, except	Market value	Market depreciation	XXX
Subinvestment quality, municipal general obligations	Book value	XXX	XXX
Defaulted securities and subinvestment quality stocks, except	Market value	XXX	Market depreciation
Defaulted municipal general obligations:			
Interim	XXX	Book value	XXX
Final, i.e., when market is reestablished	Market value	XXX	Market depreciation

1. The accrual/nonaccrual status of the loan must continue to be determined in accordance with the glossary to the current call report or bank holding company reporting instructions. Thus, while these partially charged-off loans may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the report guidance is met.

This Core report page is to present the consolidated balance sheet as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end statements need be presented. The comparative statement allows the reader to analyze any changes in asset, liability, and capital structure and to determine the condition of the consolidated organization on the specified dates.

The financial statements should be requested in the officer's questionnaire. Fiscal financial statements can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K, and published reports to shareholders.

The balance sheets should be presented in columnar form with the current interim first, prior interim period, current fiscal and prior fiscal. They may be formatted like the FR Y-9.

In preparing the comparative balance sheet, the following should be done.

1. Gross loans should be shown and then netted of unearned discount and reserve for loan losses.

2. Federal funds sold and securities purchased under resale agreements may be shown as one amount or separately, depending on how the company prepares its statements. Similar treatment should be given to federal funds purchased and securities sold under repurchase agreements on the liability side.

3. Total deposits should be broken down or footnoted to show interest-bearing and noninterest-bearing deposits in domestic and foreign offices.

4. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the "Liquidity and Debt Information" Confidential Page "C."

5. Stockholder's equity should be detailed using the following categories, as applicable: common stock, perpetual preferred stock, capital surplus, retained earnings (undivided profits), and reserves for contingencies and other capital reserves.

The amount of total consolidated debt should agree with unaffiliated debt for the current period on the "Liquidity and Debt Information" Confidential page "C." Any exceptions should be footnoted.

Equity capital should agree with the individual components shown on the "Statement of Changes in Stockholders' Equity (Parent)" page for the respective periods and with stockholders' equity on the "Parent Company Comparative Balance Sheet" Core page 5. Any exceptions should be footnoted.

Figures used in the analysis on the "Analysis of Financial Factors" Core page 3 and the "Capital Structure (Consolidated)" pages should agree with this statement.

Inspection Report Preparation (Appendix Page 9—Comparative Consolidated Statement of Income and Expenses) Section 5010.12

This report page is to present a *consolidated* statement of income and expense as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end income and expense statements need be presented. The statement aids the reader in an analysis of corporate earnings performance on a consolidated basis and provides the ability to further analyze changes in income and expense accounts from one period to another.

Statements of income and expenses should be requested in the officer's questionnaire. Statements for fiscal periods can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K and published reports to stockholders.

The statement of income and expenses should be presented in columnar form with the current interim first, prior interim period, current fiscal,

and prior fiscal. They may be formatted like the FR Y-9.

Any detail available that breaks down "interest income" for the most recent fiscal year into components should be presented either on the statement as a footnote or on a supplemental page, the "Comparative Statement of Income and Expenses (Consolidated)" page, if considered appropriate by the examiner.

Provisions for loan losses should be shown as a line item and not grouped in "other expenses." "Other income" and "other expenses" should be broken down to provide additional detail at the discretion of the examiner.

Net income should normally agree with net income of the parent on the "Comparative Statement of Income and Expenses (Parent)" page and the "Statement of Changes in Stockholders' Equity (Parent)" page. Footnote differences.

The risk-based capital guidelines apply on a consolidated basis to bank holding companies with consolidated assets of \$150 million or more. For these BHCs, the designated FR 1225 report page will be used. For BHCs with consolidated assets of less than \$150 million, the risk-based capital guidelines apply on a bank-only basis unless (a) the parent holding company is engaged in nonbank activity involving significant leverage (e.g. engaged in significant off-balance sheet activity); or (b) the parent company has a significant amount of outstanding debt that is held by the general public. For BHC with total assets of less than \$150 million the Capital Structure (FR 1241) report page is used.

5010.13.1 BHCS WITH CONSOLIDATED ASSETS OF \$150 MILLION OR MORE— [CORE PAGE 10—CONSOLIDATED CAPITAL STRUCTURE (FR 1225)]

The consolidated capital structure report page summarizes the various components of the BHC risk-based capital ratios. Two report pages are provided to allow for risk-based capital computations during transition and at year-end 1992 for final implementation. The pages provide the various limitations for the respective components of Tier 1 and Tier 2 capital. For both report pages, the first page summarizes “Total Qualifying Capital” comprised of Tier 1 and Tier 2 capital, adjusted for investments in unconsolidated financing subsidiaries and reciprocal holdings of capital.

Tier 1 capital consists of permanent core capital elements (common equity, noncumulative perpetual preferred stock, a limited amount of cumulative perpetual preferred stock, and minority interest in the equity of consolidated subsidiaries). Tier 1 capital is derived by subtracting goodwill from the sum of Tier 1 capital elements.

Tier 2 capital consists of: (a) a limited amount of the allowance for loan and lease losses; (b) auction rate perpetual preferred stock plus any cumulative perpetual preferred stock exceeding its Tier 1 limitation; (c) perpetual debt, mandatory convertible securities, and other hybrid capital instruments; (d) long-term perpetual preferred stock; and (e) limited amounts of term subordinated debt, intermediate-term preferred stock, and unsecured long-term debt issued prior to March 12, 1988.

For Tier 2 capital, the amount of mandatory

convertible securities that have the proceeds of common or perpetual preferred stock dedicated to retire or redeem them should be treated as term subordinated debt subject to the established limit of 50 percent of Tier 1 capital. Mandatory convertible securities, net of the perpetual preferred or common stock dedicated to redeem or retire the issues, are included within Tier 2 on an unlimited basis. Tier 2 capital may not exceed Tier 1 capital.

Investments in unconsolidated financial subsidiaries and reciprocal holdings of capital are subtracted from the combined total of Tier 1 and Tier 2 capital to determine the amount of total qualifying capital.

Core page 10–1 provides a summary of risk weighted on- and off-balance sheet assets, adjusted (reduced) for the excess of the allowance for loan and lease losses not included in Tier 2 capital and the allocated transfer risk reserve (ATRR). In addition, it provides a comparative peer and historical summary of risk-based capital ratios, growth rates, and dividend payout ratios.

Core page 10–2 provides a summary comments section to discuss any pertinent aspects of the institution’s capital structure not evident from the schedule.

The information on the capital structure page will give support to the examiner’s evaluation of the bank holding company’s capital adequacy. The most convenient method to obtain the information is to request it in the officer’s questionnaire, or through direct contact with the accounting department.

The amounts on the risk-based capital schedules should be shown as of the same date as the “Consolidated Comparative Balance Sheet” of the inspection report. Refer to the Risk-based Capital Guidelines in Appendix A of Regulation Y and Manual sections 4060.3 and 4060.4 for a discussion of the Capital Adequacy Guidelines and the minimum risk-based capital and leverage ratios for BHCs.

Use the instructions and guidance found on the report page and worksheets. When completing the supplementary capital section, insert the aggregate amount of each component in the space provided. If more than one issue of a particular Tier 2 capital component is outstanding, a range of rates should be shown in the appropriate space, giving the lowest and the highest rates paid.

Comments under the Risk-based Capital schedule should include:

- Any unusual terms and conditions relating to issues of supplementary capital that the examiner feels should be mentioned;
- An indication of whether a subsidiary bank's equity represents the proceeds from the issuance of parent debt (double leverage);
- A presentation or description of risk-based capital components for statutory purposes if there is a violation for which the statutory definition is relevant.
- A situation whereby the levels of risk warrant significantly higher risk-based capital ratios than the minimums.

The amounts of Tier 1 and Tier 2 used in this analysis of consolidated risk-based capital on the "Analysis of Financial Factors" page should be consistent with the amounts on this page.

5010.13.2 WORKSHEETS

In addition to the report pages, BHC Risk-Based Capital Calculation Worksheets have been developed for examiner use with year-end 1992 final implementation. The worksheets are to be

retained with the examiner's workpapers. If the bhc generated data was validated by the examiner and accepted to support or partially substitute for the computation of the elements, it should also be retained with the worksheets. The worksheets provide more detail as to the composition of core capital elements and supplementary capital elements. In addition, the footnotes provide more detailed explanations of the various components than are found on the actual report pages.

5010.13.3 BHCS WITH LESS THAN \$150 MILLION IN CONSOLIDATED ASSETS—[PAGE—CAPITAL STRUCTURE (LEAD BANK OR OTHER BANK SUBSIDIARY (FR 1241)]

The FR 1241 report page is used primarily for the lead bank. Report pages have been developed for year-end 1992 final implementation. The report pages are nearly identical to those used for state member bank examinations (FR 1460). If there is no one lead bank, the report pages should be prepared for each comparable lead bank.

This report page provides a summary of the policies formulated by the board of directors by which active management supervises holding company operations. The objective is to determine whether there are adequate formal policies developed and supervised, either directly through the board of directors, or by a delegation of the authority, for the parent company and its subsidiaries. Another objective is to evaluate management's performance in carrying out those policies for the entire organization. These policies aid in giving insight into the operations of the holding company. The policies should ensure that all statutory and regulatory requirements are met and that proper controls (management information systems) are in place to minimize risk. Examiners should encourage BHCs to develop formal written policies on all items presented.

The report page is to provide an analysis of the adequacy of supervision exercised by the holding company over its subsidiaries, and policies concerning intercompany relationships. Also included is a discussion of deficiencies in the policy-making process, any noncompliance with existing policies, and the plans for correcting any deficiencies.

In the officer's questionnaire, the examiner may request some of the information pertaining to policies. Insight into policies may also be gained by reviewing the holding company's annual reports to stockholders and through discussions with management. If the holding company does not have any formal written policies, the organization's operating procedures should be discussed with officers responsible for the various areas.

Compliance with policies may be determined by reviewing recent internal and external audit reports, recent bank examinations, and discussions with management at the subsidiary level, and by conducting tests to determine the extent of compliance with policies. Discussions with management are necessary to obtain a thorough understanding of management and supervisory practices, policy-development techniques, the degree to which management information is utilized to monitor subsidiaries, and overall management philosophy.

The policies should be summarized as succinctly as possible in narrative form. If the holding company has no formal policies the examiner may use an introductory statement indicating that comments were derived from discussions with senior management. Absence of any formal policies may require the examiner to make

a recommendation on the "Examiner's Comments" Core page 1 that the holding company strongly consider the establishment of formal written policies in order to supervise its subsidiaries more effectively.

This report page should address existing policies and the level of control and supervision exercised over subsidiaries. How effectively policies are carried out should be shown in the respective sections of the report. Where policies result in violations of law or regulation, comments should be made on the "Examiner's Comments" Core page 1 and detailed on the "Violations" page. If any policy is considered inconsistent with safe and sound banking practices, the matter should be presented on Core page 1 and detailed elsewhere in the report.

Comments on policies that are on other pages in the report should be consistent with this report page. Those comments and report pages are:

1. Dividends and fees from subsidiaries—on the "Statement of Changes in Stockholder's Equity," "Income from Subsidiaries," and the "Cash Flow Statement (Parent)" pages.
2. Dividends paid to shareholders—on the "Statement of Changes in Stockholder's Equity," and the "Cash Flow Statement (Parent)."
3. Budgeting and tax planning—on the "Other Supervisory Issues" page.
4. Internal audit—on the "Audit Program" page.
5. Insider transactions—on the "Extensions of Credit to BHC Officials" page.

5010.14.1 QUESTIONS TO BE ADDRESSED ON THE POLICIES AND SUPERVISION REPORT PAGE

5010.14.1.1 Level of Control and Supervision Exercised over Subsidiaries

1. Do subsidiaries operate autonomously? What is the degree of overlap between BHC and bank management?
2. Who sets major policies of the corporation?
3. How does the holding company monitor the operations of its subsidiaries (reports, directors, etc.)?
4. Are the subsidiaries involved in formulating the holding company's budget and tax plan-

ning? How is the holding company's budget developed and at what corporate level is income tax planning coordinated?

5. Describe the intermediate and long-term strategic planning process and whether the subsidiaries are integrated into a consolidated planning process. Does the consolidated plan include the minimum elements discussed in section 2010.4 of this manual? Is the plan effective and is it consistently applied?

6. How is the internal audit of subsidiaries performed?

- Does an audit team audit each subsidiary on a periodic basis?
- What is the frequency of the audit cycle?
- To whom does the audit department report?
- Is there an audit committee of directors?

7. Is the control and supervision of subsidiaries deficient?

5010.14.1.2 Loans and Investments of Subsidiaries (See sections 2010.2 and 2010.3.)

1. Does the parent company's policies address the minimum elements of a lending policy as listed and described in section 2010.2 of this manual?

2. Does each subsidiary have its own loan policy or does the holding company establish policy for all subsidiaries? Are lending policies considered adequate and is there general compliance?

3. Does each subsidiary handle its own investment portfolio or are investments managed at the holding company level? Are investment policies adequate and is there general compliance? Are investment-authorization procedures adequately detailed to prevent circumvention of investment-policy directives?

4. Does the holding company have a credit review team or is credit review handled by each subsidiary?

5. Does the BHC have a policy establishing limits on consolidated concentrations of credit?

5010.14.1.3 Funds Management and the Adequacy of Existing Policies (See section 2010.1.)

1. Does the parent-company management have policies in place to prevent funding prac-

tices that put at risk the welfare of the subsidiary banks or the consolidated organization?

2. Does the parent company maintain for itself and its subsidiaries policies that provide guidance and controls for funding practices?

3. To what extent do the subsidiaries follow the funding policies and how effective are they in reducing risk to the entire organization?

4. At a minimum, do the parent company's funding policies address:

a. Capitalization levels for bank subsidiaries, the nonbank subsidiaries, and the consolidated organization as to whether the policy for:

- Bank and consolidated capital are consistent with the Board's capital adequacy guidelines;
- Nonbank capital includes maintaining the capital level at industry standards;
- The holding company specifies the desired range of capital for each entity, and the measures that should be taken in the event that capital falls below that level;
- The parent company specifies the degree of double leverage that it is willing to accept;
- Each entity specifies the method for calculating dividends?

b. Asset/liability management including interest rate sensitivity matching, maturity matching, and the use of interest rate futures and forwards and other financial derivative instruments?

c. How nonbank subsidiaries fund their activities?

5010.14.1.4 Loan Participations Among Subsidiaries (See sections 2010.2 and 2020.2.)

1. Under what circumstances are loans participated?

2. Who determines the type of loans that may be participated? Does the BHC have policies in that regard? Are credit standards included in the lending policy for purchased loan participations and does the policy require complete loan documentation.

3. Does the lending policy place limits on the amount of loans purchased from any one source and does it place an aggregate limit on such loans?

4. Are low-quality loans allowed to be participated?

5010.14.1.5 Dividends and Fees From Subsidiaries

1. What is the policy for assessing dividends from subsidiaries?
2. Does the policy take into account statutory and regulatory restrictions on bank dividends as well as subsidiary asset quality, earnings, the ability to service debt and growth prospects?
3. What is the policy for determining fees charged to subsidiaries in relation to management and other services rendered?
4. Are service fee arrangements supported by contracts and are the subsidiaries actually receiving the services?
5. Are the fees charged to subsidiaries reasonable and justifiable in relation to the fair market value of the services provided? If no market exists for the services provided, are fees based on their cost plus a reasonable profit? Has the BHC directly or indirectly through other subsidiaries burdened its banking subsidiaries with excessive fees or unreimbursed charges to fund its debt service, dividend payments or support of other subsidiaries?

5010.14.1.6 Risk Evaluation and Control

1. Has the bank holding company formalized policies and procedures in identifying, evaluating, and controlling risk?
2. What has management done to limit its risk exposure in relationship to the amount of the organization's capital, or earnings?
3. Do audit procedures include a determination as to whether management's risk evaluation and control procedures are being followed as prescribed?
4. Has the bank holding company taken steps to identify and control its exposure to losses resulting from contingent liabilities and off-balance sheet activities such as standby letters of credit, interest rate swaps, foreign exchange contracts, currency swaps, options, securities lending and borrowing, insider transactions, and commitments to lend?

5010.14.1.7 Management Information Systems

1. How effective and timely are the parent company's policies and procedures with respect to its management information systems as to:

- Audit
- Budget
- Reporting
- Insurance

2. Does the board of directors receive sufficient information about key areas of its operations?

5010.14.1.8 Internal Loan Review

1. Is an internal loan review program in existence for bank and/or nonbank subsidiaries? If no program exists, does the size and complexity of the organization warrant implementation of a formal process?
2. Will the internal loan review procedures adequately identify deteriorations in credits, loans that do not comply with written loan policies and loans with technical exceptions in a timely manner?
3. Is the loan review function independent of the loan approval function, with written findings reported to a board committee or senior management committee not directly involved in lending?
4. Are the quality and size of the internal loan review staff sufficient in relation to the organization's size and complexity?
5. Are the scope and frequency of the loan review procedures adequate?

5010.14.2 DISCUSSION AND APPRAISAL OF OTHER PARENT COMPANY POLICIES

Another parent company policy that should be discussed and appraised, in addition to those listed on the "Policies and Supervision" page is the Consolidated Planning Process whereby the subsidiaries are integrated into a consolidated plan. See Manual section 2010.4.

This report page is used to present information on all violations discussed in the inspection report. The objective of the report page is to bring violations to the attention of the board of directors for corrective action and to alert the supervisory agencies to the need for supervisory attention.

The information reported should center on violations by the holding company uncovered during the course of the inspection and those that are discovered through a review of reports filed with supervisory authorities. Information on violations by the subsidiary bank(s) in its dealings with the holding company or affiliates may be obtained from the most recent bank examination reports or uncovered during the holding company inspection.

This page should include all BHC and non-bank subsidiary violations of the Act, Regulation Y, Section 23A and 23B violations of the Federal Reserve Act, and other applicable statutes and regulations. A complete write-up is necessary if the violation is not detailed on another page (including the date of the violation or transaction, a description of the transaction or act, the reason for the violation, the amount of the transaction, and the amount of any potential or actual loss). When the information is presented elsewhere, a brief summary and a reference to that page is sufficient.

Violations of the holding company should be presented first, followed by the nonbank subsidi-

aries and then bank subsidiaries. Bank violations not involving the holding company or non-bank subsidiaries should not be detailed here.

If violations of sections 23A and 23B of the Federal Reserve Act (transactions with holding company affiliates) are disclosed in a subsidiary bank's examination report or during the inspection of the holding company, comments should be limited to a brief summary on the "Violations" page with a reference to the intercompany transaction(s) on the "Other Supervisory Issues" page. This latter page will contain additional detail on the violation. (Note: only bank subsidiaries can be cited for the violations of sections 23A and 23B of the Federal Reserve Act although the violation may have resulted from holding company actions). The examiner may also criticize management on the "Examiner's Comments" Core page 1 of the inspection report for causing the bank to be in violation of sections 23A and 23B provisions.

Apparent violations should be presented on the "Other Matters" page, and may be presented on the "Examiner's Comments" page if considered appropriate by the examiner. Violations will be reviewed on a case by case basis for possible follow-up administrative action(s).

Violations must be presented in brief on the "Examiner's Comments" page referring the reader elsewhere for detail. The examiner should ensure that information contained on these related pages is consistent.

This page presents nonconfidential information or issues which would not be suitable for presentation on any other page in the report. BHC plans may be discussed here in order to anticipate any regulatory or supervisory considerations. *Apparent* violations are also presented here and may be referred to on “Examiner’s Comments” page or on other report pages at the examiner’s discretion. BHC plans for future activities may be presented.

The information might be derived from minutes of the corporation and/or subsidiaries, discussions with management, and examiner observations during the inspection.

Other information that may be summarized can include:

1. Corporate plans (debt or equity issues, acquisitions, sale of assets). Be certain management has no objection to the reference to these plans. Otherwise, present such information on page C;

2. Any unfunded pension liabilities;

3. Overall condition of corporate records; and

4. Any other comments deemed appropriate by the examiner and not noted elsewhere in the report.

Any reference that involves dollar amounts, ratios, or other information contained in schedules or comments elsewhere in the report should be cross-checked.

Procedures for Inspection Report Preparation (Page—Classified Assets and Capital Ratios of Subsidiary Banks) Section 5010.17

This report page provides a summary of asset classifications and capital ratios as of the most recent federal and state examinations for the individual bank subsidiaries. The objective of the page is to aid in the identification of existing or potential problems in the banks which may have an overall effect on the holding company.

The information is to be derived from bank examination reports which are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

The banks are to be listed in the same order as they appear on the Organization Chart or Investments in and Advances to Subsidiaries report pages. Total assets or total average assets should be shown as presented in the examination report. Do not adjust total assets by adding back valuation reserves.

For bank holding companies, tier 1 capital includes common equity and qualifying cumulative and noncumulative perpetual preferred stock, less goodwill and other designated intangible assets. Common stockholders equity includes common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock, less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values.

Qualifying cumulative perpetual preferred stock is limited within tier 1 to 25 percent of the common stockholders equity and minority interest. Total capital includes tier 1 plus tier 2 capital.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, and 20 percent of substandard and value-impaired (when applicable), net of allocated transfer risk reserves (ATRR).¹ It is appropriate to comment on weighted classified assets on the Analysis of Financial Factors page.

When determining supervisory asset-quality ratings (the [A]sset rating in "CAMELS") for the BHC's subsidiary banks, an asset-quality ratio is used based on a comparison of weighted classified assets to tier 1 capital (as defined for leverage purposes) plus the allowance for loan

and lease losses. Examiners should use this ratio and the accompanying benchmarks in conjunction with all the other factors normally evaluated when assessing asset quality for each institution.

The allowance for loan and lease losses is defined as the bank's total ALLL. The ALLL is *not* subject to the 1.25 percent limitation on supplementary capital elements for this calculation (that is, all of the ALLL is included in the denominator of the ratio).

The ratio of these assets to tier 1 capital plus the allowance for loan and lease losses is then compared to the existing asset-quality benchmark table to determine the asset-quality rating.

Asset-Quality Table

<i>Asset-Rating Ranges</i>	<i>Asset-Quality Ratio</i>
1	under 5%
2	5% to 15%
3	15% to 30%
4	30% to 50%
5	over 50%

Examiners should use the asset-quality table and other pertinent factors, including loan policies, credit administration, portfolio concentrations, and past-due levels, to determine the final asset-quality rating. While individual bank ratios may change slightly, depending on the amount of cumulative preferred stock, mandatory convertible debt, and other supplementary elements, the change in the ratio itself should not result in a change in the bank's asset-quality rating.

This page should not be prepared for one-bank holding companies. The examiner may show this data on the Bank Subsidiaries page. However, the examiner may use this page to reflect successive examination data for several years to indicate trends. The examination dates should be cross-checked to those shown on the Bank Subsidiaries page.

1. See SR-92-2 regarding the treatment of value-impaired classifications for asset-quality purposes.

This report page presents an organization chart, giving a schematic description of the structure of the organization, the intercompany relationships and the degree of control of subsidiaries.

An organization chart provided by the holding company for various regulatory filings may be used, with revisions made for new or divested subsidiaries. The information required below may simply be added to the existing chart.

The organization chart may be pictorial (box format) or linear (listing format). The parent should be presented at the head of the page. Banks should be presented individually in the same area. Nonbanks should be presented individually in the same area (if possible).

Each subsidiary should be shown by its official name; however, there is no need to indicate the address unless necessary to distinguish identity. Subsidiaries of banks and second tier nonbank subsidiaries may be omitted or shown at the examiner's discretion. Abbreviated charts should be so footnoted.

Abbreviations used throughout the report should be presented on the "Structure and Abbreviations" Report page and also on the

bottom of this page or following the chart. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word "Bank" to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

Indicate the percentage of ownership to the nearest tenth of one percent and include directors' qualifying shares. Where all, or nearly all of the subsidiaries are wholly-owned, detail the exceptions and provide a footnote to the effect that unless shown, ownership is 100 percent.

The names and/or abbreviations shown on the organization chart are to be consistently used throughout the report (for example, the "Income from Subsidiaries," "Investment in and Advances to Subsidiaries," and the "Nonbank Subsidiary" and the "Bank Subsidiary" pages).

Where applicable, the order established on this page should be used in all tables of the report.

The report page provides an abbreviated history of the organization including name changes, acquisitions, mergers, reorganizations and divestitures. The objective is:

1. To present the chronological development of the bank holding company.
2. To list nonbank activities engaged in by the parent company and its subsidiaries.
3. To provide a measure of size relative to competing institutions.

The information that is included in this report page may be obtained from documents filed with the Federal Reserve System. For lines 1 through 3, refer to reports filed with the FRB such as the registration statement and FR Y-6. In response to item 3, one bank holding company formed before December 31, 1970, first became subject to the Act on December 31, 1970, with the passage of the 1970 Amendments to the Act. A multibank company formed between 1956 and December 31, 1970, became subject to the Act on the date of controlling its second subsidiary bank. All BHCs formed after December 31, 1970, became subject to the Act

on the date of controlling their first bank subsidiary. For response to item 4, history is available in applications to FRB and in public documents such as annual reports to stockholders and SEC Form 10-K. For additional information contact the corporate secretary.

Comments responding to item 4 are to be in narrative and/or list form and should include:

1. The present number of banking subsidiaries, the percent of State deposits on an aggregate basis and size ranking in the State. For a money-center holding company, also provide its ranking on a national basis.
2. The date and outline of any acquisitions, mergers, reorganizations, or name changes.
3. A list and brief description of activities in which the nonbanking subsidiaries are engaged.
4. A discussion of any permanent or limited grandfather rights, and any plans for divestment of shares or termination of nonbank activities.

The activities shown on this page should be consistent with those shown on the nonbank subsidiary pages.

Procedures for Inspection Report Preparation (Page— Investment in and Advances to Subsidiaries) Section 5010.20

5010.20.1 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES

This schedule details the parent's financial relationships with its subsidiaries. It will be used to support comments or analyses in other sections of the report, or to clarify answers to the questions on the continued page, "Investment In etc.—continued."

The objectives of the report page are:

1. To determine the percent of the parent's assets comprised of investments in and advances to each subsidiary.
2. To help determine the dependency of subsidiaries on advances from parent.

The parent's investments in and advances to each subsidiary are usually detailed in ledgers maintained by the accounting department. Each subsidiary is listed individually beginning with banks, providing subtotals for banks and non-banking subsidiaries.

The investment in each subsidiary is to include any related unamortized goodwill. Provide a "total" in the "investment" column. From this total subtract the aggregate unamortized goodwill in all subsidiaries and detail the "goodwill" on the "Contingent Liabilities" page.

Totals for investments and advances should agree with the "Comparative Balance Sheet" page. The Parent's investment should be equal to its proportionate interest in each subsidiary's equity as presented in financial statements on the "Nonbank Subsidiary Financial Statement and Condition" and the "Bank Subsidiaries" pages plus any unamortized goodwill. Parent's advances should also equal "loans from parent" as detailed on the "Nonbank Subsidiary Financial Statement and Condition" and the "Bank Subsidiaries" pages.

5010.20.2 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES (continued)

For this continuation page, the answers to questions 1 through 6 provide information on the funding of subsidiaries.

The objectives of each question are as follows:

Question 1—To determine the amount of goodwill in the investment in each subsidiary.

Question 2—To determine if the parent "forgave" the indebtedness of any of its subsidiaries which might indicate an inability to service its debt properly or other financial difficulties in the subsidiary.

Question 3—To determine the extent of the parent's borrowings invested as equity since the last inspection. The subsidiary's enlarged capital base might provide additional debt capacity.

Question 4—To determine if the advances are on a preferential rate basis, to help in analyzing the subsidiary's earnings proficiency.

Question 5—To determine if there is any difficulty in the subsidiary regarding its ability to service its debt properly.

Question 6—To determine if the parent lends its credit and debt capacity to its subsidiary and to aid in the analysis of the parent's contingent liabilities.

The answers to all questions should be verified against company records and discussed with the comptroller, the treasurer or the finance officer. Details on some questions can come from company's latest SEC Form 10-K or the annual report to stockholders. All questions should be answered; if not applicable, so state. It is not necessary to repeat the question when answering.

Any guarantees should also be included as contingent liabilities.

Commercial paper is a source of funds for the parent and its subsidiaries. This schedule presents the maturity and placement of commercial paper in use in the parent's operations and/or for back-up to the commercial paper. The page is required if the parent issues commercial paper.

The objectives of this report page are:

1. To summarize the extent of the parent's use of commercial paper and its ability to continue the use of this funding tool.
2. To help determine the overall liquidity position of the parent company.
3. To determine the volatility of commercial paper issued, including average turnover rate.
4. To determine whether any subsidiary bank is providing compensating balances for the benefit of the parent or nonbank affiliate.

The information required in the schedule should be requested in the officer's questionnaire or can be obtained from the accounting or treasurer's departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date. (An alternate date is acceptable for the Maturity Schedule but should be specified.) The schedule should also be prepared for each nonbanking subsidiary which issues its own commercial paper.

The total commercial paper should equal amounts on "Parent Company Comparative Balance Sheet" (Core Page 5) and the confidential "Liquidity and Debt Information" page C, unless an alternate date is used.

Lines of credit are a source of funds for the parent and its subsidiaries. This schedule presents the lines of credit available for the parent's operations and/or for back-up to commercial paper.

The purpose of the report page is to be able to determine the degree of use of the lines of credit and the availability of these lines to back-up commercial paper borrowings. It is also intended to help determine the overall liquidity position of the parent company.

The information required in the schedule should be requested in the officer's questionnaire or can be obtained from the accounting or treasurer's departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date.

The exact names and locations of line banks should be shown in the "Lines of Credit" section and totals calculated for the dollar amount

columns. If a BHC has an extensive number of line banks, the detail for each line of credit may be eliminated at the discretion of the examiner with aggregate amounts and ranges included in the appropriate columns. In this instance, the total number of line banks involved and a general comment as to geographic distribution should be included.

If any subsidiary bank maintains compensating balances on behalf of the parent, the examiner should place an asterisk in the column and determine that the bank is compensated so that it does not incur a loss of income. Any resulting loss of income should be commented upon. See Manual sections 2020.4 and 2080.1.

The total lines of credit in use should equal amounts reported on "Parent Company Comparative Balance Sheet" (Core page 5) and the confidential "Liquidity and Debt Information" page C.

The answers to questions 1 through 13 should provide information about the quality of the commercial paper and the procedures for its issuance. They should also discuss funding involving the issuance of commercial paper backed by lines of credit. Examiners should refer to sections 2080.05 and 2080.1 before completing this report page.

The purpose of the report page is—

1. to determine the quality of commercial paper and to appraise the company's ability to raise additional funds in the marketplace;
2. to determine how the proceeds from commercial paper sales will be used;
3. to decide whether the use of commercial paper is in keeping with statutory requirements and regulatory requirements such as those of the Securities and Exchange Commission;
4. to determine whether the use of commercial paper satisfies liquidity needs (see section 2080.1);
5. to determine if policies in the commercial-paper funding system are safe and sound;
6. to determine if backup sources of funds are available and adequate to meet the liquidity needs of the parent; and
7. to address the examiner's concerns about commercial-paper policies, controls, and marketing methods.

The information needed to complete this report page is usually available from the holding company's investment or funds management department. It may also be obtained through discussions held with management responsible for the holding company's funding program. The information may also be available from rating agencies and in contractual agreements with lending banks.

Question 1 asks for any changes in the commercial-paper rating that may show a changing financial condition. See appendix A of this section, which lists rating indicators used by commercial-paper rating companies. Determine the cause for any change in the rating.

Bank holding companies with lower credit ratings may issue commercial paper by obtaining credit enhancements. Such credit support may be obtained from letters of credit (LOC paper) or a surety bond issued by an insurance company having a high credit rating (called credit-supported commercial paper). Bank holding company commercial paper with a lower credit rating can also be backed by other high-quality assets serving as collateral (called asset-backed commercial paper), thus allowing the bank holding company to enter the market as

an issuer. (See section 2190.1 for inspection guidance about such commercial-paper enhancements.)

Question 1 further instructs the examiner to report the range of current rates paid on all commercial paper. By presenting the range of current rates paid on different maturities of commercial paper, the examiner can compare rates paid with those of the bank holding company's peers. This will aid in determining the "market-place's" impression of the company's condition, as reflected by the rates the company must pay to attract funds.

The yields on commercial paper track those of other money market instruments. Like U.S. Treasury bills, a commercial-paper instrument is a discount instrument. Because of exposure to credit risk, the yields on commercial paper are usually higher than those of U.S. Treasury bills. As in the case of Treasury bills, interest on commercial paper is computed on a 360-day year. Treasury bills, in contrast to commercial paper, are exempt from state and local taxes and are more liquid than commercial paper.

When responding to question 2, if any subsidiary sells commercial paper for its own use or for the parent, indicate why the bank holding company chooses to structure its funding in this way. For example, a commercial-finance non-bank subsidiary of a bank holding company was authorized by the Board to underwrite (purchase) and deal in (resell or place with institutional investors) commercial paper as agent for the issuers (see section 3600.21.1). A section 20 subsidiary also can underwrite and deal in, or act as riskless principal in the placement of, commercial paper, if authorized by the Board by order (see section 2185.0).

A parent company could issue commercial paper directly or through a broker. The examiner therefore needs to be aware of the difference between direct paper and dealer paper. Direct paper is sold by the issuing firm directly to investors without using a securities dealer or an intermediary. Direct paper issuers generally require continuous funds and therefore find it more cost-effective to establish their own sales force to sell their commercial paper directly to investors. In the case of *dealer-placed commercial paper*, the issuer uses the services of a securities firm to sell its commercial paper.

If the subsidiary's name is similar to the parent's, note whether an investor can tell, by its

name or through other means, that the issue is associated with the parent.

With regard to question 3, the commercial-paper specimen should clearly state that it *is not* an FDIC-insured obligation of any bank subsidiary (see section 2080.1).

The minimum round lot in commercial-paper transactions is usually \$100,000, although some issuers sell commercial paper in denominations as low as \$25,000. With regard to question 4, bank holding companies generally should not sell commercial paper in denominations of less than \$25,000. This is to ensure that the commercial-paper instrument is suitable for investment by sophisticated investors as opposed to the general public. Commercial-paper investors are typically institutional investors.

Rollover of commercial-paper proceeds on maturity is common. The SEC has stated that obligations that are payable on demand or have provisions for automatic rollover do not satisfy the nine-month (270 days) maturity standard. SEC staff, however, has issued no-action letters for commercial-paper master-note agreements.¹ These agreements allow eligible investors to make daily purchases and withdrawals (subject to a \$25,000 minimum) as long as the maturity of the note and each investor's interest therein do not exceed nine months. Such master-note agreements may allow prepayment by the issuer any time, or upon demand of the investor.

Commercial paper and commercial-paper master-note agreements can result in a potential

1. A master note is a negotiated agreement or contract (negotiated as to size, maturity, and price) between a borrower and investor that permits the investor to place cash, up to a stated amount, with the borrower over a designated period of time. Such unsecured credit agreements (no note is actually issued, only an agreement is signed at the beginning of the arrangement) are limited to borrowers with the highest credit ratings and large investment institutions.

Master notes have characteristics similar to those of a revolving-credit arrangement. The outstanding amount allowed may vary daily but is limited by a stated cap imposed by the issuer. Investors in such agreements control the amount invested in the note on the basis of the amount of surplus cash that is on hand. Either party can terminate the agreement with only 24 hours' notice. In reality, it is a longer-term funding vehicle because the parties generally are interested in maintaining a long-term relationship.

Unlike commercial paper, master notes are indirectly accessible to a wider array of investors. Investment firms group investments from small investors with investments made by a few large institutional investors and place the funds in master notes. The master note, unlike commercial paper, avoids the task of writing daily individual tickets for each customer. Disadvantages of the master note are the potential for daily variation in the amount invested and the potential for sudden redemption.

source of funding mismatch from the use of what is commonly called "deposit sweeps." This practice is based upon an agreement with a subsidiary bank's deposit customers (typically corporate accounts). Such agreements allow these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company.

In view of the extremely short-term maturity of these sweep arrangements, banking organizations should be advised to exercise great care when investing the proceeds. Appropriate uses of the proceeds of such deposit-sweep arrangements are limited to short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal. (See also sections 2080.05 and 2080.1 when reviewing commercial-paper activities.)

Concerning question 5, investing in the bank holding company's commercial paper by a subsidiary bank's trust department is generally regarded as self-dealing and a violation of trust regulations, absent express written authority and the consent of all of the trust's beneficiaries. Bank holding company examiners finding such trust-department holdings should discuss the matter in detail with Reserve Bank trust examiners or the Board's Trust Activities Section, Division of Banking Supervision and Regulation.

In response to question 6, the examiner should indicate the use of the proceeds and whether such use is considered long-term or short-term. (See also sections 2080.05 and 2080.1.)

Question 7, on concentration of holdings, is intended to aid in determining if any party can exert influence on the bank holding company due to its commercial-paper holdings. If any individual, organization, or industry holds more than 10 percent of the commercial paper, indicate if the holder(s) exerts any influence on the bank holding company's management.

In response to question 8, if there is any indication of difficulty in refinancing commercial paper at maturity, discuss this in significant detail. Indicate the reasons for the difficulty, the problems it poses for management, and management's plans to rectify those problems. This is a particularly sensitive issue because of the financial exposure that could be created by an inability to refinance.

Question 9 is intended to aid in determining the degree to which the bank holding company can rely on its line banks. Lines that have not been confirmed in writing or for which no contractual obligation exists are less certain to be

available than those that are confirmed and contractual.

As question 10 implies, lines of credit are often specifically established solely to back up commercial-paper borrowings. Such lines impart a measure of security to the bank holding company. Evaluate the adequacy of the total amount of these lines in relation to the volume of outstanding commercial paper.

In asking about systematic rotation, question 11 is intended to help the examiner determine if the bank holding company routinely uses the proceeds from a line of credit to pay off another, and whether the bank holding company has ever been in an aggregate nonborrowing position during a given year. If the bank holding company routinely and continuously relies on its ability to repay its lines with other line borrow-

ings, discuss the potential effects on the bank holding company's ability to service its debt properly.

Question 12 asks for information on reciprocal lines that reveals the relationship between the lender and the bank holding company. A line's reciprocity may have a bearing on the degree to which the borrower may rely on the lender.

Question 13 is intended to help the examiner evaluate the relationship between the parent and its nonbank subsidiary. In those cases in which a subsidiary is authorized to borrow directly on the parent's lines, the examiner should evaluate the parent's internal controls and management information systems for supervising the subsidiary's borrowings.

5010.23.1 APPENDIX A—COMMERCIAL-PAPER RATINGS

Rating Notations by Commercial-Paper Rating Companies* (Highest- to Lowest-Quality Rating)

Rating Company†			
Standard and Poor's	Moody's	Duff and Phelps	Fitch
<i>Investment grade:</i>			
A-1/A1+	Prime-1 (P-1)	Duff-1 (D 1-/1/1+)	F-1/F-1+
A-2	Prime-2 (P-2)	Duff-2 (D-2)	F-2
A-3	Prime-3 (P-3)	Duff-3 (D-3)	F-3
<i>Non-investment grade:</i>			
B	NP (Not prime)	Duff-4 (D-4)	F-S
C (Doubtful)			
<i>In default:</i>			
D		Duff-5 (D-5)	D

*The definition of ratings varies by rating agency.

†This list of rating companies is for the examiner's information only. The list is not an endorsement of these companies by the Federal Reserve.

Listed on this page are any material assets and liabilities (actual and contingent) not detailed on the parent company's balance sheet or other schedules in the report. Contingencies include guarantees, lease or loan commitments, letters of credit, interest rate swaps, futures and forwards transactions and pending litigation.

The purpose of this report page is:

1. To determine the extent of the parent's potential obligations and the related strain on its financial capacity resulting from contingencies.

2. To determine the quality of "Other Assets." These assets are subject to evaluation and classification, if appropriate. "Other Assets" is sometimes found to include assets acquired in violation of section 4 of the Act (particularly section 4(c)(2)).

3. To detail "Other Liabilities" which may indicate external funding relationships otherwise not presented.

The information should be derived directly from the BHC's financial statements and the board of directors' and executive committee's

minutes. Management should be asked to verify and explain any contingent liabilities. A review of all "Other Assets" and "Other Liabilities" in the general ledger and subsidiary ledgers should be conducted and analyzed for appropriate types and amounts of accounts. Suspense accounts should be aged, particularly if shown as a net amount.

If there are no contingent liabilities state "None reported." Normally only items appearing on the balance sheet as of inspection date will be listed. If prior periods' items are listed, columns with dates corresponding to those on the balance sheet should be used.

Refer to Manual section 5010.8 for guidelines on presentation of details of "Other Assets" or "Other Liabilities."

The parent's guarantees on the "Investment In and Advances To Subsidiaries" page should be included as contingent liabilities. "Other Assets" and "Other Liabilities" totals should reconcile to the line items on the "Parent Company Comparative Balance Sheet" page.

Procedures for Inspection Report Preparation (Page—Statement of Changes in Stockholders' Equity (Parent)) Section 5010.25

The reconciliation of capital accounts provides a summary of transactions which have caused changes in each of the equity accounts for the periods indicated. There should be no charges against paid-in capital that are properly chargeable to income.

The report page is used to record and analyze changes in stockholders' equity and to determine the effects on the financial condition of the holding company.

The information should be requested in the officer's questionnaire. Sources for prior periods include the FR Y-6, FR Y-9 LP, the annual and quarterly reports to stockholders, previous reports of inspection and the SEC Form 10-K. Current period changes can be obtained from the corporation's accounting or comptroller's department.

The presentation should begin with the last two fiscal years and include the most recent year-to-date interim. The column heading "Capital Stock" can include common and preferred

stock. However, it is necessary to distinguish the type and amount which can be accomplished by using (C) and (P), for common and preferred, beside the amounts. An appropriate legend can be inserted in the column heading.

Net income reported should agree with that reported on the "Comparative Statement of Income and Expenses (Parent)" and the "Comparative Statement of Income and Expenses (Consolidated)" pages. If net income reported on this page does not agree with the income on a consolidated basis (i.e. differences caused by minority interests), include a footnote to explain the reason for the differences.

Balances at year-end and interim period should agree with accounts on the "Parent Company Comparative Balance Sheet" and the "Comparative Statement of Income and Expense (Consolidated)" pages. Footnote and explain any differences.

These “Interim” and “Fiscal” pages can be used when the parent receives income from more than one subsidiary, or where it is needed to support comments or analyses in other sections of the report. Both the “Interim” and “Fiscal” pages should be included in the report when this situation is applicable. From the data on these two pages, the examiner is able to analyze the contribution to overall earnings made by each of the subsidiaries. The schedule also reflects the extent of the parent’s upstreaming income from its subsidiaries.

The purpose of these report pages is:

1. To determine the relative share of the individual subsidiary’s contribution to the holding company operation;
2. To analyze the dividend payout ratio and to compare payouts between subsidiaries;
3. To determine the proportion of each subsidiary’s income paid to the parent as fees; and
4. To determine the degree of interest coverage on advances to subsidiaries.

For the interim and fiscal periods, some items can be obtained from the parent’s income statement and from the BHC’s workpapers show-

ing eliminations on the consolidating income statement. Additional information can be obtained from the holding company’s accounting department or comptroller.

The banks should be presented first, then nonbanks. Subtotals should be provided.

The dividend payout ratio is calculated by dividing total dividends by net income after taxes and securities transactions. Show an average payout ratio for banks and nonbanks, respectively, and an overall payout ratio. Do not show negative percentages.

5. Fees as a percentage of the subsidiary’s operating income is calculated using total operating income before expenses. No subtotals for banks and nonbanks are required.

Equity in undistributed earnings, dividends, interest and total fees should equal that reported for each period on the “Comparative Statement of Income and Expenses (Parent)” page. For wholly-owned subsidiaries, the sum of the “Equity in Undistributed Earnings” and “Dividends” columns should equal its net income for the related period.

The analysis is performed and the statement is completed for BHCs with consolidated assets in excess of \$1 billion, or when substantial fixed charges exist or debt is outstanding, when required by the Reserve Bank. This statement indicates the results of the parent's management of its cash position and identifies major sources of working capital and areas of disbursement. The statement also presents the cash earnings of the parent company. The cited ratios measure the parent company's ability to meet its fixed obligations and the ability of the residual earnings to cover common stock dividends. When combined with an analysis of the parent company's cash income sources from subsidiaries, it serves as a partial basis for determining the parent company's debt servicing capacity, and thus an assessment of its leverage. In addition, projected cash flow information aids in the analysis of the BHC's ability to properly service its debt.

Only items affecting cash should be shown. The "Next Fiscal Year" column completion is optional at the examiner's discretion if the inspection occurs early in the current year (i.e. the inspection is in January 19X6 and thus would require the data through the end of 19x7).

The objective of the report page is:

1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements;
2. To measure the parent's ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs;
3. To determine if the parent company's dividends to stockholders are covered by residual cash earnings;
4. To analyze any cash flow transactions which may adversely affect the financial stability of the parent;
5. To discuss parent company deficit cash flows provided by its own operations.
6. To discuss any parent company borrowings needed to sustain dividend payments to shareholders;
7. To discuss the scope for increasing cash flow to the parent company; and
8. To discuss steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments, and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.

The information may be requested in the

officer's questionnaire and a copy of the "Cash Flow Statement (Parent)" page may be included with the questionnaire.

To complete the page refer to the holding company's cash receipts and disbursements journal and its general ledger and income statement(s). Also refer to any cash flow and income projections prepared by the organization.

The statement should be verified and reconciled, to the extent possible, to the BHC's published statements. Any additional items not provided for in the preprinted statement can be separately listed in an appropriate space.

Any dividends considered unreasonable should be discussed in the comments section. Dividends paid with funds derived from new borrowings should be discussed in detail.

Any significant cash flow transactions should be discussed. Refer to section 4010 for examples of such transactions.

If shortfalls exist, discuss on the "Cash Flow Statement (Parent)" page. For example, if the parent has a deficit cash flow provided by its own operations (as is often the case), discuss how the parent offsets (or plans to offset) the deficit. If the question is not applicable, state "NA."

If the BHC must incur additional debt in order to sustain its dividend payments to shareholders, discuss this in detail on the "Cash Flow Statement (Parent)" page.

To the extent that the accrual method of accounting is used, income and expense items should agree with the figures on the "Comparative Statement of Income and Expenses (Parent)," and between balance sheet periods, the "Statement of Changes in Stockholder's Equity (Parent)" pages and the "Income from Subsidiaries" for the fiscal year are as follows:

1. Dividends, and management and service fees from subsidiaries should agree with those on the "Comparative Statement of Income and Expenses (Parent)" and the "Income from Subsidiaries" pages;
2. Interest income should agree with the amounts reported on the "Comparative Statement of Income and Expenses (Parent)" and the "Income from Subsidiaries" pages;
3. Interest expense should agree with the amounts reported on the "Comparative Statement of Income and Expenses (Parent)" page;
4. Salaries and employee benefits should be the same as those reported on the "Comparative

Statement of Income and Expenses (Parent)” page; and

5. Dividend payments made by the parent should agree with those reported on the “Statement of Changes in Stockholder’s Equity (Parent)” page.

Other increases and decreases in cash which

should agree with changes in balance sheet items on the “Parent Company Comparative Balance Sheet” page are:

1. Increases in borrowed funds;
2. Decreases or increases in advances to subsidiaries; and
3. Debt retirement or reductions.

The Parent Company Liquidity Position page is prepared for bank holding companies with consolidated assets in excess of \$1 billion and those with substantial debt outstanding, as well as select others at the option of the Reserve Bank. The report schedule provides a structured analysis of all assets and liabilities within predetermined remaining maturity categories. The schedule is designed to place emphasis on remaining maturing assets and liabilities of less than one year.

When the schedule is initially completed, the examiner is provided with an indication of whether the parent company has an adequate cushion of short-term liquid assets within the 0 to 30 days and the 0 to 90 days categories to cover short-term liabilities, or whether a pattern of short-term funding gaps exist. Following adjustments, if any, to maturing assets or liabilities, the resulting schedule sets forth a framework for observing funding mismatches, thus serving as tool for assessing the parent company's overall liquidity position.

A net positive gap is expected in the 0 to 30 days category to show the parent's ability to ride out a temporary market disarray. Similarly, a cumulative positive position is expected in the 0 to 90 days categories, despite any deficiency within the first 0 to 30 days category. A failure to satisfy those conditions requires the examiner to address the deficiency within the "Examiner's Comments" page. Results of the analysis are to be discussed in the parent company section on the "Analysis of Financial Factors" page in the inspection report.

The report schedule is prepared:

1. To determine whether the bank holding company is avoiding funding strategies that could undermine public confidence in the liquidity or stability of their banks; and
2. To evaluate the holding company's ability to meet its maturing obligations, convert its assets with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations;
3. To determine whether the level of the parent's liquid assets is sufficient to cover its short-term obligations;
4. To analyze the contractual maturity structure of its assets and liabilities and to estimate the underlying liquidity of the parent company's liabilities and assets, giving particular attention to interest bearing deposits in and advances to subsidiaries (Note: Parent company advances to subsidiaries should be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can be readily con-

verted to cash);

5. To identify funding surpluses or deficits for specific maturity intervals;

6. To provide an analytical framework for observing funding mismatches in assessing the parent company's overall liquidity position;

7. To provide an analytical tool and a basis for discussion of parent company liquidity with management; and

8. To provide a basis for developing or evaluating existing parent company contingency plans, including any reliable unused back-up lines of credit. (Note: In the event that maturing liquid assets are not sufficient to satisfy short-term obligations, primarily in the 0 to 90 days categories, and the parent company has no contingency plan to cover mismatches (shortfalls) in the under 1 year categories, the parent company must be requested to develop such contingency plans that must include standby facilities that will be reliable during times of financial stress. For those BHCs with less than satisfactory parent or consolidated supervisory ratings (3 or worse), or any BHC subject to serious liquidity or funding pressures, those BHC's must include in their contingency plan specific plans to reduce or eliminate entirely their outstanding short-term obligations.)

The information for the schedule should be obtained from the parent company's balance sheet for the contractual maturing amounts of assets and liabilities, and slot the amounts into the five maturity categories depicted.

While analyzing the contractual maturities of the assets and liabilities, the examiner must consider the underlying liquidity of the parent's intercompany advances and deposits and the extent to which they fund high quality assets that can be readily converted into cash.

The examiner should refer to the Manual's funding sections 2080.0 to 2080.6 and sections 4010.0 to 4010.2 that address parent company cash flow and liquidity.

The report page data should be entered as of the inspection report financial statement date. The examiner may, at his or her option, incorporate the schedule into the inspection report to substantiate or clarify particular judgements. Assets should be recorded net of any allowance (contra asset) accounts.

The examiner should assess the contractual maturity structure of the parent company's balance sheet by preparing the schedule according

to the parent's maturing assets and liabilities. The scheduled can be adjusted to better appraise the parent company's liquidity position by analyzing interest bearing deposits with bank subsidiaries and advances to subsidiaries. The "Other Assets" may be sub-categorized within the additional space provided. The completed schedule may be used as a basis of discussing parent company liquidity with management. The examiner should comment on the findings on the "Analysis of Financial Factors" page in the inspection report (whether or not the schedule is included in the report).

The total of each asset account should equal the respective assets as listed on the "Parent Company Comparative Balance Sheet" for the inspection report financial statement date, net of any separately listed allowance or contra asset account balances or any adjustments for market valuations. The total of each liability account should equal the respective liabilities as listed on the "Parent Company Comparative Balance Sheet" as of the inspection report financial statement date.

This report page is included in all reports when assets are classified and written up. For inspections of bank holding companies with less than \$150 million in total assets, it is to be included in the Core section of the report. The information reported represents analyses and conclusions for the classification of the parent's assets and identifies all of the nonbank subsidiary's classified assets. Refer to the instructions for the "Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems," Core page 7, for a discussion of classification standards.

The purpose of the report page is to—

- determine the risk involved in the parent's activities,
- determine the adequacy of reserves,
- disclose problem assets requiring management's attention, and
- aid in the analysis of the condition of the nonbank subsidiary(ies).

The information is obtained by an evaluation of the parent's assets and the assets of nonbank subsidiaries. For nonbank company assets, the information is obtained through examining the loan and lease portfolios, and reviewing credit files, loan reviews, past-due lists, credit analyses, and watch lists prepared by the holding company.

Any asset classified doubtful or loss requires a write-up unless the amount is insignificant to the company's operations. *Where asset reviews are undertaken, the examiner should note at which entities the asset reviews were performed, and their level of coverage.* Any classified asset that is challenged by management also requires a write-up.

Loan write-ups may extend across the entire page. At a minimum, show the total amount of

extension of credit booked by the parent, name of debtor, name of guarantors, collateral, amount of classification in appropriate category, date originated, maturity, purpose, and where deemed necessary, a short write-up giving the reason for the classification. Also identify any participation with a subsidiary, including the subsidiary's name and amount held by the subsidiary.

Nonbank loans classified substandard may be listed alphabetically with no write-up required, unless the holding company management disagrees with the classification. For other nonbank assets classified substandard, some minimum comment is necessary. For example, the examiner may make one general comment concerning the deficiencies of several credits or other assets listed.

Any nonbank subsidiary loan classified doubtful or loss, where the amount classified exceeds the lesser of \$100,000 or 5 percent of the subsidiary's total assets, should include a brief write-up stating the reason(s) for classification. However, at the discretion of the examiner, any doubtful or loss classification may be the subject of a write-up.

In the case of nonbank subsidiaries such as consumer finance companies where there are relatively small amounts and a large volume of accounts involved, the use of "bulk classification" by degree of delinquency may be more desirable than listing each loan individually. The examiner may provide write-ups on any classified nonbank subsidiary asset deemed appropriate.

The classification totals should agree with "Examiner's Comments," and/or "Analysis of Financial Factors" pages. Any major asset problems may be discussed on the "Examiner's Comments" or "Analysis of Financial Factors" pages and should be cross checked.

This FR 1225 report page presents consolidated financial statement data (a condensed balance sheet and income data) for the lead bank and any other subsidiary bank or banks (that is, subsidiary banks that have consolidated assets of \$150 million or more) or for those bank subsidiaries that exhibit conditions warranting special supervisory attention (that is, rated composite 3, 4, or 5 under the Uniform Interagency Bank Rating System). The summary of the examiner's comments and other important data extracted from the latest report of examination are incorporated into the analysis of the bank component of the BOPEC rating on the "Analysis of Financial Factors" page. The summary is incorporated when a bank subsidiary comprises 10 or more percent of consolidated assets and/or when a bank subsidiary evidences material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company's board of directors including noted bank violations.¹ As banking assets make up the majority of the assets of the holding company, the condition of the larger banks and special supervisory attention banks may have a significant impact on the condition of the consolidated organization.

The financial statements should be requested in the officer's questionnaire. Balance-sheet and income data can be obtained from the reports of condition, income, and dividends of the subsidiary banks.

Provide a condensed balance sheet as of the

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that the cross-guarantee provisions of FIRREA can have on nontroubled bank subsidiaries.

inspection date and a statement of income. The income data should be presented in a comparative columnar format and should include total operating revenue, total operating expenses, net operating income, applicable income taxes, net securities gains or losses, and net income. The balance-sheet and income data, while condensed, should provide detail to permit analysis of earnings and capital. Where any past or potential problems exist, the examiner may include more detailed statements to support comments presented.

All pages should bear the same "Bank Subsidiaries" page number, except that the number should be suffixed with a -1, -2, -3, etc., to reflect the subsequent "Bank Subsidiaries" pages.

The FR 1241 "Bank Subsidiary" report page is used for the lead bank subsidiary when its assets are less than \$150 million.

The following items should be checked to make certain that—

1. advances from the parent company agree with the "Investment in and Advances to Subsidiaries" page;

2. the holding company's proportionate share of the capital accounts reconciles with the investment shown on the "Investment in and Advances to Subsidiaries" page;

3. external (unaffiliated) debt shown agrees with that on the "Unaffiliated Borrowings" page;

4. net income reconciles with the sum of equity in undistributed earnings and dividends on the "Income from Subsidiaries" pages, in proportion to the holding company's percentage of ownership; and

5. any relevant comments made on the "Bank Subsidiaries" pages agree with Core page 1, "Examiner's Comments and Matters Requiring Special Board Attention."

For each direct nonbank subsidiary (and its significant subsidiaries not consolidated in its statements), a summary is to be provided of its history, activities, classifications, and risk exposure. Nonbank subsidiary pages consist of “Nonbank Subsidiary,” “Nonbank Subsidiary Financial Statements,” and “Nonbank Assets Subject to Classification.” Each subsidiary should be presented as a “unit.” Successive subsidiaries should be sequentially presented (for example, 18a, 18b, etc.). The information provided on the report page should aid in the determination of permissibility of activities and locations, and the evaluation of the subsidiary’s asset quality.

1. Provide the proper name of the organization, location, date of approval, date of acquisition or establishment, date activity commenced, statutory authority, and approved branch office locations should be obtained from Reserve Bank records, presented, and verified with the holding company’s records. Note the date of approval for each activity and office, if applicable.

2. For going concerns acquired by the bank holding company, state the date acquired. For de novo subsidiaries, state the date established .

3. For de novo subsidiaries, state the date activity commenced. Indicate if the BHC has received approval for any de novo activity that has not yet been commenced. Identify any approved activity for which authority has expired.

4. Number 6 refers to the exemptive provision (statutory authority) of the Bank Holding Company Act relied upon to continue to engage in the activity. If section 4(c)(8) of the act is indicated, also provide the corresponding reference to section 225.25(b) of Regulation Y to indicate the specific activities.

5. Provide the city and state location for each branch; however, if the subsidiary has a great number of branches (for example, a consumer finance subsidiary), the examiner may present only the number of offices located in each state or foreign location.

6. For the history and description section,

summarize the activities in which the company is engaged and discuss how it has expanded its operations (de novo or by acquisition). Discuss any violations that may have been uncovered.

7. Prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below.¹ This assessment is to identify subsidiaries with a risk profile that warrants an on-site presence. In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;
- ongoing monitoring efforts of surveillance and financial-analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and
- reports of internal and external auditors.

The risk assessment should address each nonbank subsidiary’s funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. Examiners are expected to document their assessment of the overall risk posed by each nonbank subsidiary on this report page or equivalent inspection workpaper. See SR-93-19.

The examiner should make certain that the classifications and valuation reserves summarized for the nonbank subsidiaries agree with totals on either the “Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems” page or the “Parent Company and Nonbank Assets Subject to Classification” page.

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

This page presents a condensed statement of condition for credit extending and special supervisory attention nonbank subsidiaries (and others at the examiner's discretion) as of the inspection date, and income data for the latest fiscal year and the year-to-date. The purpose of the report page is to aid in the analysis of the condition of each nonbank subsidiary and in the analysis of its effect on the consolidated company. The page is completed for all credit extending subsidiaries and may be completed for any other subsidiary deemed appropriate.

Financial statements should be requested in the officer's questionnaire. In the case of larger subsidiaries other financial information may be obtained from the F.R. Y-6, the SEC Form 10-K, published reports to stockholders and reports filed with professional associations. Details relevant to the financial statements can be found by reviewing various accounting records.

The balance sheet should be structured to provide sufficient detail for meaningful analysis, including specifics on valuation reserves and

stockholders' equity. Income data should also be provided for the latest fiscal year plus the year to date (i.e., total revenue, net operating income, net income, rates of return). Provide a condensed income statement for the year to date if considered necessary.

The examiner should ascertain that:

1. Advances from the parent agree with the "Investment in and Advances to Subsidiaries" page;

2. The holding company's proportionate share of the capital accounts reconcile to the investment shown on the "Investment in and Advances to Subsidiaries" page;

3. External debt reported agrees with the information reported on the "Liquidity and Debt" Confidential page "C"; and that

4. Net income reconciles with equity in undistributed earnings and dividends paid on the "Income from Subsidiaries" pages, in proportion to the holding company's percentage of ownership.

This page presents the fidelity and other indemnity insurance coverage of the holding company and its subsidiaries. Refer to section 2060.5 for related information. The report page is used to provide a summary as to whether:

1. The parent and nonbank subsidiaries have been insured against the potential for significant losses by maintaining proper and sufficient insurance;

2. A comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes;

3. A determination can be made as to which entity(ies) is responsible for paying the premiums and if the manner in which such payments are allocated is equitable among the affiliates that receive the coverage benefits; and

4. Procedures are in place to assure that claims are filed promptly.

The information on insurance coverage is

usually available from an “insurance officer” and from a review of insurance policies during the inspection. The examiner should conduct a review of insurance coverage with the “insurance officer.” In summarizing results, the examiner should indicate if any nonbank subsidiary is covered under a separate policy or if it is not covered. Also, it should be stated whether the policy is maintained by the bank and whether the BHC and nonbanks are covered by the bank’s policy. The method used to allocate the cost of insurance to the subsidiaries should also be provided.

The comments detailed on the report page should be consistent with summarized comments on the “Policies and Supervision” page and the “Other Supervisory Issues” page, item 7, if included in the report. Any noteworthy deficiencies in the insurance program may be included on the “Examiner’s Comments” page at the examiner’s discretion.

This report page consists of topics dealing with litigation and commitments, the supervisory reports, intercompany transactions and other topics of supervisory concern.

The report page includes questions that are worded to evoke a “yes” response, or if there are no problems in a particular area, a “no” response. If there are any deviations therefrom, responses are required. Positive responses as to either the adequacy of the insurance or audit programs should only be accompanied by a reference to the appropriate inspection report page that addresses the topic. For additional guidance on answering the questions on this inspection report page refer to the “Other Supervisory Issues” FR 1241 report page instructions.

5010.35.1 INTERCOMPANY TRANSACTIONS (QUESTIONS 1)

This question inquires as to the existence of significant intercompany transactions or diversions of bank income subject to adverse comments. This question guides the examiner when documenting the review of compliance with Board policy, statutes and regulations regarding various kinds of intercompany transactions.

For information on diversion of bank income, review management and service fees charged the bank and any compensating balances maintained by the bank on behalf of affiliates indicated on the “Comparative Statement of Income and Expenses (Parent)” and the “Commercial Paper (Parent)” pages, respectively. Comments on section 23A considerations may be found by a review of bank examination reports. The examiner may refer to Manual 2020.6 (management and service fees) for instructions on examining for diversions of bank income. For information on examining for 23A and 23B violations, see Manual section 2020.1 (transactions between affiliates) and the other Manual intercompany transactions sections 2020.2–2020.7.

Violations of section 23A and 23B of the Federal Reserve Act and section 106(b) of the 1970 Amendments to the Bank Holding Company Act may be summarized on the “Examiner’s Comments” page and listed on the “Violations” page with the reader referred to this page for detail. If the examiner includes comments concerning other intercompany transactions on Core page 1, “Examiner’s Comments,” the information should be cross-checked.

5010.35.2 COMPENSATING BALANCES (QUESTION 2)

If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:

1. The average collected and book balance or the range of the balance;
2. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and
3. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.

Refer to Manual section 2020.4 (compensating balances).

5010.35.3 INTERCORPORATE INCOME TAX PRACTICES (QUESTION 3)

Information on intercorporate tax practices may be obtained from the accounting or comptroller’s department. Manual section 2070.0 (taxes) may be referred to for information on examining intercorporate tax transactions which includes the Board’s intercorporate tax policy statement of September 20, 1978.

In addition to the above references, examiners should be aware that whenever there is a consolidated income tax return filed, it is important that a formal tax agreement exists between the parent and each subsidiary (approved by each board of directors). Examiners should encourage management to prepare such an agreement if not already in place.

Board policy states that taxes paid by a subsidiary bank to its parent should not be in excess of what the bank would pay if it filed on a separate entity basis. However, certain adjustments, in particular the allocation of tax benefits in a consolidated return, may result in higher payments than would have been made had the bank been unaffiliated (i.e., the surtax exemption must be allocated between organizations filing a consolidated return whereas an entity filing alone could use the entire exemption). The Board normally would regard such adjustments (that result in amounts in excess of filing alone) as acceptable. The Board does not wish to pre-

scribe the tax accounting methods to be used by BHCs. However, the Board does require that those methods employed give bank subsidiaries equitable treatment.

The examiner should comment whenever any of the following has occurred:

1. A subsidiary has been required to make tax payments to its parent that significantly preceded the date the consolidated tax payments are paid to IRS. (In general, “significantly” means not in excess of five business days.)

2. A subsidiary bank is due a tax refund due to a fiscal net loss on a taxable basis (or due to other tax credits) and the parent has not refunded to the bank taxes paid by the bank to the parent in previous tax periods.

3. The subsidiary bank has passed up deferred income tax liabilities to the parent along with an equivalent amount of cash or earning asset. Such transactions must be reversed by a reinstatement of the deferred tax on the books of the bank, along with the transfer by the parent of an equivalent amount of cash or appropriate earning asset.

5010.35.4 TIE-IN ARRANGEMENTS (QUESTION 4)

As for tie-in arrangements, see Manual section 3500.0 (tie-in considerations). This Manual section provides information on examining for impermissible tie-in arrangements. Information on tie-in arrangements is available from BHC and nonbank subsidiary management and may also be found by reviewing standard lending agreements and manuals.

5010.35.5 INSIDER TRANSACTIONS (QUESTION 5)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank subsidiaries to the BHC officials (executive officers, directors or “more than 10 percent” shareholders) or the BHC officials’ interests in the organization;

2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regulatory and Interest Rate Control Act of 1978; and

3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5010.35.6 LITIGATION (QUESTION 6)

A “yes” response to this question would require a summary of any litigation involving the parent bank holding company and the bank and nonbank subsidiaries, which could have a significant effect on the holding company. The purpose of this question is to aid the examiner in the analysis of the financial condition of the holding company by determining if any pending litigation poses a threat to the financial condition of the BHC.

Any information on law suits should be requested in the officer’s questionnaire. Information on litigation which may have a significant impact on the company is often included in the published annual report to stockholders or in the SEC Form 10-K.

Comments on litigation should be presented in narrative form summarizing the details of the lawsuit, including, if possible, the opinion of the holding company’s counsel as to the possible outcome of the suit. Generally, include only suits representing more than 10 percent of the holding company’s stockholders’ equity capital. Discussion of immaterial litigation should be avoided.

Any litigation which may have a significant effect on the bank holding company may be summarized on the Examiner’s Comments, Core page 1, at the discretion of the examiner. Also, any litigation which, in the opinion of management or counsel, is expected to result in a significant liability should be noted on the “Contingent Liabilities (Parent)” page.

5010.35.7 INSURANCE PROGRAM (QUESTION 7)

See Manual sections 2060.5 and 5010.33.

5010.35.8 AUDIT PROGRAM (QUESTION 8)

A negative response to this question will result from application of the inspection instructions found in Manual sections 2060.1 and 5010.34. Comments responding to this question should

be confined to briefly summarizing any audit program deficiencies and should reference any detailed information provided on other report pages.

5010.35.9 CREDIT QUALITY REVIEW PROGRAM (QUESTION 9)

This question refers to the examiner's review of the BHC's internal loan review program. A negative response would result from the examiner's use of the inspection instructions and procedures found in Manual section 2060.6.

5010.35.10 SUPERVISORY REPORTS (QUESTION 10)

A "yes" response with regard to this topic would result in providing information on the timeliness and accuracy of the bank holding company's submittal of required reports, such as the FR Y-6, Y-8 and the Y-9's to the Reserve Banks. If the bank holding company is consistently late in filing its reports or if there are repeated discrepancies that need correction, it could be indicative of operational deficiencies or a lack of managerial direction within the bank holding company.

Information on the timeliness and accuracy of reports must be obtained from the Reserve Bank unit handling the reports and by verifying selected items to corporate records. If reports are rou-

tinely filed late or inaccurately, the reason and the measures the bank holding company may be taking to eliminate the problem should be stated on this inspection report page.

5010.35.11 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 12)

This question reminds the examiner to appraise the bank holding company's compliance in fulfilling commitments made to the Board or the Reserve Bank. Thus, if there are any commitments outstanding which the holding company has made to the Board or the Reserve Bank, appropriate comments should be provided on the page.

Each Federal Reserve Bank is required to report to the Board's Division of Banking Supervision and Regulation on a semi-annual basis the status of unfulfilled commitments. The examiner should review this Reserve Bank report before beginning the inspection.

Commitments should be summarized presenting the nature of the commitment, the date the commitment was made, and, if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the "Examiner's Comments" Core page 1, if considered appropriate.

The Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA), as amended by FDICIA, accompanied by the Board's complimentary Regulation O, governs *bank* extensions of credit to insiders. With the passage of FDICIA and the complementary revision of Regulation O, there is the possibility that there will be an increase in the volume of parent company and nonbank subsidiary extensions of credit to BHC officials and their related interests. The report page presents information on parent company and nonbank extensions of credit to insiders, as well as parent company and nonbank subsidiary investments in and loans on stock or obligations of BHC officials' related interests. Examiners must reference Manual section 2050.0 to complete this page.

This report page is intended to identify extensions of credit to BHC officials so that those credits may be reviewed for propriety and compliance with the policies of the BHC and Manual section 2050.0. Although *Regulation O applies only to bank extensions of credit*, for BHC inspection purposes, definitions contained in Regulation O shall be used by System examiners in order to provide a uniform, comparable approach to reviewing extensions of credit to BHC officials.

The information requested on the report page should be requested in the officer's questionnaire. Other sources may include the annual report to shareholders, the FR Y-6 and filings with the Securities and Exchange Commission.

BHC examiners should review Manual section 2050.0 and Regulation O, and should be familiar with the definitions contained in the regulation. Examiners are asked to identify such credits for in-depth review and analysis. Although Regulation O applies specifically to extensions of credit by banks, and not the parent or nonbank subsidiaries, examiners may criticize a BHC's or nonbank subsidiary's direct extensions of credit to BHC officials or their related interests as an unsound practice or may criticize a specific loan for credit reasons. *Such extensions of credit are not to be cited as violations of Regulation O.*

During a BHC inspection, BHC officials should be made aware that information necessary for the completion of this page is being collected to evaluate practices, policies, or particular credits, but that FIRA and Regulation O apply exclusively to bank extensions of credit.

Section 215.4 of Regulation O entitled "General Prohibitions" sets forth various restrictions on bank extensions of credit to BHC officials. In

general, if the BHC examiner reviewing BHC and nonbank subsidiary direct extensions of credit to BHC officials and their related interests concludes, after consultation with counsel for the Reserve Bank, that the extension of credit would not have been in compliance with section 215.4 had it been a bank extension of credit, the examiner may conclude that it is appropriate to criticize the practice or the loan. If it is concluded that the BHC or nonbank subsidiary extended the loan in order to circumvent the restrictions on bank extensions of credit, comments to that effect should be incorporated onto the "Other Supervisory Issues" page or a "Continued" page. Such comments may be also summarized on page 1, "Examiner's Comments", at the discretion of the examiner based on the degree of materiality, severity and impact.

Specifically, section 215.4 of Regulation O (in part) requires bank extensions of credit to BHC officials not to be on preferential terms, not to have more than the normal risk of repayment, and over certain dollar amounts to be approved by the bank's directors. In addition, it requires bank extensions of credit to executive officers, principal shareholders, and their related interests not to exceed the bank's legal lending limit to any such individual and his/her related interests.

In reviewing BHC and nonbank extensions of credit to "related interests," note that a related interest is defined in section 215.2(k) of Regulation O as "a company that is controlled by a person . . ." The definition of "company" for purposes of Regulation O specifically excludes any "insured bank." However, for purposes of completing these report pages, and evaluating the propriety of BHC and nonbank extensions of credit to (and investments in) "related interests" of BHC officials, "related interests" shall include "banks." Therefore, a BHC or nonbank direct extension of credit to (or investment in) a BHC official's "related interest" that is itself a bank (other than a subsidiary bank of the subject BHC), should be reported.

For purposes of this page, "direct" extensions of credit represent obligations of the BHC official or related interest, alone or as co-maker while an "indirect" extension of credit includes a BHC official's or a related interest's endorsement or guarantee of an extension of credit to a third party, and obligation's to the BHC official's immediate family (spouse, all minor chil-

dren, and all children, including adults, residing in the individual's home). BHC and nonbank extensions of credit to a BHC official who serves in two or more capacities, i.e., director and executive officer, should only be presented once.

In completing the "Schedule," the examiner may select the cut-off amount used to determine which items are listed individually based on materiality. However, any extension of credit (or group of credits) to an individual BHC official and his/her related interests that would have exceeded the subsidiary bank's lending limit had it been made by the bank, should be listed individually. (In multibank holding companies, use the banks' aggregate lending limit.)

In listing "Terms" within the "Schedule," include at a minimum interest rate and date of maturity. "Comments" are intended to include a brief description of any collateral, endorsements, the purpose of the loan, the nature of the borrower's relationship to the lender if not self-evident, and status of repayment if delinquent or classified.

Identify the source and cost of funds used by the BHC to extend the loan. Any adverse affect to the BHCs net income should be commented on.

Extensions of credit should be consistent with policies summarized on the "Policies and Supervision" page. Otherwise, additional comments might be warranted.

The purpose of this report page is to present a brief analysis of the interest sensitivity of assets and liabilities on the inspection date and to further support the analysis in the form of ratios similar to a current ratio and a net working capital to total assets ratio. Positive or negative gaps within maturity buckets are gathered in the form of cumulative gap totals. The analysis can be prepared for each level of the organization.

Such an analysis is designed to determine whether maturing interest sensitive assets match maturing interest sensitive liabilities on a 1 to 1 basis within specified maturity ranges and on a cumulative basis over time.

The information for the report page can be gathered from financial management maturity analyses and interest sensitivity reports prepared by the bank holding company's management. A limited amount of maturity information on interest sensitive assets and liabilities may be obtained from Bank Call Reports, Bank Holding Company Y reports, Bank Performance Reports, and BHC Performance Reports, and can be used if the inspection "as of" date is the same as the date of these reports.

From information collected, list interest sensitive asset totals and liability totals within the maturity buckets provided for the consolidated entity. The maturity ranges may be adjusted to or expanded to coincide with interest rate sensitivity reports generated by the bank holding company management.

Next, subtract the liability totals from the asset totals to get the "Gap" totals. For each maturity range beyond 91 days, add the next repricing interval "Gap" total to the previous "Cumulative Gap" totals to obtain the repricing interval's cumulative gap.

To determine the ratio of interest sensitive assets to interest-sensitive liabilities, use the cumulative gap for the denominator. Extend the percent out to at least two decimal places.

Provide narrative analysis for any maturity period or cumulative negative or positive gap positions, stating what measures will be taken by management to address any adverse gap positions.

Procedures for Inspection Report Preparation (Page—Treasury Activities/Capital Markets) Section 5010.38

This report page presents generalized questions for the examiner to answer on treasury activities and capital markets. This page must be included in inspection reports prepared for bank holding companies that have significant exposure in the capital markets. Specific guidance can be found in section 2125.0, in the Federal Reserve System's *Trading Activities Manual*, and in SR-93-69, December 20, 1993. Procedures for

inspecting and preparing the written analysis should be based on this supervisory guidance. In banking organizations with national or state nonmember lead banks and where capital markets activities are conducted exclusively at the subsidiary bank, examiners should coordinate the collection of the information included on this page with the lead bank supervisory agency.

Procedures for Inspection Report Preparation (Confidential Page A—Principal Officers and Directors) Section 5010.40

The purpose of this report page is to identify directors and principal officers and determine the level of participation and responsibility in the affairs of the holding company, and to identify outside relationships in order to determine conflicts of interest. The page contains the names of the principal officers of the company and their position with other subsidiaries. This page also presents the names of directors, the number of years they have served in that capacity, their year of birth (to possibly assess management's plans for succession), regularity of their attendance at directors' meetings, and principal outside employment. Note if any director is also a director of a Federal Reserve Bank or branch.

The directors and principal officers' fees, compensation and other benefits information is also to be obtained and retained in the workpapers. If desired by the Reserve Bank, such salary, bonus, benefits, and other remuneration information may be included on this page. Criticism of directors' fees should be carefully considered.

The directors' ownership information (i.e. address of each director and the number of shares owned) is also to be obtained and may also be reported or retained in the workpapers. If the holding company has an advisory board or honorary directors, the data on these persons may be included on the report page at the examiner's discretion.

All information on principal officers and directors such as year of birth, responsibility and compensation, etc. should be requested in the officer's questionnaire. Attendance data should be available from the board of directors' minutes. Such information may also be contained in reports to shareholders, FR Y-6, proxy statements and SEC filings.

The directors and principal officers should be listed alphabetically with their city and State of residence indented immediately below their names. If appropriate for mailing purposes, show each director's mailing address.

The principal officers and directors are to be listed in order of rank, and alphabetically where officers have identical titles. For directors and principal officers, membership on principal com-

mittees of the board should be coded and placed immediately after the name on the same line (i.e., E = Executive, A = Audit). If a director has been elected since the last inspection, the date of election should be shown immediately after his name. For example:

John Smith elected 4-1-x1

The officer and director positions held with subsidiaries should be kept as brief as possible, utilizing abbreviations established on the "Structure and Abbreviations" Core Page 3. List only major positions if routinely assigned to staff of all subsidiaries.

A brief summary of benefits provided to officers and employees (i.e., pension plans, life and health insurance) may be presented at the bottom. Such information can assist in determining whether the principal officers appear to be adequately or overly compensated.

Special financial arrangements for specific officers may also be noted. Such arrangements would include salary contracts, unusual bonuses, fees or expense allowances, stock options, deferred compensation, and exclusive use of real estate, automobiles and airplanes.

When indicating occupation or principal business affiliation of directors, use concise, descriptive designations instead of general notations such as "merchant" or "industrialist." If the director is an officer or principal in a firm, show also the nature of the business in parentheses (e.g., law firm, CPA, pharmaceutical manufacturer, etc.).

The examiner should verify that the directorship is in compliance with Regulation L or R and that the number of directors is consistent with the corporations' bylaws. The examiner should also indicate the regular schedule of directors' meetings at the bottom of the report page to provide the Reserve Bank with information needed to plan attendance at board meetings.

Examiners should be careful to use the same names and titles of officers when referring to the individuals elsewhere in the report.

Procedures for Inspection Report Preparation (Confidential Page B—Condition of Bank Holding Company) Section 5010.41

In general, this report page presents pertinent information that is deemed confidential by the Reserve Bank and available to regulatory authorities. The report page is used to discuss and assess, confidentially, the going-concern operating results and the prospects for resolving any problems or areas of concern. The report page should be also used to discuss compliance problems relating to statutory, regulatory, or administrative provisions cited within the core or other open sections of the report. The potential for any improvement or weakening in economic conditions should also be discussed to the extent they have a bearing on earnings potential.

The specific information to be provided on the report page is—

1. information on the organization's near-future financial prospects, giving particular consideration to debt servicing and the likelihood of improving any current problems;

2. an assessment of holding company management as to the experience and qualifications of principal personnel when relative to the assessment, and a listing of subsidiary bank ratings, effective examination dates, and type and scope of examinations;

3. the examiner's concise assessment of management's oversight of the BHC's policies and supervision of subsidiaries with respect to the level of control and supervision exercised over subsidiaries (see sections 2010.0 to 2010.4) should be discussed (An evaluation of the bank holding company's recognition and control of exposure to risk should also be provided (see section 2160.0), as well as an evaluation of management information systems (MIS) based on the guidance found in sections 2060.0 through 2060.6.);

4. a discussion of the reasons for the component ratings and overall BOPEC rating assigned;

5. an analysis of chain banking organizational structure (The examiner must determine whether the BHC is a member of a *chain banking organization*. A chain banking organization may be defined generally as a collection of independent banking organizations that are controlled by the same individual, family, or a group of individuals closely associated in their business dealings.);

6. a listing of individuals or groups that control more than 5 percent of the BHC's outstand-

ing stock (Discuss any significant changes in ownership. A review of ownership is to include a determination as to whether an individual or group of shareholders exercise significant influence over the BHC. It should also include a discussion of fiduciary holdings of the parent company's stock and convertible debt of the BHC's subsidiaries.);

7. a presentation of confidential information relating to the components of the BHC rating system, avoiding repetition by cross referencing report pages in the open section; and

8. examiners' comments on any other supervisory concerns or aspects of the BHC's condition warranting confidential treatment. Comments on any violation and/or a BHC's unsafe and unsound practice should be included with any recommendations for Federal Reserve administrative action. Any plans of the holding company which are considered to be of a confidential nature should also be discussed.

Financial-analysis comments on the bank holding company organization (that is, BOPEC components, not the ratings) that are not of a confidential nature are to be discussed on the Analysis of Financial Factors core page 4.

The date and type of examination and assigned rating can be obtained directly from the latest examination report of each subsidiary bank. The other information is to be derived from discussions with senior management.

The information pertaining to ratings (CAMELS) and ratios of the banks is to be presented in columnar form with the banks listed as they appear on the organization chart. Also include any comment on the bank(s) deemed to warrant confidential treatment.

The examiner is expected to review and use the examination ratings of the other federal agencies where appropriate; however, if substantive differences of opinion exist as to the bank's composite rating, adjustments to the rating may be made and footnoted accordingly.

The examiner should make certain that the bank names or abbreviations are consistent with the organization chart and other tables in the inspection report. Any ratios or comments used in the rating analysis should be checked to corresponding areas in the open section.

This page provides a “snapshot” picture of the parent company’s short-term gap position as it relates to the amount of commercial paper compared to net short-term GAP within repricing maturity categories and also the cumulative GAP position within the maturity buckets. The page provides summary information of aggregate data from the “Commercial Paper (Parent),” “Parent Company Liquidity Position” and the “Unaffiliated Borrowings” pages or workpapers.

The lower portion of the schedule provides details on unaffiliated borrowings such as the amount and types of external indebtedness of the parent and its subsidiaries. Information regarding various debt covenants such as cross default clauses, collateral information and negative covenants can be included.

The purpose of the page is to aid in evaluating the company’s ability to service its debt and to operate within the constraints of debt restrictive covenants. It also aids in evaluating the appropriateness of the uses of the proceeds of the organization’s borrowings.

Information for the source report pages or workpapers required for an analysis of parent company liquidity, commercial paper and other short-term debt, and long-term unaffiliated borrowings should be requested in the officer’s questionnaire or can be obtained from the BHC’s accounting department. Totals should be brought forth from the “Commercial Paper (Parent)” and the “Parent Company Liquidity Position” pages or workpapers, or reconciled to the general ledger. Footnotes to financial statements in published reports contain much of this information.

For the commercial paper information, derive the totals from the total column on the “Commercial Paper (Parent)” report page, combining the totals for over 91 days maturity. Commercial paper maturity totals should be presented as a line item showing the aggregate outstanding balance netted by any amount held by subsidiaries.

For the “Long-term Debt” portion of the report page, present unaffiliated long-term borrowings in tabular form for (a) the parent, (b) each nonbank subsidiary, and (c) the bank subsidiaries (combined).

For the parent company and each nonbank subsidiary, show the borrower, lender, description of the debt, original amount, origination date, interest rate, maturity date, present outstanding balance, any significant repayment provisions, collateral, use of proceeds, major restrictive covenants and any requirements for compensating balances. In addition, mandatory convertible debt instruments of the parent should be identified and the conversion provisions detailed. In the case of large bank holding companies that have an extensive number of debt issues, detail for each issue may be eliminated at the discretion of the examiner so long as aggregates for similar issues are shown along with ranges for rates and maturities and summary information regarding the other terms of the debt.

For the “Net GAP” and “Net Cumulative GAP” use the respective total amounts (“Net Position” and “Cumulative Excess Deficiency”) on the “Parent Company Liquidity Position” report page. Bank mortgage indebtedness may be aggregated at the discretion of the examiner, showing amounts only without other detail. Capitalized lease obligations may be included in that total. For all other bank borrowings, including debentures issued to unaffiliated sources, provide complete detail.

Debt amounts on this page should agree with those shown for the “Parent Company Comparative Balance Sheet” for Core Page 5, the “Bank Subsidiaries”, the “Nonbank Subsidiary Financial Statements” pages or workpapers, and the “Consolidated Comparative Balance Sheet” Core page 8 (when adjusted to net intercompany borrowings).

This report page summarizes the examiner participants and their total workdays devoted to the inspection and provides clarification on checklist items where appropriate. Other comments should be directed to planning arrangements affecting the scope of the inspection. When non-bank subsidiaries are inspected, describe the extent of the review of the records. The examiner should cite any special problems encountered which would aid future inspections. Recommendations, suggestions, and information needed to conduct the next inspection should also be included for the next Examiner-in-Charge.

Information regarding planning is limited to the on-site planning of the work to be performed. Comments should be of a professional nature and should be strictly devoted to providing information that can be used in planning and performing an inspection (location and access to specific BHC records, inspection control problems, availability of facilities for staff, key officer and director contacts, information pertaining

to the Internal Audit Committee members, internal and external auditors, and etc.)

Information pertaining to the access to, and the storage of, workpapers and any personal information such as lodging, travel arrangements and geographical directions should be confined to the workpapers. Comments not directly related to the on-site conducting of the inspection should be avoided.

The purpose of the confidential report page is to present pertinent information to be used only by regulatory authorities. The page is reserved to summarize internal information derived from Reserve Bank inspection staff that would not be addressed in other confidential report pages. The information reported on this page may also be derived from discussions with senior bank management, workpapers, accounting records, board of directors' minutes, and etc.

Bank names or abbreviations should be consistent with the organization chart and other tables in the inspection report.

Procedures for Inspection Report Page Preparation (Page—Bank Subsidiary (FR 1241))

Section 5020.1

This report page presents financial statement data (a condensed balance sheet and income data) for one-bank holdings companies and other bank holding companies that may have assets of less than \$150 million. Place the name of the bank at the top on the line provided. For multi-bank companies, the page may be completed for the lead bank or comparable lead banks and

each bank requiring special supervisory attention. The balance sheet and income data should be obtained from the last two calendar year ends and the most recent report of condition, while the examination data should be obtained from the last three examination reports. Refer to 5010.30.

This inspection report page incorporates onto one page a comprehensive list of questions covering many areas of supervisory concern. The questions can be answered with a “yes” or “no,” or a not applicable response (“N/A”). Detail is required on an exception basis. Provided below are some guidelines to consider for several of the listed questions. Many of the questions are self-explanatory. Some questions (e.g. questions addressing audit and insurance activities) duplicate topics covered by other work papers. The purpose of the duplication and format of the report page is to provide a cross-check within the inspection report to make certain that all relevant areas have been included in the report. If relevant comments have been provided on other report pages in the “open” section, the comments need not be duplicated on this report page. Only a reference to the other report page is needed.

5020.2.1 LEVEL OF CONTROL AND SUPERVISION EXERCISED OVER SUBSIDIARIES (QUESTION 1)

Consider:

1. Whether the subsidiaries operate autonomously;
2. The degree of overlap between BHC and bank management;
3. Who sets major policies of the corporation;
4. How the holding company monitors the operation of its subsidiaries;
5. The role of supervision by the parent over the subsidiary banks in formulating the holding company’s budget, tax planning, investment policies, internal controls and audits;
6. The extent of control resulting from directors having dual roles and responsibilities at the parent and subsidiary levels; and
7. Whether problems resulting from unqualified directors carry over from the parent to the subsidiaries.

5020.2.2 DIVIDENDS FROM SUBSIDIARIES (QUESTION 2)

Consider:

1. The policy for paying dividends in relation to the earnings and capital needs of the subsidiary. For banks the examiner should rely on the most recent examination report of the federal supervisor; however an independent conclusion must be made.

2. The reasonableness of the parent company’s policy for assessing dividends from the subsidiary banks and whether it is being complied with.

5020.2.3 REPRESENTATIONS MADE IN APPLICATIONS TO THE BOARD (QUESTION 3)

Consider:

1. Whether the holding company has complied with all representations and agreements made with the Board. If no such agreements or representations have been made, state not applicable (N/A). The examiner should review transmittal letters for commitments associated with approved applications since the last full scope inspection. The supervisory file maintained by management at each bank holding company should also be reviewed for such agreements or representations.

2. Whether correspondence has been initiated with the appropriate Reserve Bank that provides an appropriate explanation as to why those representations and agreements have not been adhered to.

3. Whether the holding company is complying with any Reserve Bank reply to the holding company’s notification.

5020.2.4 COMPENSATING BALANCES (QUESTION 4)

1. If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:

- a. The average collected and book balance or the range of the balance;

- b. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and

- c. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.

2. Refer to Manual section 2020.4.

5020.2.5 MANAGEMENT AND OTHER SERVICES PERFORMED FOR SUBSIDIARIES (QUESTION 5)

If applicable, describe the holding company's policy on assessing management and services fees for work performed for the subsidiary bank. Provide comments as to whether the policies and fees are reasonable, and if not, why not. When answering this question, refer to Manual section 2020.6.

The examiner's comments should cover the following: (a) terms of the management or other service agreement or contract, if any, including the basis for charging fees, and the dates of adoption and expiration; (b) whether the boards of directors of each company have approved the agreement or contract; (c) description of the service, personnel providing the service, and whether the personnel are on the subsidiary bank's payroll; (d) conclusion on whether the services are actually being performed as stated and reasonableness of fees charged.

For multi-bank holding companies, the examiner should expand his comments to cover the role of supervision by the parent over the subsidiary banks, their lending and investment policies, budgeting and tax planning, and internal controls and audits.

5020.2.6 INTERCOMPANY TRANSACTIONS (QUESTION 6)

Review parent and nonbank subsidiary borrowings, including overdrafts from the subsidiary bank(s), for the past year and comment on significant transactions. If any extension of credit to affiliates by a bank or other transaction is deemed to violate section 23A or 23B of the Federal Reserve Act, so state. See Manual section 2020.1.

Describe any arrangement whereby the parent or nonbank subsidiary has purchased/sold significant participations or any other assets from/to a subsidiary bank. Also, discuss material transactions not discussed elsewhere in the report.

5020.2.7 INSIDER TRANSACTIONS (QUESTION 7)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank

subsidiaries to the BHC officials (executive officers, directors or "more than 10 percent" shareholders) or the BHC officials' interests in the organization;

2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regulatory and Interest Rate Control Act of 1978; and

3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5020.2.8 TAX ALLOCATION (QUESTION 8)

See Manual sections 2070.0.

5020.2.9 USE OF SUBSIDIARY BANK PERSONNEL, OR ASSETS TO SELL CREDIT RELATED LIFE INSURANCE TO THE BANK'S CUSTOMERS (QUESTION 9)

This question refers to the Board's May 1981 policy statement on the disposition of income from the sale of credit life, health and accident, and mortgage life insurance (credit life insurance) related to loans made by state member banks. A reasonable amount of compensation must be paid to the state member bank in recognition of the role played by its personnel, premises, and goodwill in credit life insurance sales. As a general rule "reasonable compensation" means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the financial institution's credit life insurance sales.

At the time of the Board's adoption, the policy was recommended for adoption by the other federal bank regulatory agencies thru the Federal Financial Institutions Examination Council. Therefore, the question is applicable to all banking subsidiaries, not just state member banks. If reasonable compensation is not being received by any or all subsidiary banks. Comment on this subject only when the parent or nonbank subsidiary receives income from the sale of insurance directly related to extensions of credit by a bank subsidiary. Describe any arrangement between the subsidiary bank(s) and the parent or nonbank affiliate concerning the sale of insurance directly related to extensions of credit. Note

whether and/or when such arrangement was formally approved by the subsidiary bank's board of directors. Describe the manner of disposition of such insurance income. In situations where the subsidiary bank provides personnel and/or facilities for the sale of credit related insurance but receives no income, the bank, as a minimum, must be reimbursed for out-of-pocket costs.

5020.2.10 TIE-IN ARRANGEMENTS (QUESTION 10)

See Manual section 3500.0.

5020.2.11 LITIGATION (QUESTION 11)

If the holding company or its subsidiary(ies) is a defendant in any litigation, the results of which could have a significant adverse effect on the overall organization, provide details of the lawsuit, including, if possible, the opinion of the holding company's counsel as to the possible outcome of the suit. As a general guideline, include only suits representing more than 10 percent of the holding company's stockholder's equity capital.

5020.2.12 INSURANCE PROGRAM (QUESTION 12)

See Manual section 2060.5.

5020.2.13 AUDIT PROGRAM (QUESTION 13)

See Manual section 2060.1.

5020.2.14 INTERNAL LOAN REVIEW (QUESTION 14)

See Manual section 2060.6.

5020.2.15 ACCURACY AND TIMELINESS OF REPORTS (QUESTION 15)

If reports filed with the Federal Reserve (e.g. the FR Y-6 Annual Report) are not filed accurately and/or on time, provide comments as to the holding company's plans for correcting the prob-

lem. Any changes in accounting to conform with generally accepted accounting principles, as required by FR Y-6, should be discussed here.

5020.2.16 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 17)

If the holding company has outstanding commitments to the Board, summarize the commitments by describing the nature of the commitment, the date the commitment was made, and if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the "Examiner's Comments" page 1, if considered appropriate.

5020.2.17 OTHER MATTERS HAVING A DETRIMENTAL IMPACT (QUESTION 18)

Discuss here any other matter having a detrimental impact upon the subsidiary bank(s) not discussed elsewhere in this report, and deemed pertinent by the examiner. Examples of some subject areas to be considered might be:

1. Public debt issues and commercial paper liabilities of the parent or nonbank subsidiary.

Comment on the following items where appropriate:

(1) Describe the debt instrument, including amount, interest rate, maturity, purchasers, and use of proceeds; (2) agency ratings; (3) determine whether any subsidiary (particularly a bank) sells the debt issue for its own use or on behalf of the parent and make critical comments whenever the issue does not clearly state that the issue is not an insured obligation of a bank subsidiary; (4) discuss any difficulties experienced in refinancing the debt; and (5) if a line of credit is used to back up a short term issue, indicate the lending bank, credit line, amount in use, expiration date, and required fee or compensating balance maintained by a subsidiary bank, if any, and whether the bank is being remunerated by the parent or nonbank affiliate. (See Manual section 5010.23.)

2. Adequacy of recordkeeping of the holding company, including nonbank subsidiaries. If

included, recommendations concerning the adoption of minimum recordkeeping standards should be presented and justified.

3. Contingent liabilities or violations not addressed elsewhere in the report (such as treasury stock purchased in violation of Regulation Y).

4. Payment of cash dividends in excess of net earnings available for common shareholders

over the past year and the rate of earnings retention is not consistent with the organization's capital needs, asset quality, and overall financial condition.

5. Adverse relationships not elsewhere mentioned, such as inappropriate allocation of income and expenses of a nonbank activity performed by subsidiary bank employees.

AUDIT PROGRAM

Comment on the adequacy and the effectiveness of the holding company's audit program, including scope and frequency of audits of subsidiaries, and the relationship with the holding company's accounting firm. Identify to whom the auditor is responsible and who receives the audit reports. Describe the nature of any "qualified opinion" submitted by the independent auditors in certifying the most recent year's financial statements and any pertinent comments regarding relations with the directors' audit committee. If the holding company does not have its own audit staff, describe the role of the internal audit staffs of the subsidiaries, and the role of the independent accounting firm of the holding company, and state if such arrangements are adequate.

CAPITAL RATIOS AND TRENDS:

	Peer Data	As of		
	December 31, 19x1	December 31, 19x1	December 31, 19x0	December 31, 19x9
Tier 1 capital ratio: ²				
Year-end 1992 rules	%	%	%	N/A %
Total capital ratio:				
Year-end 1992 rules	%	%	%	N/A
Tier 1 leverage ratio ³	%	%	%	N/A
Tangible leverage ratio ⁴	%	%	%	N/A

1. Risk-weighted balance sheet assets excludes all goodwill, net unrealized loss in marketable equity securities, investments in unconsolidated banking or financial subsidiaries, and reciprocal holdings of capital.
2. The Tier 1 capital ratio is calculated by deducting 1/2 of all investments in unconsolidated banking or financial subsidiaries from Tier 1 capital and dividing the remaining amount by risk-weighted assets. If there is insufficient Tier 2 capital from which the other half of the investments in unconsolidated banking or financial subsidiaries would be deducted, then also deduct the deficient amount from Tier 1 capital.
3. The Tier 1 leverage ratio is calculated by dividing Tier 1 capital (as defined by the final capital guidelines, effective December 31, 1992) by average total assets (for the most recent quarter) less all goodwill.
4. The tangible leverage ratio is calculated by deducting all intangibles from Tier 1 capital and dividing by average total assets (for the most recent quarter) less all intangibles.

Page

POLICIES AND SUPERVISION

Discuss and appraise the parent company's policies with respect to:

The level of control and supervision exercised over subsidiaries.

Dividends and fees from subsidiaries.

Loans and investments of subsidiaries.

Risk evaluation and control.

Funds management and the adequacy of existing policies.

Management information systems.

Loan participations by and between subsidiaries.

Internal loan review.

FIXED CHARGE COVERAGE RATIO:

$$\frac{(1)+(2)+(3)}{(2)+(3)+(4)+(5)}$$

COMMON STOCK CASH
DIVIDEND COVERAGE RATIO:

$$\frac{(1)-[(4)+(5)]}{(6)}$$

1. Are the parent company's fixed charges covered by its cash earnings? What is the amount of excess or deficiency?
2. Are the parent company's dividend payments to stockholders covered by its residual cash earnings? What is the amount of excess or deficiency?
3. Giving full consideration to the requirements for loan loss reserves and capital structure of the bank and the major nonbank subsidiaries:
 - (a) Is the present level of dividends paid by the bank and the major nonbank subsidiaries to the parent company sustainable?
 - (b) What is the scope for increasing the cash flow to the parent company?
4. If cash flow is insufficient to cover fixed charges and cash dividend payments, discuss the steps management has taken, or plans to take, to restore adequate cash earnings coverage. Include comments on whether such plans would be commensurate with the maintenance of adequate loan loss reserves and capital levels in the bank and the major nonbank subsidiaries.
5. If cash flow is insufficient to cover cash dividend payments, should the parent company revise its dividend policy to conform to the Board's guidelines on the payment of cash dividends?
6. Discuss significant cash flow transactions as deemed appropriate by the examiner.

TREASURY ACTIVITIES/CAPITAL MARKETS
(FR 1225)

-
1. Provide an overview of the organization's capital markets activities. The overview should distinguish between various types of functional activity, such as market making, trading, or end user, and include a relevant measure of volume for the activity as well as earnings performance.
 2. Does the organization maintain written policies and procedures that clearly outline the process for controlling risks inherent in the organization's functional activities? Describe where policies and procedures are deficient.
 3. Does the organization have a written overall strategy covering all capital markets activities? ____ Explain.
 4. Has this strategy been effectively communicated to the Board of Directors? ____ Explain.
 5. Does the organization have risk-management processes in place to manage and control all significant risk exposures (e.g., market, credit, operations, liquidity, and legal-risk exposures)? ____ Can the organization manage and control risks on a consolidated basis? ____ Explain.
 6. Specifically, describe how the organization measures and manages the market-risk exposures related to these activities. Is this process adequate given the complexity and size of the activities as well as the capital position of the institution? ____ Explain.
 7. Also describe how the organization measures and manages both the current and potential credit-risk exposures related to these activities. Is this process adequate given the complexity and size of the activities as well as the capital position of the institution? ____ Explain.
 8. Does the organization have management information systems to provide accurate and timely information to senior management and the board of directors?
 9. Are internal control processes sufficient to ensure safe and sound operations? ____ Explain.
 10. Does the organization have an audit plan for capital markets activities? ____ Is it Adequate? ____ Explain.

Procedures for “Limited-Scope” Inspection Report Preparation (General Instructions)

Section 5040.0

5040.0.1 OBJECTIVES

The limited-scope inspection will review all areas of activity covered by a full-scope inspection report but less intensively.

5040.0.2 IMPLEMENTATION GUIDELINES

The ultimate responsibility for determining the appropriateness of the limited scope, and the actual elements of the scope of the inspection beyond the guidelines, rests with the Reserve Bank.

Certain report pages are required to be included in the limited-scope inspection. Other pages are required when certain events trigger their applicability, “exception (E)” pages. Pages not required may be included at the Reserve Bank’s option. These are labeled as “optional” pages.

5040.0.2.1 Required Report Pages

As in the full-scope inspection report,¹ the

1. The basis for the limited-scope inspection report will be the “large” report, FR 1225.

limited-scope inspection report is divided into three parts: a core section, a section consisting of report pages that provide support to the core section, and a confidential section.

Core section. The core section of the report serves as the main vehicle for communicating the results of the inspection to management. The core pages contain the scope of the inspection, comments on administration of policies and supervision over subsidiaries, and an analysis of the BOPEC components, any or all of which could be used to support supervisory action, when necessary.

Support section. The supporting report pages contain narrative and financial and other data to support the analyses in the core section. The *required* pages provide the primary statistical support when addressing important supervisory problems or issues, and as appropriate, the BOPEC rating, or supervisory action, when needed.

Confidential section. The pages in this section are also required since they address matters of supervisory importance and other matters not deemed appropriate in the open section.

For a limited-scope inspection, the following report pages are *required*:

Manual Section

<i>No.</i>	<i>Page Location</i>	<i>Page Title</i>
5010.2		Cover (FR 1427)
5010.3	Page i	Table of Contents
5010.4	Core Page 1	Examiner’s Comments
5010.5	Core Page 2	Scope of Inspection
5010.41	Confidential Page B	Condition of the BHC

The Directors’ Summary Report will be required as in the full-scope inspection. Appropriate information provided by other reporting vehicles, inspection/examination activities or other finan-

cial institution regulatory agencies should be considered. Refer to footnote #3 for further guidance as to the need for a Directors’ Summary Report.

5040.0.2.2 Exception Limited-Scope Report Pages

The following “exception (E)” pages should be included in the report as indicated below:

<i>Manual Section No.</i>	<i>Page Location</i>	<i>Page Title</i>
5010.6	Core Page 3	Structure and Abbreviations
5010.7	Core Page 4	Analysis of Financial Factors
5010.10	Core Page 7	Summary of Consolidated Classified and Special Mention Assets, and Other Transfer Risk Problems
5010.11	Core Page 8	Consolidated Comparative Balance Sheet
5010.12	Core Page 9	Comparative Statement of Income and Expenses (Consolidated)
5010.13	Core Page 11*	Capital Structure (Consolidated) ²
5010.14	Page	Policies and Supervision
5010.15	Page	Violations
5010.16	Page	Other Matters
5010.17	Page*	Classified Assets and Capital Ratios of Subsidiary Banks
5010.19	Page*	History and Structure
5010.27	Page	Cash Flow Statement (Parent)
5010.28	Page	Parent Company Liquidity Position
5010.29	Page*	Parent Company and Nonbank Assets Subject to Classification
5010.31	Page*	Nonbank Subsidiary
5020.2	Page	Other Supervisory Issues
5010.40	Confidential Page A*	Principal Officers and Directors
5010.43	Confidential Page D	Administrative Matters

Pages with an (*) are optional if the limited-scope inspection is preceded by a full-scope inspection within the same annual period.

2. The corresponding FR 1241 page may be used if the basis is to be a lead bank subsidiary rather than on a consolidated position.

5040.0.2.2.1 Reasoning for Including “E” Pages

The “E” pages are included when the activities are present, or have been disclosed through the inspection process, or when significant findings or issues must be reported and communicated to management or to the appropriate supervising agency(ies). The limited-scope inspection report may include, at the discretion of the appropriate Reserve Bank, copies of the Bank Holding Company Financial Statements (FR Y-9) and Reports of Condition of Subsidiary Banks in place of pages containing required or optional financial statements. The FR Y-9 statements or the Reports of Condition should only be included when the financial statements accurately represent the condition of the bank holding company as determined during the inspection.

5040.0.2.3 Optional Limited-Scope Report Pages

In the limited-scope inspection, several pages have been labeled as optional because of the nonexistence of an activity or the absence of a problem in that area. Any inspection report page may be included in the report at the option of the Reserve Bank or the examiner-in-charge. Note that the “Commercial Paper” and related pages (5010.21 through 5010.23) are optional since the existence of this activity would be a “complex” organization, requiring a full-scope examination within the same annual period.

The *optional* pages are:

<i>Manual Section No.</i>	<i>Page Location</i>	<i>Page Title</i>
5010.8	Core Page 5	Parent Company Comparative Balance Sheet

5010.42	Confidential Page C	Liquidity and Debt Information

5040.0.3 LIMITED-SCOPE INSPECTION PROCEDURES

Procedure:	Complete FR 1417 and indicate that the scope was limited (“L”).
Nature of Inspection:	Disclose on the “Scope of Inspection” page that the scope is limited including any additional procedures utilized for a certain area or activity during the inspection that might be comparable to a full-scope inspection.
Directors’ Summary:	Required under the same conditions as in the full scope. ³
Rating:	Assign BOPEC rating as appropriate. Indicate under what circumstances the rating was assigned and what components were changed, including the reasons why they were changed.
Inspection Cover:	Cover will designate “limited” scope (FR 1427) and will be a designated color other than the full-scope reports.

3. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the examination finding following a full-scope

examination. Reserve Banks that have previously identified the problems and provided a report to the directors are not required to prepare the summary for the limited-scope inspection.

5040.0.4 LIMITED-SCOPE INSPECTION REPORT COVER (FR 1427)

FR 1427-Cover
(Revised 7/94)

REPORT OF
BANK HOLDING COMPANY
INSPECTION
(Limited Scope)

Name: _____ Inspection Commenced: _____
Location: _____ Inspection Concluded: _____
RSSD ID Number: _____ Inspection Date: _____

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors dis-

close or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

Procedures for “Targeted” Inspection Report Preparation (General Instructions) Section 5050.0

5050.0.1 OBJECTIVES OF A TARGETED INSPECTION

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a bank holding company. Such inspections may be conducted for various reasons, including serving as a com-

plement to an annual full-scope inspection.¹ Targeted inspections are conducted as directed by the System or at the discretion of the individual Reserve Banks. As a minimum, the inspection procedures used are comparable to a full-scope inspection.

1. FR 1225 will serve as the basis for a targeted inspection.

Report Pages Included: Cover (FR 1428)

Table of Contents for included pages and a key for abbreviations used in the report

Examiner’s Comments

Scope of Inspection

Other report pages supporting the scope, and the nature of the targeted inspection, as deemed appropriate by the Reserve Bank and the examiner-in-charge.

Confidential pages consisting of confidential page B, “Condition of the Bank Holding Company,” and confidential page D, “Administrative Matters.”

Nature of Inspection: Disclose on the “Scope of Inspection” that the scope is targeted and describe the procedures utilized for the targeted areas or activities.

Directors’ Summary: Required as prescribed in the full scope.²

Rating: A new BOPEC *composite rating* of 1 through 5 would only be assigned if the bank holding company inspection results provide sufficient information to either reaffirm or modify the most recently assigned BOPEC composite rating. At least one component area must be rated between 1 and 5 in order to assign a new composite rating; otherwise a composite rating of 0 should be assigned.

2. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the examination finding following a full-scope examination. Reserve Banks that have previously identified

the problems and provided a summary report to the directors are not required to prepare the summary for the targeted examination.

5050.0.2 TARGETED INSPECTION REPORT COVER (FR 1428)

FR 1428-Cover
(Revised 7/94)

**REPORT OF
BANK HOLDING COMPANY
INSPECTION
(Targeted Scope)**

Name: _____ Inspection Commenced: _____
 Location: _____ Inspection Concluded: _____
 RSSD ID Number: _____ Inspection Date: _____

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.11). Under no circumstances should the directors, officers, employees, trustees or independent auditors dis-

close or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF

A management information system (MIS) can be described as an automatic data processing system designed to aid in the performance of management functions. The MIS system is used in the decision-making process, which facilitates the collection and presentation of information to plan, organize, and control activities within the confines of the organizational culture. MIS encompasses the policies, procedures, and internal controls pertaining to management reporting which provide the information needed by the board to monitor and ensure control of operations and activities. MIS supports all levels of the organization in the execution of their duties—from the board of directors down to the lowest level of management within the company. A successful MIS will support the strategic direction of the company and promote the process by which decisions are made.

The objective of a targeted MIS inspection is to determine if the corporation has in place a management information system which is capable of providing its board of directors and senior management committees with sufficient, reliable, and timely data from which informed decisions can be made to monitor and manage risks. As a result, the targeted inspection uses a “top-down” approach, which focuses on the information used by the board and senior management committees and on the overall MIS architecture. For further inspection guidance, see the MIS sections 2060.0 to 2060.5 and SR-95-45 and its exhibits. The MIS supporting other levels of management should be reviewed during subsequent bank holding company inspections.

A targeted MIS inspection should be performed in companies in which there has been a notable alteration in the risk profile or aggressive expansion, or in which significant changes in information systems have occurred. This will ensure that executive management and the board have taken into consideration MIS and its ability to keep up with the changes in the organization. It should be noted that there is no one management reporting system. Depending on the structure of the organization, the activities that it engages in, the risk profile that results, and the technological environment that it operates under, MIS will be different in each bank holding company.

A key element of a successful MIS is the creation of the necessary technological support system. Since MIS is the primary tool for executive management and the board to monitor risk and measure performance, it is vital that the

generated reports are accurate, provide sufficient information, and address all areas of the organization. Thus, data integrity is a key factor in analyzing the MIS process; inaccurate data can lead to faulty conclusions by management and the board. In addition, information flows to the top level of the organization should be comprehensive enough to allow for informed decisions. An overload of trivial information can cause confusion and slow the decision-making process.

The MIS inspection process focuses on three broad areas:

1. Relevance and Use of MIS
 - overall risk assessment of the corporation
 - identification of risk responsibilities and reporting lines within the organization
 - evaluation of the quality and relevancy of MIS reports
2. Internal Controls over MIS Integrity
 - identification of information flows and internal control points
 - evaluation of internal controls over information flows
 - evaluation of the report-development process and contingency plans
3. MIS Architecture and Planning
 - analysis of corporate strategic and technology plans, and the effect of their interrelationship on MIS
 - identification of the system architecture, including planned enhancements, and its effect on MIS
 - evaluation of the capability of system architecture to assimilate acquired organizations and the subsequent effect on MIS

The targeted MIS inspection evaluates the information flows to senior management and the computer or manual systems which support them. Bank holding company inspections place emphasis on reports generated by MIS rather than on the process by which they are created.

Management information systems are made up of various subsystems and will generally be unique to the organization. MIS will be influenced by the structure of the organization, its activities, its risk profile, and its technological capabilities. The targeted MIS inspection guidelines and procedures focus on the three broad areas outlined above and provide examiners

with guidance on how to evaluate a bank holding company's MIS process.

5052.0.1 RELEVANCY AND USE OF MIS

Management information requirements will be determined by the size and complexity of an organization's operations. As an organization grows in size and its operations become more complex, management must recognize that information needs change. In addition, strategic goals may dictate a change in the focus of the company, requiring revisions in data collection and presentation. Guidelines and requirements for reports that flow to executive management and the board should be established, recognizing, however, that different levels of the organization have different informational needs.

The effectiveness of MIS has to be analyzed in terms of its ability to assist executive management and the board in identifying, monitoring, and controlling risks throughout the organization. Reports should be analyzed for quality, timeliness, and consistency. They should provide coverage of the major areas in the institution and communicate information clearly and concisely. An organization might have a comprehensive MIS, but if pertinent information is not flowing to executive management and the board of directors, the system is not effective.

Information must be presented in a summarized form, which is easy to read and understand. Procedures must be in place to allow for rapid collection and assimilation of data allowing for timely presentation to executive management and the board. The presentation of data should be consistent from one period to another to avoid any undue confusion. Changes in format need to be agreed on by all users of the report before implementation. Data should cover all areas of risk within the organization and provide comparisons to enable executive management and the board to measure performance.

An assessment of the executive management committee and board members should be performed. A review of reporting lines should also be performed. (See section 2060.4.)

5052.0.2 INTERNAL CONTROLS OVER MIS INTEGRITY

The review of data integrity of reports to the

board of directors and executive management committee is essential to ensure that information flows are accurate and that reports are consistently prepared. For each report reviewed, the flow of information through MIS must be identified, including computer platforms, applications software, and interrelationships with other computer systems. Controls such as data entry and modification, data security, disaster recovery, back-up, and program changes should be assessed. Any points in the system where manual intervention occurs should be identified, and information on the flexibility of the system should be obtained.

The procedures used to assess the data integrity controls will vary depending on the nature of the computer platform and application software and on the amount of manual intervention required to produce the report. However, in all cases, the assessment of MIS data integrity controls should begin with a review of the results of prior inspections and the result of internal and external audit reports. Previously identified deficiencies that have not been corrected can affect the integrity of current data.

Reports produced by a mainframe application system should have controls within the mainframe environment and in the application system used to produce the report. These controls are reviewed during EDP examinations and periodic EDP audits. These examination and audit reports should be used as leverage during the MIS inspection, and the current status of deficiencies noted should be ascertained through discussions with internal auditors and management.

Reports may also be produced by personal computers using spreadsheet and other office-product software in a distributed processing environment. Reviews of distributed processing systems require interviews with the persons responsible for preparing the reports. Any instances of manual intervention in such an environment must be identified and evaluated. The most recent EDP examination report should also be reviewed for any deficiencies noted in the bank holding company's microcomputer policies and procedures. A review of internal audit reports for the applicable business area and discussions with audit personnel will reveal whether this PC/spreadsheet application has been audited recently.

5052.0.3 MIS ARCHITECTURE AND PLANNING

The business plan and the computer system's architecture plan should be designed to comple-

ment each other and must support the strategic plan. The business plan identifies the goals, target markets, and areas of risk of the organization. The architecture plan describes the corporate technological plans for implementing the systems that will achieve the strategic and business goals, and it should include MIS.

Information is a valuable corporate asset. In a competitive banking environment, the ability to effectively manage this asset is crucial to a bank holding company's ability to remain competitive, introduce new products and services, and achieve desired goals. Therefore, the computer system's architecture plan should be developed in conjunction with its business plan. The architecture plan should ensure that mainframe processing and MIS are appropriately integrated and in place for the banking organization to achieve its strategic goals.

The dynamic and competitive banking and technology environments make effective planning critical. Reconciliation of the business and computer system's architecture plans is necessary to determine the effectiveness of the banking organization's planning process. With the proliferation of mergers and acquisitions in the financial industry, this process becomes more complicated. It is essential that management have a clear vision of its strategic and business goals and the technology required to achieve them if it is to effectively manage the divergent technologies that may be inherited through mergers and acquisitions. Bank holding companies in this situation should decide which acquired systems will survive. Documentation should support management's decision, and formal conversion plans should be documented. Telecommunications, compatibility of systems, data integrity, capacity, contingency planning, and data security are especially critical in this situation and should be evaluated in the planning and conversion process.

Ultimately, the business and the computer system's architecture plans should support the strategic plan. If these plans do not complement one another, the ability of management to achieve its goals may be difficult.

5052.0.4 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, risk assessment, and controls, including board and executive management committees.
2. To assess the adequacy of the management reports generated for their timeliness, qual-

- ity, accuracy, and coverage of crucial areas.
3. To evaluate reports in terms of their ability to measure the company's progress in meeting its financial and business goals, including the capability to produce forecasts using various scenarios.
4. To evaluate management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by the MIS, and the system's ability to adapt to change caused by regulatory and accounting issues or by other market conditions.
5. To determine if the policies, practices, procedures, and internal controls regarding management information systems and management reporting are adequate.
6. To evaluate the controls in place to ensure the integrity of the information within MIS, including data security, disaster recovery, and the system's development life cycle.
7. To determine if the functions of automated systems, reconciliation procedures, and reporting processes are completely understood by staff and that these functions are fully documented.
8. To ensure that an architecture plan exists that includes MIS and that it supports the business and strategic plans.
9. To determine if a management process exists for MIS planning, including organizational responsibility, development, and implementation.
10. To determine if a strategy exists for an effective consolidation of systems in the event of a merger or acquisition.
11. To recommend enhancements and/or corrective action when policies, practices, procedures, internal controls, or MIS are deficient.

5052.0.5 INSPECTION PROCEDURES

5052.0.5.1 General

1. Present the first-day request letter to executive management well in advance of the targeted inspection commencement date, allowing sufficient time for data collection (e.g., at least two weeks before). (See SR-95-45, exhibit A, for a sample first-day letter.) The examiner-in-charge should review the responses well in advance of the start of the inspection.
2. Solicit the cooperation of key senior officials

in organizing and conducting a meeting to discuss with them the identification, control, and reporting of identified risks within the various key operating areas of the bank holding company. Request that key senior management officials make or arrange for presentations during this meeting that will identify the major departments, functions, and activities within the organization and how MIS is used to identify and manage risk. (See SR-95-45, exhibit B.)

3. Draft the inspection report for participating examiners to review before the close of the on-site phase of the inspection, ensuring the inclusion of all relevant findings.

5052.0.5.2 Relevancy and Use of MIS

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls. Determine if there are any corporate policies specific to risk management or internal reporting requirements.
2. Review the board and executive management committee structure, including its membership, mission, and authority and the experience levels of the members.
3. Read board and committee minutes and obtain sample copies of the board and committee packets.
4. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors. Ask that copies of each of these *top-level* reports be attached to the listing.
 - a. Review each listed report for timeliness, clarity, completeness, relevancy, and measurability.
 - b. Analyze the management reports for information sufficient to measure the company's progress in meeting its financial and business goals, including the ability to produce various forecasting scenarios.
5. Identify management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Evaluate the system's ability to handle regulatory and accounting issues and to adapt to change.
6. Discuss the examiners' perceptions of MIS reports with executive management as to their timeliness, clarity, completeness, relevancy, and measurability.

5052.0.5.3 MIS Integrity and Internal Controls

1. Review and analyze any policies, procedures, and practices governing the corporation's MIS, including descriptions of existing controls to ensure data integrity throughout the system, disaster-recovery plans, and standardized procedures for the development and use of systems and applications.
2. Review the architecture of MIS. Determine whether there is a single MIS system or a number of related systems. Ascertain if MIS is produced by the mainframe, distributed processors, personal computers, or a combination of these systems. Identify the databases in use for MIS reporting.
3. For each board and executive management report identified, review and verify the flow of data through MIS to the reports, include all computer platforms and application software used. Identify risk points and the controls in place to ensure data integrity. (See SR-95-45, exhibit C for a suggested format.)
4. For each report, verify the controls over data input and the report-distribution process. Determine that sufficient controls are in place to reasonably ensure the accuracy and confidentiality of the data.
5. Review all internal and external audit, regulatory examination, and outside consultant reports concerning MIS since the previous inspection. Note any deficiencies and/or recommendations, and determine whether management has taken appropriate corrective action. Perform follow-up action on any unresolved issues.
6. Through discussions with management and other personnel, determine if any significant changes to MIS are planned. If so, obtain and document the details and analyze their potential effect on MIS integrity.

5052.0.5.4 MIS Architecture and Planning

1. Review the corporate strategic, business, and computer architecture plans, if applicable, to determine if the architecture plan supports the strategic and business goals. The business plan should reflect goals in support of the strategic plan, and any differences between these plans should be reconciled. If a reconciliation has not been performed, request that management complete one during the inspection. Otherwise, complete the reconciliation.

2. Request (or create) a conceptual overview model to identify the flow of information through the organization. (See SR-95-45, exhibit D.)
3. Evaluate management's conversion planning process by selecting a recently converted or consolidated MIS application for review. This application will be emphasized when completing other sections of the work program.
4. After determining the extent of merger and acquisition activity at the institution, review conversion plans and the methodology for consolidating systems and ascertain their effectiveness.
5. Review a copy of development plans for any significant MIS-related projects. Determine if they address cited MIS weaknesses, meet strategic and business goals of the organization, and are in compliance with established policies.
6. Discuss with executive management any inconsistencies among the business, system architecture, and strategic plans.

Examiners' access to automated databases that include supervisory data on state member banks (SMBs) and bank holding companies (BHCs) has been significantly enhanced. In addition, the increased availability of copiers, fax machines, and personal computers has made it possible for SMBs and BHCs to more easily transfer data to Reserve Banks. As a result, the volume of information on SMBs and BHCs available to examiners in Reserve Bank offices has been greatly augmented, and many inspection activities that have traditionally been conducted in the field can now be completed in Reserve Bank offices.

The option to complete certain inspection activities in Reserve Bank offices has various advantages. For example, examiners' ability to access automation resources, reference materials, and senior staff is much better in the office than on-site. In addition, in completing more activities off-site, Reserve Banks can reduce the burdens of on-site evaluations of SMBs and BHCs. Further, greater reliance on off-site work can allow Reserve Banks to reduce travel-related expenses.

5060.0.1 CONDUCTING INSPECTION ACTIVITIES IN RESERVE BANK OFFICES

Examiners should conduct in Reserve Bank offices all inspection activities that can be efficiently and effectively completed off-site. Activities that may be completed off-site include planning the inspection, reviewing historical information, completing preliminary financial analyses, and preparing certain report pages using data maintained at Reserve Bank offices. For additional information, see SR-95-13 (SUP).

When using this approach, examiners should contact BHCs by letter and ask them to forward to Reserve Bank offices financial and other information to be used in the off-site portion of the inspection. Most information that has traditionally been requested in first day letters and made available to examiners at the start of an inspection should be requested, with the exception of documents such as minute books or bulky printouts that would be inappropriate or impractical to have sent. While it is anticipated that this approach will be preferred to approaches that require a longer on-site examiner presence, BHCs are not required to be inspected under this approach and should be given the option to be inspected using traditional on-site approaches. Given the burdens imposed on BHCs

to prepare and mail materials to Reserve Bank offices, Reserve Banks should also offer to pay the shipping costs and give adequate lead time in requesting materials.

In the cases of certain shell BHCs, Reserve Banks are authorized to complete all inspection activities off-site on an every-other-inspection basis. As noted above, however, these BHCs should be given the option to be inspected using the traditional on-site approach. Noncomplex shell bank holding companies (NCSBHCs)¹ with less than \$500 million in assets that on their last inspection were rated BOPEC 3 or better may be inspected off-site, subject to the following restrictions.

- If information becomes available to the Reserve Bank in the period between inspections suggesting that the condition of an organization is deteriorating significantly, an on-site inspection should be scheduled or commenced immediately if warranted.
- Deteriorating 3-rated BHCs are excluded and must be inspected on-site.
- When a BHC's lead bank subsidiary is an SMB, the inspection of the BHC should be carried out in the field concurrently with the examination of its lead bank.
- NCSBHCs in the same metropolitan statistical area as the Reserve Bank or its bank supervision staff should be inspected on-site unless there is good reason to do otherwise. Newly formed NCSBHCs or those that have recently undergone a change in control should also be inspected on-site.
- If a BHC is unable to forward the information necessary to conduct an off-site inspection, or if the company is assigned a BOPEC rating of 4 or 5 or is determined to be a deteriorating 3-rated organization as a result of an off-site inspection, an on-site inspection should be scheduled or commenced immediately if warranted.
- Information requested from the NCSBHC should include all information typically requested in a first day letter, as well as copies from the company's general and subsidiary ledgers that document all significant account-

1. Noncomplex shell bank holding companies are those without credit-extending nonbank subsidiaries or debt held by the general public whose condition is predicated almost entirely on the condition of subsidiary banks.

ing entries made since the last on-site inspection, copies of cancelled checks written since the last on-site inspection, copies of the BHC's notes payable and receivable, copies of all agreements between the BHC and its bank subsidiaries, and any other information considered necessary to complete an off-site inspection of the institution.

- Findings on the BHC's condition and compliance with laws and regulations should be conveyed to management by telephone or, if the situation requires, in person at company or Reserve Bank offices. The examiner-in-charge should then complete an inspection report for transmission to the company.

5060.0.2 OFF- AND ON-SITE BHC INSPECTION PROCEDURES— APPENDIX 1

This appendix includes inspection procedures that can be completed in the Reserve Bank's offices and those procedures that should be conducted on-site. A sample first day letter information request form is included.

5060.0.2.1 Activities That Can Be Completed in the Office

Work to be performed in the office in preparation for a bank holding company inspection should include the—

- determination of the scope of inspection,
- completion of financial schedules and certain other pages, and
- review of historical financial and supervisory data leading to preparation of draft financial analyses (for example, parent, subsidiary banks, consolidated entity).

In addition, if centralized management functions (for example, investments, asset/liability management, internal audit, or loan review) are performed by the bank holding company, a preliminary understanding of these functions can be obtained in the office by reviewing policies, reports, and other relevant materials. Further, if the bank holding company has nonbank subsidiaries, the preliminary risk assessment mandated by SR-93-19 (see sections 5010.7.3 and 5010.31) can be performed in the office, based on information submitted by the institution.

5060.0.2.2 BHC Inspection Activities That Should Be Conducted On-Site

The following inspection activities are recommended and should continue to be performed at the bank holding company:

- review of credit and investment files at holding company and nonbank subsidiaries for quality, documentation, and compliance with policy, laws, and regulations;
- in-depth discussions with management;
- verification of selected financial information;
- review of selected tax workpapers, including the review of intercompany tax allocations;
- observation of operations and internal controls;
- collection of follow-up documentation to complete the financial analysis;
- review of documents such as minute books for the holding company and nonbank subsidiaries and bulky printouts that would be inappropriate or impractical to have sent to the Reserve Bank's office;
- exit meetings with management.

5060.0.2.3 Sample Information Request for a Bank Holding Company

Information To Be Mailed to the Federal Reserve Bank

1. Exhibits A through N (See attachment #2, SR-95-13). Also, please assemble applicable workpapers that correspond to reported information for verification on-site.

2. The corporation's current legal-entity and management organization charts, detailing line and staff authority from the chairman of the board through the various division heads.

3. Copies of any strategic planning documents.

4. A copy of the most recent information package provided to the directors in connection with regular board meetings.

5. A copy of any other management reports that summarize the performance of the subsidiary banks.

6. Schedules of internal audits and internal loan reviews for the prior and current year. In addition, please furnish a copy of the most recent management letter provided to the corporation by its external auditing firm and management's formal response.

7. List of consolidated past-due, restructured, and nonaccrual loans and overdrafts; watch-list

report; and any results of internal loan-grading systems.

8. Loan-loss reserve adequacy evaluation (consolidated and lead bank). Include the most recent calculation for assessing the adequacy of the loan-loss reserve based on the organization's internal methodology.

9. Risk-based capital analysis (consolidated and lead bank) for the most recent quarter-end and two prior year-ends, including workpapers. Break out guaranteed loans and loans secured by certificates of deposit. Also include the total amount and proportionate guarantee of each loan guaranteed by such entities as the FmHA, SBA, and VA.

10. Current and upcoming year's budgets (consolidated and lead bank).

11. A copy of any capital, dividend, or cash-flow plans or projections.

12. Most recent internal consolidated interest-rate-sensitivity analysis and liquidity analysis.

13. Parent-company consolidating entries and consolidated comparative financial statements as of the most recent quarter-end.

14. Parent-company-only comparative financial statements as of the most recent quarter-end.

15. The parent company's trial balance as of the most recent quarter-end.

16. Details of any items included in parent-company "other" assets, liabilities, income, or expense, which cannot be readily identified from the most recent quarter-end trial balance.

17. A summary of insurance coverage for the parent company and its subsidiaries. Please include a copy of the cover pages of each policy, along with the amount of coverage and expiration date. In addition, also indicate the most recent board approval of such coverage.

18. A detailed schedule of all consolidated borrowings as of the most recent quarter-end. Include the average interest rate paid on each type of borrowing.

19. For the parent company only, please provide the following information on all outstanding obligations: (a) amount outstanding, (b) lender (if publicly held, only note holders of greater than 10 percent), (c) origination and maturity dates, (d) interest rate and payable dates, (e) principal repayment schedule, and (f) reason for incurring debt.

20. A schedule of the fiduciary holdings of the parent company's stock and convertible debt by the parent's subsidiaries. Indicate the degree of investment authority the respective trust departments have over these shares.

21. Copies of all intercompany management and service agreements along with (1) the names

of the staff members responsible for the administration of these activities and (2) documentation showing the basis of the assessments.

22. Litigation letter from the holding company's attorneys relating to the status of all lawsuits in which the holding company or its subsidiaries is named defendant. If none, please submit a letter from an officer of the holding company indicating such.

23. A complete copy of all written policies that have been amended or adopted since the previous FRB inspection.

24. A copy of the bank's most recent Report of Condition and Income (call report), including the corresponding internal balance sheet and income statement (daily statement) for the lead bank.

25. Daily statement for the lead bank as of the inspection date.

26. Copies of any "key man" or "split-dollar" life insurance policies held at the holding company or the subsidiaries.

27. Copy of compensation agreements with subsidiary bank personnel who sell credit-related life insurance for the holding company, along with any tie-in policies, if applicable.

28. Copy of any other compensation arrangement either at the holding company or between the holding company and the subsidiary banks.

29. Most recent market-rate survey for local deposits at the lead bank.

30. For all nonbank subsidiaries, please provide (a) financial statements for the most recent quarter-end; (b) strategic plans; (c) directors' monthly reports; (d) internal audit reports; and (e) a trial balance of all credits, delinquency reports, nonperforming reports, and watch-listed loans for credit-extending subsidiaries.

Information To Be Provided at the Holding Company

31. Access to all written policies pertaining to specific operational areas (for example, due diligence/acquisitions, lending, funds management, tax allocation, and dividends).

32. Access to internal audit and internal loan review reports and workpapers.

33. Minutes of meetings of the board of directors, shareholders, and any committees. Please include a list of committees and their members, and fees paid to directors.

34. Holding company articles of incorporation and by-laws.

35. Stock register.

36. Access to federal tax returns filed since the most recent FRB inspection, along with workpapers. In addition, provide schedules of intercompany tax allocations for the corresponding periods, including projected allocations.

37. Access to parent company accounting records such as ledgers, journals, and check registers.

38. Access to monthly account-analysis statements for any parent company transaction accounts held at a subsidiary bank.

39. For all nonbank subsidiaries, please provide (a) directors' minutes; (b) annual budgets and cash flow projections; (c) checking account statements and check registers and/or cash receipts and disbursements registers; (d) a listing of directors and officers; and (e) access to credit policies and credit files for all nonbank credit-extending subsidiaries.

40. Access to due-diligence reports and workpapers and assimilation plans.

41. Any available information on local economic conditions.

5060.0.3 PROCEDURES FOR IMPLEMENTING OFF-SITE INSPECTIONS FOR CERTAIN SHELL BHCS—APPENDIX 2

This appendix includes procedures for implementing the program authorizing off-site inspections for certain shell BHCS. Listed below are general procedures that can be followed in implementing the program for off-site inspections of certain noncomplex shell bank holding companies (NCSBHCS). Sample documents are included that can be used in implementing the program, including examples of correspondence with eligible bank holding companies and a sample first day letter information request form.

5060.0.3.1 General Procedures for Off-Site Inspections

In implementing the program, Reserve banks should conform to the following procedures:

1. Senior management of bank holding companies should be notified before or early in the calendar year if their company qualifies for a full off-site inspection. They should also be informed that they may opt out of the off-site process and that, even if they choose to participate, the Reserve Bank may conduct the inspection on-site if conditions change or if, at some point during the year, examiners will be traveling to the company's vicinity to carry out other activities.

2. When the Reserve Bank is ready to conduct the off-site inspection, the holding company should be contacted by telephone, as well as by letter. An information request form should be attached to the letter.

3. After assigned examiners have reviewed information forwarded by the company, additional information may be requested by telephone or other means if deemed necessary. Once all necessary information has been received, the designated examiners should commence the off-site inspection.

4. Findings of the inspection should be conveyed to company management by telephone or, if the situation requires, at company or Reserve Bank offices.

5. The examiner-in-charge should then complete an inspection report for transmission to the company.

SAMPLE LETTER

Date:

BHC Official
 BHC Name
 Address

Dear BHC Official:

This year, the Federal Reserve Bank of New York will conduct off-site inspections of certain bank holding companies. Your company will be inspected during 19X0 and presently qualifies for an off-site review by our office.

As part of our off-site program, you will receive an information request form which must be completed and returned to the Reserve Bank. The Reserve Bank will reimburse you for postage expenses. The form requires responses to several questions, as well as submission of copies of certain holding company financial documents. Our examiners will review the information, complete their analysis, and discuss their findings with management, either by telephone conference or, if necessary, at the offices of your bank holding company. Following the off-site review, holding company management will receive a written report which will include the following:

- a description of the scope of the inspection;
- the examiner's presentation of the financial condition and performance of the parent company and the subsidiary bank;
- an evaluation of the company's compliance with laws and regulations; and
- the examiner's comments, conclusions, and recommendations.

We have found that the off-site inspection program has proved attractive to many banking organizations. However, participation is not mandatory. Therefore, if you do not wish to participate, please sign and mail the enclosed form by DATE. We do want to make it clear, however, that while we plan to conduct an off-site review of your company if you accept this proposal, we still may conduct an on-site inspection if conditions change or if examiners are otherwise in your vicinity.

Should you have any questions concerning the off-site inspection program, please contact OFFICE STAFF MEMBER at (800) ____-____, extension ____.

Sincerely,

Officer

SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

Pursuant to our telephone conversation of (Date), an off-site inspection of (BHC Name), will be conducted by our office. Please respond to each item of the information request form attached and complete the enclosed schedules. Please be aware that all items submitted for review will be retained by our office and not returned to the company. Therefore, it is advisable to submit copies of records rather than originals. Upon receipt of the items requested, we will reimburse your bank holding company for the postage expense.

In order for us to use the off-site program, you must submit a complete response to this information request no later than (Date). If we are unable to satisfactorily resolve any issues arising from your response to this request, or if the information contained in your response is substantially incomplete, we will schedule the company for an on-site inspection.

Upon review of the information submitted, we will contact you to schedule a meeting with our examiners. If you have any questions concerning the inspection process or the preparation of your responses, please contact (Office Staff Member) at (800) ---, extension ---.

Sincerely,

Name
Examiner

SAMPLE INFORMATION REQUEST FORM

BHC
 OFF-SITE INSPECTION CONDUCTED AS OF
 DATE ___/___/___

INFORMATION REQUEST FORM

Please submit or provide responses to the following (if non-applicable, answer N/A):

1. Statements for the most recent quarter and the two latest fiscal years:
 - A. Parent Company -- Balance Sheet
 - B. Parent Company -- Income Statement
 - C. Parent Company -- Statement of Changes in Stockholders' Equity
 - D. Bank -- Reports of Condition and Income (most recent quarter only)
 - E. Reconciliation of the parent company's "Investment in Bank" account to the subsidiary bank's "Stockholders' Equity" as reported in the Reports of Condition
2. The bank's daily statement and income and expense statement dated ___/___/___.
3. Projected cash flow worksheet for the year 19X1 (see attached form).
4. Excerpts from the company's general ledger and subsidiary ledgers containing all significant accounting entries since ___/___/___.
5. Detail of any "other assets" or "other liabilities" accounts for the company, as well as "other income" or "other expense" items, presented in financial statements requested above IF the amounts exceed \$500.
6. Details on any liabilities, contingent or otherwise, not appearing in the financial statements.
7. A copy of the company's bank statements and its check register and/or cancelled checks issued since ___/___/___.
8. A copy of any notes payable and/or receivable of the bank holding company (including a copy of any related loan agreements) if they have been put in place or amended since the last inspection.*

*The last inspection of (BHC Name) was conducted on (Date) .

SAMPLE INFORMATION REQUEST FORM—Continued

- 2 -

9. A copy of any agreements originating since the last inspection between the company and the bank, between stockholders, or between the bank holding company and the stockholders.
10. A list of changes of specific services performed by the holding company for the bank or for any other company since the last inspection. Also indicate the method for computing fees, provide copies of any relevant agreements, and provide documentation supporting any management/service fee assessments.
11. For any changes to the parent company's investments in stocks of companies OTHER THAN subsidiaries, a list of the (1) date of acquisition/sale, (2) number of shares acquired/sold, (3) resulting percentage ownership, and (4) nature of business engaged in by the subject company.
12. A copy of any internally prepared reports of problem loans and nonperforming assets for the banking organization.
13. A list of any stock issuances or redemptions by the company since the last inspection, including the issue/redemption date and price. Also, list all stockholders and their percentage interest in the holding company as of ___/___/___.
14. A statement of the date and amount of any capital injections into the bank since the last inspection.
15. A copy of the minutes of all shareholders'/directors' meetings for the company held since the last inspection.
16. For each director of the holding company, provide his or her (1) date of birth, (2) date first elected to the board, (3) position in the bank holding company, (4) position in the bank, (5) principal occupation if different than bank or bank holding company officer, (6) ownership percentage in other financial institutions, and (7) positions in other financial institutions.
17. A statement of any material litigation affecting the company or the bank.
18. A list of all tax transactions since ___/___/___ . These transactions would include those between the bank and the holding company as well as any transactions with the tax authorities. (See attached example.)
19. A copy of the last two years' federal and state income tax returns, including any amendments.
20. A copy of your accountant's workpapers showing the calculation of the holding company tax benefit or liability for the last two years.

SAMPLE INFORMATION REQUEST FORM—Continued

- 3 -

21. If the parent company filed for a tax loss carryback in the last two years, provide documents filed with the IRS and related prior-year tax returns.
22. A copy of the tax sharing agreement between the bank holding company and its bank subsidiary if amended or redated since the last inspection.
23. The date of the last IRS audit of the bank holding company's tax returns, an identification of the tax periods covered in the audit, and an indication of whether any assessments or refunds remain unsettled.
24. A copy of the bank's current year budget and operating projections, if available.
25. If the subsidiary bank maintains a correspondent balance at any creditor bank of the holding company, copies of (1) the monthly analysis of the account provided by the correspondent for the last 12 months, (2) any agreement whereby the loan to the holding company is contingent on the subsidiary bank maintaining such a balance, and (3) an explanation if the balances maintained by the subsidiary bank exceed the level required for services received.
26. If any Employee Stock Ownership Plan (ESOP) owns stock in the holding company, provide copies of (1) the ESOP plan and trustee agreement; (2) the ESOP's current balance sheet; (3) the independent appraisal used to determine the value of the holding company stock purchased by the ESOP; (4) any note payable, security agreement, loan agreement, and guarantees. Also provide (1) the date the plan was accepted by the IRS; (2) a description of the ESOP's current investments, including the date they were purchased and their cost; (3) the names of the individuals who have the power to vote the ESOP's stock; (4) a list of individuals having the power to make investments for the ESOP; and (5) a list of the beneficiaries of the ESOP.
27. Copies of the articles of incorporation and by-laws for the bank holding company, if amended since the last inspection.
28. If the holding company is selling insurance, list the (1) licensed agents employed by the company; (2) compensation received by each agent; (3) method for determining compensation; (4) a description of how customers of the bank are informed that they are not obligated to purchase insurance from the holding company in order to obtain credit; and (5) a breakdown of insurance accounts receivable, past due more than 90 days.

SAMPLE INFORMATION REQUEST FORM—Continued

- 4 -

29. If the subsidiary bank is providing the holding company with either personnel or facilities for the sale of insurance or any noninsured investment products, a statement indicating whether the subsidiary bank is reimbursed for its expenses. If the bank is reimbursed, a description of the method used to determine such amounts. Indicate when this reimbursement method was approved by the respective boards of directors.
30. If the holding company is involved in the sale of any non-insured investment products such as annuities or mutual funds, describe the program including any arrangements that involve the use of third-party brokers. If the holding company receives any share of the related commissions or lease income or if employees of the holding company or a nonbank subsidiary of the holding company are involved in the program, please describe.
31. Copies of the dividend policies of the holding company and the subsidiary bank. If no written policy exists, provide a description of the methods used to determine the amount of dividends paid by the bank holding company or any of its subsidiaries.
32. The dates and amounts of dividends paid by the subsidiary bank since the last quarter-end.
33. A description of any changes made to the holding company's audit and/or credit review programs.
34. Details of any directors and officers liability insurance maintained by the organization or indemnification provisions adopted by the bank or bank holding company.
35. For banker's blanket bond and excess fidelity bond coverage, please provide (1) name of surety; (2) form number; (3) primary and excess amount of coverage; (4) expiration date; (5) name of insured; (6) an indication of whether all officers and employees of the holding company, bank, and any nonbank subsidiaries are covered; (7) the date the insurance coverage was last approved by the bank holding company's board of directors and the bank's board of directors; and (8) a description of how insurance premiums are allocated among the entities of the organization.
36. Details of any significant transactions since ___/___/___ not already described in responses to the above questions.
